Subject: ITC imposes duties on biodiesel imports from Argentina, Indonesia

By Doug Palmer

12/05/2017 10:12 AM EDT

The U.S. International Trade Commission today approved hefty double-digit duties on imports of biodiesel from Argentina and Indonesia, opening the door for a possible World Trade Organization challenge against the United States.

The trade panel voted 4-0 there was enough evidence of injury to U.S. producers to justify the restrictions.

The move clears the way for the Commerce Department to issue final countervailing duties in the range of 72 percent on imports from Argentina and 35 percent to 65 percent on imports from Indonesia.

Importers have already been required to post cash deposits based on those rates.

Biodiesel is made from a diverse mix of resources such as recycled cooking oil, soybean oil and animal fats, and can be used in existing diesel engines without modification, according to the National Biodiesel Board, which brought the case along with 15 domestic producers.

Argentina exported about $1.2 billion worth of the energy product to the United States last year and Indonesia exported about $268 billion.

That was a combined increase of 464 percent from 2014 levels, taking 18.3 percentage points of market share from U.S. manufacturers, the biodiesel board said.

Argentina President Mauricio Macri told Reuters last month that Argentina would challenge the duties at the WTO if the Trump administration went through with the measures.

Argentina had hoped to settle the dispute by negotiating a minimum price for its exports, but no agreement was reached before the Commerce Department announced it final countervailing duty determinations last month.

Indonesian Trade Minister Enggartiasto Lukita has also threatened to challenge the duties either through the U.S. court system or at the WTO.

Subject: Dec 4 PRG Energy Update: Solar Rallies Against Trade Barriers; Cruz Gets RFS Mtg w/Prez

Friends,

I hope you got a great view of two things yesterday: 1) last night's Super Moon and 2) the epic sign of Detroit Lions futility (and I'm not referring to the horrible performance in Baltimore). The Super Moon was pretty spectacular, while in Michigan, demolition crews tried to implode the former home of the Lions, the Pontiac Silverdome to an epic fail. The highlighted links have the videos. These launch a Super Busy Week starting today when President Trump heads to Utah where he is expected to announce that he will shrink the size of at least two national monuments.

Over the weekend, the Senate passed its tax reform bill which moves the process forward to this week. Now, they will scramble to put together a House-Senate Conference as soon as this evening to hash out the differences. While there are many out there, Axios has a good summary of a few energy issues at play in the tax plan including ANWR, corporate issues, EVs/Renewables, BEAT, AMT and oil/gas. My tax expert colleague **Liam Donovan** is all over it and can answer your questions. Follow him on twitter at @LPDonovan or at http://lpdonovan.com/

Tomorrow, solar advocates including **Abby Hopper** will hold a presser at the National Press Club at 9:15 a.m. to roll out an approach for protecting the booming solar industry with an American First plan instead of harmful tariffs proposals. Then on Wednesday, the US Trade Rep holds a public hearing to take comments on the solar tariffs. Expect a whole lot of rallying from solar advocates who will be out in force across from the White House. Already, a diverse group including the Campbell Soup Company, Schneider Electric, utility NextEra Energy and the National Electrical Contractors Assn have weighed in against tariffs.

Other events Wednesday include the Feminist Majority's 30th Women, Money, Power Summit and the widely attended, popular Southern Company Holiday party at Union Station. Out of town on Wednesday, ALEC hosts its annual States & Nation Policy Summit, a three-day conference in Nashville consisting of intensive, in-depth sessions addressing issues that will be at the top of state legislative agendas the following year.

Then Thursday, President Trump will meet with Sen. Ted Cruz and several Cabinet members to discuss U.S. biofuel policy and fuel efficiency standards, holding the meeting Cruz and 8 other senators requested in October. It will be a busy day for EPA Administrator Scott Pruitt who will have to rush over to the White House from the House Energy Committee where he will start testifying earlier that morning.

Finally, two special honors: First, congrats to our colleague **David Mann** who attends his final MBA class tonight at Georgetown University. David, who handles many of PRG's Admin and FEC/Lobbying filings (as well as serving as Segal's gatekeeper) has been plugging away on his MBA for more than 3 years. Secondly, this evening at City Tap House in Dupont, many of us will honor veteran energy reporter **Chris Holly** as he retires. Chris has long been one of the most savvy, intelligent and fair reporters, covering so many issues, it is hard for me to remember all of them. He was one of the first reporters I worked with when I started on this beat 20-plus years ago when he was at *McGraw-Hill's Electric Utility Week*. He has since graced the pages of *Energy Daily* for the last 15 or so. We have enjoyed working with him all these years, and certainly will miss his wit, tough reporting and intellect.

Call with questions. Best,

Frank Maisano

FRANKLY SPOKEN

"The time is ripe for EPA to grant substantive relief from the unique, adverse impacts the RFS program is having on the state of Texas. The extreme, detrimental impacts on large portions of the refining sector have now placed unacceptable burdens on the Texas economy and the economy and security of the nation as a whole."

Texas Gov. Greg Abbott requesting a waiver from the Renewable Fuels Standard Friday.

IN THE NEWS

Groundbreaking Fluorocarbon Conversion Technology Advances under Montreal Protocol – The groundbreaking HFC chemical conversion technology offered by Midwest Refrigerants advanced to next stage of commercialization with a decision by the Montreal Protocol Multi-Lateral Fund (MLF) recently. The timetable for development could lead to construction of first-ever commercial scale unit in China in 2018. According to the decision of the MLF Executive Committee, UNDP will prepare a project business proposal to be submitted by March 26, 2018, for review, consideration, and approval for funding at its next meeting in June 2018. The decision also set a budget of $2.8 million to support the project. The project also received strong statements of support and encouragement from MLF representatives from the United States government. UNDP will develop a project proposal between Midwest Refrigerants and LUXI Chemical, in Liaocheng City, China, for the conversion of HFC-23, a byproduct of the R-22 manufacturing process that is also a potent greenhouse gas. R-22 is used as a refrigerant that is being phased out under the Montreal Protocol and is also used as a feedstock for polymer manufacturing. The Midwest conversion technology, which operated in a pilot facility for more than 24 months, has been shown to convert fluorocarbon compounds to their original components suitable for reuse in the manufacturing process, while leaving no waste stream. At commercial scale, this technology is expected to be considerably less expensive and more sustainable than current destruction technology. Happy to connect you Midwest's Lew Steinberg if you are interested.

New Report: US is Most Attractive Place for Oil & Gas Investment in the World – The Fraser Institute recently released its annual Global Petroleum Survey ranking the appeal for investment in 97 oil and gas jurisdictions around the world. This year's survey results found six of the top 10 most attractive regions in the world for oil and gas development are located in the United States: Texas (1st), Oklahoma (2nd), North Dakota (3rd), West Virginia (5th), Kansas (6th} and Wyoming (9th). In fact, according to the report, in the last six surveys, Texas, Oklahoma and North Dakota, as well as Saskatchewan in Canada, are the only four jurisdictions in the world to consistently rank in the top 10. Three hundred thirty-three oil and gas executives and managers responded to this year's survey, which evaluates jurisdictions based on investment factors such as fiscal terms, taxation, environmental regulations, regulatory costs, consistency and enforcement, political stability, quality of infrastructure and geology, and availability of a skilled workforce.

EIA Says Taller, More efficient Turbines Producing More – The U.S. Energy Information Administration reported that installed wind turbines are taller and more efficient than in the past.

EIA found that the average height and power generating capacity for wind turbines installed in the country are taller and more efficient that in years past. According to data on utility-scale electricity generators collected by EIA, wind turbine capacity is based largely on the length of the blades and taller turbines are able to not only have longer blades, but also take advantage of better wind resources that are available at greater heights. The largest onshore turbines in the United States are in Texas, with capacities of 4 MW each. One of the world's largest wind farms is also in Texas: the Horse Hollow Wind Energy Center has 420 wind turbines spread over about 47,000 acres. The project has a combined electricity generating capacity of about 735 MW. Turbines are taller now than they were in previous decades. Since 2012, the average height of wind turbines installed in the United States has been about 280 feet, or 80 meters. Before 2006, few wind turbines were as tall as 280 feet. Wind speed typically increases with altitude and increases over open areas without windbreaks such as trees or buildings. Favorable sites for wind turbines include the tops of smooth, rounded hills; open plains and water; and mountain gaps that funnel and intensify wind.

TX Gov Abbott Requests RFS Waiver – Texas Gov. Greg Abbott requested a waiver from the RFS late Abbott, in particular, cited high RIN prices as causing hardship to refiners across the state. He said as a result of the increasingly unpredictable cost of RINS, refiners are exploring all options to reduce these escalating costs, including exporting product, which reduces fuel inventories in the United States, increasing the cost of fuel available to U.S. consumers and decreasing the U.S.'s energy independence and self-reliance strategy mentioned in the goals of the legislation when passed. Abbott also said small retailers are impacted dramatically. According to Professor Bernard Weinstein, a distinguished economist at the Maguire Energy Institute at Southern Methodist University in Dallas, "On a global scale, if profit margins for small, independent retailers continue to narrow in order to 'meet the competition,' even more of these businesses can be expected to fail in coming years. Fewer small retailers, in turn, will result in higher fuel prices for consumers along with a reduction in the services these businesses provide, such as auto repair and maintenance."

Diverse Groups Urge Opposition to Solar Tariff – There were four interesting separate sectors weighing in in the USTR Comments opposed to Solar Tariffs: 1) Campbell Soup Company, 2) Schneider Electric 3) utility NextEra Energy and 4) the National Electrical Contractors Assn CEO John Grau. These comments show the broad impacts that this policy could have on many companies, sectors, workers or consumers. And remember Duke Energy also offered strong comments at the ITC docket. I can send pdfs of all of these if you cannot find them.

Cape Wind Project Gives Up Lease – Cape Wind Associates will not go through with their proposed wind farm in Nantucket Sound, halting a controversial project that has been in the works for more than a decade. Cape Wind will give up its 46-square-mile federal lease. The decision was disappointing but not unexpected. The project was dealt a major setback in January

2015, when Eversource and National Grid ended contracts to buy power from the turbines. Then in 2016 when the state Energy Facilities Siting Board declined to extend permits for the project that had originally been issued in 2009. Interestingly, this project is not really representative of the current state of offshore wind, given that larger turbines are now being installed in truly offshore locations. Deepwater Wind has successfully launched a project in Rhode Island and Current Statoil is moving forward with a project in leaded areas off New York.

US Rig Count Sees 4th Straight Week of Gains – Baker Hughes said the number of US oil and natural gas rigs climbed by six to 929 last week -- the fourth consecutive week of increases. Four new rigs were deployed in the Permian Basin and three were added to the Haynesville Shale, while North Dakota's Williston Basin gained one rig.

ON THE SCHEDULE THIS WEEK

Clean Edge, GridWise Alliance Host gridCONNEXT – GridWise Alliance and Clean Edge will host gridCONNEXT today through Wednesday in Washington, D.C. with hundreds of regulators, utility executives, corporations, and other industry stakeholders to explore the many grid modernization.

USGCRP to Take Comment – Today and tomorrow, the US Global Change Research Program is taking comments from the public at the National Academy of Sciences Building on topics like its Climate Communications Initiative, its Rising Seas Initiative and Building Resilience in the US-Mexico Drylands

EPA Holds Truck Emissions Kit Hearing – The EPA holds public hearings today on proposed repeal of emission requirements for glider vehicles, glider engines, and glider kits at EPA HQ. The EPA earlier this month announced its plan to reclassify glider kits as non-new vehicles, thereby restricting the EPA's ability to regulate their exhaust emissions, and to repeal the glider kit-specific provisions of the Phase 2 emissions regulations.

Climate Film to Be Screened – Tonight at 6:00 p.m., New America and Columbia University's School of International and Public Affairs hold a special screening of 'The Age of Consequences,' a documentary investigating the links between climate change, U.S. national security, and global stability.

Solar Tariff Opponents to Weigh-in at Press Club – Opponents of tariffs on solar imports will hold a briefing tomorrow at 9:15 a.m. at the National Press Club. As the Trump Administration nears a determination on remedies for the Section 201 solar trade case, solar industry leaders will discuss the details of a true "America First" Plan for solar energy that supports domestic cell and panel manufacturing without destroying demand for American solar energy. Experts will preview the U.S. Trade Representative hearing and discuss why the Administration should not impose quotas and tariffs on imports of these products and instead adopt an approach that will not inflate the cost of electricity for all Americans and harm workers, consumers and the U.S. economy.

ITC to Vote on Biodiesel Tariffs – Tomorrow at 9:30 a.m., the U.S. International Trade Commission holds meeting and vote on biodiesel from Argentina and Indonesia. In May, USITC determined that there is a reasonable indication that a U.S. industry was materially injured by reason of imports of biodiesel from Argentina and Indonesia that are allegedly subsidized and sold in the United States at less than fair value.

EIA, Interior Noms Hearing Set – The Senate Energy Committee holds a hearing tomorrow at 10:00 a.m. on the nominations of Timothy Petty to be an assistant Interior secretary and Linda Capuano to be administrator of the Energy Department's Energy Information Administration.

Forum to Look at Media, Journalism, Trump – Talkers Magazine will host a forum at Hillsdale College's Kirby Center In Washington DC looking at the Trump Administration and its coverage by the media. A panel of talk show hosts including former talk show host and Hillsdale College radio station GM Scot Bertram, Dom Giordano of WPHT/Philadelphia, Hugh Hewitt of Salem Radio Network, Joe Madison SiriusXM Satellite Radio, Janet Parshall of the Moody Radio Network and Bill Press of the TYT Network.

Forum to Look at China Impact – The National Bureau of Asian Research will host a public panel discussion tomorrow at 3:45 p.m. in CVC 268 on China's Growing Energy and Geopolitical Impact in Xi Jinping's New Era. The event will also mark the launch of NBR's 2017 Energy Security Program report on "Asia's Energy Security and China's Belt and Road Initiative." Rep. Ann Wagner leads the discussion.

Forum to Look at Climate Diplomacy – The German Marshall Fund is holding a forum tomorrow at 5:30 p.m. for a discussion on the future of climate action in the United States, the role of cities and regions in implementing international climate policy, and the importance of strong transatlantic leadership in this area of global concern. The speaker will be Tim Robinson, Chief Counsel of the House Committee on Energy and Commerce.

Roll Call Forum to Look at Infrastructure – Roll Call Live and CQ holds an infrastructure forum on Wednesday morning featuring expert analysis and bipartisan discussion to examine the many questions that infrastructure stakeholders and policymakers will face in the new administration. Rep. Peter DeFazio and White House aide DJ Gribben.

USTR Hearing on Solar Trade Tariff – The US Trade Representative will hold a public hearing on Wednesday to discuss the solar tariff issue.

California AG Hits Press Club – The National Press Club Newsmakers Committee will host California AC Xavier Becerra at a Headliners Newsmaker news conference Wednesday at 10:00 a.m. in the club's First Amendment Lounge. The news conference will look at Cali's two dozen lawsuits challenging the Trump Administration's efforts to make changes that affect immigrant rights, civil rights, environmental standards and consumer protections. Becerra will discuss these legal actions and other issues and will be moderated by *Los Angeles Times* reporter Chris Megerian.

Women, Power, Money Summit Set at Press Club – The Feminist Majority hosts its 30th annual Women Money Power Summit Wednesday at the National Press Club. The summit brings together a combination of feminist thinkers, speakers, and activists as well as top political leaders. New strategies and campaigns to increase women's economic and political clout and to stop the war on women and reproductive rights are always at the top of the agenda. Main Speakers will include Sens. Dianne Feinstein and Mazie Hirono and Reps. Niki Tsongas and Maxine Waters. Our colleague Dee Martin is a board member of FM.

Senate Enviro to Host Army Corps Nominee – The Senate Environment Committee holds a hearing Wednesday on the nomination of R.D. James to be assistant secretary of the Army for civil works.

WCEE to Host NatGas Leaders – The Women's Council on Energy and the Environment (WCEE) will hold a forum on Wednesday looking at the role of natural gas in the economy. Dena Wiggins, President and CEO of the Natural Gas Supply Association (NGSA), and Lori Traweek, Chief Operating Officer of the American Gas Association, will discuss how natural gas fits into our country's energy future and how they rose to leadership in the energy world.

AEI to Host Ag Discussion – American Enterprise Institute will hold a forum on Wednesday at 12:30 p.m. for a discussion on substantive reforms to US agricultural subsidy programs. AEI's Vincent Smith will facilitate a discussion among these experts as they break apart the 2018 Farm Bill. The event looks at the current state of the American farm sector. In the newest papers of AEI's "Agricultural Policy in Disarray" series, leading agricultural economists evaluate federal programs and regulations that affect conservation and the environment. Erik Lichtenberg will present his findings on conservation programs. Aaron Smith will discuss the future of the Renewable Fuel Standard. Nathan Hendricks will present his findings on the contentious debates between agricultural and environmental interests about the Clean Water Rule.

Wilson Forum Looks at Moving Villages – The Wilson Center will hold a forum on Wednesday at 1:00 p.m. looking at moving villages due to climate change. The event will feature the Village of Newtok, a Yupik Eskimo community of 450, faces certain destruction from a slow-moving climate disaster. The discussion with Newtok's leadership will focus on their experiences and struggles to preserve their Yupik way of life on their historic subsistence lands.

Senate Environment to Discuss Superfund Sites in Disasters – The Senate Environment Committee's Superfund and Waste Management Subcommittee holds a hearing Wednesday at 2:30 p.m. on challenges facing Superfund and waste cleanup efforts following natural disasters.

Forum Looks at Future of Ag – The National Museum of Natural History and Resources for the Future will host a forum on Wednesday evening with Jesse Ausubel, Director and Senior Research Associate of the Program for the Human Environment at Rockefeller University, for a look into the future as he explores how precision agriculture and better sources of food and fuel can benefit the natural world. Ausubel's work covers forests and farms, marine and human life, energy and materials. He marries climate and Earth sciences to elaborate the vision of a large, prosperous society that spares large amounts of land and sea for nature and emits little or nothing harmful into the atmosphere. This event is presented by Resources for the Future with the Smithsonian Institution's National Museum of Natural History as part of an ongoing series, Anthropocene: Life in the Age of Humans.

ALEC Conference Set for Nashville – Starting Wednesday in Nashville, the American Legislative Exchange Council hosts the States & Nation Policy Summit, a three-day conference consisting of intensive, in-depth educational sessions addressing issues that will be at the top of state legislative agendas the following year. Nearly 1,000 state and local lawmakers, policy experts and other stakeholders gather to explore the philosophical principles that guide a free society.

Forum to Look at NAFTA, Energy – The Washington International Trade Association holds an event Thursday at 9:00 a.m. the Ronald Reagan Building & International Trade Center at as part of its NAFTA series on energy and NAFTA. The forum will look at NAFTA renegotiation's impact on energy trade across North American borders, as well as its investment, jobs and North American energy independence. Former Rep. Charles Boustany hosts API's Jack Gerard, CSIS's Sarah Ladislaw and Sergio Marchi of the Canadian Electricity Association. Panel 2 includes our friend Maryam S. Brown of Sempra Energy, former State Department Energy envoy David Goldwyn and ADM's Lorraine Hawley.

Pruitt to Head to House Energy Panel – The House Energy and Commerce Environment Subcommittee will hold a hearing on Thursday with EPA Administrator Scott Pruitt testifying. The appearance will be Pruitt's first before the Energy and Commerce Committee.

House Resources to Look at Interior Dept Reforms – House Natural Resources panel lawmakers will review Interior Department reform proposals in a hearing on Thursday at 10:00 a.m.

House Transpo Roundtable to Look at Trucking Techs – On Thursday at 10:00 a.m., the House Transportation Committee's Subcommittee on Highways and Transit will host a roundtable on emerging technologies in the trucking industry.

ASE Forum to Look at Biz Case for Energy Efficiency – The Alliance to Save Energy hosts a forum on Thursday at 12:00 p.m. to discuss the business case for tax incentives promoting energy efficiency. From residential retrofits to commercial-scale systems improvements, energy efficiency upgrades deliver massive benefits to consumers, businesses and taxpayers – creating jobs and economic activity, saving money, and reducing harmful emissions while strengthening U.S. energy security. Yet the U.S. tax code no longer contains meaningful tax incentives for energy efficiency. Hear directly from leading businesses and advocates about tax policies new

and old that could advance this important cause – and the business case for getting them done as Congress looks at rewriting the tax code.

CSIS to Release World Oil Outlook – The CSIS Energy & National Security Program is hosting the U.S. launch of OPEC's World Oil Outlook 2017 (WOO) on Thursday at 2:00 p.m. The WOO is OPEC's outlook for medium- and long-term oil supply, demand, and downstream to 2040, factoring in the latest developments in global oil markets and OPEC production adjustments. The analysis includes the impacts of worldwide shifts in demographics, emissions reductions, and technological development in the oil sector. The presentation of WOO 2017 will be given by OPEC's Al-Qahtani.

POLITICO to Look at 2018 Mid-Terms – Playbookers Anna Palmer and Jake Sherman are going LIVE with POLITICO Playbook in a special extended version of the Playbook Audio Briefing on Thursday at 6:00 p.m. at the 6th & I Synagogue. The POLITICO Playbook Team and other key reporters will try to make sense of Washington as it marches toward mid-term elections in 2018. Speakers will include POLITICO's Rachel Bade, Annie Karni and Seung Min Kim, as well as Michael Barbaro of the *New York Times*, John Rogers of the National Republican Congressional Committee and Dan Sena of the Democratic Congressional Campaign Committee.

House Energy to Look at Cybersecurity, Energy – The House Energy and Commerce Energy Subcommittee holds a hearing on Friday at 9:00 a.m. examining the role of the Department of Energy in energy sector cybersecurity. Bruce Walker, DOE's Assistant Secretary of the Office of Electricity Delivery and Energy Reliability will testify.

IPAA Exec to Address Energy Economists – The National Capital Area members of the US Assn of Energy Economist will host Fred Lawrence for their Friday lunch. Lawrence, VP at the Independent Petroleum Association of America, will discuss the outlook for U.S. oil and natural gas, including shale export trends over the past two years, focus on the Independents in a Sector and demand and geopolitical reality vs. ideology.

Forum to Touch on Climate, Bonn Results – The GW Law School is hosting a roundtable discussion on Friday at Noon looking at the status of climate change policy under the Trump Administration. The discussion will draw on articles written for the recent Special Edition of the Climate and Carbon Law Review (CCLR). The program will feature several CCLR authors including Vicki Arroyo, Executive Director of the Georgetown Climate Center at Georgetown

Law, Professor Robert Glicksman from the George Washington University Law School, Fatima Ahmad and Jennifer Huang from the Center for Climate and Energy Solutions, and Charles Di Leva, visiting scholar at the Environmental Law Institute. Topics under discussion will include, the reaction of state and local authorities to the withdrawal of the US from the Paris Agreement, the fate of the Clean Power Plan and the flexibility of Nationally Determined Commitments (NDCs) under the Paris Agreement.

IN THE FUTURE

Paris Forum to Focus on Anniversary – Forum to French President Macron will host the One Planet Summit on December 12 in Paris, on the two-year anniversary of the Paris Agreement. The Summit will focus specifically on climate finance. Heads of State will be invited to attend this meeting.

Nuclear Weapons Triad Forum Set – The Advanced Nuclear Weapons Alliance Deterrence Center (ANWA DC) will host the Inaugural morning forum on Capitol Hill on December 12th. The event will feature key Members of Congress representing nuclear triad communities at Air Force and Naval bases, and NNSA sites, The group will also outline a series of 11 more 2018 forums and roundtables with key government officials, industry leaders and suppliers, and academic experts on the triad issues of the day, Each of these events will tackle the nuclear triad's emerging issues and challenges, while sharing the successes, in the ongoing nuclear weapons enterprise modernization.

Energy Storage Forum Set –The 3rd annual U.S. Energy Storage Summit will be held in San Francisco on December 12th and 13th at the Hilton Union Square. The forum will bring together utilities, financiers, regulators, technology innovators, and storage practitioners for two full days of data-intensive presentations, analyst-led panel sessions with industry leaders, and extensive, high-level networking. Speakers will Include APRA-E's Susan Babinec, Peter Klauer of Cal ISO, Cal PUC Commissioner Carla Peterman, ESA CEO (and former MD PSC Chair) Kelly Speakes-Backman and our friends Shayle Kann of GTM Research, Stephen Lacey and Justin Gerdes of Greentech Media.

Forum Set to Look at NatGas – On December 12th and 13th, the Energy Institute at Colorado State University (CSU) and Gas Technology Institute (GTI) will be co-hosting the CH4 Connections conference at CSU's campus in Fort Collins. This conference, now in its fourth year, will focus on methane emissions quantification, mitigation, and capture for the natural gas

industry, and will include a tour of the Methane Emissions Test and Evaluation Center (METEC) that will showcase the solutions under development and in field testing at the center.

***NJ* to Host NAFTA Webinar** – *National Journal* will host a webinar on Thursday December 14th at 11:00 a.m. to look at renegotiating the North American Free Trade Agreement. In this webinar, speakers will examine NAFTA's history, development, and future, and address the major players involved, each side's key demands, the timeline, potential outcomes and the impact of President Trump's rhetoric on the process.

Forum to Look at US-Mexico NatGas – The Latin American Dialogue hosts a panel discussion on Friday December 15th aimed at understanding the role of LNG for US energy exports and commercial ties in Latin America, as well as the US-Mexico energy relationship. As global energy trade grows and the United States looks to expand oil and gas exports, Latin American countries provide significant commercial opportunities for exporters and investors alike. It remains imperative that Latin American countries and the United States strive to find mutually beneficial opportunities in order to boost energy ties and expand energy cooperation. Speakers include State's Deputy Assistant Secretary of the Bureau of Energy Resources John McCarrick, Sempra's Mark Nelson, Leslie Palti-Guzman of the Rapidan Group and several others.

***The Last Jedi* Hits Theaters** – DECEMBER 15th

CSIS to Host World Coal Report – On December 18th at 3:30 p.m., CSIS will host the launch of the IEA's new report analyzing coal's recent trends and forecasting its demand, supply, and trade through 2022. Coal remains world's dominant fuel. Under pressure from decarbonization, cheaper alternatives, and geopolitical shifts in demand, coal continues to be one of the most pressing questions in energy. Peter Fraser, Head of Division for Gas, Coal, and Power Markets at the International Energy Agency, will present the IEA's report.

API's Annual State of Energy Address – January 4th (expected).

75th Annual Global Globes – Can't wait for Seth Myers to host this one from January 7th from Hollywood.

World Energy Outlook Set For Launch – On January 16th at 1:30 p.m., the CSIS Energy & National Security Program will host a forum and the U.S. launch of the International Energy Agency's World Energy Outlook 2017. Fatih Birol, Executive Director of the IEA, will present the findings from the report.

Pruitt to Head to Senate Environment – The Senate Environment and Public Works Committee said EPA Administrator Scott Pruitt will appear before the Committee on Jan. 31, 2018, making his first return to the panel nearly a year after his confirmation.

Subject: POLITICO's Morning Score: Trump endorses Roy Moore as Republicans come around on working with him — NRSC staffers resign after digital break-in — A congressman's accuser gets blackballed

By Elena Schneider | 12/05/2017 10:00 AM EDT

With Scott Bland

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

MOORE SUPPORT - "Trump endorses Roy Moore as Republicans come around on working with him," by POLITICO's Daniel Strauss and Louis Nelson: "President Donald Trump moved Monday to quash any lingering doubts about his support for Roy Moore, as Washington Republicans increasingly come to terms with the idea of the controversial former Alabama Supreme Court judge joining the Senate. Early Monday morning, Trump tweeted that 'we need Republican Roy Moore to win' in order to push through the president's agenda. Later, Trump called the Senate candidate directly to endorse his campaign, principal deputy press secretary Raj Shah said, and he has a rally planned later this week just over the state line in Pensacola, Florida. Some Alabamians have been receiving robocalls urging them to travel to the neighboring state for the rally. ... Hanna Ford, Moore's deputy campaign manager, said Trump called the former judge 'a fighter' during their call Monday. Brett Doster, a Moore adviser, said the president also stressed 'the importance of winning next Tuesday.'" **Full story.**

- "Woman shares new evidence of relationship with Roy Moore when she was 17," by The Washington Post's Stephanie McCrummen: "...'Happy graduation Debbie,' it read in slanted cursive handwriting. 'I wanted to give you this card myself. I know that you'll be a success in anything you do. Roy.'" **Full story.**

'RESIGNED' - "NRSC staffers resign after digital break-in," by Campaign Pro's Kevin Robillard: "Two fundraising staffers for the National Republican Senatorial Committee who broke into the computer servers of the House GOP campaign arm resigned late last week, GOP sources told POLITICO. The staffers, Laura Kleffner and Krista Madaio, had previously worked at the National Republican Congressional Committee. Three Republican sources told POLITICO last week NRSC aides used their old NRCC passwords to collect information on more than 200,000 donors. The digital break-in infuriated NRCC officials when they became aware of it in October." **Full story.**

ICYMI - LAST WEEK - "Senate GOP campaign arm stole donor data from House Republicans," by Campaign Pro's Robillard and Elena Schneider. **Full story.**

'IT'S A RECKONING' - "A congressman's accuser: Blackballed and babysitting for cash,"

by POLITICO's Rachael Bade: "North Carolina native Lauren Greene aspired to a career in politics when she arrived on Capitol Hill as an intern in 2009. She spent the next five years climbing the Capitol Hill ladder, ultimately becoming a communications director for a congressman in 2014. But Greene's budding career imploded, she said, the minute she accused Rep. Blake Farenthold (R-Texas) of sexually harassing her. Since the summer of 2014, when she says Farenthold fired her for raising concerns about a hostile work environment, Greene has been unable to land a full-time job. She's making $15 an hour working temporary gigs for a homebuilder. She babysits on the side to earn extra cash. Her family has had to support her financially. And Greene, now 30, has left D.C., with no illusions that she will ever work in politics again." **Full story.**

IT'S ON - "Former CFPB head and Trump target Richard Cordray to run for Ohio governor as Democrat," by the Cincinnati Enquirer's Jessie Balmert: "Cordray, 58, will announce his candidacy for governor Tuesday morning at Lilly's Kitchen Table in his hometown of Grove City, an advisor said. After that, he will tour the state to meet with Democratic activists, leaders and voters. ... Cordray, a former Jeopardy champion, should enter the race with considerable support from Democratic fundraisers nationwide. Mary Ellen Withrow, former U.S. treasurer under President Bill Clinton, was listed as Cordray's campaign treasurer in paperwork filed Monday. ... Last week, GOP Ohio Attorney General Mike DeWine named Ohio Secretary of State Jon Husted as his running mate. The powerful Republican duo was hoping to clear the primary field, which includes Lt. Gov. Mary Taylor and U.S. Rep. Jim Renacci." **Full story.**

ON THE HILL - "House conservatives almost topple tax vote," by POLITICO's Bernie Becker, Sarah Ferris and Colin Wilhelm: "House conservatives threatened to derail a key tax vote on Monday in an attempt to win more influence over the GOP's spending strategy, just four days before the deadline to fund the government." **Full story.**

- Organizing for Action out with digital ads against senators' tax vote: Organizing for Action is attacking nine senators for their vote on the tax bill last week. The ads target Sens. Susan Collins, Ted Cruz, Joni Ernst, Jeff Flake, Cory Gardner, Dean Heller, John McCain, Lisa Murkowski, Rob Portman and Marco Rubio.

- Not One Penny releases internal polling on tax reform: Not One Penny, a progressive group, popped internal polling that found the GOP's tax bill to be unpopular in six battleground House seats. The polling also tests popularity for the Republican incumbents, all of whom are losing in a race against a generic Democrat. Check out polling memos from the following districts: IA-01, CO-06, VA-10, ME-02, NY-24 and CA-25.

Days until the 2018 election: 336 (updated for 12/5 Score)

Thanks for joining us! You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com, dstrauss@politico.com and mseverns@politico.com.

WATCH LIVE at 8 A.M. - WOMEN RULE: 5TH ANNUAL SUMMIT - POLITICO hosts a full day of live conversations with female leaders as we ask: who are the new women shaping our future - and what are their agendas? Where can women find common ground at a time of division? How are women taking their place at the table in the public and private sectors - and what difference can they make there? Featured speakers include: actress Kate Bosworth, "Me Too" movement founder Tarana Burke, Transportation Sec. Elaine Chao, Kellyanne Conway, Sen. Kirsten Gillibrand (D-N.Y.) and more. Learn more: here. Livestream: here.

JOIN POLITICO PLAYBOOK - LIVE: Join Playbook co-authors Anna Palmer and Jake Sherman for a live taping of POLITICO Playbook. Featured guests include: Michael Barbaro, host of the New York Times' "The Daily" Podcast, DCCC Executive Director Dan Sena and NRCC Executive Director John Rogers, and Rachael Bade, Seung Min Kim, and Annie Karni. Sixth and I - Dec 7 - Doors open 6:00 p.m. Get tickets: here.

FIRST IN SCORE - Everytown targets 5 House members on concealed carry: Everytown for Gun Safety Action Fund is out with radio, digital and newspaper ads in five House districts, urging members to not support concealed carry reciprocity (H.R. 38 (115)). The ads will go after three Republicans - Mike Coffman (CO-06), Fred Upton (MI-06) and Leonard Lance (NJ-07) - and two Democrats, Kyrsten Sinema (AZ-09) and Kurt Schrader (OR-05). The ads are part of a $300,000 ad push as Congress considers the measure.

FIRST IN SCORE - DEPT. OF BIO VIDEOS - Dean Phillips, running in MN-03, pops new video: Democrat Dean Phillips' campaign is out with a new bio video that shows him driving a truck across the district. "The great intention of my campaign - and my personal mandate - is to get people to talk again, and the truck is simply a vehicle to do so. It's a conversation starter," Phillips said. The ad hits on "money in politics" as the "root of all the gridlock in Washington." **Check out the video here.**

MORE FROM THE HILL - "Ryan weighed stripping Frelinghuysen of chairmanship," via POLITICO's Rachael Bade and John Bresnahan: "Speaker Paul Ryan and his leadership team recently discussed replacing House Appropriations Chairman Rodney Frelinghuysen after he bucked the party and voted against the GOP tax bill, multiple sources told POLITICO. ...Chairmen are expected to support GOP leaders on tough votes or major pieces of legislation. And Frelinghuysen, who hails from a more moderate-minded swing district, was not given a green light to vote against the tax bill." **Full story.**

PRIMARY WATCH - "Menendez gets a potential primary challenger," by POLITICO New Jersey's Matt Friedman: "An attorney who worked on the Hillary Clinton and Barack Obama presidential campaigns is considering a Democratic primary challenge to Sen. Bob Menendez. Michael Starr Hopkins, in an op-ed piece for the Washington publication 'The Hill,' wrote that New Jerseyans deserve 'the chance to vote for someone who hasn't been tainted by the culture of corruption in Trenton and Washington, someone who doesn't owe any favors to the political establishment or powerful interests.'" **Full story.**

NOT ROMNEY - "Trump says he wants Hatch to seek 8th Senate term," by POLITICO's

Louis Nelson: "President Donald Trump said today that he is urging Sen. Orrin Hatch to seek reelection for an eighth six-year term. Trump, visiting a Salt Lake City food bank operated by the Church of Jesus Christ of Latter Day Saints, was asked if he was encouraging Hatch (R-Utah) to run for reelection, to which he replied 'yes.'" **Full story.**

FROM THE DGA - "Democrats eye major gains in depleted governors' ranks in 2018 'awakening,'" by CNN's Eric Bradner: "Washington Gov. Jay Inslee knows about political wave elections: He was wiped out by a Republican wave as a three-term House member in 1994. Now, citing President Donald Trump's unpopularity, he's confidently predicting an even bigger Democratic landslide in the 2018 midterm elections. Inslee projected that Democrats would reverse the 2010 and 2014 losses that left them with just 15 governor's offices." **Full story.**

DIGITAL WAR - "Giffords buys ads against 8 Republicans on concealed carry," by POLITICO's Edward-Isaac Dovere: "Gabby Giffords is going up on the air Monday with a six-figure ad buy against Reps. Rodney Frelinghuysen (R-N.J.) and Jason Lewis (R-Minn.) from her gun safety group. The ads come ahead of this week's expected House vote on Concealed Carry Reciprocity, which, if enacted, would be a massive opening of gun laws across the country, forcing all states to accept gun licenses issued in any state. The result could lead to gun carrying laws effectively being set everywhere at the lowest level any state would allow. ... Digital ads will also go out against Reps. Steve Knight (R-Calif.), Ed Royce (R-Calif.), Mimi Walters (R-Calif.), Mike Coffman (R-Colo.), Lee Zeldin (R-N.Y.) and Barbara Comstock (R-Va.)." **Full story.**

QUOTE OF THE DAY: "This is Armageddon." - Democratic Leader Nancy Pelosi on the GOP tax bill, Fox News reported.

Subject: POLITICO's Morning Transportation: Nielsen nom moves along — DOT puts the brakes on ECP mandate — Brown sentenced to 5 years for fraud

By Tanya Snyder | 12/05/2017 10:00 AM EDT

With help from Brianna Gurciullo

NIELSEN MOVES ALONG: The Senate Monday evening cleared a procedural hurdle to bring debate to a close on the nomination of Kirstjen Nielsen to serve as Secretary of Homeland Security. The vote was 59-33, with all Republicans, 10 Democrats and Independent Angus King of Maine voting in favor. Majority Leader Mitch McConnell called Nielsen "a qualified candidate with the talent and experience to succeed," saying that her previous work with the department "makes her an ideal candidate to be ready to lead the agency on day one."

Her résumé: Nielsen would be the first DHS secretary to have prior experience in the agency. She started and ran TSA's offices of legislative policy and government affairs, and later served as DHS Secretary John Kelly's deputy (and moved over to the White House when he did). Some conservatives have targeted her for taking a softer line on immigration than President Donald Trump, and some Democrats have expressed concern about her role in FEMA's response to Hurricane Katrina, but no roadblocks are expected on her path to confirmation.

DOT PUTS THE BRAKES ON ECP MANDATE: DOT Monday rescinded the mandate for trains carrying crude oil and ethanol to be equipped with electronically controlled pneumatic (ECP) brakes, a rule that the freight rail industry has fought against since its inception. The 2014 FAST Act ordered a scientific evaluation of ECP brake performance in emergencies, with a requirement for a final decision on the rule's fate by Monday - the two-year anniversary of the law's passage.

Noped: The scientific study was inconclusive, and a GAO study found that DOT didn't have enough data to make a call. But a DOT analysis in October found that the costs outweighed the benefits of an ECP mandate. Commerce Committee Chairman John Thune (R-S.D.) praised the repeal decision. "Repealing this rule puts sound science and careful study ... over flawed guesswork," he said in a statement.

IT'S TUESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ships. Tanya is in the MT cockpit. Send tips, feedback and song lyrics to tsnyder@politico.com or @TSnyderDC.

"Everywhere with helicopter / hard to follow when I'm slow / everywhere with helicopter / sending off where lightning goes."

LISTEN HERE: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) about lonely highways and south-bound trains?

BROWN SENTENCED: Former Rep. Corrine Brown (D-Fla.), the long-time top Democrat on the House Transportation subcommittee in charge of rail, was sentenced Monday to five years in federal prison for her role in a conspiracy and fraud scheme involving a sham scholarship charity. Brown's longtime chief of staff, Elias "Ronnie" Simmons, was sentenced to 48 months in prison, and the founder of the fraudulent charity, Carla Wiley, was sentenced to 21 months. "Corrine Brown abused her position as a member of Congress by defrauding charitable donors who wanted to help underprivileged young men and women receive a quality education," said Acting Assistant Attorney General Cronan. "Instead of helping those deserving students, Brown used the contributions she solicited to finance a personal slush fund to support her lavish lifestyle." Brown served 12 terms in Congress. Her top campaign donors were railroads and cruise lines.

FROM THE DEPARTMENT OF DUBIOUS HONORS: Transportation has overtaken power plants as the largest source of pollution in the United States for the first time in 40 years, according to data compiled by the U.S. Energy Information Administration and reported by Bloomberg. Important note: It's not that transportation is getting dirtier, it's that electricity generation is getting cleaner.

LET'S MAKE A FRESH START: After getting stood up by Democratic leaders last week, President Donald Trump will get his meeting with Senate Minority Leader Chuck Schumer and House Minority Leader Nancy Pelosi on Thursday. The three hope to hash out an agreement on government spending beyond Friday's deadline to avoid a government shutdown. "That year-end deal is also likely to include other long-stalled legislative priorities, including addressing funding lapses for the Children's Health Insurance Program and the National Flood Insurance Program," Jennifer Scholtes and Sarah Ferris report.

LET ME FLY FREE! The Association of American Railroads thinks the FAA should let railroads use small drones at night, past line of sight and over people, all of which require a waiver now to do. That's what the group wrote in comments submitted late last week in relation to President Donald Trump's order for agencies to take a look at their current regulations and put forward which rules could be repealed or tweaked. Drones "can be used to investigate accident scenes without exposing emergency responders and railroad personnel to dangerous conditions," the group wrote. Brianna breaks down AAR's other asks here.

MENENDEZ GETS PRIMARY CHALLENGER: Sen. Bob Menendez (D-N.J.), whose corruption trial ended in a jury deadlock last month, now faces a new battle: a potential primary challenge in the form of Democratic campaigner Michael Starr Hopkins. Hopkins announced in an op-ed piece for The Hill that he is "exploring" a bid against Menendez, though his website already says "Michael Starr Hopkins for United States Senate." Menendez's approval rating tanked during the trial, and 51 percent of New Jersey voters think he does not deserve to be reelected. Hopkins wrote that New Jerseyans deserve "the chance to vote for someone who hasn't been tainted by the culture of corruption in Trenton and Washington." Matt Friedman of POLITICO New Jersey has the full story.

RIDE ON: PeopleforBikes is rallying its members against the Senate tax bill's elimination of the $20-per-month bicycle commuter benefit. "This modest reimbursement program has helped bike

commuting grow by more than 50 percent nationwide during the last decade," the advocacy group said in an action alert.

ASCE WILL GIVE THIS REPORT A D-: In a new report , the RAND Corporation suggests "not everything is broken" with U.S. water and transportation infrastructure - a statement that will no doubt raise eyebrows in some camps. Researchers found that a 2.5 percent to 3 percent annual spending increase at the local, state, and federal level would essentially eliminate existing transportation and water infrastructure maintenance backlogs by 2030. Still, they said the problem isn't so much money as policy. Feds should stop trying to sprinkle transportation funds evenly throughout the country "without a sense of national purpose or priority," said lead author Debra Knopman. Rather, they should focus on "maintaining and modernizing vital federal infrastructure and on targeting nationally significant projects that are beyond the capacity of individual states and cities."

SHIFTING GEARS: Alison McAfee is the new new managing director of communications at Airlines for America. She worked in the comms shop of JetBlue from 2006 and 2013 and since then at Hawaiian Airlines. Harris Corporation chairman, president and CEO William Brown has been appointed the Vice Chairman of Aerospace Industries Association's Board of Governors for 2018.

THE AUTOBAHN:

- "How can the DOT deregulate? Almost 3,000 weighed in last week." Supply Chain Dive.

- "VW unveils new electric van to go into production next year for its ride-sharing service." Electrek.

- "Travelers asked to postpone Christmas trips to Bali." Smarter Travel.

- "3 obstacles ahead for autonomous farm equipment." Agriculture.com.

- "Supreme Court lets Trump fully impose latest travel ban." POLITICO.

THE COUNTDOWN: DOT appropriations run out in 4 days. The FAA reauthorization expires in 117 days. Highway and transit policy is up for renewal in 1,031 days.

Subject: POLITICO's Morning Energy: Trying to turn GOP climate talk into action — First lawsuits filed over Trump monument decision — Greens seek new reviews in Keystone XL saga

By Anthony Adragna | 12/05/2017 10:00 AM EDT

With help from Alex Guillén and Tanya Snyder

UPPING THE ANTE ON ANWR: Environmental advocates and Democrats are upping the pressure on the House GOP's self-styled climate hawks to withhold their vote on the final tax package H.R. 1 (115) if it contains a Senate provision allowing oil and gas drilling in the Alaska National Wildlife Refuge. But those efforts don't appear to have borne any fruit yet, Pro's Ben Lefebvre and your ME host report. The rider - a key priority for Senate Energy Chairman Lisa Murkowski - is just one of many dicey items Senate and House negotiators must work through as they go to conference to iron out differences in their bills, even as drilling opponents push Republican members of the Climate Solutions Caucus to back up their words with action.

Six of the 12 House GOPers who signed a letter last week opposing ANWR drilling backed the initial tax bill, and activists staged protests at the offices of Reps. Pat Meehan and Carlos Curbelo on Monday. Three of those six tax bill supporters who oppose ANWR - Reps. Dave Reichert, Ryan Costello and Curbelo - suggested the fate of the ANWR rider wouldn't determine their final vote. "It would be very disappointing, but I doubt that I would deny all of my constituents the opportunity to experience tax relief because of any one provision," Curbelo told ME at Monday votes.

Earthjustice, the Center for Biological Diversity and other groups sent a letter to Climate Solutions Caucus Republicans asking them, among other things, to work against opening ANWR. And Democrats say the final tax bill vote offered a concrete opportunity for members of the group to demonstrate their pro-climate stance. "It would certainly be nice if the symbolic power of them acknowledging climate change through this caucus translated into action at some point," Rep. Jared Huffman told ME. "This would be a good point."

Two interesting polls suggest there's no widespread public support for opening ANWR despite the vocal backing of Alaska's delegation. One, from the Harvard T.H. Chan School of Public Health and POLITICO, found 67 percent of respondents said opening ANWR "should not be a priority" for the federal government. The other poll, conducted for the Yale Program on Climate Change Communication, found that 70 percent of Americans oppose drilling in ANWR.

Late Monday, Speaker Paul Ryan named four lawmakers of particular note to ME fans to the House's conference committee: Natural Resources Chairman Rob Bishop, Energy and Commerce Chairman Greg Walden, John Shimkus and Don Young. Also joining the Republican conference party: Ways and Means Chairman Kevin Brady, Devin Nunes, Peter Roskam, Diane Black and Kristi Noem.

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and Squire Patton Boggs' Lem

O. Smith was first to identify Sen. Lamar Alexander as the one-time Trent Lott roommate. For today: Who was the original House sponsor of the Energy Policy Act of 2005? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

FIRST MONUMENT LAWSUITS FILED: A coalition of environmental groups filed the first lawsuit challenging President Donald Trump's long-expected move to shrink the Grand Staircase-Escalante National Monument just hours after he announced his decision to significantly pare two national monuments in Utah. The groups argue in their complaint filed in Washington federal court that the Antiquities Act "does not authorize Presidents to abolish [national monuments] either in whole or in part, as President Trump's action attempts to do." And the Native American Rights Fund, representing the Hopi Tribe, Navajo Nation, Pueblo of Zuni and Ute Mountain Ute Tribe, filed its own challenge the Bears Ears proclamation late Monday evening.

Report's coming today: While on hand for Trump's announcement in Utah, Interior Secretary Ryan Zinke told the press pool to expect the release of the results today of his review of several dozen national monument designations. And Natural Resources Chairman Rob Bishop, as well as Utah Reps. Chris Stewart and John Curtis, host a pen and pad briefing this morning at 11 a.m. where they'll discuss Trump's visit and the introduction of related legislation on Utah monuments.

Pro's DataPoint has whipped up a nifty graphic showing Trump's drastic reductions to the Bears Ears and Grand Staircase-Escalante national monuments in Utah. Check that out here.

The quote everyone's talking about: "Does he know the interior. He's knows it, he loves it. He loves seeing it and riding on it," Trump on Zinke.

NEW REQUESTS FOR KEYSTONE XL PROJECT: Environmental groups are asking the Trump administration to conduct a new supplemental environmental impact statement and Endangered Species Act consultation after the Nebraska Public Service Commission approved a modified path for the Keystone XL pipeline last month. "Now the administration has no choice but to update its assessment to reflect the pipeline's current proposed route," Doug Hayes, a senior attorney with the Sierra Club, said in a statement. That comes as the Nebraska regulators scheduled a Dec. 12 hearing for TransCanada and environmental groups to argue it should reconsider its decision on the controversial pipeline, Pro's Ben Lefebvre reports.

Meanwhile, the Pipeline and Hazardous Materials Safety Administration said a weight put in place to keep the Keystone pipeline from moving may have played a role in the 210,000 gallon oil spill in South Dakota last month, Reuters reports. It's a finding that could trigger costly inspections of tens of thousands of miles of underground pipelines.

KEEPING THE LIGHTS ON: House Republican leaders think they'll have enough votes from their caucus alone to pass a two-week, stopgap spending package to keep the lights on this week, Pro Budget & Appropriations Brief reports. But a warning signal went up Friday as the Florida and Texas delegations (that's 63 people for those counting at home) threatened to withhold

support unless they get a more generous disaster aid package. That threat didn't appear to refer directly to the two-week bill currently under consideration, but shows how much power the two delegations could exert on the spending debates going forward.

Even amid the now-routine House hiccups over the short-term package, Senate Majority Leader Mitch McConnell coolly predicted his chamber "will pass it before the end of this week."

Green groups launch new push: Ahead of the funding deadline, a collection of environmental and public health groups are unveiling a new website today highlighting local stories of the importance of environmental protections and what budget cuts could mean for health and safety. That comes as Mike Mikulka, president of the largest union for EPA Region 5 employees, warned a government shutdown would "create an unprecedented emergency for human health and our environment."

And a dozen environmental and union groups are sending a letter to congressional leaders calling for a disaster supplemental package that is "robust, funds recovery and rebuilding efforts in a way that results in stronger and more resilient communities." Link here.

Oh and ICYMI: House Republicans, including Ryan, weighed stripping House Appropriations Chairman Rodney Frelinghuysen of his gavel after the long-time New Jersey Republican voted against their tax bill, POLITICO's Rachael Bade and John Bresnahan report.

AMERICA FIRST FOR SOLAR PLAN: The Solar Energy Industries Association this morning rolls out its plan for Trump that it argues would keep America First and, at its core, reiterates the group's push against any tariffs or quotas on imported solar equipment. SEIA argues imposing tariffs represents a "bailout" for two foreign-owned companies that are exploiting U.S. trade law and would be a "bad deal for America." One idea floated in the plan is an import license fee that the group says would "get hundreds of millions of dollars in direct investment help to U.S. companies and our economy." They'll roll the whole thing out at 9:15 a.m. at the National Press Club.

DOT PUTS THE BRAKES ON ECP MANDATE: DOT Monday rescinded the mandate for trains carrying crude oil and ethanol to be equipped with electronically controlled pneumatic brakes, with the understanding that such brakes would reduce the risk of derailment in cases of emergency. The 2014 FAST Act ordered a scientific evaluation of ECP brake performance in emergencies, with a requirement for a final decision on the rule's fate by Monday - the two-year anniversary of the law's passage. The scientific study was inconclusive, and a GAO study found that DOT didn't have enough data to make a call. But a DOT analysis in October found that the costs outweighed the benefits of an ECP mandate by a factor of three. Commerce Committee Chairman John Thune praised the repeal decision. "Repealing this rule puts sound science and careful study ... over flawed guesswork," he said in a statement.

MOVING MORE NOMINATIONS: The Senate Energy and Natural Resources Commitee takes up the nominations of Timothy R. Petty to be Interior assistant secretary for water and science and Linda Capuano to run the Energy Information Administration today at 10 a.m. Watch here.

LAWSUIT ROUNDUP! SUIT FILED OVER MISSED SMOG DEADLINES: Ten environmental and public health groups filed a lawsuit Monday over a missed Oct. 1 statutory deadline for EPA to say which parts of the U.S. were meeting the 2015 ozone standard, Pro's Alex Guillén reports. A coalition of Democratic attorneys general is also expected to sue EPA soon.

Interior appeals loss in methane rule stay suit: The Interior Department said Monday evening it will appeal a federal judge's October ruling that said its delay of the Obama administration's methane waste rule was illegal. The judge said the Bureau of Land Management should have gone through notice-and-comment rulemaking to delay the rule since it had already taken effect. Interior proposed an 18-month delay and took public comments into November. It is unclear when that delay will be finalized. Interior's appeal will go to the 9th Circuit.

Are you new here? A lawsuit challenging EPA's delay of a regulation limiting power plants' toxic wastewater discharge was transferred from an Obama appointee to newly confirmed Judge Dabney L. Friedrich on Monday, Pro's Alex Guillén reports. Environmental advocates originally filed the case in May, and in September EPA finalized the delay of certain implementation deadlines.

ANOTHER HIRE AT EPA: Clint Woods, the head of an association that represents conservative state air agencies, will become the deputy assistant administrator of EPA's air office, Pro's Emily Holden reports. Woods is executive director of the Association of Air Pollution Control Agencies. He previously worked for the energy and environment subpanel of the House Science Committee and for the American Legislative Exchange Council. He'll begin his new job at EPA in mid-December.

NEW EPA PUSH ON PFAS: EPA announced Monday it was launching a cross-agency effort to address PFAS contamination around the country that will include identifying a set of near-term actions it can take to help local communities. No details were given though. You'll remember that concerns over PFAS contamination in North Carolina waterways were one of the major concerns for that state's senators in deciding they couldn't support Michael Dourson's nomination to run the agency's chemical office.

MUSICAL CHAIRS AT E&C: Mississippi Rep. Gregg Harper takes over as chairman of the Energy and Commerce Oversight and Investigations Subcommittee, Chairman Greg Walden announced Monday. Also of interest to ME readers: South Carolina Rep. Jeff Duncan joins both the Energy and Environment subcommittees.

PERRY'S IN UAE! Energy Secretary Rick Perry's swing through the Middle East next takes him to Abu Dhabi in the United Arab Emirates, where he'll co-chair the Carbon Sequestration Leadership Forum along with UAE Minister of Energy Suhail Mohamed Al Mazroui. Agenda here . The visit comes after he inked a memorandum of understanding with Saudi Arabia during his trip there to increase research and collaboration on carbon capture technologies. "This MOU outlines a future alliance not only in supercritical carbon dioxide, but also in a range of clean fossil fuels and carbon management opportunities," Perry said in a statement.

Also, guys, he's having the best time! Check out these pictures of Perry with his feet in the sand, shopping and doing other fun looking things here.

TAKE A GLANCE! The American Council for Capital Formation is out with a report today blaming the struggles of the California Public Employees' Retirement System, the nation's largest public pension fund, in part on investments in "certain political causes and issues at the expense of doing what's necessary to improve fund performance." It argues prioritizing environmental, social and governance investments frequently comes "at the expense of other investments more likely to optimize returns."

FOR YOUR VIEWING PLEASURE: Vice President Al Gore is hosting The Climate Reality Project's seventh-annual 24 Hours of Reality through 6:30 p.m. today with people like California Gov. Jerry Brown, San Juan Mayor Carmen Yulín Cruz, Mariah Carey, Sheryl Crow, Ellie Goulding and others talking up the importance of climate action and activism. Watch online here and a schedule of speakers is here.

STREAMLINING UTILITY SUSTAINABILITY REPORTING: The Edison Electric Institute announced Monday a pilot template that it said would help utilities more consistently provide investors with sustainability and other similar information. Utilities participating in the pilot project will begin using the template as they report 2016 information in the coming weeks.

LIGHTER CLICK! Pruitt tweeted out scenes from what seemed like a lovely holiday party in his office. Check them out here.

Subject: America needs to step up the military to keep China at bay

Dear Colleagues:

I'm writing to share my latest essay in *The Hill*, " America needs to step up the military to keep China at bay." China has engaged in a vast, ambitious military modernization program, even as almost all other countries have slowed their defense spending. One oft-overlooked aspect is China's emphasis on informational and psychological warfare as part of its "three warfares" strategy. I argue that Washington must reverse its military decline and develop ways to counter China's attempts to "win without fighting."

As always, I look forward to your comments and feedback.

Best,

Dan Blumenthal
Director of Asian Studies and Resident Fellow

Subject: POLITICO's Women Rule Summit begins

At a moment of far-reaching change in politics and policy, women are more politically engaged than ever before - and yet remain vastly under-represented at every level of local, state, national and corporate decision-making.

At this year's Women Rule Summit, POLITICO is bringing together female leaders from the public and private sectors for a frank and forward-looking discussion about what it will take for women to finally break through.

Who are the women shaping our future - and what are their agendas? Where can women find common ground at a time of division? How are women taking their place at the table in the public and private sectors - and what difference can they make there?

Subject: BREAKING NEWS: NRSC staffers resign after digital break-in

Two fundraising staffers for the National Republican Senatorial Committee who broke into the computer servers of the House GOP campaign arm resigned late last week, Republican sources told POLITICO.

The staffers, Laura Kleffner and Krista Madaio, had previously worked at the National Republican Congressional Committee. Three Republican sources said last week that the NRSC aides used their old NRCC passwords to collect information on more than 200,000 donors. The digital break-in infuriated NRCC officials when they became aware of it in October.

The NRSC declined to comment.

Subject: POLITICO Investigation: The Environmental Scandal in Scott Pruitt's Backyard

Tar Creek, Oklahoma, is an uninhabitable toxic wasteland. The best hope for residents was a program engineered by Senator Jim Inhofe and state politicians to help them move elsewhere. But when residents sued over alleged wrongdoing, and the state auditor investigated, President Donald Trump's EPA Chief Scott Pruitt, as Oklahoma attorney general, kept the audit from being made public. Now, residents are demanding its release and a public-interest group is suing to get it out.

California Officials Upbeat On ZEVs Despite Likely Failure On Sales Goals

California energy and air regulators are painting a rosy picture for the future of zero-emission vehicle (ZEV) sales in the state, despite acknowledging that the total number of ZEVs in operation by 2025 likely will not meet Gov. Jerry Brown's (D) 1.5 million target, and the number in 2030 will fall well short of the state air board's 4.2 million goal.

District Court Rejects Refiners' Suit Aiming To Shift RFS 'Obligation' Point

A federal district court in Texas has rejected refiner Valero's suit aiming to force EPA to shift the renewable fuel standard's (RFS) "point of obligation" compliance mandate from refiners to fuel blenders, saying the court cannot compel the agency to assess the change by a "date certain" -- a decision other courts weighing similar suits might adopt.

API Touts Voluntary Methane Reduction Effort But Hedges On EPA Rules

The oil and gas sector's main trade association, the American Petroleum Institute (API), is touting its new voluntary program for members to reduce emissions of the potent greenhouse gas methane from onshore production facilities, though officials are hedging on the role of EPA rules on the issue, which the Trump administration is seeking to roll back.

Summaries

AIR
Massachusetts SIP/Logan Airport Parking Freeze
AIR

Proposed rule of the EPA would approve a revision to the Massachusetts SIP to increase the total number of commercial parking spaces allowed in the Logan Airport Parking Freeze Area by 5,000 parking spaces. The revision is intended to reduce carbon monoxide and nitrogen oxide emissions by reducing vehicle miles traveled resulting from insufficient available parking. Comments are due Jan. 4, 2018. Contact: Anne McWilliams; EPA Region 1, Air Quality Planning Unit; 617-918-1697; mcwilliams.anne@epa.gov. Citations: 40 CFR 52

82 FR 57415 (12/05/2017)

Regulatory Update

AIR
New York SIP/Cross-State Air Pollution Rule
AIR

Final rule of the EPA conditionally approves portions of revisions to the New York SIP regarding Cross-State Air Pollution Rule (CSAPR) federal trading programs. The revisions replace default allowance allocations of the federal trading programs for annual nitrogen oxide (NOx) and sulfur dioxide emissions for the state's large electric generating units for the control periods in 2017 and beyond with state-determined allocations. The revisions leave the corresponding CSAPR federal implementation plans and all other provisions of the trading programs in place. No action is being taken on the proposed revision addressing NOx ozone season emissions. The approval is conditioned on the state correcting certain regulatory deficiencies by Dec. 29, 2017. The rule is effective Dec. 5, 2017. Contact: Kenneth Fradkin; EPA Region 2, Air Programs Branch; 212-637-3702; fradkin.kenneth@epa.gov. Citations: 40 CFR 52.38, 52.39, 52.1670

Regulatory Update

AIR
West Virginia SIP/2015 Ozone NAAQS
AIR

Notice of the EPA announces the withdrawal of an Oct. 16, 2017, direct final rule (82 FR 47981) that would have approved revisions to the West Virginia SIP to incorporate the 2015 ozone NAAQS. The revisions address the 2015 ozone monitoring reference and equivalent methods pertaining to fine particulate matter, carbon monoxide, and course particulate matter. The revisions also update the ozone monitoring season, the federal reference and equivalent methods, and the photochemical assessment monitoring stations network. In addition, the revisions replace a reference to the "West Virginia Department of Environmental Protection" with the "Division of Air Quality." The withdrawal is in response to adverse comments. The agency will proceed with a final rule based on the related proposed rule (82 FR 48033; 10/16/2017). The withdrawal is effective Dec. 5, 2017. Contact: Joseph Schulingkamp; EPA Region 3; 215-814-2021; schulingkamp.joseph@epa.gov. Citations: 40 CFR 52.2520

82 FR 57362 (12/05/2017)

Regulatory Update

AIR
West Virginia SIP/Source-Specific Emissions Control
AIR

Proposed rule of the EPA would approve revisions to the West Virginia SIP concerning source-specific SIP requirements to achieve various NAAQS. The revisions remove source-specific requirements relating to the following five sources in Brooke, Hancock, and Marshall counties, that have permanently ceased operation: Columbian Chemicals Co., Follansbee Steel Corp., International Mill Service Inc., Mountaineer Carbon Co., and Standard Lafarge. Comments are due Jan. 4, 2018. Contact: Irene Shandruk; EPA, 215-814-2166; shandruk.irene@epa.gov. Citations: 40 CFR 52, Subpart XX

Categorization of Investigational Device Exemption Devices for Coverage Decisions
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the availability of a guidance regarding categorization of investigational device exemption (IDE) devices to assist the CMS with coverage decisions. The guidance updates current policy on categorization of IDE devices to support CMS in Medicare coverage determinations and implements a Dec. 2, 2015, memorandum of understanding that describes the efficient categorization of investigational medical devices. Comments may be submitted any time. Contact: Owen Faris; FDA, Center for Devices and Radiological Health; 301-796-6356

82 FR 57460 (12/05/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Continuous Release Reporting Regulation
GENERAL ENVIRONMENT AND SAFETY

Notice of the EPA announces the submission of a continuing information collection request to the OMB regarding the reporting and recordkeeping requirements for compliance with the continuous release reporting regulation under CERCLA Section 103. The collection modifies the current approved collection (72 FR 55197, 09/28/2007) by adding the farms sector and associated burden and costs for release reporting. Farms may use the continuous release reporting option to report air releases of hazardous substances from animal wastes, rather than provide notification on a per-occurrence basis. Comments are due Dec. 15, 2017. Contact: Sicy Jacob; EPA, Office of Emergency Management; 202-564-8019; jacob.sicy@epa.gov. Citations: 40 CFR 302.8

GENERAL ENVIRONMENT AND SAFETY
Louisiana/TransCameron Pipeline and Calcasieu Pass Terminal Projects
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the availability of the environmental review schedule for the TransCameron Pipeline Project and the Calcasieu Pass Terminal Project, both in Cameron Parish, La. The projects, proposed by TransCameron Pipeline LLC and Venture Global Calcasieu Pass LLC, include construction and operation of nine single-mixed refrigerant liquefaction blocks, two liquid natural gas (LNG) storage tanks, a 720 megawatt electric generating plant, a marine terminal consisting of a turning basin and LNG carrier berths, LNG piping, transfer lines, and loading facilities. The projects also consist of 23.4 miles of 42-inch-diameter pipeline, one meter station, three mainline valves, one pig launcher, and one pig receiver. The system would provide 10 million tonnes of LNG annually. The issuance of the environmental assessment is scheduled for July 3, 2018, and the 90-day federal authorization decision is due Oct. 1, 2018. GENERAL ENVIRONMENT AND SAFETY

Pennsylvania/FM100 Modernization Project
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of FERC to prepare an environmental assessment for the FM100 Modernization Project in Cameron, Clearfield, Elk, McKean, and Potter counties in Pennsylvania. The project, proposed by National Fuel Gas Supply Corp., of Williamsville, N.Y., would involve abandonment of existing lines FM100 and FM120 and the Costello Compressor Station. The project also would include installation of new natural gas pipeline; a new compressor station; a natural gas pipeline loop; and interconnects, valves, and metering. The project would disturb approximately 369 acres of land during the construction phase, and National Fuel would maintain about 188 acres for permanent operation of project facilities. Comments are due Dec. 29, 2017. Contact: FERC, Office of External Affairs; 866-208-3372; FercOnlineSupport@ferc.gov

Now or never for the Chinese economy

December 2017

Derek Scissors

Key points

- **China has fundamental economic challenges, featuring sharp resource constraints, a rapidly aging workforce, and a terrible recent record of debt accumulation. These indicate a process of stagnation, not the continued GDP growth Beijing will of course report.**
- **China needs to return to the pro-market reform of 1978–2002, which was abandoned by 2009. Rural land ownership rights and less protection of state-owned enterprises are the key elements.**
- **Greatly improved rural education and systemic financial deleveraging would also improve China's prospects.**
- **If Xi Jinping declines to start pro-market reform now, there is little prospect for China to become rich. By the time he is expected to fade from the scene in 2027, the population will have aged further, and China will likely still be wasting resources on state firms.**

Subject: Volkswagen Senior Manager Sentenced to 84 Months in Prison for Role in Conspiracy to Cheat U.S. Emissions Tests

Volkswagen Senior Manager Sentenced to 84 Months in Prison for Role in Conspiracy to Cheat U.S. Emissions Tests

WASHINGTON (December 6, 2017) - The former general manager of Volkswagen AG's (VW) U.S. Environment and Engineering Office was sentenced today 84 months in prison for his role in VW's scheme to sell diesel "clean diesel" vehicles containing software designed to cheat U.S. emissions tests.

Acting Assistant Attorney General John P. Cronan of the Justice Department's Criminal Division, Deputy Assistant Attorney General Jean E. Williams of the Justice Department's Environment and Natural Resources Division, Acting U.S. Attorney Daniel L. Lemisch of the Eastern District of Michigan, Special Agent in Charge David P. Gelios of FBI's Detroit Field Office and Acting Assistant Administrator Larry Starfield, for the Environmental Protection Agency (EPA)'s Office of Enforcement and Compliance Assurance made the announcement.

Oliver Schmidt, 48, a citizen and resident of Germany, was sentenced by U.S. District Judge Sean F. Cox of the Eastern District of Michigan, who also ordered Schmidt to pay a criminal penalty of $400,000. Schmidt pleaded guilty on Aug. 4 to one count of conspiracy to defraud the United States, to commit wire fraud and to violate the Clean Air Act, and to one count of violating the Clean Air Act.

"Upon learning of Volkswagen's massive scheme to defraud and mislead U.S. consumers and regulators, Oliver Schmidt chose to join the conspiracy and deceive U.S. regulators," said Acting Assistant Attorney General Cronan. "This case, along with the prior prosecution of the company and another Volkswagen engineer, further demonstrate the Criminal Division's unwavering commitment to hold both corporations and individuals accountable for their wrongdoing."

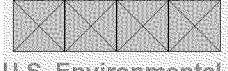
"Oliver Schmidt cheated the American people, and today's sentencing shows that such behavior will be prosecuted to the fullest extent of the law," said Deputy Assistant Attorney General Williams. "The Department of Justice and its partner agencies will continue to work together to ensure a level playing field for all competitors and a cleaner environment for all Americans."

"This sentence reflects how seriously we take environmental crime," said Acting U.S. Attorney Lemisch. "Protecting natural resources is a priority of this office. Corporations, and individuals acting on behalf of corporations, will be brought to justice for harming our environment."

"Americans expect corporations to follow laws and regulations designed to protect consumers and the environment," said FBI Special Agent in Charge Gelios. "The sentence of Mr. Schmidt demonstrates the Department of Justice's commitment to hold companies that defraud their customers both personally, as well as, corporately accountable for their crimes."

"As this case demonstrates, EPA is committed to ensuring a level playing field for companies that follow the rules and pursuing individuals whose actions create an unfair competitive advantage for

their employer," said EPA Acting Assistant Administrator Starfield.



In connection with his guilty plea, Schmidt admitted that he agreed with VW employees to mislead and defraud the United States and domestic customers who purchased diesel vehicles, and to violate the Clean Air Act. Schmidt first learned during the summer of 2015 that certain VW diesel vehicle models contained a defeat device, or software that detected the difference between when the car was undergoing standard U.S. emissions testing and when it was being driven under normal conditions on the road. If the vehicle recognized that it was not being tested, many of its emissions control systems were significantly reduced, resulting in NOx emissions that were sometimes 30 times higher than U.S. standards. Schmidt admitted to participating in discussions with other VW employees in the summer of 2015 on how to coordinate responses to questions from U.S. regulators about VW's diesel vehicles without admitting to the defeat device contained in vehicles. On the instructions of management, Schmidt met with U.S. regulators twice in August 2015 and attempted to obtain approval for the sale of additional VW diesel vehicles without disclosing what he knew was the truth – that the real reason for the high emissions on the road was that VW had intentionally installed software designed to cheat emissions testing.

Schmidt further admitted that he knew during his participation in the conspiracy that the VW "clean diesel" vehicles were being marketed to the public as being environmentally friendly and promoting increased fuel economy while complying with U.S. environmental regulations. Schmidt knew that VW's diesel vehicles were not compliant with U.S. standards and regulations and that these representations made to domestic customers were false, he admitted.

As part of his guilty plea, Schmidt agreed that during his participation in the scheme, he and his co-conspirators caused losses to victims of more than $150 million and that he obstructed justice.

The FBI's Detroit Field Office and the EPA's Criminal Investigation Division are investigating the case, with assistance from U.S. Immigration and Customs Enforcement's Homeland Security Investigations. Securities and Financial Fraud Unit Chief Benjamin D. Singer and Trial Attorney David M. Fuhr of the Criminal Division's Fraud Section, Senior Trial Attorney Jennifer Blackwell of the Environment and Natural Resources Division's Environmental Crimes Section and White Collar Chief John K. Neal of the U.S. Attorney's Office for the Eastern District of Michigan are prosecuting the case.

What you need to know to start your day.

Disasters and Superfund Sites • Clean Air Bills Moving • EPA to Get Earful at Hearing

By Chuck McCutcheon

Senators will talk today about toxic waste sites and what to do after natural disasters inflict damage on them.

The Senate Environment and Public Works' subcommittee on Superfund and waste management will look not only at the impact on toxic-waste sites from the recent hurricanes in the southeastern U.S., but also how California's record-setting wildfires affected toxic sites.

California Sen. Kamala Harris, the top Democrat on the subcommittee, told David Schultz she'll be highlighting the need for greater accountability at Superfund sites from both the EPA and the companies that are responsible for dumping waste on them. But South Dakota GOP Sen. Mike Rounds, the subcommittee chairman, emphasized he wants to avoid a "gotcha" hearing, in which lawmakers seek only to make federal officials look bad.

The problem of natural disasters affecting Superfund sites predates this year's hurricane and wildfire season. In 2011, floods caused by Hurricane Irene threatened berms for benzene-laden lagoons at a New Jersey Superfund site, requiring reinforcement of the structures to withstand similar floods.

It's a productive day for the House Energy and Commerce Committee, which will mark up seven bills for eventual House floor action.

Four of those bills are meant to relax clean air rules for industry. One throws a lifeline to plants powered by coal waste that can't conform to EPA's mercury rule; another extends the date by which brick makers have to control hazardous air pollution from their kilns.

A third clean-air bill gives manufacturers three more years before their heaters have to meet more stringent emissions standards under the Clean Air Act. A final one excludes cars made or modified for racing from being regulated as motor vehicles

under the Clean Air Act. Stephen Lee is tracking.

The EPA is likely to get an earful from all sides today when it discusses at a public meeting how it's changed its reviews of new chemicals following changes Congress made last year to the primary U.S. chemicals law.

Chemical manufacturers remain frustrated with how long it takes the EPA to review chemicals they'd like to bring to market. Meanwhile, environmental and health advocates are frustrated the agency isn't being more rigorous or transparent. Steve Gibb is covering.

Other Stories We're Covering

- The Senate's environment committee holds a hearing on the nomination of R.D. James, an engineer for the Mississippi River Commission, to lead the Army Corps of Engineers. David Schultz is covering.
- The U.S. Trade Representative holds a hearing on a pending solar panel trade case. The International Trade Commission in September decided that the sola industry is being hurt by cheap solar panel imports, recommending that President Trump take action.
- A host of agencies are expected to meet Dec. 13 at Energy Department-sponsored talks to discuss plans for the future of Puerto Rico's storm-ravaged electricity grid, Deputy Energy Secretary Mark Menezes tells Rebecca Kern. Likely participants include FEMA, the Army Corps of Engineers, New York Power Authority, Puerto Rico Electric Power Authority, and the Energy Department's national labs.

Pope Francis appears with Cardinal Peter Turkson at the Vatican in November 2016.
Photographer: Vincenzo Pinto/AFP/Getty Images

Quote of the Day

"America First. America can be first, only you have to ask the question of who must be number two? What does it take for one to be first and for another one to be number two?"
—Cardinal Peter Turkson, who led the drafting of Pope Francis's 2015 encyclical letter on climate change and the environment, in calling for the European Union or China to fill the void left by the U.S. after President Trump's decision to pull the country out of the Paris Agreement.

Around the Web

- FERC Acting Chairman Neil Chatterjee has gotten into a spat with actor/environmental activist James Cromwell, known for his roles in "Babe" and "L.A. Confidential," following Cromwell's participation in recent pipeline protests. Cromwell's criticism of Chatterjee and FERC led Chatterjee to refer to

the actor as a "C-list movie star," then—following further barbs from the actor—posted "Come at me bro!" above a screenshot on Cromwell's Facebook page.
- The Texas county that's home to Houston has adopted regulations that will, for the first time in two decades, increase the amount that new homes must be elevated to avoid floodwaters.
- Rhode Island's Sheldon Whitehouse and six other Senate Democrats want Congress' watchdog arm to analyze the social cost of carbon—an influential figure used to weigh the value of efforts that reduce greenhouse gas emissions—after Trump administration agencies used lower values in a recent regulatory analysis.

Today's Events

- **10 a.m. • Endangered Fish** • House Natural Resources panel holds hearing on a bill to extend endangered fish recovery programs.
- **12:30 p.m. • Agriculture/Environment** • American Enterprise Institute sponsors talk with agricultural economists on conservation programs, Renewable Fuel Standard, and Clean Water Rule.
- **3 p.m. • Water Infrastructure** • Democratic Reps. Dan Kildee of Michigan and Elizabeth Esty of Connecticut will host a discussion on water infrastructure at the Capitol as part of Kildee's "Future of America's Cities and Towns" initiative.
- **All Day • Electricity** • gridCONNEXT conference brings together business, utility, and policymakers to explore topics affecting the electricity grid at the national, regional, state, and local levels. Scheduled speakers include Alaska GOP Sen. Lisa Murkowski, chairman of the Senate's energy committee, and Bruce Walker, assistant energy secretary for electricity delivery and energy reliability.

California

AIR
Greenhouse Gas Emissions Reporting/Crude Oil and Natural Gas Facilities
California AIR

Final rule of the California Air Resources Board amends regulations under 17 CCR 95673 regarding greenhouse gas emissions reporting requirements for crude oil and natural gas facilities. The rule revises an email address that may be used for reporting required information. The change without regulatory effect was filed Nov. 20, 2017. Contact: Bradley Bechtold; CARB; 916-322-6533

—State Publication Date: 12/01/2017. Citations: Title 17 CCR Section 95673 (amended)

Regulatory Update

AIR
Mobile Automotive Repair Advertising
California AIR

Final rule of the Department of Consumer Affairs, Bureau of Automotive Repair, amends and adopts regulations under 17 CCR 3351 and 3371 to establish registration, advertising, and other standards for automotive repair dealers that engage in the business of mobile automotive repair and that do not operate a currently registered place of business where the diagnosis or repair of motor vehicles is performed. The rule is effective Nov. 16, 2017. Contact: Brian Clark; DCA; 916-403-8560; brian.clark@dca.ca.gov

—State Publication Date: 12/01/2017. Citations: Title 16 CCR Section 3371.1 (amended); Title 16 CCR Sections 3351.7.1, 3351.7.2, 3351.7.3 (new)

Regulatory Update

HAZARDOUS MATERIALS TRANSPORTATION

Inhalation Hazard Shipments/Routes and Stopping Places
California HAZARDOUS MATERIALS TRANSPORTATION

Final rule of the California Highway Patrol amends regulations under 13 CCR 1157.21 regarding routes and stopping places for inhalation hazard shipments. The rule adds one safe stopping place and updates information on business names, access, services, and hours for five stopping places. The rule is effective Jan. 1, 2018. Contact: Tian-Ting Shih; CHP, Commercial Vehicle Section; 916-843-3400

—State Publication Date: 12/01/2017. Citations: Title 13 CCR Section 1157.21 (amended)

Regulatory Update

HAZARDOUS MATERIALS TRANSPORTATION
Motor Carrier Safety/Modified Limousine Buses
California HAZARDOUS MATERIALS TRANSPORTATION

Proposed rule of the California Highway Patrol would amend and adopt regulations under 13 CCR 1212.5, 1218, 1231, 1239, and 1264 to establish requirements for a modified limousine terminal inspection program. The rule also would establish a terminal inspection fee based on carrier fleet size. In addition, the rule would apply certain requirements regarding maximum driving and on-duty time, fueling restrictions, commercial vehicle safety out-of-service criteria, and passenger compartment signaling devices to modified limousines. The proposal currently is in effect as an emergency rule, expiring Jan. 30, 2018. Hearing requests are due Jan. 2, 2018. Comments are due Jan. 15, 2018. Contact: Joseph Mosinski; CHP; 916-843-3400; cvsregs@chp.ca.gov

—State Publication Date: 12/01/2017. Citations: Title 13 CCR Section 1231.3 (new); Title 13 CCR Sections 1212.5, 1218, 1239, 1264 (amended)

Regulatory Update

HAZARDOUS MATERIALS TRANSPORTATION
Motor Carrier Safety/Modified Limousines
California HAZARDOUS MATERIALS TRANSPORTATION

Proposed rule of the California Highway Patrol would amend and adopt regulations under 13 CCR 1201 through 1269 (nonconsecutive) regarding modified limousine safety. The rule would add a definition of "modified limousine" and clarify requirements regarding the location, size, marking, latching, maintenance, inspection, and operability requirements for push-out side window emergency exits. The rule also would set forth requirements for passenger doors, emergency exit maintenance, and fire extinguishers. The proposal currently is in effect as an emergency rule, expiring Jan. 30, 2018. Hearing requests are due Jan. 2, 2018. Comments are due Jan. 15, 2018. Contact: Joseph Mosinski; CHP; 916-843-3400; cvsregs@chp.ca.gov

—State Publication Date: 12/01/2017. Citations: Title 13 CCR Section 1267.1 (new); Title 13 CCR Sections 1201, 1217, 1232, 1242, 1268, 1269 (amended)

Regulatory Update

SOLID WASTE
Division of Recycling/Reasonable Financial Return Calculation

California SOLID WASTE

Emergency rule of the Department of Resources Recycling and Recovery amends regulations under 14 CCR 2975 to establish fixed reasonable financial returns for urban and rural recycling centers for the 2018 calendar year. The rule establishes a rate of return of 11.5 percent of the statewide average allowable costs generally and a rate of 16.6 percent of such costs for recycling centers in rural regions. The rule is effective on Nov. 16, 2017, and expires May 16, 2018. Contact: Adam Tauber; DRRR; 916-323-6888; Adam.Tauber@CalRecycle.ca.gov

—State Publication Date: 12/01/2017. Citations: Title 14 CCR Section 2975 (amended)

Regulatory Update

TOXIC SUBSTANCES
Reference Exposure Levels/Hexamethylene Diisocyanate, Toluene
California TOXIC SUBSTANCES

Notice of the Office of Environmental Health Hazard Assessment announces the availability of documents summarizing the toxicity and derivation of draft reference exposure levels for hexamethylene diisocyanate (HDI) (CAS. No. 822-06-0) and toluene (CAS No. 108-88-3). HDI is primarily used as a hardener for automobile and airplane polyurethane spray paints, and toluene is produced in petroleum refining and coke oven operations and in automobile emissions. The reference exposure limits are airborne concentrations of a chemical that are not anticipated to result in adverse noncancer health effects for specified exposure durations in the general population, including sensitive subpopulations. Following the comment period, the documents, with any revisions by OEHHA, will be peer reviewed by the state's Scientific Review Panel on Toxic Air Contaminants. Workshops are scheduled for Jan. 8 and 10, 2018, in Sacramento and Diamond Bar, respectively. Comments are due Jan. 30, 2018. Contact: John Budroe; OEHHA; 510-622-3145; John.Budroe@oehha.ca.gov

—State Publication Date: 12/01/2017.

Regulatory Update

TOXIC SUBSTANCES
Safe Drinking Water and Toxic Enforcement Act/Clear and Reasonable Warnings
California TOXIC SUBSTANCES

Final rule of the Office of Environmental Health Hazard Assessment amends regulations under 27 CCR 25600.1 through 25607.13 (nonconsecutive) regarding clear and reasonable warnings under the Safe Drinking Water and Toxic Enforcement Act (Proposition 65). The rule clarifies requirements established under a Sept. 9, 2016, final rule that expanded right-to-know provisions and provided specific guidance on the content of safe harbor warnings for a variety of exposure situations and corresponding methods for providing such warnings, effective Aug. 30, 2018. The rule revises definitions; clarifies the required format and location of product labels; and clarifies specific exposure warning requirements for restaurant food and beverages, prescription drugs and emergency medical and dental care, furniture products, diesel engines, and vehicles. The rule is effective Aug. 30, 2018. Contact: Monet Vela; OEHHA; 916-323-2517; monet.vela@oehha.ca.gov

—State Publication Date: 12/01/2017. Citations: Title 27 CCR Sections 25600.1 to 25607.13 (non seq) (amended)

Regulatory Update

WATER
Drinking Water Operator Certification, Fees
California WATER

Emergency rule of the State Water Resources Control Board amends and adopts regulations under 22 CCR 63750.80 and 63850 regarding the Drinking Water Operator Certification Program. The rule adds a definition of "State Water Board" and revises the operator examination and certification fee schedules. The rule is effective Nov. 16, 2017. Contact: Alice Webber; SWRCB; 916-449-5642; alice.webber@waterboards.ca.gov

—State Publication Date: 12/01/2017. Citations: Title 22 CCR Section 63750.80 (new); Title 22 CCR Section 63850 (amended)

Regulatory Update

WATER
Use of Coastal and Estuarine Waters for Power Plant Cooling
California WATER

Final rule of the State Water Resources Control Board amends regulations under 23 CCR 2922 to incorporate revisions to the statewide water quality control policy on the use of coastal and estuarine waters for power plant cooling (Resolution 2017-0047). The policy establishes uniform technology-based standards to implement Section 316 of the Clean Water Act, which requires that the location, design, construction, and capacity of cooling water intake structures use the best technology available for minimizing adverse environmental impact. The revisions extend a compliance deadline for Encina Power Station Units 2 to 5 by one year to Dec. 31, 2018. The rule is effective Nov. 20, 2017. Contact: Maria de la Paz Carpio-Obeso; SWRCB; 916-341-5858

—State Publication Date: 12/01/2017. Citations: Title 23 CCR Section 2922 (amended)

Regulatory Update

WATER
Wastewater Operator Certification, Fees
California WATER

Emergency rule of the State Water Resources Control Board amends regulations under 23 CCR 3682, 3702, and 3717 regarding wastewater treatment plant classification, operator certification, and contract operator registration. The rule changes the certification renewal period from two years to three years and reduces various operator, provisional operator, and operator-in-training fees. The rule is effective Nov. 16, 2017. Contact: Wes Wilkinson; SWRCB; 916-341-5131; wes.wilkinson@waterboards.ca.gov

—State Publication Date: 12/01/2017. OCCUPATIONAL SAFETY AND HEALTH
General Industry Safety and Health Standards/Powered Platforms for Building Maintenance
Michigan OCCUPATIONAL SAFETY AND HEALTH

Proposed rule of the Department of Licensing and Regulatory Affairs, Director's Office, would amend, adopt, and rescind regulations under MAC 408.10501 through .10592 (nonconsecutive) regarding general industry safety and health standards for powered platforms for building maintenance (Part 5). The rule would align provisions with federal standards under 29 CFR 1910, Subpart D. The rule also would revise the chapter title from scaffolds and clarify that the requirements apply to powered platform installations permanently dedicated to interior or exterior building maintenance but not temporary suspended scaffolds or swinging scaffolds. In addition, the rule would add and revise definitions, update incorporated standards, address inspections and tests, and add mandatory requirements for existing installations. A comment due date is not specified. Contact: Daniel Dykstra; DLRA; 517-284-7734; dykstrad@michigan.gov

Nevada

GENERAL ENVIRONMENT AND SAFETY
Dissolved Mineral Resource Exploration
Nevada GENERAL ENVIRONMENT AND SAFETY

Notice of the Commission on Mineral Resources announces changes to a Nov. 21, 2017, proposed rule to adopt regulations under NAC 534B to establish requirements and fees for dissolved mineral resource exploration. The rule would establish application requirements and procedures and set a $1,000 fee for a two-year permit to drill an exploration well. The rule also would establish responsibilities for exploration borehole and well drillers at a drilling site. In addition, the rule would restrict drilling below 3,000 feet, require continuous temperature monitoring, require plugging of an exploration borehole within 60 days, and require specific sealing for a borehole in which an artesian condition is discovered. Finally, the rule would require the use of and recordkeeping for blowout prevention equipment and water monitoring equipment, require public reporting of certain information, and specify penalties for violations. The changes clarify that if drilling does not commence within 60 days of the approval of a notice of intent to drill, a new notice of intent must be submitted, and specify that dissolved mineral resource exploration well monthly reports are to be submitted to the Division of Minerals. Contact: CMR; 775-684-7040; ndom@minerals.nv.gov

—State Publication Date: 11/30/2017. Citations: NAC 534B (amended)

Regulatory Update

WATER
Water Controls/Water Quality Standards
Nevada WATER

Notice of the State Environmental Commission announces additional changes to a June 23, 2016, proposed rule to amend regulations under NAC 445A regarding water quality standards to conform with EPA numeric criteria for Escherichia coli bacteria for protection of water contact recreation beneficial use. The rule would change the existing reference period from annual geometric mean (AGM) to geometric mean (GM) for all waters that have an existing AGM; replace the unit of measurement from most probable number (MPN) per 100 milliliter (mL) with colony-forming-units (CFU) per 100 mL; and remove existing single value (SV) criteria of 235 MPN, 298 MPN and 576 MPN and replaces with a SV of 410 CFU. The rule also would explain frequency and duration limits of the GM and SV criteria and add a definition of "colony-forming-units." The changes specify that the number of E. coli bacteria present in a sample of water may be determined and reported by counting the colony-forming units in the sample or through the use of a statistical testing method to determine the most probable number of bacteria in the sample. WATER
Water Controls/Water Quality Standards
Nevada WATER

Notice of the State Environmental Commission announces additional changes to a Sept. 23, 2016, proposed rule to amend regulations under NAC 445A regarding water quality standards (WQS). The rule would revise the WQS tables to establish numeric criteria for alkalinity, color, and turbidity based on current EPA standards; to remove references to the 95th percentile for total dissolved solids beneficial use numeric criteria; and to remove references to "X" in the beneficial use columns for secondary uses. The rule also would remove references to "natural conditions" and "no adverse effects," reformat how nitrogen species are presented in the WQS tables, and specify the criteria for toxic materials. In addition, the rule would move the ammonia standards tables so they occur after standards applicability discussions and beneficial uses. The changes update the referenced version of the Water Quality Standards for Salinity, Colorado River System, to 2017. Contact: Valerie King; SEC; 775-687-9374

AIR
Clean Fuels Program
Oregon AIR

Final rule of the Department of Environmental Quality amends, adopts, and repeals regulations under OAR 340-253 regarding the Clean Fuels Program. The rule adds provisions concerning a credit clearance market to serve as a cost containment mechanism in place of the monthly fuel price deferral. The rule also updates provisions concerning electricity as a transportation fuel, adds electricity used for certain public transit applications to the program, and reclassifies renewable hydrocarbon diesel as a regulated fuel. In addition, the rule restricts the transfer of the compliance obligation for large importers of finished fuels for in-state transactions below the rack, adds market monitoring and enforcement provisions, and revises provisions concerning the emergency fuel supply deferral to include the ability to respond to credit market disruptions. The rule is effective Nov. 17, 2017. Contact: Emil Hnidey; DEQ; 503-229-5946; hnidey.emil@deq.state.or.us

GENERAL ENVIRONMENT AND SAFETY
Energy, Waste Disposal Facility Site Certificates
Oregon GENERAL ENVIRONMENT AND SAFETY

Notice of the Department of Energy, Energy Facility Siting Council, announces corrections to a Nov. 1, 2017, final rule that amended regulations under OAR 345-021, -022, -027, and -050 regarding the structural, geologic, and seismic issues and hazards the council considers when issuing site certificates or amendments to site certificates for energy facilities and waste disposal facilities. The rule clarified relationship and consultation requirements between applicants and the Department of Geology and Mineral Industries. The rule also added factors for applicants to consider in their assessments and explanations of how they will design, engineer, construct, and operate a facility to avoid related issues and hazards. Such factors include the environment, resiliency, rapid recovery, future climate conditions, and tsunami hazards. The corrections replace language under OAR 345-027 concerning site certificates that was inadvertently omitted. The corrections are effective Nov. 20, 2017. Contact: Jason Sierman; DOE, Energy Facility Siting Council; 503-378-4040; jason.sierman@oregon.gov

WATER
Clean Water State Revolving Fund
Oregon WATER

Final rule of the Department of Environmental Quality amends regulations under OAR 340-054 to align clean water state revolving fund provisions with federal law. The rule expands eligible land purchase costs for treatment works construction projects, defines eligible recipients for additional subsidization, and incorporates federal requirements for procuring architectural and engineering contracts. The rule also extends the period for applicants to remain on the program's intended use plan, establishes criteria for refinancing and restructuring loans, extends the time frame for borrowers to request the first loan disbursement, and requires a 30-day prepayment notification from borrowers that intend to prepay a loan. In addition, the rule provides eligible borrowers an alternate subsidy equivalent to principal forgiveness, establishes a principal forgiveness calculation for eligible green projects based on the cost of the components, and deletes expired bond purchase language. The rule is effective Nov. 7, 2017. Contact: Meyer Goldstein; DEQ; 503-229-6478; Goldstein.Meyer@deq.state.or.us

Subject: Republicans divided over taking up tax extenders this year

By Brian Faler

12/06/2017 05:40 PM EDT

Republican leaders are divided over whether to take up a second tax-cut bill this year.

Senate Republicans want to move legislation reviving a rump group of tax "extenders," separate from their more sweeping plan to rewrite the code.

But the House's top tax writer isn't so sure.

"I don't like the extenders," said House Ways and Means Chairman Kevin Brady (R-Texas). "It's horrible policy and process."

"No decision yet," he added, saying lawmakers need to talk it over.

His comments came after Sen. John Thune, the chamber's No. 3 Republican, said today lawmakers will revive biodiesel, geothermal and other energy-related breaks along with other "cats and dogs," including a tax credit to maintain short-line railroads.

Thirty-four temporary tax provisions expired at the end of last year, including 16 energy ones, and lawmakers are now facing demands to revive them. Some want to attach the provisions to funding legislation needed to keep the government open H.J. Res. 123 (115).

Many Republicans had sworn off the "extender" ritual after a 2015 tax agreement made many of the breaks permanent while giving others what lawmakers said was one final extension — which, for some, ended last year.

Putting together an extender bill, even as lawmakers negotiate a final compromise on their tax-overhaul plans, is likely to test tax writers' bandwidth.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

December 6, 2017

Latest News

EPA Enforcement Letter May Signal Weaker Oversight Of States' Programs

Former EPA employees fear that a recent Region 7 letter to Missouri saying agency officials will reduce oversight of the state's enforcement efforts could signal a broader administration push to weaken oversight of states with delegated authority on environmental programs, including enforcement and reviews of state-issued federal permits.

EPA Claims Broad Discretion To Reject Suits Targeting State NPDES Powers

EPA is defending its decision to work with Alabama on improving the state's Clean Water Act (CWA) permitting program rather than revoking the state's authority to issue discharge permits as environmentalists had sought, arguing the CWA provides broad discretion in how to respond to such petitions and that requiring automatic withdrawal proceedings is contrary to cooperative federalism.

API Touts Voluntary Methane Reduction Effort But Hedges On EPA Rules

The oil and gas sector's main trade association, the American Petroleum Institute (API), is touting its new voluntary program for members to reduce emissions of the potent greenhouse gas methane from onshore production facilities, though officials are hedging on the role of EPA rules on the issue, which the Trump administration is seeking to roll back.

District Court Rejects Refiner's Suit Aiming To Shift RFS 'Obligation' Point

A federal district court in Texas has rejected refiner Valero's suit aiming to force EPA to shift the renewable fuel standard's (RFS) “point of obligation” compliance mandate from refiners to fuel blenders, saying the court cannot compel the agency to assess the change by a “date certain” -- a decision other courts weighing similar suits might adopt.

Staff Urge Changes To Risk Assessment Division In OPPT Reorganization

Staff in EPA's toxics office, which senior officials are reorganizing to better implement

the reformed Toxic Substances Control Act (TSCA), are urging managers to also reorganize the Risk Assessment Division (RAD) as part of the effort, saying any failure to tap the RAD for overhaul would hobble TSCA implementation.

Daily Feed

AAPCA's Woods joins EPA as air office deputy

Clint Woods will leave the state air group to join EPA as a deputy to air chief William Wehrum.

Environmentalists' ELG suit transferred to Trump judge

The decision to transfer the case to a newly confirmed district judge could potentially delay a ruling on whether to dismiss environmentalists' lawsuit.

FOIA suits seek Pruitt's schedule, speeches

Environmentalists and the *New York Times* file separate suits seeking information about Pruitt's meetings and his speeches.

POTWs urge high court to enforce CWA 'blending' ruling

The Wet Weather Partnership says EPA has effectively ignored an appellate ruling that barred it from banning wastewater “blending” through Clean Water Act permits.

Ewire: API launches voluntary methane reduction program

In today's Ewire: Nearly all member companies with onshore operations are set to join the American Petroleum Institute's voluntary methane program. Plus: DOJ courts climate scientists.

Environmentalists' suit aims to compel ozone designations

Environmentalists are seeking to force EPA to issue all ozone area designations for its 2015 standard, ahead of likely similar suits from states.

ALEC slated to vote on divisive measure urging EPA to scrap GHG finding

The group of conservative state legislators is facing an internal “civil war” over the draft resolution, which is backed by hard-line conservatives even as some industry groups shy away from it.

Subject: Today on Climate Beat

December 6, 2017

Today on Climate Beat . . .

. . . we headed West, where EPA says it will host three additional public hearings on its proposal to repeal the Obama-era Clean Power Plan greenhouse gas rule, with the events to be held in San Francisco, Gillette, WY, and Kansas City, MO.

In Congress, seven Democratic senators are urging the Government Accountability Office to analyze several aspects of the Obama-era social cost of carbon metric for estimating climate change-related damages, arguing the review is necessary because the Trump administration has directed agencies not to use the tool when crafting climate rules.

Speaking of Congress, two House Energy & Commerce subcommittees are planning a joint hearing next week on vehicle fuel economy and greenhouse gas standards, a forum likely to showcase auto industry calls to relax EPA's GHG standards and also highlight pending legislation to "harmonize" the EPA and Department of Transportation (DOT) vehicle programs.

Staying in that committee, EPA's Inspector General is agreeing with a call by Rep. Frank Pallone (D-NJ), the top Democrat the energy panel, to launch an investigation into an April meeting in which EPA Administrator Scott Pruitt visited the National Mining Association and reportedly urged the group to support withdrawing from the Paris climate deal.

And our daily news roundup looked at a brewing showdown over a pending American Legislative Exchange Council resolution urging EPA to scrap its greenhouse gas endangerment finding, including news that ExxonMobil is opposing the measure.

Driving the Day

JUST POSTED -- AP'S JOSH LEDERMAN: "Doctors identify brain abnormalities in Cuba attack patients": "Doctors treating the U.S. Embassy victims of mysterious, invisible attacks in Cuba have discovered brain abnormalities as they search for clues to explain the hearing, vision, balance and memory damage, The Associated Press has learned.

"It's the most specific finding to date about physical damage, showing that whatever it was that harmed the Americans, it led to perceptible changes in their brains. The finding is also one of several factors fueling growing skepticism that some kind of sonic weapon was involved." http://bit.ly/2Ay35S2

Good Wednesday morning. REMEMBER: The government shuts down Friday. Neither chamber of Congress will have a government funding bill on the floor today -- the House delayed its funding vote until Thursday. Congressional leaders go to the White House tomorrow. Rep. Al Green, Democrat from Texas, says he will force a vote on impeaching **PRESIDENT DONALD TRUMP** today. Watch that vote. It could be a tough one for some Democrats. House Republicans are expected to be united in opposition.

-- STEVEN SHEPARD, with the latest POLITICO/Morning Consult poll: "Sixty-three percent say members of Congress should should avoid a shutdown at all costs. Only 18 percent of voters surveyed say members should allow a temporary government shutdown if it helps them achieve their policy goals. The remaining 19 percent of voters are undecided." http://politi.co/2knFs8r

IN CALIFORNIA -- "Ventura County wildfire rages over 50,000 acres, reaches

Pacific Ocean as it jumps 101 Freeway," by L.A. Times' Ruben Vives, Laura Nelson, Sarah Parvini, Matt Hamilton and Sonali Kohli: "The destructive Thomas fire finally met a fire line it could not jump: the Pacific Ocean. The fast-moving, wind-driven wildfire continued to rage through the city of Ventura on Tuesday evening, jumping Highway 33 and burning through oil fields before crossing the 101 Freeway into Solimar Beach, authorities said.

"The blaze has consumed 50,500 acres on its journey to the ocean. The 101 remains open, but authorities warned drivers to be cautious traveling through the area. Thousands of homes were still threatened by flames, 27,000 people were forced to flee, a firefighter was injured and Gov. Jerry Brown declared a state of emergency, as some 1,100 personnel continued to battle the blaze." http://bit.ly/2BKEOWS

HAPPENING TODAY -- "Trump to recognize Jerusalem as Israel's capital," by Nahal Toosi and Andrew Restuccia: "President Donald Trump will announce Wednesday that the United States recognizes Jerusalem as the capital of Israel and will eventually relocate its embassy there - a declaration that could spur violent protests in the Middle East and undermine the White House's effort to strike a peace deal between Israel and the Palestinians.

"Trump is making the announcement despite criticism from numerous U.S. allies, including France, Jordan and Saudi Arabia, which have urged him to avoid the extremely sensitive topic. The president is still open to the possibility of a two-state solution, and he understands that the final borders of Israel and a future Palestinian state remain subject to negotiations, senior administration officials told reporters Tuesday. Trump will also not declare that Jerusalem must be the 'undivided' capital of Israel, an official told POLITICO." http://politi.co/2jW1FGJ

-- SPOTTED at the Israeli Embassy Hanukkah party last night: Jason Greenblatt, Trump's Middle East negotiator.

-- NYT'S GARDINER HARRIS in **BRUSSELS:** "Secretary of State Rex W. Tillerson's reception in Brussels was distinctly chilly, as disappointment among European diplomats in President Trump's nationalistic tone and insulting messages on Twitter built into quiet fury on the eve of an expected announcement that the United States would recognize Jerusalem as the capital of Israel. Such a move could infuriate the Palestinians, who want East Jerusalem to be their capital in a future Palestinian state. ... 'We believe that any action that would undermine these efforts must absolutely be avoided,' said Federica Mogherini, the European Union's top diplomat. 'A way must be found through negotiations to resolve the status of Jerusalem as a future capital of both states.' ...

"Mr. Tillerson's spokesman, R.C. Hammond, acknowledged the less-than-warm reception. 'Allies have been very frank today in sharing some of their views,' Mr. Hammond said." http://nyti.ms/2AAcbM1

DISSENT -- "VATICAN CITY (AP) - Pope Francis urges status quo for Jerusalem, calls for 'wisdom and prudence' to avoid further conflict." ... **BARAK RAVID (@BarakRavid):** "Chinese foreign ministry: We are concerned by Trump's intention to recognize Jerusalem as the capital of Israel. This decision might lead to an escalation" ... "French president Macron called Jordan King Abdullah to discuss Trump's upcoming speech on Jerusalem. The king told Macron Trump's will have dangerous consequences of security and stability in the region".

-- GLOBE AND MAIL's Michelle Zilio in Ottawa: "A government official told The Globe and Mail on Tuesday that Canada will keep its embassy in Tel Aviv. The official also said Canada still does not recognize Jerusalem as Israel's capital city, despite reports Mr. Trump will declare the U.S. does during a speech on Wednesday." https://tgam.ca/2is7tHJ

-- U.S. AND PHILIPPINES ON THE SAME PAGE: @DanWilliams: "Philippine President Rodrigo Duterte tells Israel he's interested in moving his country's embassy to Jerusalem - @ReshetBet".

-- REUTERS: "Palestinian envoy says U.S. recognition of Jerusalem is 'declaring war'": "'If he says what he is intending to say about Jerusalem being the capital of Israel, it means a kiss of death to the two state solution,' Manuel Hassassian said in a BBC radio interview. 'He is declaring war in the Middle East, he is declaring war against 1.5 billion Muslims (and) hundreds of millions of Christians that are not going to accept the holy shrines to be totally under the hegemony of Israel' Hassassian added." http://reut.rs/2B4tZBY

-- @KhaledAbuToameh: "HAMAS declares Friday a DAY OF RAGE to protest Trump's intention to move US embassy to Jerusalem and calls for confrontations with Israel after Friday prayers."

SHOT -- @joshledermanAP: "Here in Brussels, British Foreign Minister Boris Johnson just called on Trump administration to offer a Mideast peace plan quickly following Trump's #Jerusalem move".

CHASER -- Senior Trump administration official: "The President will reiterate how committed he is to peace. While we understand how some parties might react, we are still working on our plan which is not yet ready. We have time to get it right and see how people feel after this news is processed over the next period of time."

SHELDON ADELSON'S PAPER -- ISRAEL HAYOM FRONT PAGE: "The eyes are on Jerusalem" -- ***Front page, with photo of Trump at the Wailing Wall*** http://bit.ly/2jYPwAZ

TRUMP'S WEDNESDAY -- An 11:30 a.m. cabinet meeting, followed by a 1 p.m. statement on Jerusalem.

AROUND THE TAX HORN ... "'Holy crap': Experts find tax plan riddled with glitches," by Brian Faler: "Republicans' tax-rewrite plans are riddled with bugs, loopholes and other potential problems that could plague lawmakers long after their legislation is signed into law. Some of the provisions could be easily gamed, tax lawyers say. Their plans to cut taxes on 'pass-through' businesses in particular could open broad avenues for tax avoidance.

"Others would have unintended results, like a last-minute decision by the Senate to keep the alternative minimum tax, which was designed to make sure wealthy people and corporations don't escape taxes altogether. For many businesses, that would nullify the value of a hugely popular break for research and development expenses. Some provisions are so vaguely written they leave experts scratching their heads, like a proposal to begin taxing the investment earnings of rich private universities' endowments." http://politi.co/2Ax1ax1

-- "Trump pressuring congressional Republicans to speed up on tax reform," by Nancy Cook and Aaron Lorenzo: "'We want it to proceed as quickly as possible, and we've communicated that to the Hill in a lot of ways,' said Marc Short, White House director of legislative affairs. 'There are not a lot of outstanding issues remaining, and we're not looking to open up Pandora's box.'" http://politi.co/2AcMsw7

THE HOUSE AND SENATE TAX BILLS handle nearly every single issue in a different way. There actually are a lot of outstanding issues remaining. The issues appear to be solvable, according to sources involved in the talks.

-- "California Republicans Push to Preserve Income-Tax Deduction," by WSJ's Rich Rubin and Siobhan Hughes: "Though the House and Senate have voted to repeal the deduction for state income taxes in Republican tax overhaul plans, it isn't dead yet. California Republicans are pushing for an income-tax deduction in the final tax bill being worked out by lawmakers in a House-Senate conference committee on tax legislation. ... California Republicans would like the $10,000 cap to be higher. And they want at a minimum to let taxpayers deduct $10,000 against either property or income taxes, said Rep. Mimi Walters (R-Calif.)." http://on.wsj.com/2k15F9g

-- "Tax Plan Crowns a Big Winner: Trump's Industry," by NYT's Patricia Cohen and Jesse Drucker: http://nyti.ms/2AyTo3r

****** **A message from PhRMA** : A medicine's path from the biopharmaceutical company to the patient involves many entities across the supply chain. A new report examines how money flows through this system - which includes wholesalers, pharmacy benefit managers, pharmacies and insurers - and how that impacts what patients pay at the pharmacy. Read more. http://onphr.ma/2kgd6Nu ******

UP NEXT! ... -- "After Push on Taxes, Republicans Line Up Welfare Revamp Next: Trump and GOP lawmakers ready to kick off fight to overhaul social programs," by WSJ's Louise Radnofsky: "The president didn't offer specifics about which of the dozens

of welfare programs he was seeking to change, or how. But congressional Republicans who have been pushing him for months to pursue the issue have proposed layering tougher work requirements on beneficiaries of programs such as food stamps, which are used by around 43 million Americans, and the cash benefit known as Temporary Assistance for Needy Families, which is received by around 3.5 million people. ...

"A spokesman for Mr. Ryan said the goals for 2018 would be set at a conference retreat in January. But Mr. Jordan, a head of the conservative House Freedom Caucus who often has the ear of the president, has argued in recent weeks that the issue is one of the most winning ones with Mr. Trump's voters and should take center stage next year." http://on.wsj.com/2nxdMzn

-- "Food stamp changes may usher in welfare reform push," by Helena Bottemiller Evich: "USDA signaled on Tuesday plans to give states greater flexibility over how they administer food stamps, potentially opening the door to stricter work requirements or drug testing on recipients. The announcement comes as Wisconsin Gov. Scott Walker announced that he would move ahead with drug testing on able-bodied adults applying for food stamps, something the Obama administration had successfully blocked in the past. The Trump administration is also expected to announced that it would allow states to impose work requirements for Medicaid recipients - moves that anti-poverty advocates see as an assault on the safety net for vulnerable Americans." http://politi.co/2nx5HK

-- BEHIND THE SCENES, there is a lot of trepidation about taking up a massive entitlement overhaul within months of a midterm election that could be bruising for the Republican Party, especially in the House. Welfare reform is something that could deeply divide House Republicans.

NYT'S JONATHAN MARTIN and **MAGGIE HABERMAN: "Trump's Endorsement of Roy Moore Points Up a G.O.P. Problem: Chaos":** "In a departure from every modern White House, Mr. Trump himself largely dictates whom to back and how to support his preferred candidates. Even before tensions between the president and Senate Republicans flared back up over Mr. Moore's candidacy, there was little regular communication between West Wing officials and Republicans overseeing the 2018 races, Republicans say.

"The scheduled meetings between the White House, the Republican National Committee and the House and Senate campaign committees stopped months ago. Congressional officials find it difficult to get presidential signoffs for even small requests like using Mr. Trump's name in direct-mail appeals, according to party officials. And less than a month until the election year begins, he has not scheduled a single fund-raiser for a candidate running for the House, Senate or governor. ...

"Yet the president does not completely understand his role as a principal, Republicans say, and his political operation does not have enough sway with him to make him fully grasp that he is the leader of the Republican Party. For example, he is

still telling his friends who attend high-dollar committee fund-raisers that they do not need to pay, the sort of favoritism that can create endless headaches for staff." http://nyti.ms/2BEzZh2

-- "The RNC's Silent Decision To Back Roy Moore Again - And How It Upset Everyone," by BuzzFeed's Henry J. Gomez and Alexis Levinson: "The [RNC's] renewed support for Roy Moore comes with a peculiar caveat: No one at the RNC is actually defending the decision publicly. The news broke late Monday, via Breitbart, the far-right website that never wavered in its support for Moore, even after accusations that the Alabama Senate candidate dated teenage girls as an adult and made sexual advances on a minor. Moore denies the allegations. RNC officials subsequently confirmed the move to BuzzFeed News and others on the condition that they not be identified in the stories.

"On Tuesday -- as the national party took a beating for the decision -- including from many fellow Republicans, the RNC remained silent. Several RNC committee members acknowledged frustrations but would not speak on the record. Senior party leaders punted questions to spokespersons who declined to comment. 'Oh man,' said a source close to the RNC. 'It's embarrassing.'" http://bzfd.it/2knuDDl

-- "Bannon welcomes Moore back to the GOP fold at Alabama rally," by Kevin Robillard in Fairhope, Alabama: "Roy Moore is fully back in the Republican fold, and Steve Bannon was here to greet him. Moore, the GOP Senate candidate to replace Attorney General Jeff Sessions, has faced multiple accusations of predatory sexual behavior aimed at young women and girls. (Moore has denied the allegations.) The NRSC, RNC and a slew of elected officials pulled their support.

"Bannon held firm, and now President Donald Trump, the RNC and the GOP base are all back with the twice-ousted former Chief Justice of the Alabama Supreme Court. At a rally here in a barn at Oak Hollow Farm, in an affluent suburb on the eastern shore of the Mobile Bay, Bannon, Moore and a host of other staunch backers of the president took turns taking shots at the media, the GOP establishment, and Moore's Democratic opponent, former U.S. Attorney Doug Jones. The rally here was a replay of a rally Bannon and a host of other conservative figures held for Moore on the eve of the September runoff." http://politi.co/2knvJyX

COMING ATTRACTIONS -- "Congress to Grill Trump's Data Guru and His Longtime Assistant," by The Daily Beast's Betsy Woodruff: "Alexander Nix, the data guru who offered to help Julian Assange distribute Hillary Clinton's emails, is scheduled to testify before the House intelligence committee on Dec. 14, according to a source familiar with the committee's interview schedule. The committee is also scheduled to interview Rhona Graff, Trump's longtime personal assistant, on Dec. 22. Rob Goldstone-the music publicist who helped arrange the notorious June 2016 Trump Tower meeting between Jared Kushner, Paul Manafort, Donald Trump Jr., and Kremlin-linked Russian operatives-offered to send information on the meeting to Trump himself through Graff." http://thebea.st/2Aww8W7

-- "Donald Trump Jr. asked Russian lawyer for info on Clinton Foundation," by NBC News' Ken Dilanian and Natasha Lebedeva: "Donald Trump Jr. asked a Russian lawyer at the June 2016 Trump Tower meeting whether she had evidence of illegal donations to the Clinton Foundation, the lawyer told the Senate Judiciary Committee in answers to written questions obtained exclusively by NBC News.

"The lawyer, Natalia Veselnitskaya, told the committee that she didn't have any such evidence, and that she believes Trump misunderstood the nature of the meeting after receiving emails from a music promoter promising incriminating information on Hillary Clinton, Donald Trump's Democratic opponent. Once it became apparent that she did not have meaningful information about Clinton, Trump seemed to lose interest, Veselnitskaya said, and the meeting petered out." http://nbcnews.to/2krExnm

-- JOSH MEYER: "Investigators probe European travel of Trump associates": "Several people close to then-candidate Trump visited Europe during and after the campaign, including his son Donald Trump Jr., Trump lawyer Michael Cohen and foreign policy advisers Carter Page, George Papadopoulos and Jeffrey Gordon. Their known destinations include London, Paris, Budapest and Athens. But their explanations of those trips have not always been forthcoming, and some congressional investigators find their stories suspect." http://politi.co/2jkgEuy

THE JUICE...

-- DANIELLE BURR of Peck Madigan Jones is joining Uber as its new head of federal affairs.

--HOT TICKET -- STEVE BANNON, NEWT GINGRICH, LAWRENCE KADISH and **ED ROGERS** are hosting a book launch party for Corey Lewandowski and Dave Bossie's new book "Let Trump Be Trump" tomorrow night from 6 to 8 p.m. at the Trump hotel. ***See the invite*** http://politi.co/2irQ2aa

THE RESISTANCE -- "Consumer Bureau's New Leader Steers a Sudden Reversal," by NYT's Jessica Silver-Greenberg and Stacy Cowley: "Some employees, including a few of the bureau's top officials, have welcomed their new leader. Others, pointing to [Mick] Mulvaney's earlier hostility toward the agency and its mission, are quietly resisting. One small group calls itself 'Dumbledore's Army,' according to two of the people who were familiar with their discussions. The name is a reference to a secret resistance force in the 'Harry Potter' books. An atmosphere of intense anxiety has taken hold, several employees said. In some cases, conversations between staff that used to take place by phone or text now happen almost exclusively in person or through encrypted messaging apps." http://nyti.ms/2zQKAEV

BIG WEINSTEIN PIECE -- NYT'S MEGAN TWOHEY, JODI KANTOR, SUSAN DOMINUS, JIM RUTENBERG and **STEVE EDER: "Weinstein's Complicity Machine:** The producer Harvey Weinstein relied on powerful relationships across industries to provide him with cover as accusations of sexual misconduct piled up for decades": "A master of leverage, Mr. Weinstein parlayed his films into relationships across the worlds of entertainment, politics, publishing and beyond, achieving a stature that at times proved useful in intimidating others and protecting himself. 'I know the president of the United States. Who do you know?' Mr. Weinstein, a Democratic fund-raiser, would say during the years Barack Obama was in the White House, adding expletives. 'I'm Harvey Weinstein,' he used to say. 'You know what I can do.'

"In late September, emails show, he was discussing a documentary television show he was working on with Hillary Clinton. He had long raised campaign cash for her, and her feminist credentials helped burnish his image -- even though Tina Brown, the magazine editor, and Lena Dunham, the writer and actress, each say they had cautioned Mrs. Clinton's aides about his treatment of women. Now, Mr. Weinstein

exchanged questions about distribution rights for the show. 'I am hopeful we can get a good price for this,' Robert Barnett, Mrs. Clinton's lawyer, replied. ...

"In 2016, Lena Dunham, the writer and actress, said she was troubled by the producer's visible presence during Mrs. Clinton's presidential run, hosting fund-raisers and appearing at campaign events. She had heard stories, both directly and secondhand from other actresses, about disturbing encounters with him, she said. So in March last year, Ms. Dunham, a vocal Clinton supporter, said she warned the campaign." http://nyti.ms/2AwCrsD

MEDIAWATCH -- "Behind the Murdochs' Sale Talks: Scale, Price and Family Dynamics," by WSJ's Amol Sharma, Joe Flint and Keach Hagey: "[T]he power-sharing arrangement instituted by Mr. Murdoch, 86 years old, in 2015 with the elevation of his sons, James and Lachlan, has faced stresses. The power-sharing setup made James Murdoch, 44, the chief executive of 21st Century Fox. Lachlan Murdoch, 46, is co-executive chairman of the company alongside his father and is viewed as the first among equals. At times, James has felt like a CEO in title only, according to some people who know him. These people say James was never keen about the setup, is ready for a new chapter in his career and has sometimes been on a different page from his father and brother. Despite having stepped down as CEO, the elder Mr. Murdoch has deepened his involvement in Fox, partly because he took the helm at Fox News last year to stabilize the network in the wake of a sexual-harassment scandal." http://on.wsj.com/2AWxA4l

-- SCOOPLET -- FOREIGN POLICY MAGAZINE was planning on including **SEN. AL FRANKEN** (D-Minn.) on its annual "Global Thinkers" list that was released this week. But they took him off the list when the sexual harassment allegations surfaced. A magazine spokeswoman told us: "[W]e were planning to make him an awardee but removed him from the list when we heard of his inappropriate behavior." Franken's office did not reply to a request for comment. ***The list*** http://atfp.co/2AyyBNA

Is Trump Planning to Distract from His Tax Bill by Causing a Government Shutdown?

By Tom Jawetz, Sam Berger, and Miguel Rodriguez

In the early morning hours of Saturday, December 2, Senate leadership rammed through its tax bill, the final version of which had been drafted just a few hours earlier, on a party-line vote. The bill was a plutocrat's dream: massive tax cuts for the wealthy and corporations paid for by increases in middle-class taxes and cuts to middle-class health care. As his base realizes just how bad this bill is for them, Trump's already low approval ratings are likely to crater even further. **President Trump's response to this issue is apparently to try to change the conversation, and he may have settled on forcing a funding showdown as his best option.**

His latest plan appears to be to precipitate a shutdown fight by violating the deal he struck to address the problems caused by ending the Deferred Action for Childhood Arrivals (DACA) program. Due to Trump's reckless cancellation of DACA, nearly 800,000 young people who have lived in the United States since childhood soon will be at risk of detention and deportation. As Trump plays fast and loose with causing a government shutdown, it's important that Congress stand strong and hold the president to his promises.

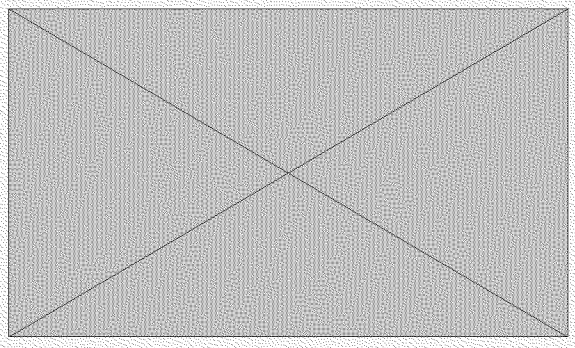
Subject: AEI Today: How hot air hurts school reform

Usually, we claim to have little use for people who are all talk.

AEI's daily publication of independent research, insightful analysis, and scholarly debate

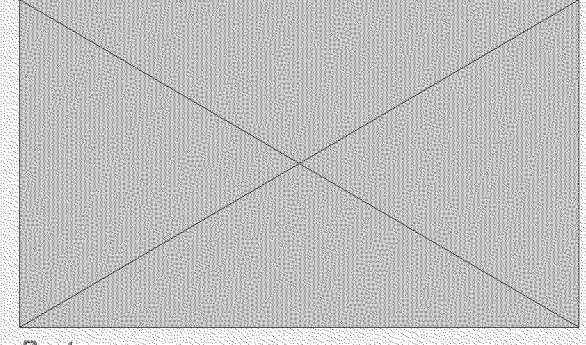


Twenty20

How hot air hurts school reform

Frederick M. Hess | Education Next

Usually, we claim to have little use for people who are all talk. We mock second-guessers and those Monday-morning quarterbacks who tell others what they should have done. We as a society are impressed by people who create or rebuild things. Whether talking about fixing a car or teaching algebra, what matters is taking responsibility for a task and then doing it well. Unfortunately, Rick Hess fears education reform is more and more the province of talkers and second-guessers.

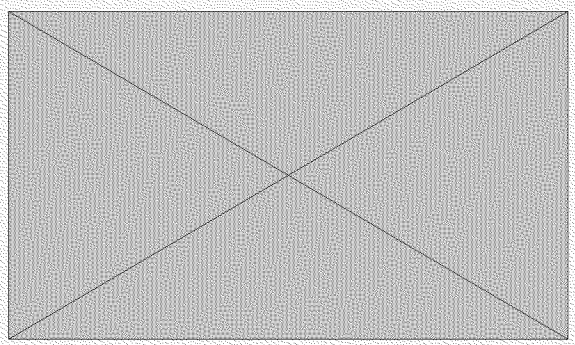


Reuters

After Saleh, what's next for Yemen?

Maher Farrukh and Katherine Zimmerman | Critical Threats

Ali Abdullah Saleh's death is a turning point for Yemen's civil war. Saleh was one of the most powerful figures in Yemen, and his influence permeated Yemeni institutions. It will certainly lead to the fragmentation of the alliance between Saleh's network and the Iranian-backed al Houthi movement. It will likely generate additional fracturing in Yemen's already-kaleidoscopic civil war. It requires a deep reexamination of US, Saudi, and Emirati policies in Yemen.



Reuters

The Constitution

doesn't allow prosecution, only impeachment

John Yoo and Saikrishna Prakesh | The New York Times

A wayward tweet has set off renewed accusations that President Trump obstructed justice. The known facts are too weak to support any federal prosecution. But even if President Trump did illegally conspire to improve relations with Russia, his critics are pursuing their quarry down the wrong path. Impeachment — not criminal prosecution — is the tool for a corrupt sitting president.

Twenty20

To spur homeownership, stop subsidizing it

Edward J. Pinto | The Wall Street Journal

Tax reform could make housing more affordable. Done correctly, it could increase the supply of homes by reducing federal tax subsidies for homeownership. The House's Tax Cuts and Jobs Act furthers this aim in several ways — by raising the standard deduction, capping new loans qualifying for the mortgage-interest deduction at $500,000, eliminating the deduction on loans for second homes and the deduction on cashing

out home equity, and capping the property-tax deduction at $10,000.

Subject: POLITICO's Morning Score: Red-state Democrats stay away from GOP tax bill — Trump moves to block Romney Senate run — Latino Victory Fund endorses

By Daniel Strauss | 12/04/2017 10:00 AM EDT

With Scott Bland

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

TAXATION WITHOUT... - "Red-state Democrats stay away from GOP tax bill" by Campaign Pro's Kevin Robillard: "When Republicans began their push for tax reform earlier this year, they had hopes of wooing multiple Senate Democrats to back their plan: 10 of them faced reelection in states President Trump won, five in states he won by more than 20 points. But those dreams were dashed by the bill's unpopularity in public polling and the inclusion of measures no Democrat was willing to vote for. None of the Democrats voted for the plan on Friday night. But the GOP still thinks it can make them pay in 2018. ... According to a Democrat tracking media buys, Republican groups have spent about $6 million on ads promoting the plan, double the $3 million Democrats have spent attacking it. The state with the most action was Wisconsin. There, the Koch Bros.-backed Freedom Partners Action Fund spent $1.6 million blasting Baldwin for supporting tax increases in the past and not supporting tax reform. Senate Majority PAC responded with its own six-figure buy to defend the Wisconsinite." **Full story**.

DAILY ROLL TIDE - "McConnell on Moore: 'I'm going to let the people of Alabama make the call'" by Robillard: "Senate Majority Leader Mitch McConnell on Sunday shifted his tone on allowing Alabama GOP Senate candidate Roy Moore to serve in the Senate if elected. ... 'I'm going to let the people of Alabama make the call,' McConnell said on ABC's 'This Week.' He said he thought the Senate Ethics Committee would handle the allegations against Moore if he is elected: 'The ethics committee will have to consider the matters that have been litigated in the campaign should that particular candidate win.'" **Full story.**

- A CBS poll released Sunday found Moore leading Jones 49 percent to 43 percent. A Washington Post poll released Saturday, however, showed Jones leading Moore 50 percent to 47 percent.

- "Is Roy Moore winning? Don't ask the pollsters" by Politico's Steven Shepard: "The reality? No one really has a clue about where things stand with Alabama voters in the Dec. 12 special election. For all the national attention and the millions of dollars spent to win the seat, there's relatively little public polling in the contest. Only three public surveys in the average have been conducted since the Thanksgiving holiday, and odds are you've never heard of two of the three pollsters." **Full story.**

SEXUAL HARASSMENT IN CONGRESS - Freshman Democrat Ruben Kihuen accused by former campaign staffer, via BuzzFeed's Kate Nocera and Tarini Parti: "Samantha, whose last name BuzzFeed News is withholding at her request, began working for Rep. Ruben Kihuen early in his campaign to unseat Republican Rep. Cresent Hardy in December 2015 and quit by April 2016. Starting in February of that year, Samantha, who was 25 at the time, said Kihuen, who was then 35 and still competing in the primary race, propositioned her for dates and sex despite her repeated rejections. On two occasions, she says he touched her thighs without consent. ... After this story was published, the congressman's office sent out a new statement adding that he wanted to 'make it clear that I don't recall any of the circumstances' described by Samantha. ... DCCC chairman Ben Ray Luján called on Kihuen to resign." **Full story.**

- More from POLITICO's Heather Caygle and Elena Schneider: House Minority Leader Nancy Pelosi and Minority Whip Steny Hoyer also called on Kihuen to resign. Lucy Flores, a former state legislative colleague and primary rival of Kihuen's in 2016, said: "Even though he maintained a girlfriend, he was known to be very flirtatious and hands on. I personally witnessed him being grabby with young, attractive women. ... I can certainly confirm that was the reputation he maintained [in the state Legislature]." **Full story.**

- Flores also blistered ex-Sen. Harry Reid and the Culinary Union on Twitter for aiding Kihuen's rise: "You can thank @SenatorReid and his cronies for making sure the powers including @Culinary226 aligned behind his choice. He's got a terrible track record of male political mentees, BTW."

- IN FARENTHOLD'S TX-27 - Potential primary challenger steps forward: "It is a sad day when an elected official uses taxpayer money to settle a claim of sexual harassment," said Texas Water Development Board Chairman Bech Bruun in a statement, via the Texas Tribune. "I am humbled by the numerous calls I have received today and during the past weeks asking me to run for U.S. Congress to help restore voters' faith in our national leadership. ... I anticipate announcing my intentions next week." The filing deadline for Texas' primaries is Dec. 11.

Days until the 2018 election: 336

Thanks for joining us! You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com, dstrauss@politico.com and mseverns@politico.com.

THE PLAYBOOK POWER LIST: 18 TO WATCH IN 2018: The final Playbook Power List of the year highlights 18 politicians, activists and operatives across the country who are poised to make waves in 2018. From the anti-Trump "Resistance" on the left to the far right Bannonite wing trying to remake the GOP, keep an eye on these people over the next 12 months. Click HERE to find out who made the list.

LEADERSHIP CHANGE - Washington Gov. Jay Inslee is poised to take over the

chairmanship of the Democratic Governors Association today. Here's a DGA video hailing the beginning of Inslee's chairmanship.

GO SOUTHWEST - "Latino Victory Fund endorses in Southwest governor races" by Robillard: "Latino Victory Fund is backing Rep. Michelle Lujan Grisham of New Mexico and David Garcia of Arizona in its first gubernatorial endorsements of the cycle. ... Garcia and Grisham are the two most prominent Latino candidates for governor in 2018. Garcia is competing with state Sen. Steve Farley for the Democratic nomination to challenge GOP Gov. Doug Ducey. Grisham is competing with state Sen. Joe Cervantes and businessman Jeff Apodaca, the son of former Gov. Jerry Apodaca. GOP Gov. Susana Martinez is term-limited. If Grisham wins, she would become the first Democratic Latina governor in the history of the United States." **Full story.** <<

LEVIN RETIREMENT - "U.S. Rep. Sander Levin will retire from Congress when term ends next year" by The Detroit Free Press's Kathleen Gray: "After 35 years in Congress, U.S. Rep. Sandy Levin , D-Royal Oak, has decided it's time for a different adventure. The 86-year-old Democrat will not run for reelection in 2018, but will instead join the University of Michigan's Gerald R. Ford School of Public Policy, where he will continue to work on issues that have engrossed him in Congress, such as health care and trade issues. ... Levin is leaving after three decades of doing everything from fighting to make sure Social Security isn't privatized to securing a bailout for the domestic auto industry and overseeing the passage of the Affordable Care Act as the chairman of the powerful tax-writing Ways and Means committee." **Full story.**

12-DIMENSIONAL CHESS - "Trump moves to block Romney from the Senate" by POLITICO's Alex Isenstadt: "Donald Trump is going all out to persuade seven-term Utah Sen. Orrin Hatch to seek reelection - a push aimed in no small part at keeping the president's longtime nemesis, Mitt Romney, out of the Senate. ... Trump is slated to ride [to Utah today] with Hatch both ways on Air Force One - a total of roughly nine hours round-trip. After descending from the plane together, the two will meet with Mormon leaders and then head to the state capitol for the signing of the executive order, according to three White House officials. Hatch will introduce Trump, who in turn is expected to lavish praise on the senator. After the order is signed, Hatch is expected to receive the president's pen." **Full story.**

- "Steve Bannon mulls Orrin Hatch endorsement to block Mitt Romney" by The Washington Examiner's David Drucker: "Steve Bannon is mulling an endorsement of Sen. Orrin Hatch in his bid to keep Mitt Romney out of the Senate, a source close to President Trump's former chief strategist confirmed on Sunday. Bannon is targeting Republican incumbents in 2018 primaries to undermine support for Senate Majority Leader Mitch McConnell, R-Ky. Hatch, a McConnell loyalist and a fixture of Washington and the Republican establishment for more than 40 years, is not Bannon's ideal choice. ... "If Steve had a choice between Orrin Hatch and Mitt Romney, he would pick Hatch 10 times out of 10," the source close to Bannon told the Washington Examiner." **Full story**.

STAFFING UP - "Former White House southeast political director running Tennessee Senate campaign" by Campaign Pro's Daniel Strauss and Daniel Lippman: "Thomas

Midanek, formerly the White House southeast regional political director, has left the Trump administration and joined former Tennessee Rep. Stephen Fincher's Senate campaign as campaign manager. A source familiar with Midanek's thinking said he left the White House because he 'wanted to get back into the campaign world.' Midanek confirmed the new job but declined to comment further. ... Fincher is one of a handful of Republicans running in the Tennessee Republican primary for Sen. Bob Corker's Senate seat. His most high profile opponent in the primary is Rep. Marsha Blackburn." **Full story**.

QUOTE OF THE DAY: "And we'll swear in whoever's elected and see where we are at that particular point." - Senate Majority Leader Mitch McConnell during an interview on "Face the Nation" on Sunday responding to a question about what to do about Roy Moore.

Subject: Morning Energy: Senior Republicans feeling upbeat on ANWR's chances — Pruitt's unusual Thursday congressional appearance — Zinke recommends shrinking two more monuments

By Anthony Adragna | 12/06/2017 05:42 AM EDT

With help from Emily Holden, Catherine Boudreau and Eric Wolff

ODDS LOOKING GOOD FOR ANWR: Senior House Republicans said Tuesday they were optimistic a provision opening the Arctic National Wildlife Refuge to oil and gas drilling would make it into Congress' final tax package, even as a handful of their colleagues expressed unease. "I've been asking for ANWR for a long, long time," said Natural Resources Chairman Rob Bishop, who is on the conference committee sorting out the differences between the House and Senate bills. "And so have most rational people. I expect it to be part of the final product." Alaska Republican Rep. Don Young, also a conferee, said he was "feeling pretty good" about the provision's chances of making it through conference.

Alaska Sen. Dan Sullivan summed up the state of play over ANWR: "You don't want to jinx it and we're going to continue to work hard, but we're confident and we're going to have good representation on the conference." Senate Energy Chairman Lisa Murkowski is expected to join Young as a conferee once the Senate votes to go for conference. Sullivan added his vote on the package would be in jeopardy if the ANWR provision doesn't make it into the finished product.

Grassley ready to rumble: Senate Judiciary Chairman Chuck Grassley suggested he'd throw his weight around to alter provisions in the House-passed bill that would change qualification terms for some renewable energy projects and trim the renewable production tax credit. "I would think they'd be embarrassed of even putting it in," he told reporters. "What is there about wind that would cause them to do something that they haven't done for anything else?" Grassley also said changing the tax credits went against a promise he'd received from Treasury Secretary Steven Mnuchin back in January. A coalition of right-of-center clean energy groups sent a letter outlining their own concerns about the House and Senate bills on Tuesday.

Extenders package coming together: Legislation extending expired tax provisions, including short-term tax benefits to promote renewable energy sources like biodiesel and solar power, is expected to come together in the next couple of weeks, Pro Tax's Aaron Lorenzo and Bernie Becker report, citing senior GOP senators. Multiple sources say a package could hitch a ride with an end-of-year government funding agreement. Sens. Johnny Isakson and Tim Scott are advocating to extend a 2020 deadline on tax credits for new nuclear energy projects, while Grassley has pushed a biodiesel credit.

Meanwhile, senior congressional Republicans are drawing a line in the sand by promising they won't grant Democrats concessions in a second short-term spending bill later this month to keep the government open, Pro Budget & Appropriations Brief's Jennifer Scholtes and Sarah Ferris report. "If we pass a bill on or about the 22nd and go home, then the Senate will need to make up its mind about what to do about that," Rep. Hal Rogers said. "The option is either: Pass or have a

shutdown in place."

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and the ClearPath Foundation's Spencer Nelson was first up to identify Joe Barton as the original sponsor of the Energy Policy Act of 2005. For today: What was the *smallest* national monument ever created in the U.S.? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

Legislative Compass - Preferred Pricing for 2017: Test out POLITICO Pro's powerful, easy-to-use tool that simplifies federal and state legislative tracking. **Get started.**

NEVER HEARD OF THIS BEFORE: EPA Administrator Scott Pruitt will only stay for an hour during a Thursday appearance at an Energy and Commerce subcommittee before returning later in the afternoon. "Congressional Republicans need to grow a backbone and stand up to President Trump and the members of his cabinet, like Administrator Pruitt, who have repeatedly ignored any Congressional oversight," ranking member Frank Pallone told ME in a statement. "It's clear that we're simply not going to get any real oversight of the Trump Administration from Congressional Republicans anytime soon." A committee spokesman confirmed the arrangement and said it was to accommodate a meeting at the White House. EPA didn't respond to request for comment.

Context here: ME's never heard of a Cabinet official taking a lengthy break in the middle of a congressional hearing, regardless of the reason. And, remember, this is slated to be Pruitt's first appearance before the Energy and Commerce Committee.

Ahead of the appearance, more than 1,000 scientists asked congressional leaders to question Pruitt about efforts to overhaul the agency's science advisory panels. "Without the best available scientific advice, the EPA will be ill-equipped to tackle emerging environmental and public health challenges, and the American people will suffer," they write.

GOOD DAY, SUNSHINE: TRADE REP TO HEAR SOLAR CASE: The U.S. Trade Representative will hear arguments today at 9:30 a.m. for what kind of tariffs or quotas — if any — the president should impose on imported solar panels. The hearing will likely be a rehash of arguments that were made to the U.S. International Trade Commission before that body proposed its own set of remedies for the damage done to U.S. trade manufacturers by low cost imports.

Trump gets to make the call: The president will ultimately have full latitude to impose penalties on imported solar cells and panels, and the Solar Energy Industries Association is hoping to influence his decision by recasting their arguments against a tariff in Trump's preferred terms. The group rolled out its America First Plan for Solar Energy, saying rejecting tariffs would promote "U.S. energy dominance," help national security and save jobs. Trump must make a decision by Jan. 26.

Republicans urge no tariffs: 35 House and six Senate Republicans sent letters ahead of the hearing urging the Trump administration not to slap tariffs on imported solar equipment.

ZINKE FLOATS SHRINKING MORE MONUMENTS: Interior Secretary Ryan Zinke urged Trump in his 20-page final recommendations to downsize Nevada's Gold Butte and Oregon's Cascade-Siskiyou national monuments, in addition to the drastic scalebacks of Bears Ears and Grand Staircase-Escalante national the president announced Monday. Management plans at half a dozen other monuments would be changed, though their boundaries would not be altered. And Zinke suggests creating three new national monuments: Camp Nelson in Kentucky; Medgar Evers's home in Mississippi; and the Badger II Medicine Area in Zinke's own homestate of Montana.

CITIES RALLY ON CLIMATE: Some 36 U.S. mayors signed an agreement Tuesday vowing to do their part to curb greenhouse gas emissions even as the Trump administration has signaled its intent to leave the Paris agreement. Former President Barack Obama later delivered brief remarks to the gathering in Chicago thanking cities for showing "the kind of leadership that is needed at the moment" and mayors for helping to keep "our word on the world stage." Obama said "cities and states and businesses and universities and nonprofits have emerged as the new face of American leadership on climate change."

MCINTYRE MIA? It's been 34 days since Jones Day attorney Kevin McIntyre was confirmed by the Senate to be a FERC commissioner, and two weeks since he got his signed commission. Commissioners basically get to decide for themselves when they want to get sworn in, so speculation has swirled about why the would-be chairman hasn't shown up for work. McIntyre still has a webpage at Jones Day, which usually is one of the first things to go when a big firm lawyer takes a government job. An out-of-office reply from his work email account said he he would be back on Dec. 14. The White House did not respond to a request for comment, and a FERC spokesman said, "We have nothing on that at this time."

AIN'T NO THING: Grassley is downplaying the significance of the meeting that Sen. Ted Cruz secured with Trump and several Cabinet members on Thursday to discuss biofuels and vehicle fuel-efficiency policy. "The president keeps doing what he told the voters of Iowa, as well as me and Senator [Joni] Ernst , which is supporting ethanol," Grassley told reporters Tuesday, adding that it's not unusual for the president to accept a meeting request from senators. The Iowa Republican also said he thinks Cruz's leverage has diminished since the EPA last week released the rule setting 2018 blending requirements for biofuels — which kept flat the levels for corn ethanol.

SWEET TREAT: Bishop gave Trump a special little treat during his Monday visit to Utah to unveil his monument recommendations: a box of chocolates from a store in his district. "It was cheesy but I thought why not?" he said. "He says he likes chocolates." No word on what Trump thought of the candy, which Bishop said was the store's popular nut roll.

And another gift: At a tax event at the White House on Tuesday, North Dakota state Sen. Jessica Unruh gave Trump a Make Coal Great Again hat as she praised the tax overhaul. "The production tax credit has destroyed the energy market, especially in the Midwest. We don't have a lot of electricity produced from natural gas in North Dakota. So wind production has really eroded our state tax base and replaced coal production when it comes to electricity production," she said. "We're also very thankful for all the regulatory reform we've seen come from your office."

NO NOMINATION VACATION: The Senate Environment and Public Works Committee takes up R.D. James' nomination to run the Army Corps of Engineers this morning at 10 a.m. in Dirksen 406. The nomination earlier this month cleared the Senate Armed Services Committee on a voice vote, though the crowded December to-do list suggests he may not get a floor vote until next year.

In the afternoon, an EPW subcommittee holds a hearing entitled "Challenges Facing Superfund and Waste Cleanup Efforts Following Natural Disasters." Witnesses are from Texas and California alone.

SEE YOU IN COURT (AGAIN): Joining environmental and public health groups, a coalition of 15 Democratic attorneys general sued EPA on Tuesday for missing a key deadline related to implementation of its 2015 ozone standard, Pro's Alex Guillén reports.

MAIL CALL! DON'T TURN THE CAR (STANDARDS) AROUND: At least 22 Democratic senators, led by Ed Markey, Sheldon Whitehouse and Kamala Harris , are sending Pruitt a letter this morning urging him not to weaken emissions standards for model years 2021 through 2025. "Regulated industries should not be able to undermine technically sound standards that have clear environmental and health benefits," they'll say in letter which ME has glimpsed. And their letter comes as the Union of Concerned Scientists releases a new report arguing automakers have for decades repeated a "familiar pattern" of attacking new policies as technologically infeasible.

TAKE A LOOK PLEASE! Seven Democratic senators asked GAO in a letter to examine how the Trump administration developed its lower social cost of carbon figure. In particular, they asked for an examination of how other states and countries created similar measures. Link here.

FIGHTING PARK SERVICE CUTS: The NRDC Action Fund is launching a five-figure, TV ad campaign in Montana today against the Trump administration's proposed cuts to the National Park Service and urging Sen. Jon Tester to continue fighting them. Watch it here.

FOR YOUR RADAR: The American Legislative Exchange Council is meeting today through Friday in Nashville and conservative legislators will weigh a model resolution calling on EPA to review the endangerment finding, which requires regulations to limit greenhouse gas emissions. ALEC members will vote on the proposal Thursday. Exxon

Mobil, a private sector member of ALEC, is opposing the push, particularly because of its language questioning climate science, The Hill reports.

STUDY BUDDIES: E2, former DOE head Ernest Moniz's Energy Futures Initiative and the National Association of State Energy Officials are teaming up on a detailed analysis of energy jobs for every state, including jobs in solar, wind, energy efficiency and clean transportation. The groups expect the report out by Spring 2018.

HOW TO DIGITIZE AN ELECTRIC GRID: The Bipartisan Policy Center released a series of recommendations Tuesday for how to digitize the electric grid. Among their suggestions: Having DOE convene a task force on the issue and including funding for modernizing grid investment as part an infrastructure package. Read the whole report here.

Stories from POLITICO Pro

House tax bill slashes value of wind energy tax credit Back

By Eric Wolff | 11/02/2017 02:20 PM EDT

The House tax bill released Thursday would substantially reduce the value of a key wind energy incentive, tighten requirements on what renewable energy companies have to do to qualify for tax credits, extend a nuclear energy tax break, and restore support for clean energy technologies that had been "orphaned" from an earlier tax extenders law.

The bill also eliminates an electric vehicle tax credit and jettisons some little-used oil industry tax breaks — as well as getting rid of the more significant domestic production tax deduction enjoyed by oil companies and other manufacturers.

The wind industry was quick to condemn the changes to its tax treatment.

"Despite comments to the contrary, this proposal reneges on the tax reform deal that was already agreed to, and would impose a retroactive tax hike on an entire industry," Tom Kiernan, CEO of the American Wind Energy Association, said in a statement. "The House proposal would pull the rug out from under 100,000 U.S. wind workers and 500 American factories, including some of the fastest growing jobs in the country. We expect members of the House and Senate to oppose any proposal that fails to honor that commitment, and we will fight hard to see that wind energy continues to work for

America."

Here are some highlights from the text and a section-by-section summary provided by the Ways and Means committee.

— **PTC cutbacks:** The bill would reduce the value of the Production Tax Credit to 1.5 cents per kilowatt-hour, the level it was set at in 1992, rather than indexing it for inflation. That would reduce its value far beyond the terms of a tax credit phase-out that was implemented with bipartisan support in 2015. Wind farms and other eligible projects that begin construction this year can now claim a 1.9 cents/kWh credit, down from 2.3 cents/kWH for projects that started last year. The credit is scheduled to disappear for projects built after 2019 under current law, a schedule maintained in the House bill.

Developers also would face tougher requirements to claim the credit, the value of which is determined by when construction begins. The House bill requires a "continuous program of construction" until a facility comes online in order to qualify for the credit, eliminating provisions of existing law that allow developers to make "safe harbor" investments to qualify. The Joint Committee on Taxation says eliminating the inflation-adjustment and tightening the construction requirements will save $12.3 billion over 10 years, according to the bill summary.

— **ITC repealed after 2027, orphan credits revived** : The House bill extends the investment tax credit for a set of "orphaned" technologies left out of the 2015 legislation phasing out the ITC and PTC over five years. Fuel cells, small wind turbines, combined heat and power systems and microturbines can now claim the ITC until Jan. 1, 2022, with the credits phasing down at the same rate as the solar ITC. But what was to be a permanent 10 percent tax credit for solar investments will now terminate at the end of 2026. The House bill includes similar "continuous construction" requirements for the ITC as for the PTC. The changes would cost the government $1.2 billion in reduced revenues over 10 years, according to JCT estimates cited in the bill summary.

— **Advanced nuclear tax credit extended:** The bill extends a tax credit for advanced nuclear projects, allowing the secretary of Treasury to transfer unused credits after 2020, which was the in-service deadline under current law. The extension has long been a priority for South Carolina Republican Sens. Lindsey Graham and Tim Scott, among others. The credits would cost $400 million over 10 years.

— **Utilities keep interest deduction**: The bill would change how much loan interest some businesses can deduct form their taxes, while allowing them to take advantage of full expensing of capital investments. However, it excludes regulated utilities from the new rules, providing a win for the industry. Eric Grey, director of government relations for the Edison Electric Institute, a trade group, told POLITICO in September that losing the interest tax deduction was a major concern for utilities. Overall, JCT estimates the deduction-and-expensing changes would save the government $172 billion over 10 years.

— **No more 199:** The House bill would eliminate the domestic manufacturing credit known as section 199. Current law allows certain oil and gas companies to claim a 6 percent tax deduction, and other manufacturers can claim a 9 percent deduction, but the House bill would strip section 199 from the tax code starting next year. Doing so would save $95.2 billion over 10 years.

— **Minor oil credits repealed:** The bill repeals two small oil industry credits that have barely been used because they only kick in when commodity prices are low. Repealing the enhanced oil recovery credit would cost the government about $200 million over 10 years, while eliminating the marginal well production credit would have no effect on revenues.

— **EVs lose credit:** The bill repeals a $7,500 tax credit for electric vehicles. It is part of a slew of tax credits, along with a mortgage credit, and an adoption credit, that the bill proposes repealing. Repealing all of the credits would save $4 billion over 10 years, but the summary does not include a JCT estimate for the electric vehicle credit alone.

— **Biodiesel, CCS missing:** An expired biodiesel blenders credit was not restored, something likely to become an issue in the Senate where Sen. Chuck Grassley wants it revived as a producers credit; and a credit for carbon capture and sequestration did not get in the text, despite having bipartisan support.

Back

Senate tax writers teeing up tax extenders bill Back

By Aaron Lorenzo and Bernie Becker | 12/05/2017 07:23 PM EDT

Leading GOP senators expect legislation to extend expired tax provisions to come together in the next couple of weeks.

Energy and agriculture provisions are driving the plan.

"We always wind up doing it, so yeah, I suspect that's something we'll have to do," said Senate Finance Chairman Orrin Hatch (R-Utah). "There hasn't been much talk about it right now, but there's always loose ends that you just have to tie up."

The items, which would revive short-term tax benefits to promote renewable energy sources like biodiesel and solar power, as well as rail lines crucial to farming communities, weren't included in the major tax legislation already advancing in Congress, H.R. 1 (115). Nor were they part of the massive package of tax extenders Congress passed in 2015.

Instead, these extra extensions of longstanding policies are moving separately.

They could ride with an end-of-year government funding agreement, according to multiple sources on Capitol Hill, as well as lobbyists.

"I wanted it in the bigger tax bill but there are so many extenders that they just made it too complicated," said Sen. Mike Crapo (R-Idaho). "So the decision was made — not by me — to pull the extenders back for a different bill."

Crapo is pushing to continue a tax credit to maintain short-line railroads, which connect farm goods from hard-to-reach locations around the country to main rail arteries that can carry the food anywhere.

Sens. Johnny Isakson (R-Ga.) and Tim Scott (R-S.C.) are advocating to extend a 2020 deadline on tax credits for new nuclear energy projects. Sen. Chuck Grassley (R-Iowa) has worked on biodiesel.

In the House, a separate effort has been afoot to further delay start dates on several health care-related taxes, like the medical device excise tax and health insurance tax, connected to the Affordable Care Act.

WHAT'S NEXT: Government funding runs out Dec. 8, and talks on longer-term spending plans are ongoing.

House GOP leaders vow no deals with Democrats on stopgap spending Back

By Jennifer Scholtes and Sarah Ferris | 12/05/2017 11:06 AM EDT

House Republican leaders have promised conservatives that they won't grant concessions to Democrats to get enough votes for a stopgap spending bill — gaining GOP support but also raising the specter of a government shutdown later this month.

Majority party leaders in the House tentatively decided Tuesday morning to hold tight on their plan to fund the government through Dec. 22, bucking calls from conservatives to move the deadline to Dec. 30.

Still whipping to ensure sufficient GOP support, leaders pushed off a Rules Committee meeting and final floor action by a day, with House passage on the two-week patch, H.J. Res. 123 (115), now expected Thursday. Government funding runs out on Friday.

Those intraparty talks will drag into Wednesday, after a huddle with House Speaker Paul Ryan, conservative holdouts and defense hawks ended without a resolution Tuesday afternoon. A final decision isn't expected until Wednesday morning, after

another last-minute meeting by the House Freedom Caucus.

The problem with the House strategy is that Senate Republicans still need the votes of at least eight Senate Democrats to advance spending legislation, likely resulting in deal-making later this month that won't fly with fiscal conservatives in the House.

Enough Senate Democratic votes appear possible for a "clean" stopgap spending bill, or continuing resolution, that would extend from Friday until Dec. 22. Both parties hope to have reached a bipartisan, two-year agreement on overall spending levels for defense and non-defense programs by later in the month.

"We don't know what the House is going to do, but if it's a short-term CR, it gives us a little more time to do the things we're talking about now," Senate Minority Leader Chuck Schumer told reporters Tuesday afternoon, noting that top congressional leaders plan to meet with President Donald Trump on Thursday to work on topline budget caps.

Senate Majority Leader Mitch McConnell also indicated that Republicans in the upper chamber are gunning for a two-week stopgap rather than a deal until Dec. 30, which he said isn't "the best way to go forward."

But the trouble could come with the vote on a second stopgap just before the Christmas holiday, when Democrats would be expected to make more demands such as an agreement on how to treat DREAMers, young undocumented immigrants. If GOP leaders in the lower chamber stay true to their promises to the likes of the House Freedom Caucus, the game plan could result in shutdown-spurring deadlock right before lawmakers plan to leave town for the holidays.

The scheduling changes in the House came after members of the Freedom Caucus temporarily withheld support on a tax vote Monday night to get leaders to opt for a Dec. 30 deadline.

But for now, fiscal hardliners seem appeased by other commitments they've clinched after making that demand.

Rep. Dave Brat (R-Va.), a member of the Freedom Caucus, said leaders "made some great assurances" during a Tuesday morning Republican Conference meeting that "the team stays together" on issues that could emerge.

"And that means you don't go to the Democrats like usual at Christmastime or right after," Brat told reporters.

Longtime spending leader Rep. Hal Rogers (R-Ky.) suggested House lawmakers could try to force the Senate to accept their version of the second patch.

"If we pass a bill on or about the 22nd and go home, then the Senate will need to make up its mind about what to do about that," Rogers said. "The option is either: Pass or have a shutdown in place."

Ryan expressed confidence that the initial funding measure will pass this week but didn't address prospects for a deal beyond Dec. 22.

"I feel like we're going to have a majority, and we're going to have 218 for passing the CR we had this week," Ryan told reporters Tuesday morning. "We're having a good conversation with our members about timing and date and tactics and all the rest. The point is, we're having the kind of family discussion that we need to have on how to proceed forward with a majority, and I'm confident we'll have that."

In punting the drama to the week before Christmas, GOP lawmakers may try to jam Democrats with big boosts to defense spending.

An unlikely mix of conservatives and defense hawks is still eyeing a plan to attach a full year of Pentagon funding to the Dec. 22 bill — a move that would cause a showdown in the Senate.

Democrats in that chamber have refused to back a bill that prioritizes the military over spending on domestic programs. And Senate Minority Whip Dick Durbin dug in on that threat Tuesday.

Some conservatives in the House are betting pressure to fund the Pentagon would be just enough to convince a handful of red-state Democrats to vote in support of a second government funding bill later this month.

If the military funding isn't enough, House Republicans are tossing around another bargaining chip: a disaster aid package. That bill would include tens of billions of dollars for storm-ravaged Florida, Texas, Puerto Rico and the U.S. Virgin Islands, making it tougher for Democrats to oppose.

Another must-pass item, funding for the Children's Health Insurance Program, could also be added to the bill, lawmakers said.

"Is the Senate going to turn around, Christmas or New Year's, and say we're not going to take care of the defense of America, we're not going to take care of these people with these hurricanes?" Rep. Bradley Byrne (R-Ala.) said. "If they are, then it's on them."

Connor O'Brien contributed to this report.

Greens sue EPA over missed ozone designation deadline Back

By Alex Guillén | 12/04/2017 03:04 PM EDT

Ten environmental and public health groups today sued EPA for missing a key deadline to implement the 2015 ozone standard.

EPA faced a statutory deadline on Oct. 1 to say which parts of the U.S. were meeting the new ozone standard. Administrator Scott Pruitt said over the summer that he would delay that decision by one year, although he reversed course after several lawsuits were filed. EPA last month issued designations for 85 percent of all U.S. counties which it said met the standard or did not have enough information to decide.

But the agency has remained silent on the remaining 15 percent of the nation, which includes many of the urban and downwind regions that face the worst smog pollution. Any area deemed in "nonattainment" will have to write a plan to reduce ozone-related pollution, and EPA's delay also puts off any requirement for those areas to act.

A coalition of Democratic attorneys general is also expected to sue EPA soon.

EPA has faced similar lawsuits after delaying designations under previous standards — such as the 2010 sulfur dioxide rule, for which environmental groups negotiated a consent decree with the Obama administration that set a series of designation deadlines lasting through 2020.

It's unclear whether a similar deal can be reached here. Pruitt recently issued a directive barring EPA from agreeing to such consent decrees. If EPA resists negotiations, the court may set its own timeline for the agency to act.

WHAT'S NEXT: The environmentalists' suit was filed in the U.S. District Court for Northern California. EPA has not indicated when it may act on the remaining designations.

Democratic AGs sue EPA over missed ozone deadline Back

By Alex Guillén | 12/05/2017 05:06 PM EDT

Fifteen Democratic attorneys general today sued EPA for missing a key deadline to implement the 2015 ozone standard.

EPA Administrator Scott Pruitt faced an Oct. 1 deadline to declare which parts of the country failed to meet the 2015 standard. Pruitt has issued designations for 85 percent of the nation's counties that either meet the standard or lack the data to make a decision. But he has not said which areas are in nonattainment, a designation that would require those states to write and implement a plan to clean up the air.

A number of the states involved face ozone pollution problems, including car-heavy California and New York as well as states in New England, which are often referred to as the "nation's tailpipe" since pollution from other states blows in their direction.

The AGs who joined the lawsuit include those from California, Connecticut, Illinois, Iowa, Maine, Maryland, Massachusetts, Minnesota, New York, Oregon, Pennsylvania, Rhode Island, Vermont, Washington and the District of Columbia.

WHAT'S NEXT: The AGs' lawsuit comes one day after environmental and public health groups sued over the same issue. Both are in the U.S. District Court for Northern California.

Subject: POLITICO's Morning Transportation: Tax bill passes Senate with nothing for infrastructure — McConnell shuts down shutdown talk — Flying American over the holidays? Enjoy your flight.

By Tanya Snyder | 12/04/2017 10:00 AM EDT

With help from Stephanie Beasley and Brianna Gurciullo

YOU GET NOTHING! YOU LOSE! GOOD DAY, SIR! The Senate passed its tax overhaul early Saturday morning with no provision to route revenues toward a promised $1 trillion infrastructure plan or to fix the Highway Trust Fund's insolvency crisis. White House officials have reportedly told lawmakers that the Highway Trust Fund would be addressed later on in an infrastructure bill, but the timeline for such a bill is becoming increasingly slippery.

One last try (well, two): Sen. Ben Cardin (D-Md.) introduced a motion to amend the tax bill (S. 1 (115) , to use deemed repatriation revenue for infrastructure, but the Senate rejected it, 43-57. The motion would have sent the bill back to the Senate Finance Committee with instructions to "designate the revenue raised by the deemed repatriation provisions of the bill for infrastructure improvements." The motion's (predictable) defeat signals the end of the road for that long-held Democratic priority.

Last minute: Sen. Dan Sullivan (R-Alaska) was able to get a provision stripped out of the bill that would have created a new tax for international cruise ships. However, a provision sponsored by Sen. Rand Paul was included in the bill that allows auto dealerships to fully deduct the interest paid on a certain type of short-term loans. Both those provisions were on a list of amendments Sen. Claire McCaskill (D-Mo.) circulated hours before final passage that she said were never shared with Democrats.

IT'S MONDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ships. Tanya is in the MT cockpit. Send tips, feedback and song lyrics to tsnyder@politico.com or @TSnyderDC.

"On the drive back here, I was worried over nothing / On the drive back there, tears spilling over something."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) about lonely highways and south-bound trains?

THE PLAYBOOK POWER LIST: 18 TO WATCH IN 2018: The final Playbook Power List of the year highlights 18 politicians, activists and operatives across the country who are poised to make waves in 2018. From the anti-Trump "Resistance" on the left to the far right Bannonite wing trying to remake the GOP, keep an eye on these people over the next 12 months. Click HERE to find out who made the list.

NOPE'N SKIES: A provision that would have forced Persian Gulf airlines to pay U.S.

corporate taxes during brief layovers in the United States was was axed because it was found to violate the Byrd rule, which prohibits extraneous provisions from budget bills that are going through the reconciliation process. U.S. Travel Association Executive Vice President Jonathan Grella called the Senate drama around the provision "the most significant moment in the three-year war on Open Skies."

THIS WEEK:

Tuesday - The American Association of Airport Executives, TSA and DHS hold a joint summit on aviation security.

Wednesday - The Atlantic hosts a summit on infrastructure and transportation. The Senate Environment and Public Works Committee holds a hearing on the nomination of R.D. James to be assistant secretary of the Army for civil works. The Senate Homeland Security and Governmental Affairs Committee holds a hearing on evolving international terrorist threats.

Thursday - The Airports Council International-North America hosts the two-day 2017 International Aviation Issues Seminar. The House Transportation Highways and Transit Subcommittee holds a hearing on "Emerging Technologies in the Trucking Industry."

FOR YOUR RADAR: The Senate plans to vote Monday to invoke cloture on Kirstjen Nielsen's nomination to be Secretary of Homeland Security.

DON'T PANIC: Senate Majority Leader Mitch McConnell (R-Ky.) Sunday promised "there's not going to be a government shutdown," on ABC's "This Week." It appears that a continuing resolution will run through Dec. 22, after which members will have to return to Washington during their holiday recess. Current appropriations run out Friday.

AV START BILL GETS A HARD STOP: The Republican senator objecting to the Senate driverless car bill is still a mystery, but at least two Democrats are now known to have put in a hold on the bill: Sens. Richard Blumenthal (D-Conn.) and Ed Markey (D-Mass.) want more time to discuss safety, privacy and cybersecurity issues, report The Hill and Bloomberg.

LIGHT MONDAY READING: The Congressional Research Service has a new breakdown of the "topics likely to arise as the 115th Congress continues to debate FAA reauthorization." Give it a read here.

CHRISTMAS IS SAVED: American Airlines has struck a deal with the Allied Pilots Association, resulting in an assurance from the union that the airline will be able to "maintain a full December schedule as planned." A technical glitch had let all of American's pilots take vacation time around Christmas, raising the possibility of cancellations. Leaders on both sides hashed it out Friday and over the weekend, discussing "APA's grievance concerning restrictions on premium pay and trip trading for December flying," the union told its members, and they reached an agreement to pay pilots up to double their normal pay rate during that time. More from Brianna here.

BATTERIES NOT INCLUDED: American Airlines passengers will stop permitting travelers to carry "smart bags" for recharging devices that don't have removable battery packs, starting Jan. 15, Stephanie writes. The air carrier announced the change Friday, saying it was taking the precautionary step in anticipation of smart bags being a popular gift this holiday season. The bags contain lithium-ion batteries which can explode when stored in aircraft cargo holds.

THE $84,000 QUESTION: POLITICO revealed Friday that Rep. Blake Farenthold (R-Texas) paid an $84,000 settlement to a former aide who had accused the congressman and another staffer of sexual harassment. As John Bresnahan and Rachael Bade report, Republicans are split on the question of whether to call on the House Transportation Committee member to resign.

NEW LEASE ON LIFE: Arlington Memorial Bridge is getting a $227 million facelift, Interior Secretary Ryan Zinke announced Friday. "Over the past six years, the National Park Service (NPS) and Federal Highway Administration (FHWA) have made emergency temporary repairs while planning the larger rehabilitation," DOI said in a news release. "Without a complete rehabilitation, the continued and accelerated deterioration of the bridge's concrete deck would have required it be closed by 2021." Construction will begin next year.

TITLE AND REGISTRATION: Cavarocchi Ruscio Dennis Associates registered to lobby for Embry-Riddle Aeronautical University on issues related to the U.S. Navy, Air Force and FAA.

THE AUTOBAHN:

- "Report: U.K. to seek to stay inside EU's aviation safety agency post-Brexit." POLITICO Europe.

- "Chinese drone maker denies giving data to government." The Associated Press.

- "Congress faces frantic week with possible shutdown, taxes, Russia." POLITICO.

- Michigan task force recommends including drones in driverless car test site. The Associated Press.

- "California DMV ditches rule to limit liability for self-driving car manufacturers." The Verge.

- Are Uber and Lyft cutting into transit ridership? The Washington Post.

- In Senate race, Rokita blames opponent for voting for a gas tax hike, just like he himself did. The Associated Press.

- "Hours after Senate GOP passes tax bill, Trump says he'll consider raising corporate rate." The Washington Post.

- "The boss made me do it: 43 percent admit using smartphone because of work while driving, survey says." The Washington Post.

THE COUNTDOWN: DOT appropriations run out in 5 days. The FAA reauthorization expires in 118 days. Highway and transit policy is up for renewal in 1,032 days.

UN Leaders Tackle Air Pollution, Call It Globe's Greatest Threat

By *Wachira Kigotho*

Pollution accounts for 12.6 million deaths each year, in addition to causing other human suffering and the destruction of ecosystems, Edgar Gutierrez, the president of the 2017 United Nations Environment Assembly, told more than 4,000 delegates in Nairobi, Kenya.

Senate Likely to Confirm Army Corps Nominee Despite Delay

By *David Schultz*

The Trump administration's choice to lead the Army Corps of Engineers appears to be cruising toward Senate confirmation, despite one Republican senator's plan to block him as a way to get answers from the Pentagon about Russia.

Freeport-McMoRan Seeks 43-Fold Hike in a Water Pollution Limit

By *Tripp Baltz*

Colorado has decided to put off for two years a decision on a proposal by copper company Freeport-McMoRan Inc. to hike state water-pollution molybdenum levels in streams nearly 43 times higher than current standards.

Panel Sends Clean Air Carve-Out Bills to House Floor

By *Stephen Lee*

Republicans on the House Energy and Commerce Committee sent seven environmental bills to the House floor Dec. 6.

China to Ban 10 More Highly Toxic Pesticides

By *Michael Standaert*

Agricultural authorities in China are speeding up the phaseout of highly toxic pesticides, announcing Dec. 5 that another 10 pesticides will be eliminated by the end of 2022.

Today's News

Groundwater Pumping Fees Are Not Taxes, California Court Says

By *Carolyn Whetzel*

A decision by California's highest court could give a boost to local water agencies grappling with how to implement the state's landmark groundwater management law.

Packaging Industry in Brazil Boosts Recycling Above Year-End Goal

By *Michael Kepp*

Packaging importers, producers, and distributors in Brazil that signed a 2016 collection and reprocessing agreement have increased the volume of used packaging waste being recycled by 29 percent, well above the 19.8 percent increase targeted in their accord, a recent report shows.

Brazil Fines Companies $2.5M for Applying Banned, Toxic Pesticides

By *Michael Kepp*

Fifteen crop dusting companies in Brazil are facing 8.2 million reais ($2.5 million) in fines, the biggest of which were levied for using crop dusters to apply banned,

highly toxic pesticides, according to the country's environmental agency.

California Bill to Banish Gasoline Cars by 2040 Is in the Works

By *Ryan Beene* and *Dana Hull*

A California lawmaker wants to put the state alongside China, France and the U.K. and have its legislature consider a ban on vehicles powered by fossil fuels.

Natural Gas Risks Becoming Too Pricey in Climate

Change Battle

By Mathew Carr and Anna Shiryaevskaya

Natural gas risks becoming too expensive for its own good. Rising costs are likely to make gas increasingly uncompetitive against solar, wind and battery storage technologies, undermining its role as a "transition fuel" between coal-fired generation and renewables beyond 2030

Biggest U.S. Nuclear Owner Exelon Investing in Storage Startup

By *Brian Eckhouse*

Exelon Corp., the biggest U.S. nuclear operator, is investing in the batteries of the future.

European Power Companies Pledge Faster Shift to Clean Energy

By *Ewa Krukowska*

The European Union's electricity industry vowed to accelerate the transition to clean energy and take a leading role in the EU plan to reduce greenhouse-gas emissions.

Power Lines, Poles Focus of Industry Over Coal and Nuclear Plants

By *Naureen S. Malik, Mark Chediak* and *Jim Polson*

Hurricane winds and raging wildfires knocked out power to millions of people from Florida to California this year, underscoring the need to protect America's electric grid from disaster.

Your Recycling Heads to Dump as China Gets Picky About Waste

By Jen Skerritt and Kristine Owram

Amid the pear orchards and wineries of southern Oregon, more than 90 percent of residents dutifully dump discarded junk mail, unwanted phone books and old magazines into specially marked gray and red recycling bins. And every other week, the canisters get wheeled to the curb for pickup, as most of the contents begin their long trip to China.

Arctic Oil Rush Abates in Norway After Exploration Letdown

By *Mikael Holter*

Oil exploration in Norway's Arctic seems to have lost some of its appeal after a disappointing drilling campaign.

German Prosecutors Look into BMW Diesel Cheating Allegations

By *Karin Matussek*

Munich prosecutors are looking into allegations BMW AG diesel cars are fitted

with defeat devices to cheat on emissions levels following tests by German environmental group DUH.

Dead-Well Glut Has Alberta Regulators Scrutinizing Oil Licenses

By *Kevin Orland*

Alberta's government is giving its energy regulator new authority to scrutinize and reject applications for oil and gas production licenses to try to slow the growth of the province's inventory of abandoned wells.

World's No. 1 Miner Sees Bigger Role for Carbon-Capture Systems

By *Feifei Shen*

BHP Billiton Ltd., the world's biggest mining company, said wider use of systems that trap carbon emissions will be needed to meet international climate goals, even as investments in the technology stall.

Tuesday Night Wrapup

Argentine, Indonesian Biodiesel Imports Will Face New Duties

By *Brian Flood*

U.S. biodiesel producers scored a big win when the International Trade Commission Dec. 5 said imports of biodiesel from Argentina and Indonesia have seriously injured the domestic industry.

Update Groundwater Policies to Stem Depletion, Pollution: OECD

By *Rick Mitchell*

China is testing programs to trade groundwater in its northern region, while India is rationing electricity to reduce pumping, and Tucson, Ariz,, is striving to diversify its water portfolio.

Texas Toxic Site Might Wait Two Years for Cleanup (Corrected)

By *Nushin Huq*

Cleanup of a waste pit at a Texas Superfund site targeted for cleanup by the EPA might not begin for another two years, agency officials said.

Subject: Morning Media: How Weinstein manipulated the media — National Enquirer editor accused of sexual misconduct — Lipman leaves USA Today — Breitbart expands on SiriusXM — MSNBC's 'afraid' of Cernovich

By Michael Calderone | 12/06/2017 05:33 AM EDT

HARVEY WEINSTEIN SURELY COULDN'T HAVE GOTTEN away with decades of alleged sexual misconduct if it weren't for his media enablers. The disgraced film mogul "held off press scrutiny with a mix of threats and enticements, drawing reporters close with the lure of access to stars, directors and celebrity-packed parties," the New York Times reported Tuesday night in a quintuple-byline blockbuster drawn from nearly 200 interviews and documents.

- "Some journalists negotiated book and movie deals with him even as they were assigned to cover him. The studio chief once paid a gossip writer to collect juicy celebrity tidbits that Mr. Weinstein could use to barter if other reporters stumbled onto an affair he was trying to keep quiet," the Times reported. "He was so close to David J. Pecker, the chief executive of American Media Inc., which owns The Enquirer, that he was known in the tabloid industry as an untouchable 'F.O.P.,' or 'friend of Pecker.' That status was shared by a chosen few, including President Trump."

- A few days before the 2016 election, the Wall Street Journal reported how Pecker's American Media once agreed to buy a former Playboy model's story of an alleged 2006 affair with Trump and never published the account, a practice known as "catch and kill" in the tabloid world. The Times reported Tuesday how American Media tried to buy an actress's 2015 account of Weinstein groping her to similarly squash it - though a deal never happened. However, Dylan Howard, the National Enquirer's editor-in-chief and American Media's chief content officer, worked with Weinstein in other capacities and even "dispatched reporters to find information that could undermine accusers," according to the Times.

- The Times latest Weinstein bombshell dropped just hours after The Associated Press reported that former employees accused Howard of sexual misconduct, of having "openly described his sexual partners in the newsroom, discussed female employees' sex lives and forced women to watch or listen to pornographic material." The alleged behavior sparked a 2012 company inquiry when Howard was working in the company's Los Angeles office. Howard quit following that investigation, but returned a year later to American Media's New York office in a higher-level position.

- Howard dismissed the claims of ex-employees to the AP as "baseless." An American Media lawyer told the AP that the investigation found that none of Howard's behavior "rose to the level of harassment that would require termination." The lawyer characterized the editor's actions as "horsing around outside the office, going to bars and things that are not uncommon in the media business."

Good morning and welcome to Morning Media. I included some media nuggets that stood out,

but the entire Times piece is a must-read. Please send tips to mcalderone@politico.com and @mlcalderone. Daniel Lippman (@dlippman) contributed to the newsletter. Archives. Subscribe.

TUNE IN: TIME'S 'PERSON OF THE YEAR': Editor-in-chief Ed Felsenthal will announce the winner around 7:30 a.m. on the Today show. The shortlist includes the Colin Kaepernick, the #MeToo Movement, and President Trump, who we can assume will be watching - and tweeting?

JOANNE LIPMAN, the chief content officer and editor in chief of USA Today, is leaving at the company at the end of the year to focus on her book on closing the gender gap in the workplace. "The heightened focus on sexual harassment has led to a flood of interest and opportunities surrounding my upcoming book about closing the gender gap," Lipman told staff on Tuesday. Some expressed surprise with the departure given that Lipman was the public face of Gannett, later rebranded as the USA Today Network. Temple University journalism dean David Boardman tweeted that Lipman "was the best thing to happen to @gannett in years."

- In addition to serving as USA Today's top editor, Lipman also helped merge Gannett's 100-plus newspapers, such the Des Moines Register, Cincinnati Enquirer, and Arizona Republic, into a more cohesive structure. "We have boots on the ground across the country, in red states and in blue states, in big cities and small towns and rural areas," Lipman told CJR in March. "To me, that's incredibly exciting because it's so different than the major national news organizations."

BREITBART LAUNCHES RADIO EXPANSION: Breitbart News chief Steve Bannon has rejoined a morning show, Breitbart News Daily, and the right-wing site's radio network is expanding with new weeknight show on SiriusXM's Patriot channel, hosted by West Coast editors Rebecca Mansour and Joel Pollak. It has plans for more weekend programming.

- "As I have said all along, everything I brought to the Trump campaign came directly from the listeners I spoke with every morning on Breitbart News Daily on SiriusXM's Patriot channel," Bannon said in a statement. "From the moment I left the White House, getting back behind the microphone was very important to me. To get on the road outside the Beltway and to spend time with the great men and women of America is an honor."

ALSO JUST LAUNCHED: "50 States of Blue," a new site for local news and progressive politics. "We have reached a moment when there are more local stories with national implications than ever," Howard Megdal, founder and editor-in-chief, said in a statement. "We will provide a conduit to these issues, stakeholders and movements through our passionate, intellectually honest pursuit of the stories that matter."

HOW NEW "60 MINUTES' BOOK EVOLVED: Longtime executive producer Jeff Fager took over writing the iconic newsmagazine's 50th anniversary book "after objecting to the direction" of original author Richard Zoglin, who was "focusing too much on the negative," according to the New York Times.

- "Specifically, Mr. Fager expressed concern that Mr. Zoglin had asked his interview subjects about the treatment of women in the '60 Minutes' workplace, according to three people who spoke on the condition of anonymity to describe sensitive internal matters," report John Koblin

and Michael Grynbaum. "Mr. Fager also asked Mr. Zoglin why he had brought up the rocky tenure of Katie Couric, a onetime correspondent for the show and former CBS News anchor who left the network on bad terms."

JEFF GLOR BRINGS DIGITAL CHOPS TO 'CBS EVENING NEWS': The Los Angeles Times' Stephen Battaglio writes that network executives see Glor's experience at streaming network CBSN as a real asset for the anchor desk. "Our entire newsroom needs a jolt of a new reality," Steve Capus, executive producer of "CBS Evening News," told the paper. "Our output is being consumed a lot of different ways and if we think about it too narrowly, we're missing a big segment of the audience."

MSNBC'S 'AFRAID' OF MIKE CERNOVICH: Liberal commentator and "Majority Report" podcast host Sam Seder told The Washington Post's Erik Wemple that he believes MSNBC is "afraid" of right-wing blogger and media personality Mike Cernovich, and others who amplified a 2009 tweet that led to the network cutting ties with him.

- In a video statement, Seder recalled being "disgusted" eight years ago as Hollywood figures defended "child rapist" Roman Polanski simply because he was also a good director. Seder posted a tweet intended to be satirical, to mock those excusing Polanski's deeds, that he says has now been willfully misrepresented by people acting in bad faith. MSNBC responded to the social media outrage by not renewing Seder's contract when it ends in February.

- The network, which boasts a progressive prime-time lineup, has come under fire from the left for appearing to cave to a right-wing blogger who has had success in the past applying pressure on a media company over an intended joke on Twitter. Cernovich told Wemple on Tuesday that it was a "conspiracy theory" to blame him for Seder's situation. Meanwhile, Seder has started a GoFundMe fund to defend against attempts to drive away his podcast advertisers.

SOUNDS BITES

"The entire culture and our politics are now dominated by people who have weaponized bad faith and shamelessness." [Chris Hayes]

"Everyone should subscribe to ... The Majority Report." [Chris Hayes]

"Before Seder/MSNBC, there was NPR axing its CEO. See my 2011 post: They Brought a Tote Bag to a Knife Fight: [Jay Rosen]

JAMES MURDOCH AS BOB IGER SUCCESSOR? The Financial Times reports that the Murdoch son has been suggested as a possible future CEO of Disney amid talks over the sale of 21st Century Fox entertainment assets (which doesn't include Fox broadcast network, Fox News, or Fox Business). James Murdoch is expected to take a senior role at Disney is the deal goes through, with Iger scheduled to retire in 2019.

AL FRANKEN WAS TAKEN OFF Foreign Policy magazine's Global Thinkers list when the sexual harassment allegations about him were revealed. A magazine spokeswoman told my

colleague Daniel Lippman: "We were planning to make him an awardee but removed him from the list when we heard of his inappropriate behavior." Franken's office did not reply to a request for comment. *The list* http://atfp.co/2AyyBNA

BEST OF 2017: The New Yorker has listed its top 25 most-read stories of the year, leading with Ronan Farrow's investigation of Harvey Weinstein and followed by Anthony Scaramucci's expletive-filled call to Ryan Lizza.

APPLY: The Nieman Foundation for Journalism at Harvard and the Abrams Foundation have launched a new local investigative journalism fellowship. "In the coming year, the new fellowship will fund up to three Nieman Fellowships for U.S. journalists who cover news in areas of the United States where resources are scarce," the announcement read. "In addition to studying at Harvard University for an academic year, the Abrams Nieman Fellowship will include a fieldwork period, during which fellows will work on a public service journalism project for up to nine months."

REVOLVING DOOR

Veteran foreign correspondent and video journalist **Stephen Farrell** was named Jerusalem bureau chief of Reuters, where he'll lead coverage of Israel and the Palestinian territories. For the Times of London, Farrell reported extensively from war zones, including in the Balkans, Afghanistan, and Iraq, and throughout the Middle East. He joined the New York Times in 2007, beginning in Baghdad, before moving several years later to New York to work on video projects.

POLITICO's own **Ali Watkins** is heading to the New York Times as a national security reporter. While an intern, Watkins was part of a 2013 McClatchy team that was a Pulitzer-finalist team reporting on CIA spying on the Senate Intelligence Committee. She later worked at HuffPost and BuzzFeed.

Monica Drake, a senior editor running the New York Times' travel section, has been promoted to a masthead-level position of assistant managing editor, overseeing new digital features and projects. "Having Monica join the masthead is a testament to the importance of her new job and our belief that the Times newsroom should play a leading role in securing our economic future, just as it did in the 1970s when a host of new sections broadened the paper's appeal," top editors Dean Baquet and Joe Kahn wrote in a memo.

Jeff Mays is joining the New York Times to cover City Hall and politics, deputy editor Dean Chang announced on Twitter.

ADDENDUM: Yesterday, Morning Media suggested that Fox News Radio's Jon Decker, who just passed the D.C. bar, may be the only lawyer in the White House press corps. It turns out Reuters White House correspondent Jim Oliphant has a law degree from Ohio State (and was also once editor-in-chief of Legal Times). In addition, Guardian political reporter Ben Jacobs graduated from Duke law school.

EXTRAS

- Corey Lewandowski and David Bossie continue to claim the New York Times provided an advance story to Paul Manafort during the campaign, a charge the paper denies.

- TheSkimm is exploring a possible sale.

- Wall Street Journal editors urge staff to be more precise when referencing millennials.

- At a media conference, News Corp's Robert Thomson discussed Fox News-Mark Zuckerberg meeting mentioned in yesterday's Morning Media. He also called YouTube a "toxic waste dump."

Subject: POLITICO's Morning Energy: Trump visits Utah for monument announcement today — Energy world reacts to Senate tax bill passage — EPA axes mining cleanup rule

By Anthony Adragna | 12/04/2017 10:00 AM EDT

With help from Alex Guillén

TRUMP'S MONUMENTAL DECISION: The news spotlight will shift to Salt Lake City today, where President Donald Trump is expected to unveil his decision to drastically trim Utah's Bears Ears and Grand Staircase-Escalante national monuments after deciding the designations under the Antiquities Act were overreach. The moment marks a huge victory for the state's congressional delegation, which fought hard to undo the designation. "Every elected official from the mayors to the commissioners, every single elected representative, got engaged in it. It was the real, Utah cumulative, everybody-pull-together kind of thing," Boyd Matheson, president of the Sutherland Institute, told the Salt Lake Tribune. Look for a whole bunch of VIPs, including Interior Secretary Ryan Zinke, Sen. Orrin Hatch and House Natural Resources Chairman Rob Bishop, to be on hand for the Trump's announcement.

But expect the pushback to be instantaneous and lengthy legal battles to follow. Some 5,000 people protested the anticipated decision outside the Utah State Capitol over the weekend (picture via League of Conservation Voters here). Look for Native American, public lands and environmental groups to lodge lawsuits arguing the Antiquities Act doesn't provide the president authority to change a prior designation. Representatives from the Navajo, Ute, and Hopi Tribes will hold a telephone press conference tomorrow at 5 p.m. EST responding to announcement.

Trump is due to speak at 2:40 p.m. EST in Salt Lake City. One thing to watch for is whether his comments touch on the other national monument designations that Zinke recommended shrinking such as Cascade-Siskiyou, Organ Mountain-Desert Peaks, Rio Grande del Norte and Katahdin Woods and Waters.

Also, look for Trump to use the trappings of a presidential trip - and a roundtrip flight on Air Force One - to heap praise on Hatch as he tries to persuade the seven-term Utahn to seek reelection and block Mitt Romney's path to the Senate, POLITICO's Alex Isenstadt reports.

ANWR IN AS HOUSE-SENATE MOVE TO TAX CONFERENCE: House lawmakers vote today on whether to go to conference on their tax plans H.R. 1 (115) after senators voted 51 to 49 early Saturday morning to pass their massive tax overhaul. Sen. Maria Cantwell 's push to block language opening ANWR to oil and gas drilling fell short on largely party lines 48 to 52 during the debate. Here's what the energy and environment world had to say following the vote:

-Clean energy groups: "We applaud the reduction in the corporate tax rate and preserving frameworks that support the clean energy sector. However, we are concerned about provisions that will have a negative impact on clean energy investments, including Base Erosion Anti-Abuse Tax (BEAT) provision and the impact of the corporate Alternative Minimum Tax (AMT)

on investment tools that have been critical to the growth of the clean energy sector," a statement, signed by six groups including American Wind Energy Association and Citizens for Responsible Energy Solutions, reads.

-Oil, gas and utility industry groups liked what they saw and encouraged the chambers to iron out their differences ASAP. "We are encouraged that both the House and Senate agree that reducing the corporate tax rate is vital to modernizing the tax code, and urge Congress to quickly finalize legislation for the President to sign into law," American Fuel & Petrochemical Manufacturers said in a statement.

-Environmental groups warned the bill would undermine public health and environment: "The bill would threaten the climate by leaving billions of dollars of fossil fuel subsidies intact while changing the tax code in ways that would jeopardize the financing of numerous clean energy projects under construction and discourage future clean energy investments in wind and solar," Ken Kimmell, president of the Union of Concerned Scientists, said in one such statement.

Someone's not happy: Coal magnate Bob Murray bashed the Senate's plan as a "mockery" of the tax reform process and warned it might put him out of business, according to the Wall Street Journal. "This is not job creation. This is not stimulating income. This is driving a whole sector of our community into nonexistence," he said.

What's next on taxes? Pro Tax's Brian Faler has an excellent rundown.

WELCOME TO MONDAY! I'm your host Anthony Adragna, and Squire Patton Boggs' James Eklund was first to identify Michael Bennet as the senator who once led the public schools of his state's largest city. For today: Which current senator was once roommates (briefly) with former Sen. Trent Lott? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

Legislative Compass - Preferred Pricing for 2017: Test out POLITICO Pro's powerful, easy-to-use tool that simplifies federal and state legislative tracking. Get started.

THE PLAYBOOK POWER LIST: 18 TO WATCH IN 2018: The final Playbook Power List of the year highlights 18 politicians, activists and operatives across the country who are poised to make waves in 2018. From the anti-Trump "Resistance" on the left to the far right Bannonite wing trying to remake the GOP, keep an eye on these people over the next 12 months. Click HERE to find out who made the list.

Please welcome to the stage: The Pro Energy team's Darius Dixon and his wife recently expanded their family. Marcus Inali Dixon was born at 3:06 a.m. Friday at a healthy 8lbs. 10oz. All is well with the Dixon clan but it's not yet clear whether Marcus will share Dad's interest in FERC and nuclear waste. Here's a pic!

EPA SAYS NEVERMIND ON MINE BONDING RULE: EPA on Friday evening backtracked on the Obama administration's proposal to require hardrock miners to prove they have the money to clean up their mines, saying that it's actually "not appropriate" to regulate.

The issue has been brewing for years following an environmentalist lawsuit that said EPA had never fulfilled part of the Superfund law requiring it to write financial assurance regulations for industries that could leave behind toxic messes. The Obama administration's proposed rule required hardrock miners to obtain some type of bonding or collateral would have cost $171 million annually and was projected to save taxpayers $527 million in Superfund clean-ups over 34 years. It was strongly opposed by industry and Republicans.

On Friday, at the court-ordered deadline to finalize a rule, EPA said no regulation was necessary . "EPA is confident that modern industry practices, along with existing state and federal requirements address risks from operating hardrock mining facilities," Administrator Scott Pruitt said in a statement. "Additional financial assurance requirements are unnecessary and would impose an undue burden on this important sector of the American economy and rural America, where most of these mining jobs are based." The final rule noted especially that the savings for taxpayers would have been "relatively small" and that miners would have faced costs "an order of magnitude greater" than the government's savings.

Industry, Republicans celebrate: Supportive statements flooded in Friday night from the National Mining Association, Senate Energy and Natural Resources Chairwoman Lisa Murkowski, Senate Environment and Public Works Chairman John Barrasso, and Bishop. EPA's own release included praise from three Republican governors and Sen. Steve Daines , who chairs the Senate Western Caucus. Earthjustice, which represented a coalition of green groups in the lawsuit, vowed to sue over the decision in a statement over the weekend.

Two more points: 1) The Obama administration's plans to write similar rules for chemical makers, electric utilities and petroleum and coal products manufacturers are looking unlikely to happen following this decision. 2) Coal mines are regulated differently and are required to obtain financial assurance, a practice regulated by the states. Hardrock mining covers a variety of non-fuel resources, including gold, copper, silver, iron, gypsum and sulfur.

TAKE A PASS? Ahead of a Thursday meeting between Trump, Sen. Ted Cruz and other senior officials about biofuels policy, Texas Gov. Greg Abbott formally asked for a Renewable Fuel Standard waiver from Pruitt. "The time is ripe for EPA to grant substantive relief from the unique, adverse impacts the RFS program is having on the state of Texas," he wrote in a Friday letter . "The extreme, detrimental impacts on large portions of the refining sector have now placed unacceptable burdens on the Texas economy and the economy and security of the nation as a whole." Abbott, in particular, cited high RIN prices as causing hardship to refiners across the state.

SHUTDOWN? WHAT SHUTDOWN? Senior Republicans projected strong confidence Sunday they'd be able to avoid a government shutdown by passing a short-term funding package before the Friday deadline, POLITICO's Kevin Robillard reports. "There's not going to be a government shutdown," Majority Leader Mitch McConnell said on ABC's "This Week." "It's just not going to happen." House Appropriations Chairman Rodney Frelinghuysen on Friday released a two-week CR that would keep the lights on through Dec. 22.

But disaster aid will wait: House Republicans are tentatively planning to package the next

installment of disaster aid with the Dec. 22 stopgap funding bill, Pro Budget & Appropriations Brief reports. "There's working agreement to that model," Texas Rep. Pete Sessions said Friday. "I think some of these things all collide together." No word yet on how much bigger that package will be compared to the White House's $44 billion request.

WHITEFISH HIRES MORE LOBBYISTS: Whitefish Energy, the tiny Montana-based company that drew controversy for its now-canceled $300 million grid repair contract in Puerto Rico, hired the Tallahassee office of Foley & Lardner to lobby on its behalf, POLITICO's Matt Dixon reports. Lead lobbyists will be Robert Hosay, a former Gov. Jeb Bush administration official, and Jason Allison, who once led the Scott administration's Agency for State Technology. The hiring comes as the company filed a lawsuit Friday alleging a subcontractor interfered with tens of millions in payments, the Associated Press reports.

Speaking of which, Senate Homeland Security ranking member Claire McCaskill sent a letter Friday seeking additional information about a $200 million contract inked by Puerto Rico's utility with Cobra Acquisitions LLC, another newly-formed company, for grid restoration work. Link here.

OBAMA LAMENTS CLIMATE LEADERSHIP PAUSE: Speaking in France on Sunday, former President Barack Obama said U.S. states and cities were making up for what he called "a temporary absence of American leadership" on climate action, Reuters reports. Obama also met with French President Emmanuel Macron, his predecessor Francois Hollande and Paris Mayor Anne Hidalgo.

CALLING ALL COMMENTERS! EPA convenes a public hearing this morning at 10 a.m. at agency headquarters on its plan to repeal the Obama-era Phase 2 emissions rule for heavy-duty trucks that classified "glider kits" as new vehicles or engines that are subject to more stringent requirements. More information here.

PERRY'S IN THE MIDDLE EAST: Energy Secretary Rick Perry continues his Middle East swing this week. Among this weekend highlights: Meeting with His Royal Highness Crown Prince Mohammed bin Salman in Saudi Arabia and touring Aramco's facilities in Dhahran. ME readers will of course remember that Trump asked the oil giant to make its hugely anticipated stock offering on the New York Stock Exchange.

GETTING IN THE FAST LANE: Zinke used a trip to Louisiana over the weekend to pledge to remove regulatory barriers slowing down coastal restoration projects, The Advocate reports. "Louisiana and the coastline are important, and we're losing too much of it. ... There's a lot of things that Interior can do," Zinke said. Photos from his visit here and here.

CLARIFYING: ME wrote last week that coal magnate Robert Murray said at a conservative energy conference that he had met with Pruitt seven times. A spokesman clarified that Murray was referring to all meetings with anyone from the Trump administration, not just Pruitt, including "before and after the election." It was previously reported Murray has met several times this year with President Trump himself to discuss strategies to boost the coal industry, including his ultimately unsuccessful proposal to use the Energy Department's emergency

authority to keep coal plants operating.

Environment & Safety Resource Center Update

December 04, 2017 - Number 49

Analysis : Air Pollution Control Guide | Safety Guide | Waste Management Guide

Federal Statutes, Regulations and Agency Documents : Federal Chemical Controls Updates | Federal Register Final Rules | Federal Register Notices | Federal Register Proposed Rules | Federal Workplace Safety Updates | Military Documents

States—Environment : Arkansas | California | Florida | Illinois | Indiana | New Mexico | Oregon | South Dakota | Wyoming

Analysis

Air Pollution Control Guide

State

Indiana (Emissions Trading). Updated to reflect a final rulemaking by the Indiana Department of Environmental Management establishing emissions trading programs for annual and seasonal nitrogen oxides and sulfur dioxide as required by the federal Cross-State Air Pollution Rule (CSAPR). The rule took effect Nov. 24.

Virginia (NOx SIP Call). Updated to reflect a final rulemaking by the Virginia Department of Environmental Quality conforming the state's Nitrogen Oxide Budget Program to the federal CSAPR. This Virginia rule removes requirements pertaining to the trading of NOx emissions under CAIR. It also retains requirements necessary to control emissions from nonelectric generating units to make state requirements conform with CSAPR. The rule took effect Nov. 29.

Additional Analysis

Defining Green Finance for Climate Change. A new Practitioner Insights article by Daniel Rossetto, chief executive of Climate Mundial, and Bruce Tozer, chairman of Climate Mundial, is added that proposes a definition for "green finance" in the context of climate change. The authors argue that green finance is an important and emerging segment of financial markets that holds the promise of delivering environmental benefits that could help tackle climate change.

Safety Guide

State

Alaska (Whistle-Blowers). Updated to remove a requirement that discrimination reports alleging

retaliatory actions taken against employees who file complaints must be submitted within 30 days. The rule became effective Nov. 29.

Waste Management Guide

State

Alaska (Underground Storage Tanks (Financial Responsibility)). Updated to reflect an Alaska final rule amending financial responsibility requirements for owners of underground storage tanks.

Alaska (Underground Storage Tanks (Financial Assistance)). Revised to provide an updated analysis of Alaska financial assistance for remediating releases from underground storage tanks.

Alaska (Aboveground Storage Tanks). Revised to provide an updated analysis of Alaska's regulatory program for aboveground storage tanks.

Subject: Webinar on EPA Strategic IT Vision, Tomorrow, 1 CPE

COMPLIMENTARY WEBINAR, THURS 11/30, CPE CREDIT

Hi Ryan,

The White House vision for Federal IT modernization calls for secure use of the best commercial technology available. The plan is also charged with enabling more rapid delivery of new methods and technology to the public to improve cybersecurity of networks and systems, and spur agencies to operate IT more cost effectively.

This webinar features Tim Thorpe, Director, Enterprise Hosting Division, Environmental Protection Agency and will address how government is achieving IT innovation through policy, technology, and workforce change.

REGISTRATION AND INFO:

Subject: BREAKING NEWS: Trump to recognize Jerusalem as Israel's capital

President Donald Trump will announce Wednesday that the United States recognizes Jerusalem as the capital of Israel and will eventually relocate its embassy there - a declaration that could spur violent protests in the Middle East and undermine the White House's effort to strike a peace deal between Israel and the Palestinians.

Trump is making the announcement despite criticism from numerous U.S. allies, including France, Jordan and Saudi Arabia, which have urged him to avoid the extremely sensitive topic.

The president is still open to the possibility of a two-state solution, and he understands that the final borders of Israel and a future Palestinian state remain subject to negotiations, senior administration officials told reporters Tuesday.

Trump will also not declare that Jerusalem must be the "undivided" capital of Israel, an official told POLITICO.

Such caveats appear to leave room for Palestinians to at least claim East Jerusalem as their territory in a future state. Regardless, the administration officials insisted, Trump is not concerned that recognizing Jerusalem as Israel's capital will derail the peace process, because he sees it as an affirmation of reality.

"While President Trump recognizes that the status of Jerusalem is a highly sensitive issue, he does not think it will be resolved by ignoring the simple truth that Jerusalem is home to Israel's legislature, its supreme court and the prime minister, and as such is the capital of Israel," one of the officials said, adding: "Delaying the recognition of Jerusalem as the capital of Israel has done nothing to achieve peace for more than two decades."

Trump will direct the State Department to devise plans to move the U.S. Embassy from Israel to Jerusalem, but that process, the officials said, could take several years. Although in theory the president could simply switch the sign at the existing U.S. consulate in Jerusalem to say "embassy," the administration says it wants to wait until an appropriate site is selected, proper security is in place and a host of other personnel issues are addressed.

Trump will continue to sign a national security waiver that allows the U.S. to keep its embassy in Tel Aviv for now - a process that comes up every six months under a 1995 law passed by Congress that requires moving the embassy to Jerusalem. Trump needs to sign the waiver so that State Department funding cuts aren't triggered by the law, the senior officials said.

U.S. and foreign officials predicted that Trump's decision would spark a possibly violent backlash in the Muslim world and badly damage America's ability to be seen as an honest broker in a peace process - an initiative being led by Trump's son-in-law Jared Kushner.

Already, the State Department has urged embassies worldwide to upgrade security and has

restricted U.S. diplomats' movements in Israel and the Palestinian territories, where demonstrations are expected starting Wednesday.

"U.S. citizens should avoid crowds and areas with increased police and/or military presence," the department's consular bureau said in a travel notice.

Both Israelis and Palestinians claim Jerusalem as their capital. But the U.S. and most of the rest of the world have long declined to take a position on the fate of the holy city, saying it's a topic to resolve during negotiations.

Peace negotiators have long envisioned that Jerusalem would be divided between the two sides. And U.S. presidents, despite their campaign rhetoric, have for years been signing waivers delaying the move of the embassy.

The senior administration officials stressed that Trump remains committed to the Middle East peace process. Kushner, who also serves as a top White House adviser, has been working on a peace plan for several months.

The process has been largely shrouded in secret, involving only a handful of Trump aides. But a Trump recognition of Jerusalem as the Israeli capital could throw a wrench into the plan, U.S. officials and analysts say, by making the Palestinians unwilling to trust the Americans.

Trump has spoken this week to several foreign leaders, including Palestinian President Mahmoud Abbas, Israeli Prime Minister Benjamin Netanyahu and Jordanian King Abdullah II, in order to outline his intentions.

Abbas warned Trump of the "grave consequences" of moving the embassy, stating that such a decision would result in "detrimental consequences on the peace process and the prospects for the internationally endorsed two-state solution."

In light of Trump's planned announcement, the Palestinian delegation in Washington announced that it was canceling a Christmas celebration planned for Wednesday.

"Out of care for our leaders and children, it might be unsuitable for them to speak and sing shortly after the possibility of an announcement that runs counter to the message of peace," the delegation said in a statement.

The Jordanian monarch warned Trump that "the decision will have serious implications that will undermine efforts to resume the peace process and will provoke Muslims and Christians alike," according to a statement from the Jordanian government.

Saudi Arabia's Ministry of Foreign Affairs also expressed "deep concerns" about the possible move in a statement. European allies, including France, have also weighed in, urging Trump to avoid taking a position on Jerusalem.

The president relishes being unpredictable, and he is known to often change his mind at the last

minute. But for days now, White House aides have been indicating that Trump is determined to break with tradition, noting that he promised during the 2016 presidential campaign that he would move the embassy.

Trump has already proven hard to persuade on a number of issues that have broad international support. He has said the U.S. is pulling out of the Paris climate agreement, for one, and has also abandoned the Trans-Pacific Partnership trade deal. More recently, he decided to pull the U.S. out of an international effort to come up with a new framework for dealing with refugees.

What to do about Jerusalem is an issue that has sparked fierce internal debate, with Trump's advisers warning that the move could threaten prospects for a peace deal. But the senior administration officials briefing reporters on Tuesday said the ultimate decision was borne of a collaborative effort.

They added that various U.S. agencies were prepared for potential unrest as a result of the president's decision.

Nolan McCaskill and Louis Nelson contributed to this report.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

December 4, 2017

Latest News

EPA Allies Warn Of Toxics, Enforcement Cuts To Fight FY18 Spending Plan

Environmentalists and other EPA allies are trying to fight major proposed fiscal year 2018 funding cuts for the agency by warning of the adverse health and environmental impacts that the cuts would have in scrapping a key toxic risk assessment program and significantly cutting enforcement, among other scaled-back programs.

House Critics Build Case For Overhauling NEPA To Speed EIS Reviews

House opponents of the National Environmental Policy Act (NEPA) are building a case for legislation to overhaul the foundational environmental law to speed project reviews, holding a recent hearing where they outlined a number of examples for how the law's review process is delaying projects and driving up their costs.

Citizens Urge High Court To Reject Air Law 'Contingency' Measures Case

Arizona citizens are urging the Supreme Court to reject the state's request for the court to hear its appeal of a ruling that said it cannot count existing air pollution controls as new "contingency measures" required to cut emissions under the Clean Air Act, saying there is no appellate split on the issue that would justify high court review.

EPA Renews Pledge To Issue Perchlorate Rule After Official Raised Doubts

A lead member of EPA's water office staff reassured members of the agency's children's health advisory panel that officials will continue on their path toward regulating the rocket fuel ingredient perchlorate in drinking water, despite a suggestion from a top agency office last month that raised questions in some stakeholders' minds.

Industry, Environmentalists Spar Over Perchlorate Peer Review Documents

Environmentalists and industry stakeholders are sparring over documents that EPA prepared for a second round of peer review of the model intended to assist the agency in setting a drinking water goal for the rocket fuel perchlorate -- even as the

agency has failed to meet its first court ordered deadline for doing so.

Daily Feed

Environmentalists defend suit over 'vague' CRA terms

Environmentalists are urging the court to preserve their suit that challenges the Congressional Review Act's limits on agencies replacing rules that Congress scraps under the law.

NOAA pick agrees humans are 'main' cause of climate change

The administration's pick to lead NOAA goes much further in acknowledging human contributions to climate change than most Trump administration officials, including EPA Administrator Scott Pruitt.

Ewire: House panel poised to codify Trump's deregulatory orders

A House committee is voting Nov. 30 on legislation to codify President Donald Trump's deregulatory orders.

D.C. Circuit urged to 'clarify' AFO reporting mandate

Environmentalists are insisting that EPA's exemption of animal feeding operations from some emissions reporting requirements is unlawful “final agency action.”

Amid GHG Endangerment Fight, Some Conservatives Push Sector Strategy

As the future of EPA's greenhouse gas endangerment finding divides conservatives, some legal observers are suggesting an alternative approach that they say would leave the finding -- the driver for nearly all of EPA's GHG rules -- in place but still largely allow the agency to avoid regulations that opponents are seeking to eliminate.

Trucking Sector Blasts Legal, Policy Rationale For Glider GHG Rule Repeal

Numerous representatives of the trucking sector -- including for manufacturers, large fleets and advanced technology firms -- are pushing back hard against EPA's proposal to scrap greenhouse gas restrictions on "glider" trucks that combine used engines with a new chassis, arguing EPA's legal justification could open up a massive Clean Air Act loophole and disadvantage numerous businesses that have invested in cleaner technology.

House Critics Build Case For Overhauling NEPA To Speed EIS Reviews

House opponents of the National Environmental Policy Act (NEPA) are building a case for legislation to overhaul the foundational environmental law to speed project reviews, holding a recent hearing where they outlined a number of examples for how the law's review process is delaying projects and driving up their costs.

EPA Staff Defend Modeling For Vehicle GHG Rules Amid Industry Attack

EPA career staffers are defending their technical modeling used to analyze the agency's greenhouse gas standards for model year 2022-2025 light-duty vehicles against an auto industry attack that the modeling is "biased" in favor of finding greater fuel efficiency gains from advanced vehicle technology.

Oregon

AIR
Cleaner Air Oregon
Oregon AIR

Proposed rule of the Department of Environmental Quality would amend regulations under OAR 340-012 through -246 and the state implementation plan to add public health-based protection from emissions of air toxics to the existing air permitting regulatory framework. The rule would require commercial and industrial facilities to report emissions from 601 chemicals. The rule also would require facilities to calculate and report the risk posed by their emissions where people would be exposed and prohibit operation of facilities whose risks are above the risk action levels and exceeding a proposed upper risk limit. In addition, the rule would revise standards for art glass manufacturers to align with program standards. Comments are due Dec. 22, 2017. Regulatory Update

AIR
Clean Fleet Program
Texas AIR

Proposed rule of the Texas Commission on Environmental Quality would amend regulations under 30 TAC 114 regarding the Clean Fleet Program. The rule would reduce the number of vehicles a grant under the program covers for an eligible entity from 20 to 10 and require a qualifying vehicle to be certified to the appropriate current federal emissions standards as determined by the commission. The rule also would clarify that the executive director may, rather than shall, waive specified eligibility requirements on a finding of good cause. If finalized, the rule will be submitted to the EPA as a revision to the state implementation plan. A hearing is scheduled for Dec. 11, 2017, in Austin. Comments are due Dec. 22, 2017. Contact: Steve Dayton; TCEQ, Implementation Grants Section; 512-239-6824

Regulatory Update

AIR
Clean School Bus Program

Texas AIR

Proposed rule of the Texas Commission on Environmental Quality would amend regulations under 30 TAC 114 regarding the Clean School Bus Program. The rule would add the replacement of a pre-2007 model year school bus to the list of eligible projects and clarify that the requirement for a school bus proposed for retrofit be used on a regular, daily route to and from a school only applies during the school year. The rule also would remove provisions addressing projects to replace equipment or repower, add requirements for a school bus that has been proposed for replacement, and require a school bus proposed for purchase to replace a pre-2007 model year school bus to be of the current model year or the year before the current model year. In addition, the rule would clarify that the replacement school bus must be purchased and the grant recipient must agree to own and operate the school bus on a regular, daily route to and from a school during the school year for at least five years after a start date established by the commission. Finally, the rule would require a school bus replaced under the program to be rendered permanently inoperable or be permanently removed from the state to outside the U.S., Canada, or Mexico. If finalized, the rule will be submitted to the EPA as a revision to the state implementation plan. A hearing is scheduled for Dec. 11, 2017, in Austin. Comments are due Dec. 22, 2017. Contact: Steve Dayton; TCEQ, Implementation Grants Section; 512-239-6824

Regulatory Update

AIR
Diesel Emissions Reduction Incentive Program
Texas AIR

Proposed rule of the Texas Commission on Environmental Quality would amend regulations under 30 TAC 114 regarding the Diesel Emissions Reduction Incentive Program. The rule would revise the definition of "small business" to apply to a business owned by a person who owns and operates no more than five vehicles and who has owned the vehicles for more than two years. The rule also would remove the engine model-year requirements for at least one of the on-road or nonroad diesels owned and operated by the small business and clarify that the executive director may, rather than shall, waive specified eligibility requirements on a finding of good cause. In addition, the rule would clarify that the small business incentives may be implemented either through a separate small business grant program or through special consideration to small businesses when implementing another specified program. If finalized, the rule will be submitted to the EPA as a revision to the state implementation plan. A hearing is scheduled for Dec. 11,

2017, in Austin. Comments are due Dec. 22, 2017. Contact: Steve Dayton; TCEQ, Implementation Grants Section; 512-239-6824

AIR
Light-Duty Motor Vehicle Purchase or Lease Incentive Program
Texas AIR

Proposed rule of the Texas Commission on Environmental Quality would adopt regulations under 30 TAC 114 regarding the Light-Duty Motor Vehicle Purchase or Lease Incentive Program. The rule would establish eligibility requirements and other requirements for applying for and receiving an incentive for the lease or purchase of a new light-duty motor vehicle powered by compressed natural gas, liquefied petroleum gas, or hydrogen fuel cell, or other electric drive. The rule also would provide a $5,000 incentive for the purchase or lease of an eligible new light-duty motor vehicle powered by compressed natural gas or liquefied petroleum gas and a $2,500 incentive for eligible new light-duty motor vehicles powered by a hydrogen fuel cell or other electric drive. In addition, the rule would establish requirements and procedures for manufacturers to submit a report on eligible vehicles and compressed natural gas and liquefied petroleum gas systems that the manufacturer intends to sell in the state. A concurrent proposed rule would repeal existing provisions under 30 TAC 114 related to the program. A hearing is scheduled for Dec. 11, 2017, in Austin. Comments are due Dec. 22, 2017. Contact: Steve Dayton; TCEQ, Implementation Grants Section; 512-239-6824

Regulatory Update

AIR
New Source Review Permits/Consolidated Notices
Texas AIR

Proposed rule of the Texas Commission on Environmental Quality would amend regulations under 30 TAC 39 regarding new source review case-by-case air quality permit applications that are subject to public participation requirements. The rule would establish content requirements for consolidated notices for permit and permit amendment applications that the executive director has declared administratively and technically complete and for which a draft permit was prepared within 15 days of receipt of the application. A concurrent proposed rule would consolidate notice of receipt of application and intent to obtain permit and notice of application and preliminary decision requirements to allow for one 30-day notice period during which comments and requests for a public meeting or contested case hearing may be submitted. If finalized, the rule will be submitted to the EPA as a revision to the state implementation plan. A hearing is scheduled for Jan. 3, 2018, in Austin. Comments are due Jan. 3, 2018. Contact: Janis Hudson; TCEQ, Environmental Law Division; 512-239-0466

AIR

Seaport and Rail Yard Areas Emissions Reduction Program

Texas AIR

Proposed rule of the Texas Commission on Environmental Quality would amend regulations under 30 TAC 114 regarding the Drayage Trunk Incentive Program. The rule would rename the program as the Seaport and Rail Yard Areas Emissions Reduction Program. The rule also would require drayage trucks and cargo handling equipment to be powered by an electric motor or contain an engine certified to the current federal emissions standards applicable to that type of engine and to emit nitrogen oxides at a rate that is at least 25 percent less than the emissions rate of the engine on the truck or equipment being replaced in order to be eligible for purchase under the program. In addition, the rule would apply the same standards to engines and motors for repowering a drayage truck or cargo handling equipment and clarify that the nitrogen oxides emissions rate of the engines replaced or purchased must be based on the emissions standard or family emissions limit of the engine or a baseline emissions rate established by the commission for uncontrolled engines. If finalized, the rule will be submitted to the EPA as a revision to the state implementation plan. A hearing is scheduled for Dec. 11, 2017, in Austin. Comments are due Dec. 22, 2017. HAZARDOUS WASTE MANAGEMENT
Underground and Aboveground Storage Tanks/Exclusions, Registration, Recordkeeping, Fees
Texas HAZARDOUS WASTE MANAGEMENT

Proposed rule of the Texas Commission on Environmental Quality would amend regulations under 30 TAC 334 regarding underground and aboveground storage tanks. The rule would incorporate Oct. 13, 2015, amendments to EPA standards for underground storage tanks (USTs) and state program approval under 40 CFR 280 and 281. The rule also would exclude certain listed USTs from certain operator training, on-site supervisor licensing, and contractor registration requirements. In addition, the rule would clarify the applicability of requirements for agency approval regarding certain regulated construction activities occurring over the Edwards Aquifer, classify a switch to a regulated substance containing greater than 10 percent ethanol or 20 percent biodiesel as a major construction activity, and establish a new exemption relating to reporting initiation or rescheduling of switching to biofuel. Finally, the rule would require operation and maintenance records to include reports from periodic testing and walkthrough inspection, clarify maximum fee amounts and the fee calculation methodology, and revise and add definitions. A hearing is scheduled for Jan. 9, 2018, in Austin. Comments are due Jan. 8, 2018. Contact: Cynthia Gandee; TCEQ, Program Support Section; 512-239-7025

HAZARDOUS WASTE MANAGEMENT

Underground and Aboveground Storage Tanks/Release Reporting and Investigation
Texas HAZARDOUS WASTE MANAGEMENT

Proposed rule of the Texas Commission on Environmental Quality would amend regulations under 30 TAC 334 regarding underground and aboveground storage tanks. The rule would incorporate Oct. 13, 2015, amendments to EPA standards for storage tanks and state program approval under 40 CFR 280 and 281. The rule would add liquid in the interstitial space that is not used for interstitial monitoring as an "unusual operating condition." The rule also would reduce reporting requirements as long as owners and operators take prompt action to investigate and respond to suspected releases. In addition, the rule would add "including investigation of an alarm" to the conditions that require a suspected release investigation, clarify the monitoring period for inventory control, and describe instances when leaks found contained in secondary containment do and do not require agency notification. Finally, the rule would establish requirements for system tests following a suspected release and require repair, or replacement, or closure of systems when tests confirm a leak into the interstice or a release. A hearing is scheduled for Jan. 9, 2018, in Austin. Comments are due Jan. 8, 2018. Contact: Cynthia Gandee; TCEQ, Program Support Section; 512-239-7025

Regulatory Update

HAZARDOUS WASTE MANAGEMENT
Underground and Aboveground Storage Tanks/Technical Standards
Texas HAZARDOUS WASTE MANAGEMENT

Proposed rule of the Texas Commission on Environmental Quality would amend regulations under 30 TAC 334 regarding technical standards for underground and aboveground storage tanks. The rule would incorporate Oct. 13, 2015, amendments to EPA requirements for storage tanks and state program approval under 40 CFR 280 and 281. The rule also would require UST systems to be maintained to prevent releases, specify options owners and operators may use to demonstrate agency compliance, and require the removal of liquid and debris found in sumps and spill prevention equipment within 96 hours only. In addition, the rule would clarify the applicability of the requirement to use double-wall tank and piping systems for any UST system situated on the regulated zones of the Edwards Aquifer, require certain equipment testing, and address release detection methods. Finally, the rule would address temporary and permanent removals from service. A hearing is scheduled for Jan. 9, 2018, in Austin. Comments are due Jan. 8, 2018. Subject: Senate tax writers teeing up tax extenders bill

By Aaron Lorenzo and Bernie Becker

12/05/2017 07:23 PM EDT

Leading GOP senators expect legislation to extend expired tax provisions to come together in the next couple of weeks.

Energy and agriculture provisions are driving the plan.

"We always wind up doing it, so yeah, I suspect that's something we'll have to do," said Senate Finance Chairman Orrin Hatch (R-Utah). "There hasn't been much talk about it right now, but there's always loose ends that you just have to tie up."

The items, which would revive short-term tax benefits to promote renewable energy sources like biodiesel and solar power, as well as rail lines crucial to farming communities, weren't included in the major tax legislation already advancing in Congress, H.R. 1 (115). Nor were they part of the massive package of tax extenders Congress passed in 2015.

Instead, these extra extensions of longstanding policies are moving separately.

They could ride with an end-of-year government funding agreement, according to multiple sources on Capitol Hill, as well as lobbyists.

"I wanted it in the bigger tax bill but there are so many extenders that they just made it too complicated," said Sen. Mike Crapo (R-Idaho). "So the decision was made — not by me — to pull the extenders back for a different bill."

Crapo is pushing to continue a tax credit to maintain short-line railroads, which connect farm goods from hard-to-reach locations around the country to main rail arteries that can carry the food anywhere.

Sens. Johnny Isakson (R-Ga.) and Tim Scott (R-S.C.) are advocating to extend a 2020 deadline on tax credits for new nuclear energy projects. Sen. Chuck Grassley (R-Iowa) has worked on biodiesel.

In the House, a separate effort has been afoot to further delay start dates on several health care-related taxes, like the medical device excise tax and health insurance tax, connected to the Affordable Care Act.

WHAT'S NEXT: Government funding runs out Dec. 8, and talks on longer-term spending plans are ongoing.

Subject: First Move: 'Devastating' Tax Provision • Arctic Refuge's Oil Potential • Speeding Up Gas Exports

What you need to know to start your day.

'Devastating' Tax Provision • Arctic Refuge's Oil Potential • Speeding Up Gas Exports

By Chuck McCutcheon

Now that the Senate has passed its tax overhaul, the renewable energy industry is beseeching tax writers—who are negotiating with the House—to fix a provision it warns could cripple that sector.

The Senate-approved proposal preserved some of the tax credits that have led to great growth in the wind and solar industries. But the bill threatens a key source of wind and solar financing from big companies, including JPMorgan Chase & Co. and Bank of America Corp.

In tax-equity deals, renewable-energy developers sell portions of their projects' tax credits to corporations—often banks and some insurance companies—that can apply the credits to their own tax bills. The Senate version includes a provision that imposes a minimum tax on these companies' foreign transactions. If they have to pay a minimum tax, they may no longer have any need for the credits acquired through tax-equity deals.

"The impacts are potentially devastating," American Council on Renewable Energy President Gregory Wetstone told Bloomberg News.

Meanwhile, industries such as coal and nuclear that didn't get provisions into the tax overhaul may get a second chance before the end of the year. Tens of billions of dollars in expiring tax incentives could be attached to must-pass government funding legislation.

The Senate's tax overhaul also includes language to open Alaska's Arctic National Wildlife Refuge to oil leasing. That swath of land is thought to hold greater potential for new oil discoveries than any other U.S. onshore area, Alan Kovski explains in a story being published this week.

The U.S. Geological Survey doesn't expect super-giant oil fields like Prudhoe Bay will be found in ANWR, but there is thought to be a good chance of finding large

fields—holding hundreds of millions of barrels each—that are on a scale similar to discoveries announced in recent years on the North Slope in state onshore and offshore areas and in the National Petroleum Reserve-Alaska.

The Senate Energy and Natural Resources Committee's panel on energy is talking about seven bills at a hearing today, including a measure addressing one of the Trump administration's energy goals: speeding up exports of liquefied natural gas to other countries.

The bill by Republican Sens. Bill Cassidy of Louisiana and Marco Rubio of Florida aims to codify into law an Energy Department proposed rule that is intended to expedite the approval of small-scale LNG exports to the Caribbean, Central America, and South America. The bill would cover exports equal to or less than 51.1 billion cubic feet per year.

The Energy Department's rulemaking is in response to a Trump administration executive order requiring federal agencies to find ways to lift restrictions to "unleash" more domestic energy resources.

Rebecca Kern will cover the hearing.

Other Stories We're Covering

- The independent, quasi-judicial U.S. International Trade Commission will vote today on whether to pave the way for anti-subsidy duties on biodiesel from Argentina and Indonesia. A decision in favor of duties would be a victory for the National Biodiesel Board Fair Trade Coalition, which argues the fuel is unfairly subsidized and being dumped in the U.S. at prices below production costs.
- Trump's decision to shrink two Utah national monuments will be followed by decisions on other national monuments. A report on the decisions—originating with recommendations from Interior Secretary Ryan Zinke—will be released this week, the White House said.
- The Senate energy committee considers nominations of Timothy Petty to run Interior's U.S. Geological Survey and Bureau of Reclamation and Linda Capuano to be the head of the Energy Department's research arm. Rebecca Kern is covering.
- The German Marshall Fund is hosting a forum on U.S. climate action, including looking at cities' and regions' roles in implementing international climate policy. Dean Scott is monitoring.

A tugboat on London's Thames River in heavy smog in 1952.
Photo by Fox Photos/Hulton Archive/Getty Images

Around the Web

- Sixty-five years ago this week, London's Great Smog was the worst air-pollution crisis in European history, killing as many as 12,000 people. It led to restrictions on coal burning in urban areas.
- An English grocery chain says it's selling products up to a month past their "best by" dates to try to reduce food waste.
- Researchers are starting to understand why some glaciers swing between extremes of stagnation and crushing ice flow.

Quote of the Day

"How would we all feel if 5 percent of trucks didn't have to stop for a school bus or abide by the speed limit?"
—Robert Nuss of Nuss Truck & Equipment, criticizing an EPA proposal to exempt glider kits from Obama-era greenhouse gas standards for heavy-duty trucks. Glider kits are new truck chassis and cab assemblies built for the installation of a used engine and transmission. They make up about 5 percent of the heavy-duty fleet.

Today's Events

- • **All Day** • **Clean Water Act** • The American Law Institute-Continuing Legal Education and the Environmental Law Institute are co-sponsoring a webcasted Clean Water Act seminar at the Hunton & Williams LLP offices in Washington.
- • **All Day** • **Electricity** • gridCONNEXT conference brings together business, utility, and policymakers to explore topics affecting the electricity grid at the national, regional, state, and local levels.

Summaries

AIR
California SIP/Bay Area AQMD Emission Reduction Credit Banking
AIR

Final rule of the EPA conditionally approves a revision to the Bay Area Air Quality Management District portion of the California SIP. The revision updates provisions for the issuance and banking of emission reduction credits for use in the review and permitting of major sources and major modifications. The EPA determined that the rule is deficient in three respects but that conditional approval of the revision will not interfere with continued attainment of the NAAQS in the area. The approval is conditioned on the district submitting the required measures by Nov. 1, 2018. The rule is effective Jan. 3, 2018. Contact: Laura Yannayon; EPA Region 9; 415-972-3534; yannayon.laura@epa.gov. Citations: 40 CFR 52.220, 52.232

82 FR 57133 (12/04/2017)

Regulatory Update

AIR
California SIP/Sacramento Metropolitan AQMD Operating Permits
AIR

Final rule of the EPA approves a revision to the Sacramento Metropolitan Air Quality Management District portion of the California SIP regarding emissions of volatile organic compounds (VOC). The revisions concern portions of two district operating permits that limit VOC emissions from landfill gas flaring at the Kiefer Landfill in Sacramento. The rule is effective Jan. 3, 2018. Contact: Stanley Tong; EPA Region 9; 415-947-4122; tong.stanley@epa.gov. Citations: 40 CFR 52.220

Regulatory Update

AIR

California SIP/Sacramento Metropolitan AQMD Organic Chemical Manufacturing

AIR

Final rule of the EPA approves revisions to the Sacramento Metropolitan Air Quality Management District portion of the California SIP regarding emissions of volatile organic compounds (VOCs) from organic chemical manufacturing operations. The revisions address VOC emissions requirements for pharmaceutical manufacturing. This rule, along with a concurrent final rule regarding municipal waste landfill permits, address deficiencies in the state's demonstration of reasonably available control technology requirements for the 1997 eight-hour ozone NAAQS as specified in an Aug. 12, 2016, final rule (81 FR 53280). The rule is effective Jan. 3, 2018. Contact: Arnold Lazarus; EPA Region 9; 415-972-3024; lazarus.arnold@epa.gov. Citations: 40 CFR 52.220

82 FR 57123 (12/04/2017)

Regulatory Update

AIR

Energy Conservation Standards/Certification and Compliance Requirements

AIR

Notice of the Energy Department, Office of Energy Efficiency and Renewable Energy, announces the submission of a revised information collection request to the OMB regarding certification and compliance requirements for consumer products and commercial/industrial equipment subject to federal energy or water conservation standards. The collection addresses the gathering of data and submission of certification and compliance reports for basic models distributed in commerce in the U.S., including supplemental testing instructions for certain commercial equipment, recordkeeping, applications for test procedure waivers, applications for extension of the date by which representations must be made in compliance with a new or amended test procedure, and labeling. The revisions modify the online Compliance and Certification Management System (CCMS) to allow the California Energy Commission to accept a CCMS report in satisfaction of the state reporting requirement. Comments are due Jan. 3, 2018. Contact: Ashley Armstrong; DOE, Office of Energy Efficiency and Renewable Energy; 202-586-6590; ApplianceStandardsQuestions@ee.doe.gov. Citations: 10 CFR 429, 430, 431

Regulatory Update

AIR

Idaho SIP/PM-2.5 NAAQS Infrastructure Requirements

AIR

Final rule of the EPA approves revisions to the Idaho SIP regarding the infrastructure requirements for the 2012 annual fine particulate matter (PM-2.5) NAAQS. The rule does not approve or disapprove state provisions regarding excess emissions during startup, shutdown, or malfunction of operations at a facility or any provisions involving state director discretion or variance. The rule is effective Jan. 3, 2018. Contact: Matthew Jentgen; EPA Region 10, Air Planning Unit; 206-553-0340; jentgen.matthew@epa.gov. Citations: 40 CFR 52.670

Regulatory Update

AIR
Michigan, Minnesota SIP and FIP/Regional Haze, Taconite Plants
AIR

Notice of the EPA announces final action denying petitions for reconsideration of a Feb. 6, 2013, final rule (78 FR 49490); a Sept. 30, 2013, final rule (78 FR 59825); and an April 12, 2016, final rule (81 FR 21672) that disapproved in part Michigan and Minnesota regional haze SIPs and established and revised a federal implementation plan (FIP) addressing requirements for best available retrofit technology for taconite ore processing facilities. The petitions were filed by the U.S. Steel Corp., of Pittsburgh. The denials are effective Dec. 4, 2017. Petitions for judicial review are due Feb. 2, 2018. Contact: Steven Rosenthal; EPA, Region 5, Air Planning and Maintenance Section; 312-886-6052; rosenthal.steven@epa.gov. Citations: 40 CFR 52.1183, 52.1235, 52.1236

82 FR 57125 (12/04/2017)

Regulatory Update

AIR
New York SIP/Danskammer Generating Station
AIR

Final rule of the EPA approves a source-specific revision to the New York SIP. The revision consists of a best available retrofit technology (BART) determination and emission limits for sulfur dioxide, nitrogen oxides, and particulate matter for Unit 4 at the Danskammer Generating Station in Newburgh. The revision also restricts Unit 4 to combusting only natural gas. In addition, the rule withdraws identical emission limits in the Aug. 28, 2012, federal implementation plan (77 FR 51915) that addressed BART for Danskammer Unit 4. The rule is effective Jan. 3, 2018. Contact: Edward Linky; EPA Region 2, Air Programs Branch; 212-637-3764; Linky.Edward@epa.gov. Citations: 40 CFR 52.1670

82 FR 57126 (12/04/2017)

Regulatory Update

AIR
Utah SIP/Logan PM-2.5 Nonattainment Area
AIR

Proposed rule of the EPA would approve portions of revisions to the Utah SIP regarding the attainment plan for the Logan, Utah-Idaho, 2006 24-hour fine particulate matter (PM-2.5) NAAQS nonattainment area. The revisions include determinations for major stationary source reasonably available control technology, on-road mobile sources reasonably available control measures (RACM), Cache County inspection and maintenance program as additional reasonable measures, and off-road mobile sources RACM. The revisions also include the emissions inventory, modeled attainment demonstration, and 2015 motor vehicle emission budgets. Comments are due Jan. 3, 2018. GENERAL ENVIRONMENT AND SAFETY
California/San Francisco Bay to Stockton Navigation Study
GENERAL ENVIRONMENT AND SAFETY

Notice of the U.S. Army Corps of Engineers supplements a March 4, 2016, notice of intent (81 FR 11529) to prepare a joint environmental impact statement/environmental impact report regarding the San Francisco Bay to Stockton Navigation Improvement Study. The original study would have evaluated the efficiency of the movement of goods along the existing deep-draft navigation route extending from the West Richmond Channel to the Stockton Deep Water Ship Channel. The agency now proposes a reduced scope and project footprint that includes a study area extending from Central San Francisco Bay to Avon only. The agency also proposes to evaluate incremental deepening only to a maximum depth of 38 feet mean lower low water. The draft EIS/EIR is expected to be issued in summer 2018. Comments are due Jan. 3, 2018. Contact: Stacie Auvenshine; USACE; 904-314-6714; Stacie.j.auvenshine@usace.army.mil

Illinois, Missouri/Spire STL Pipeline Project
GENERAL ENVIRONMENT AND SAFETY

Supplemental notice of FERC announces the availability of the environmental assessment and reopening of the comment period for the Spire STL Pipeline Project in Greene, Jersey, and Scott counties in Illinois and St. Charles and St. Louis counties in Missouri. The project, proposed by Spire STL Pipeline Co., of St. Louis, involves the construction of approximately 65 miles of pipeline, three meter stations, and piping and pigging facilities. The project would provide for transport of about 400,000 dekatherms per day of natural gas service to the greater St. Louis region. The comment period is being reopened due to a delay in receipt of the EA by some stakeholders. Comments now are due Dec. 22, 2017. PESTICIDES
Extension of Pesticide Tolerances for Emergency Exemptions/Clothianidin, Sulfoxaflor
PESTICIDES

Final rule of the EPA extends the time-limited tolerance for residues of the insecticide clothianidin and its metabolites in or on citrus fruit, group 10-10, at 0.07 parts per million (ppm) for an additional three-year period for use in the control of the Asian citrus psyllid in Florida and Texas. The rule also extends time-limited tolerances for residues of the insecticide sulfoxaflor and its metabolites in or on sorghum forage at 0.4 ppm, sorghum grain at 0.3 ppm, and sorghum stover at 0.9 ppm for an additional three-year period for control of the sugarcane aphid in several states. The rule is effective Dec. 4, 2017. Objections and hearing requests are due Feb. 2, 2018.

PESTICIDES
Pesticide Tolerance Exemption/α-Methyl Mannoside
PESTICIDES

Notice of the EPA announces the receipt of an initial filing of a petition to establish an exemption from the requirement of a tolerance for residues of the plant regulator α-methyl mannoside in or on all raw agricultural commodities. The petition was filed by Brandt iHammer, of Powell, Ohio. Comments are due Jan. 3, 2018. Contact: Robert McNally; EPA, Office of Pesticide Programs; 703-305-7090; BPPDFRNotices@epa.gov. Citations: 40 CFR 180

82 FR 57193 (12/04/2017)

Regulatory Update

PESTICIDES
Pesticide Tolerance Exemption/HPPD-4
PESTICIDES

Final rule of the EPA establishes an exemption from the requirement of a tolerance for residues of the HPPD-4 protein derived from the 4-hydroxyphenylpyruvate dioxygenase enzyme of Pseudomonas fluorescens in or on all food commodities, when used as a plant-incorporated protectant inert ingredient. The rule is issued in response to a petition filed on behalf of Bayer CropScience LP, of Research Triangle Park, N.C. The rule is effective Dec. 4, 2017. Objections and hearing requests are due Feb. 2, 2018. Contact: Robert McNally; EPA, Office of Pesticide Programs; 703-305-7090; BPPDFRNotices@epa.gov. Citations: 40 CFR 174.537

82 FR 57137 (12/04/2017)

Regulatory Update

PESTICIDES
Pesticide Tolerance/Bacillus thuringiensis
PESTICIDES

Final rule of the EPA increases the tolerance for residues of the Bacillus thuringiensis Cry14Ab-1 protein in or on soybeans, when used as a plant-incorporated protectant in soybean plants, in accordance with the terms of experimental use permit (No. 264-EUP-151). The rule is issued in response to a petition filed by BASF Corp., of Research Triangle Park, N.C. The current action differs from the request in that Cry14Ab-1 is qualified not as a plant-pesticide, but as a plant-incorporated protectant. The rule is effective Dec. 4, 2017. Objections and hearing requests are due Feb. 2, 2018. Contact: Robert McNally; EPA, Office of Pesticide Programs; 703-305-7090; BPPDFRNotices@epa.gov. Citations: 40 CFR 174.538

82 FR 57135 (12/04/2017)

Regulatory Update

PESTICIDES
Pesticide Tolerances/Ethofumesate
PESTICIDES

Final rule of the EPA establishes and eliminates tolerances for residues of the herbicide ethofumesate in or on sugar beet molasses and roots. The rule is issued in response to a petition filed by Interregional Research Project Number 4, of Princeton, N.J. The current action establishes tolerances that differ from what the petitioner requested due to the agency's determination that an increased tolerance is not needed because the commodity is no longer a significant livestock feed item or a recognized human food. The rule is effective Dec. 4, 2017. Objections and hearing requests are due Feb. 2, 2018. Contact: Michael Goodis; EPA, Office of Pesticide Programs; 703-305-7090; RDFRNotices@epa.gov. Citations: 40 CFR 180.345

82 FR 57151 (12/04/2017)

Regulatory Update

PESTICIDES
Pesticide Tolerances/Prometryn
PESTICIDES

Final rule of the EPA establishes tolerances for residues of the herbicide prometryn in or on multiple commodities. The rule is issued in response to a petition filed by Interregional Research Project Number 4, of Princeton, N.J. The rule also modifies tolerance levels to reflect the correct number of significant figures and removes the tolerance for residues of prometryn in/on sesame oil at 0.12 parts per million because the tolerance is not necessary. In addition, the rule revises the description of "florence fennel" to "fennel, florence, fresh leaves and stalk." The rule is effective Dec. 4, 2017. Objections and hearing requests are due Feb. 2, 2018. Contact: Michael Goodis; EPA, Office of Pesticide Programs; 703-305-7090; RDFRNotices@epa.gov. Citations: 40 CFR 180.222

82 FR 57140 (12/04/2017)

Regulatory Update

PESTICIDES
Pesticide Tolerances/Quinclorac
PESTICIDES

Final rule of the EPA establishes tolerances for residues of the herbicide quinclorac and its methyl ester metabolite in or on the bushberry subgroup 13-07B, the caneberry subgroup 13-07A, and asparagus at 0.08 parts per million. The rule is issued in response to a petition filed by Interregional Research Project Number 4, of Princeton, N.J. The current action increases the levels of tolerances that were requested by the petitioner because the residue values from the submitted field trial data did not include the residue values of methyl ester metabolite. The rule also revises the definition of "bushberry subgroup 13-07B, except lowbush blueberry" to "bushberry subgroup 13-07B" because the lowbush blueberry tolerance is covered under another subgroup. The rule is effective Dec. 4, 2017. Objections and hearing requests are due Feb. 2,

2018. Contact: Michael Goodis; EPA, Office of Pesticide Programs; 703-305-7090; RDFRNotices@epa.gov. Citations: 40 CFR 180.463

Subject: SVP of Advocacy and Communications search for APPA - thoughts?

Dear Ryan,

I hope this note finds you well. I can't believe it is December – the year is flying by!

I wanted to pick your brain for a search I am just kicking off for the **Senior Vice President of Advocacy and Communications** for the **American Public Power Association** (APPA). The SVP oversees APPA's integrated external affairs function, including the 25-person government affairs, regulatory advocacy and communications teams. S/he will lead the development and implementation of a coordinated advocacy strategy and the seamless execution of a multi-faceted external communications plan with the ultimate goal of raising the visibility of the critical role public power utilities play in communities across the country. The ideal candidate would be an accomplished manager of people and teams with demonstrated expertise in the external affairs arena within the utility sector.

I have attached a copy of the position specification and would welcome any thoughts you might have of potentially strong candidates. I'm happy to hop on a quick call to talk through in more detail if that would be helpful.

Thanks in advance for your assistance!

Best,

Stephanie

Latest News

EPA Staff Defend Modeling For Vehicle GHG Rules Amid Industry Attack

EPA career staffers are defending their technical modeling used to analyze the agency's greenhouse gas standards for model year 2022-2025 light-duty vehicles against an auto industry attack that the modeling is "biased" in favor of finding greater fuel efficiency gains from advanced vehicle technology.

Court Slated To Hear Arguments Over States' CWA Powers To Block Pipelines

The U.S. Court of Appeals for the 2nd Circuit is poised to hear arguments in a dispute between federal energy regulators and New York over the state's effort to block a natural gas pipeline by withholding its approval under the Clean Water Act (CWA), a case that could set a precedent for North Carolina's efforts to block a different pipeline.

Trucking Sector Blasts Legal, Policy Rationale For Glider GHG Rule Repeal

Numerous representatives of the trucking sector -- including for manufacturers, large fleets and advanced technology firms -- are pushing back hard against EPA's proposal to scrap greenhouse gas restrictions on "glider" trucks that combine used engines with a new chassis, arguing EPA's legal justification could open up a massive Clean Air Act loophole and disadvantage numerous businesses that have invested in cleaner technology.

States Warn Of Economic Impacts If EPA Strategic Plan Drops SMM Effort

State waste managers are raising concerns that EPA's omission of sustainable materials management (SMM) from the agency's draft multi-year strategic plan will cause economic harm, making the United States less competitive with other countries that are pursuing a circular economy.

6th Circuit Poised To Hear Novel Challenge To EPA CWA Permit Objection

The U.S. Court of Appeals for the 6th Circuit is poised to hear oral argument Dec. 6 in a novel case that tests whether EPA can face legal challenges for objecting to Army

Corps of Engineers-issued Clean Water Act (CWA) permits even when the agency does not formally deny a permit application.

EPA Scraps Plan For Mining Finance Rule, Raising Doubts About Other Sectors

Despite staff expectations, the Trump administration is dropping an Obama-era proposal to issue the first-ever financial responsibility requirements under section 108 of the Superfund law for the mining sector, saying it would create an undue burden on the sector and creating doubts over whether the agency will pursue similar rules for other industries.

Driving the Day

BIG NEWS FOR DEMS -- NYT'S YAMICHE ALCINDOR -- "Conyers Won't Seek Re-election in Wake of Harassment Claims, Relative Says": "Mr. Conyers, the longest-serving member of the House of Representatives, will make the announcement by calling into a local radio show on Tuesday morning, Ian Conyers, a Michigan state senator, said in a phone interview early Tuesday. Ian Conyers, 29, the grandson of Mr. Conyers's brother, said he now planned to run for the seat held by his 88-year-old great-uncle, a Democrat who represents the Detroit area. 'He is not resigning. He is going to retire,' the younger Mr. Conyers said. 'His doctor advised him that the rigor of another campaign would be too much for him just in terms of his health.'" http://nyti.ms/2kmc8iN

-- THE DECISION could ratchet down pressure in the Democratic Caucus. But remember: many Democrats have said Conyers should resign immediately.

Good Tuesday morning. **NEWS --** The joint House-Senate Republican legislative retreat will be held at the Greenbrier Resort in West Virginia in January. The retreat -- organized by the Congressional Institute -- will be Jan. 31 through Feb. 2. President Donald Trump is expected to attend. The Greenbrier is more than four hours from Washington in the West Virginia mountains. House Republican Conference Chairman Cathy McMorris Rodgers of Washington State is expected to make this announcement today in a closed party meeting.

PAGING TRUMP AND JARED: THE WORLD COMES OUT AGAINST THE U.S. NAMING JERUSALEM ISRAEL'S CAPITAL -- AP at 4:23 a.m.: "ANKARA, Turkey (AP) - Turkey warns US that recognizing Jerusalem as Israel's capital is 'red line' for Muslims."

... **BARAK RAVID,** of Israel's Channel 10: If the U.S. declares Jerusalem the capital, it

"might lead to cutting of diplomatic relations between Turkey & Israel" ... "German FM Gabriel: U.S. recognition of Jerusalem as the capital of Israel will be counterproductive & will only worsen the crisis. A solution to the issue of Jerusalem should be achieved through negotiations".

... **JOE DYKE,** AFP's Jerusalem bureau chief **(@joedyke):** "Breaking: US Jerusalem recognition would end Trump peace push, senior official Nabil Shaath announces. @AFP".

... **SAUDI ARABIAN FOREIGN MINISTRY:** "The Kingdom of Saudi Arabia views this step, if taken, to be in contradiction of the principle of not affecting final status negotiations, and contradicts international resolutions that emphasize the historical and firm rights of the Palestinian People regarding Jerusalem, which cannot be changed, nor can an attempt to impose a new reality upon it be made. This step, if taken, will constitute a fundamental change, and an unwarranted shift in the United States' impartial position, at a time when the world looks to the United States of America to work on achieving the desired progress in the peace process."

NYT's MARK LANDLER: French President Emmanuel "Macron, ... reaffirmed that the status of Jerusalem must be resolved through peace negotiations between Israelis and Palestinians, and particularly those relating to the establishment of two states, Israel and Palestine, living side by side in peace and security with Jerusalem as their capital.'" http://nyti.ms/2jQgZol

-- "State Department warns of violence ahead of Trump Jerusalem decision," by Nahal Toosi: "The State Department has warned American embassies worldwide to heighten security ahead of a possible announcement Wednesday by President Donald Trump that the U.S. recognizes Jerusalem as the capital of Israel. The warning -- delivered in the past week via two classified cables described by State Department officials -- reflects concern that such an announcement could provoke fury in the Arab world even as Trump's son-in-law Jared Kushner works to advance long-stalled peace talks between Israelis and Palestinians.

"Some Arab leaders have implored Trump not to change longstanding American policy on Jerusalem, saying it could make any peace agreement impossible and that it would spark mass protests and even terrorism. The militant group Hamas has already called for a new Palestinian 'intifada,' or uprising, if Trump declares Jerusalem the capital of the Jewish-majority state. 'The impending Jerusalem announcement has me very worried about the possibility of violent responses that could affect embassies,' one State Department official told POLITICO. 'I hope I'm wrong.'" http://politi.co/2jNWPvi

REUTERS' DAN WILLIAMS (@danwilliams): "Hearing that @netanyahu, asked during a closed-door meeting with Israeli parliamentarians yesterday what @realDonaldTrump would announce tomorrow regarding US policy on Jerusalem and the mooted embassy move, answered: 'I don't know.' No confirmation on that from @IsraeliPM aides."

TWEET OF THE MORNING -- AP'S JOSH LEDERMAN (@joshledermanAP): "'The State Department is not missing a beat,' Secretary Tillerson says at US Embassy in Brussels, where there's no US ambassador to EU or Belgium".

JUST POSTED - MCKAY COPPINS in The Atlantic's Jan./Feb. issue, **"God's Plan for Mike Pence:** Will the vice president-and the religious right-be rewarded for their embrace of Donald Trump?": "On Friday, October 7, 2016, The Washington Post published the Access Hollywood tape ... It's been reported that Pence sent Trump a letter saying he needed time to decide whether he could stay with the campaign. But in fact, according to several Republicans familiar with the situation, he wasn't just thinking about dropping out-he was contemplating a coup. Within hours of *The Post* 's bombshell, Pence made it clear to the [RNC] that he was ready to take Trump's place as the party's nominee. Such a move just four weeks before Election Day would have been unprecedented-but the situation seemed dire enough to call for radical action. ...

"Meanwhile, a small group of billionaires was trying to put together money for a 'buyout'-even going so far as to ask a Trump associate how much money the candidate would require to walk away from the race. According to someone with knowledge of the talks, they were given an answer of $800 million. (It's unclear whether Trump was aware of this discussion or whether the offer was actually made.) Republican donors and party leaders began buzzing about making Pence the nominee and drafting Condoleezza Rice as his running mate.

"Amid the chaos, Trump convened a meeting of his top advisers in his Manhattan penthouse. He went around the room and asked each person for his damage assessment. Priebus bluntly told Trump he could either drop out immediately or lose in a historic landslide. According to someone who was present, Priebus added that Pence and Rice were 'ready to step in.' ... The furtive plotting, several sources told me, was not just an act of political opportunism for Pence. He was genuinely shocked by the *Access Hollywood* tape. ... The couple was appalled by the video, however. Karen in particular was 'disgusted,' says a former campaign aide. 'She finds him reprehensible-just totally vile.'" http://theatln.tc/2nvmwWw

STICKING UP FOR THE FBI -- "Director Defends F.B.I. After Trump Says Bureau Is in 'Tatters,'" by NYT's Adam Goldman and Charlie Savage: "In a message to the F.B.I.'s 35,000 agents and support staff that was provided to The New York Times, [Christopher] Wray said that he was 'inspired by example after example of professionalism and dedication to justice demonstrated around the bureau. It is truly an honor to represent you.' He did not mention Mr. Trump by name. ... Mr. Wray, who has run the F.B.I. for about four months, told his employees to ignore any criticism and to continue to uphold the Constitution. 'We find ourselves under the microscope each and every day - and rightfully so. We do hard work for a living,' he said, adding that the F.B.I. should 'continue to keep focused on our critical mission.' The email concluded with one of his favorite maxims: 'Keep calm and tackle hard.'" http://nyti.ms/2kn0HYb

NEBRASKA AVE READ -- AP/SAN DIEGO -- "Border arrests plunge, deportation

arrests soar," by Elliot Spagat: "The federal government, in the most complete statistical snapshot of immigration enforcement under President Donald Trump, says Border Patrol arrests plunged to a 45-year low while arrests by deportation officers soared.

"The Border Patrol made 310,531 arrests during the fiscal year that ended Sept. 30, a decline of 25 percent from 415,816 a year earlier and the lowest level since 1971. Despite the significant decline, arrests increased every month since May - largely families and unaccompanied children.

"Immigration and Customs Enforcement, whose officers pick up people for deportation away from the border, made 143,470 arrests, an increase of 25 percent from 114,434 a year earlier. After Trump took office, ICE arrests surged 40 percent from the same period a year earlier." http://bit.ly/2inpze9

DRAMA -- "House conservatives almost topple tax vote," by Bernie Becker, Sarah Ferris, and Colin Wilhelm: "House conservatives threatened to derail a key tax vote on Monday in an attempt to win more influence over the GOP's spending strategy, just four days before the deadline to fund the government. In a dramatic political stunt, more than a dozen members of the House Freedom Caucus withheld their support for a crucial procedural vote on the GOP's tax bill, threatening an embarrassing blow to GOP leadership.

"The conservatives eventually relented, approving what had been thought to be a formality - a motion to appoint negotiators to hammer out a final tax bill with the Senate. But the frenzy on the House floor underscored the divisions within the GOP over a spending strategy this month, and that the Republicans' march toward overhauling the tax code - which has proceeded with relatively little drama so far - could get caught up in the process.

"Rep. Mark Meadows (R-N.C.), the Freedom Caucus chairman, said after Monday's vote that he 'felt very good' about his conversation on the floor with Speaker Paul Ryan, who personally involved himself in the arm-twisting of conservatives. Meadows had earlier stepped outside the House chamber to take a phone call from President Donald Trump, but declined to give any details on the president's message." http://politi.co/2iQOQ4a

-- IF YOU'RE A BETTING MAN OR WOMAN, this isn't over. The Freedom Caucus wants to change the date of the government funding expiration. Right now, funding is set to expire Dec. 22, at which time Congress will punt the deadline again into 2018 to cobble together a large, yearlong spending bill. Meadows and the Freedom Caucus want a Dec. 30 or Dec. 31 expiration, because they think it gives them leverage. This does not seem likely to happen.

-- THIS IS A GOOD REMINDER: The Freedom Caucus, when it's unified, can control the outcome on the House floor.

TO REVIEW -- The government shuts down on Friday. Meadows -- the leader of a bloc of more than 30 conservatives -- says he does not like the GOP leadership plan. Democrats have no intent to help Republican leaders pass a stop gap measure. And the first serious talks between principals -- Democratic and Republican leaders and President Donald Trump -- is Thursday, the day before the funding deadline.

****** **A message from PhRMA** : A medicine's path from the biopharmaceutical company to the patient involves many entities across the supply chain. A new report examines how money flows through this system - which includes wholesalers, pharmacy benefit managers, pharmacies and insurers - and how that impacts what patients pay at the pharmacy. Read more. http://onphr.ma/2kgd6Nu ******

ON TAXES -- "Republicans Sought to Undercut an Unfavorable Analysis of the Tax Plan," by NYT's Jim Tankersley: "A Republican requirement that Congress consider the full cost of major legislation threatened to derail the party's $1.5 trillion tax rewrite last week. So lawmakers went on the offensive to discredit the agency performing the analysis. In 2015, Republicans changed the budget rules in Congress so that official scorekeepers would be required to analyze the potential economic impact of major legislation when determining how it would affect federal revenues.

"But on Thursday, hours before they were set to vote on the largest tax cut Congress has considered in years, Senate Republicans opened an assault on that scorekeeper, the Joint Committee on Taxation, and its analysis, which showed the Senate plan would not, as lawmakers contended, pay for itself but would add $1 trillion to the federal budget deficit. Public statements and messaging documents obtained by The New York Times show a concerted push by Republican lawmakers to discredit a nonpartisan agency they had long praised. ...

"The attack on the joint committee and its analysis is a change from the praise Republicans have long heaped on the body, which is staffed with economists and other career bureaucrats who analyze legislation in depth. 'The people who prepare our cost estimates are the best in the business, and they've been working on this issue for years,' Republicans on the House Budget Committee said on a page that was restored to the committee's website on Monday afternoon, after what staff members said was an accidental deletion during a site redesign this year." http://nyti.ms/2zPH6mn

-- "Companies Push to Repeal AMT After Senate's Last-Minute Move to Keep It Alive," by WSJ's Theo Francis and Rich Rubin: "Technology, banking and other industries mounted a new round of lobbying Monday to save a wide range of tax breaks following the last-minute switch in the federal tax overhaul by the U.S. Senate. The Senate on Saturday decided to keep a corporate alternative minimum tax, or AMT, a move that gave the senators $40 billion over a decade to use on other priorities, according to the official estimate. The move blindsided CEOs and business groups, who acted quickly on Monday to try to persuade legislators to kill or modify the provision, arguing that keeping it would undercut several goals of the legislation, including

fostering investment in the U.S." http://on.wsj.com/2BzJ1fe

BIG WIN FOR TRUMP -- "Supreme Court allows full enforcement of Trump travel ban while legal challenges continue," by WaPo's Robert Barnes: "The Supreme Court on Monday granted President Trump's request to fully enforce his revised order banning travel to the United States by residents of six mostly Muslim countries while legal challenges to it proceed in lower courts. It was a victory for the White House, which has seen the courts trim back various iterations of the travel ban, and it bodes well for the administration if the Supreme Court is called upon to finally decide the merits of the president's actions." http://wapo.st/2BAFZHl

-- "Justices take up dispute over wedding cake for gay couple," by AP's Mark Sherman: "The Supreme Court is taking up the highly anticipated case of the Colorado baker who refused to make a wedding cake for a same-sex couple. Tuesday's clash at the high court pits baker Jack Phillips' First Amendment claims of artistic freedom against the anti-discrimination arguments of the Colorado Civil Rights Commission, and two men Phillips turned away in 2012. The commission ruled that Phillips violated the state's anti-discrimination law when he refused to make a wedding cake for Charlie Craig and David Mullins." http://bit.ly/2BLJcFh

IMPORTANT READ -- "A congressman's accuser: Blackballed and babysitting for cash," by Rachael Bade: "North Carolina native Lauren Greene aspired to a career in politics when she arrived on Capitol Hill as an intern in 2009. She spent the next five years climbing the Capitol Hill ladder, ultimately becoming a communications director for a congressman in 2014. But Greene's budding career imploded, she said, the minute she accused Rep. Blake Farenthold (R-Texas) of sexually harassing her.

"Since the summer of 2014, when she says Farenthold fired her for raising concerns about a hostile work environment, Greene has been unable to land a full-time job. She's making $15 an hour working temporary gigs for a homebuilder. She babysits on the side to earn extra cash. Her family has had to support her financially. And Greene, now 30, has left D.C., with no illusions that she will ever work in politics again.

"'It's definitely turned my life upside down,' Greene said in her first interview since she made the accusations against Farenthold. 'It's been a tough road. Emotionally, it was tough. Professionally, it's been hard to figure out next steps. And it's definitely had an impact on my career.' She later added: 'I was told right away that I would be, quote-unquote, 'blackballed' if I came forward. ... That's exactly what happened.'" http://politi.co/2jfRNby

-- "Woman says Rep. Conyers groped her while they were in church," by AP's Corey Williams in Detroit: "A woman who says she worked for U.S. Rep. John Conyers for more than a decade says he slid his hand up her skirt and rubbed her thighs while she was sitting next to him in the front row of a church. Elisa Grubbs made the allegation in an affidavit released late Monday by her attorney, Lisa Bloom.

"Grubbs is the cousin of another accuser, Marion Brown, who reached a confidential settlement with Conyers over sexual harassment allegations but broke a confidentiality agreement to speak publicly last week**.** Bloom posted Grubbs' affidavit on Twitter and confirmed to The Associated Press that it was genuine." http://bit.ly/2AtSoQp

-- "Woman shares new evidence of relationship with Roy Moore when she was 17," by WaPo's Stephanie McCrummen in Delray Beach, Florida: "Debbie Wesson Gibson was in her attic hauling out boxes of Christmas decorations last week when she noticed a storage bin she said she had forgotten about. Inside was a scrapbook from her senior year of high school, and taped to a page titled 'Those Who Inspire' was a graduation card. 'Happy graduation Debbie,' it read in slanted cursive handwriting. 'I wanted to give you this card myself. I know that you'll be a success in anything you do. Roy.' ... Gibson, who said that she publicly dated Moore when she was 17 and he was 34, a relationship she said she 'wore like a badge of honor' until she began reevaluating it in light of the accounts of other women, and now, Moore's own denials." http://wapo.st/2koiJJj

--"RNC to support Roy Moore in Senate race in Alabama, weeks after cutting ties with his campaign," by WaPo's Sean Sullivan, Michael Scherer and David Weigel: "President Trump led an aggressive charge Monday on behalf of embattled Senate nominee Roy Moore, with the [RNC] rejoining Moore's side in Alabama weeks after cutting ties with him following allegations of sexual misconduct. ... By day's end, the RNC was back in his corner and America First Action, a pro-Trump group, said it would spend $1.1 million to try to push Moore across the finish line. Senate Republican leaders, however, remained critical of Moore, warning that the former judge is likely to face an immediate ethics probe if he is elected next week." http://wapo.st/2ilHzoU

THE RUSSIA REPORT -- "McFarland Contradicted Herself on Russia Contacts, Congressional Testimony Shows," by NYT's Mike Schmidt and Sharon LaFraniere: "An email sent during the transition by President Trump's former deputy national security adviser, K.T. McFarland, appears to contradict the testimony she gave to Congress over the summer about contacts between the Russian ambassador and Mr. Trump's former national security adviser, Michael T. Flynn. Ms. McFarland had told lawmakers that she did not discuss or know anything about interactions between Sergey I. Kislyak, who had been Moscow's ambassador to the United States, and Mr. Flynn, according to Senate documents.

"But emails obtained by The New York Times appear to undermine those statements. In a Dec. 29 message about newly imposed Obama administration sanctions against Russia for its election interference, Ms. McFarland, then serving on Mr. Trump's transition team, told another transition official that Mr. Flynn would be talking to the Russian ambassador that evening." http://nyti.ms/2Ayud11

--"Prosecutors: Manafort tried to write op-ed with Russian operative while under house arrest," by Darren Samuelsohn: "Paul Manafort and a long-time Russia-based

colleague with ties to Russian intelligence were caught last week ghost-writing an op-ed about his work in Ukraine, federal prosecutors working for special Russia counsel Robert Mueller said in a Monday court filing. Mueller's office argued that by working on the article, which was never published, Manafort violated a gag order imposed on his case. ... Prosecutors said the unauthorized move was a breach of trust that leads them to oppose an $11 million bail agreement that it had previously reached with Manafort." http://politi.co/2koY8ox

BLOOMBERG -- "Mueller Subpoenas Trump Deutsche Bank Records," by Steven Arons: "Special prosecutor Robert Mueller zeroed in on President Donald Trump's business dealings with Deutsche Bank AG as his investigation into alleged Russian meddling in U.S. elections widens.

"Mueller issued a subpoena to Germany's largest lender several weeks ago, forcing the bank to submit documents on its relationship with Trump and his family, according to a person briefed on the matter, who asked not to be identified because the action has not been announced." https://bloom.bg/2AU4vqB

GOVERNMENT TAKING GUNS -- "Feds issue 4,000 orders to seize guns from people who failed background checks," by USA Today's Kevin Johnson: "Federal authorities sought to take back guns from thousands of people the background check system should have blocked from buying weapons because they had criminal records, mental health issues or other problems that would disqualify them. ... It's the largest number of such retrieval requests in 10 years, according to FBI records- an especially striking statistic after revelations that a breakdown in the background check system allowed a troubled Air Force veteran to buy a rifle later used to kill 26 worshipers at a Texas church last month." https://usat.ly/2BAwzvw

TRUMP'S TUESDAY -- President Trump is having lunch with Republican senators. This afternoon he will talk with American business owners and their families. Tonight he and First Lady Melania Trump will host the Congressional Ball.

THE JUICE ...

-- FIRST IN PLAYBOOK: BEN HOWARD, part of the White House leg affairs team, is coming back to the Capitol to work as House Majority Whip Steve Scalise's (R-La.) floor director. Howard was previously House Majority Leader Kevin McCarthy's (R-Calif.) floor director. He starts in January. "Ben Howard has years of experience working in the House, Members trust him, and I am honored to welcome him to the Whip Team," Scalise said in a statement. "We have a lot of important work to do next year as we continue delivering on President Trump's agenda to create jobs and get our economy back on track, and Ben's unique experience in working both in the House and the administration will make him a strong asset to our team as we work to achieve significant legislative victories for the American people."

-- NYT'S JEREMY PETERS has sold a Trump-related book to Penguin Random

House's Crown imprint for a "high six-figure sum following an auction among rival publishers," per Vanity Fair's Joe Pompeo. The book is titled "Insurgency: The Inside Story of the Battle for the Soul of the Republican Party," and is set for publication in 2019. http://bit.ly/2iQdbXO

WATCH LIVE at 8 A.M. - WOMEN RULE: 5TH ANNUAL SUMMIT - POLITICO hosts a full day of live conversations with female leaders as we ask: who are the new women shaping our future-and what are their agendas? Where can women find common ground at a time of division? How are women taking their place at the table in the public and private sectors-and what difference can they make there? Featured speakers include: actress Kate Bosworth, 'Me Too' movement founder Tarana Burke, Transportation Sec. Elaine Chao, Kellyanne Conway, Sen. Kirsten Gillibrand (D-N.Y.) and more. ***Learn more*** http://politi.co/2Bzkreu ... ***Livestream*** http://politi.co/2jfMvMW

-- SPOTTED at the Women Rule VIP Happy Hour last night at the Four Seasons: Tarana Burke, Dr. Susan Blumenthal, Mistique Cano, Niki Christoff, Ambassador Vlora Citaku, Tasha Cole, Rebecca Cooper, Laurie Fabiano, Nancy Cook, Virginia Conye, Stephanie Cutter, Wade Davis, Carolyn DeWitt, Gloria Dittus, Heather Podesta, Amy Brandwein, Kristen Gentile, Julie Drews, Beth Helle, Jason Gold, Lucy Gettman, Maureen Griffin, Meredith Kelly, Jean Medina, Erin Loos Cutraro, Ambassador Sylvie Lucas, Trish Peva, Becky Tallent, Stephanie Schriock, Susannah Wellford and Scarlette Whyte.

YOU'RE INVITED -- Our first live podcast taping is this Thursday night at 7 p.m. at Sixth and I. Our inaugural guests: **MICHAEL BARBARO**, host of the New York Times' hit podcast "The Daily," **DCCC EXECUTIVE DIRECTOR DAN SENA and NRCC EXECUTIVE DIRECTOR JOHN ROGERS**. And a panel of **POLITICO** stars: **RACHAEL BADE, SEUNG MIN KIM a**nd **ANNIE KARNI**. Get your tickets now! http://bit.ly/2hWK7tF

Playbook Reads

PHOTO DU JOUR: President Donald Trump pushes a shopping cart as he tours the Church of Jesus Christ of Latter-Day Saints' food distribution center at LDS Welfare Square in Salt Lake City on Dec 4. | Saul Loeb/AFP/Getty Images

ALI WATKINS -- "Elite terrorist interrogation team withers under Trump": http://politi.co/2iQksqF

ON THE KOREAN PENINSULA -- "Microwave weapon could fry North Korean missile controls, say experts," by NBC News' Cynthia McFadden, William Arkin, Kevin Monahan and Kenzi Abou-Sabe: "The U.S. has microwave weapons that

proponents believe could stop North Korea from launching missiles by frying their electronics. The weapons were discussed at an August White House meeting related to North Korea, according to two U.S. officials with direct knowledge. The microwave weapons, known as CHAMPs, are fitted into an air-launched cruise missile and delivered from B-52 bombers. With a range of 700 miles, they can fly into enemy airspace at low altitude and emit sharp pulses of microwave energy to disable electronic systems." http://nbcnews.to/2AP4DaP

ISAAC DOVERE talks with **DAVID BOSSIE** and **COREY LEWANDOWSKI** in the latest "Off Message podcast: **"Trump's Threat to Take Down the GOP Still Stands":** "His threat to take down the GOP if it resists, Bossie and Lewandowski told me in an interview for POLITICO's Off Message podcast, still stands. They wouldn't answer if they think the president will stay a member of the Republican Party, let alone committed to Senate Majority Leader Mitch McConnell and House Speaker Paul Ryan.

"The furthest Lewandowski would go: 'I think the president very much respects the Republican Party. He is very engaged with the Republican National Committee and helps them raise a lot of money and understands that having Republicans controlling Congress is a fundamentally different thing than having Democrats.' 'When you are fighting the establishment -- not just the Democrats, but there are some within the party and the deep state,' Bossie said, 'you're going to fight all of that and you're going to get some people, even in your own party, who don't like what you're doing.'" http://politi.co/2AtGfKW

TOP OP-ED: "Bill Clinton: Americans Must Decide Who We Really Are": http://nyti.ms/2A50sYJ

-- "Democrats question GOP commitment to Senate's Russia inquiry," by Elana Schor: "Democrats on the Senate Judiciary Committee are raising fresh concerns about the GOP-led panel's appetite for digging into the Russian ties forged by multiple advisers to President Donald Trump. Friction on the committee last spiked in October, when the chairman, Sen. Chuck Grassley (R-Iowa), sent a slew of letters to key figures in the Russia investigation without the signature of Sen. Dianne Feinstein of California, the panel's top Democrat.

"Feinstein has followed by sending four rounds of letters without Grassley's signature that seek material from other players in the Trump campaign's communications with Russian officials - the most recent series of letters coming on Monday. 'Asked about Grassley's decision to not sign on, Feinstein told reporters late Monday that 'I think there's an effort, subtle, not to go deeply.' 'And I hadn't realized it before, but I realize it now," she continued. "And we're going to have to find a way to deal with it." http://politi.co/2AyyyBl

pharmacy benefit managers, pharmacies and insurers - and how that impacts what patients pay at the pharmacy. Read more. http://onphr.ma/2kgd6Nu ******

HAPPENING TODAY -- "Cordray chooses hometown diner to announce run for governor," by Columbus Dispatch's Marty Schladen: "Life is coming full-circle for Richard Cordray, as the Grove City native returns to a diner in the heart of his home town Tuesday to launch his campaign for the top job in Ohio. Cordray will make his gubernatorial candidacy announcement at Lilly's Kitchen Table in Grove City, marking the start of a 'kitchen table' tour of the state." http://bit.ly/2ASSDFc

BUSINESS BURST -- "How Dollar General Became Rural America's Store of Choice," by WSJ's Sarah Nassauer: "While many large retailers are closing locations, Dollar General executives said they planned to build thousands more stores, mostly in small communities that have otherwise shown few signs of the U.S. economic recovery. The more the rural U.S. struggles, company officials said, the more places Dollar General has found to prosper. 'The economy is continuing to create more of our core customer,' Chief Executive Todd Vasos said in an interview ... 'We are putting stores today [in areas] that perhaps five years ago were just on the cusp of probably not being our demographic,' he said, 'and it has now turned to being our demographic.'" http://on.wsj.com/2il1Wmk

MEDIAWATCH -- "Bill O'Reilly Is Sued by Woman Who Settled Over Harassment Accusations," by NYT's Emily Steel: "A woman who reached a settlement with Bill O'Reilly over harassment allegations sued Mr. O'Reilly and Fox News on Monday for defamation and breach of contract, saying that public statements he and the network made violated the settlement and portrayed her as a liar and politically motivated extortionist. The woman, Rachel Witlieb Bernstein, is one of six known to have reached settlements after making accusations against Mr. O'Reilly. (Her allegations did not include sexual harassment.) ...

"Mr. O'Reilly has repeatedly said that the harassment allegations that led to his ouster from Fox News in April have no merit, that he never mistreated anyone and that he resolved the matters privately to protect his children. 'In fact, Mr. O'Reilly is the liar,' states the lawsuit, which was filed in the United States District Court for the Southern District of New York. 'He mistreated Ms. Bernstein. She was forced out of her job at Fox News and paid a settlement because of his mistreatment.'" http://nyti.ms/2ArOdnV

--WHITE HOUSE GAGGLE KERFUFFLE -- per Brian Stelter's Reliable Sources newsletter: "President Trump flew to Utah on Monday, so there was no W.H. press briefing. Reporters thought there would be a 'gaggle' aboard Air Force One, but White House Deputy Press Secretary Hogan Gidley told the press pool that he would not answer any Q's on the record, which obviously defeats the purpose of a Q&A. Gidley made statements on several topics, including Jerusalem and Moore, but then told the press pool he would not answer any questions on the record.

"An excerpt from the haggling that ensued: Q: 'We have to ask the questions--' A: 'I

understand that, you have a job to do and so do I.' Q: 'You're not doing your job. Your job is literally to take questions from us. That's the whole point of this.' If you don't want to do that, 'you can release paper statements if you want.' A: 'Please tell me more about my job if I get to tell you more about yours...' Once it was clear that Gidley wouldn't field ANY Q's on the record, the press pool scrapped it."

--"ABC News president excoriates staff over Brian Ross' Michael Flynn error," by CNN's Oliver Darcy and Brian Stelter: "ABC News president James Goldston ... [also] announced that Ross, the network's chief investigative reporter, will no longer cover stories related to President Trump. ... 'I don't think ever in my career have I felt more rage and disappointment and frustration that I felt through this weekend and through the last half of Friday,' Goldston said [in ABC News' morning editorial call]. 'I don't even know how many times we've talked about this, how many times we have talked about the need to get it right,' he added. 'That how we have to be right and not first. --"PBS names CNN's Christiane Amanpour as Charlie Rose's interim replacement," by Brent D. Griffiths: "CNN International will continue to air Amanpour's shows on weekdays at 2 p.m. and 5 p.m. EST. 'Amanpour on PBS' [began] airing on New York's PBS station on Monday and will roll out to other stations beginning Dec. 11." http://politi.co/2AqjCr3

ABOUT LAST NIGHT -- Oliver Darcy in CNN's Reliable Sources newsletter: "Corey Lewandowski and David Bossie's book is out on Tuesday... So the pair threw a book party Monday night at Del Frisco's in Midtown Manhattan. ... When Steve Bannon strolled in, he shouted 'fake news,' gave me a hug, and joked I probably found out about the event via a Breitbart Slack leak which he vowed to close. Bannon also said Matt Drudge 'is my homie,' calling the conservative news heavyweight 'the king,' despite the barbs Drudge has thrown his direction."

Playbookers

SPOTTED: Senate Majority Leader Mitch McConnell last night at Kinship

OUT AND ABOUT IN NYC - Pool report: "Last night, Mike Bloomberg hosted a gala dinner at Manhattan's Gotham Hall to fete the inaugural 'Bloomberg 50,' a new, annual list published by Bloomberg Businessweek that honors 50 icons and innovators who have changed the global business landscape in measurable ways. The event was emceed by Emmy and Peabody award-winner Keegan-Michael Key (who attended with his fiancé Elisa Pugliese), featured a special performance by recording artist, Broadway veteran and 'Hamilton' star Mandy Gonzalez." ***Pic*** http://bit.ly/2zOPzpM ... ***The list*** https://bloom.bg/2AsjJCj

SOME OF WHAT BLOOMBERG SAID: "Now, I know what you're all thinking: Why isn't Mike Bloomberg on the list?! Good question. I was wondering that myself. But I was told it would be seen as self-promotion -- and as we all know, the American people will not stand for a business executive who promotes himself at every turn. I'm glad to say that the Bloomberg 50 is already being copied by other media outlets. Time Magazine just announced that the Time 100 will be split in half -- with two separate issues. The Koch brothers couldn't agree on a list."

SPOTTED: Adam Silver, Jeffrey Bewkes, Agnes Gund, Georgette Mosbacher, Eric Schmidt, Jon Batiste, Mark Morris, Hilary Rosen, Tammy Haddad, Jordan Klepper, Ken Burns, Martha Stewart, Jane Seymour, Hannah Bronfman, John Overdeck and David Siegel, Coco Rocha, Paulina Porizkova, Tamron Hall, and Ty Hunter, Megan Murphy, John Micklethwait, Marty Schenker, Justin Smith, and Jason Schechter.

SPOTTED at Heritage Foundation's media Christmas party last night at the Metropolitan Club: Ed Feulner, Mike Needham, Craig Gordon, Alyssa Farah, Brad Rateike, Paul Teller, Kelly Sadler, Russ Vought, Jess Bravin, Francesca Chambers, Chris Stirewalt, David Smith, Robert Schlesinger, Alex Pfeiffer.

BIRTHWEEK (was yesterday): Sarah Paulos of Flanagan Fulkerson & Company (hat tip: Heather Purcell)

BIRTHDAY OF THE DAY: Treasury chief of staff **Eli Miller** is 35. **A fun fact about Eli:** "I have constructed an impressive collection of USSS challenge coins over years of traveling. I have close to 100! My favorite is the USSS Special Agent Rescue Swimmer Coin. It's very rare and a difficult trade." **Read his Playbook Plus Q&A:** http://politi.co/2AWJBY1

BIRTHDAYS: NYT media correspondent Mike Grynbaum (h/t Rachel Adler) ... Jamie Rhoades (hubby tip: Matt) ... photographer Paul Morse ... University of Tennessee-Knoxville's Stuart N. Brotman (h/t son Gabe) ... Evan Burfield, co-founder of startup incubator 1776 and CEO of UNION, is 41 (h/t Peter Cherukuri) ... Andrew Williams, VP of media relations at Goldman Sachs ... WaPo's Rachel van Dongen ... Roy Schwartz, co-founder and president of Axios, is 42 ... Moira Mack Muntz ... Politico Europe's Stephen Brown ... Jamie Estrada ... Politico's Khorri Atkinson ... Rep. French Hill (R-Ark.) is 61 ... NewsHour's Jeffrey Brown is 61 ... WRC NBC4 anchor Chris Lawrence ... Alex Simon ... Adam Casella, senior associate at Owl Rock Capital ... Katie Krieg ... Gray Johnson of the Atlantic Council ... Yana Mayayeva ... Jeremy Thompson ... Brai Odion-Esene ... Zoey Davidson ...

... Lisa Spies ... DJ Eckert ... Ashley Selden (h/ts Blake Waggoner) ... Ruiyong Chen, a principal on the paid media team at Precision Strategies (h/t Tom Zigo) ... Simon Jerome of the International Republican Institute ... Adam Rosenberg ... former Rep. Rodney Alexander (R-LA) is 71 ... Mike Platt, assistant Commerce secretary ... Chad Krilow ... Bush DHS alum Caroline Dierker Poe ... Anne Trenolone ... Porter McNeil ... Zach Drennen, communications manager for Climate Advisers ... Susan Scott Neal ...

Alex Traub ... Nicole Drummond, deputy digital director at Strategic Partners & Media ... Angelo Turner ... Mike O'Toole ... Anthony Bedell, deputy assistant secretary at DOT, is 5-0 ... Arthur Colby, MBA candidate at UChicago ... Calvin Trillin is 82 ... Kim Perkins ... Chuck Chvala (h/ts Teresa Vilmain)

****** **A message from PhRMA**: In the competitive marketplace for medicines, negotiations between pharmacy benefit managers (PBMs) and biopharmaceutical companies result in substantial rebates and fees. According to a new report, in many cases, this system often creates incentives for PBMs to prefer medicines with higher list prices and higher rebates. Read more about how money flows through the supply chain here: http://onphr.ma/2kgd6Nu ******

Subject: First Move: Trump's Monumental Changes • Rare Earth Minerals Research • Pruitt Heads to Hill

What you need to know to start your day.

Trump's Monumental Changes • Rare Earth Minerals Research • Pruitt Heads to Hill

By Chuck McCutcheon

President Trump is expected to head to Utah this week to announce changes to national monuments that will include significant downsizing of that state's Bears Ears and Grand Staircase-Escalante monuments.

Sandstone formations are shown in the Grand Staircase-Escalante National Monument outside Boulder, Utah.
Photographer: George Frey/Getty Images

Backers of the monument changes, including the Utah congressional delegation and state government, argue that vastly more acreage has been designated than needed. But environmental advocacy groups and a coalition of five Native American groups are vowing to file quick lawsuits in response to Trump's move.

The president also could shrink the Cascade-Siskiyou National Monument, in southern Oregon and a small patch of northern California, and restore commercial fishing rights to some Atlantic and Pacific offshore national monuments. Alan Kovski is covering.

The coal industry has a new best friend: minerals known as rare earth elements, which are used to make everything from mobile phones to wind turbines and have been found in small amounts in the nation's coal deposits.

Rare earth minerals—which Energy Secretary Rick Perry has talked up as a means of reviving the coal industry—have been found not only in Appalachia but also in Illinois and Wyoming. No commercial means of pulling them out of coal has been developed, but West Virginia Democratic Sen. Joe Manchin has a bill that would fund research into those technologies to the tune of $20 million annually.

A Senate energy committee panel will start moving that bill forward at a Tuesday hearing. It also will discuss other energy bills, including three aimed at developing energy storage pilot projects and grants and another aimed at lowering the cost of battery technologies. Stephen Lee and Rebecca Kern are tracking.

One year to the day after he was selected to serve as EPA administrator, Scott Pruitt will go to Capitol Hill on Thursday to discuss his agency's mission with a House Energy and Commerce panel.

"We're looking forward to receiving a much-needed update from Mr. Pruitt on his priorities for the agency, including his stated policy of getting EPA 'back to the basics' and its impact on the agency's activity going forward," said Republicans Greg Walden of Oregon, the Energy and Commerce chairman, and John Shimkus of Illinois, who chairs Energy and Commerce's environment subcommittee. Abby Smith is covering.

Other Stories We're Covering

- Registering pesticides for marijuana cultivation will be among the contentious topics surrounding pesticide use that state regulators will discuss in Arlington, Va., on Monday and Tuesday with EPA officials. Yvette Hopkins, federal-state liaison for the EPA's Office of Pesticide Programs, will speak at the event. Tiffany Stecker is covering.
- The National Brownfields Training Conference will take place Tuesday through Thursday in Pittsburgh, focusing on innovation, liability, and other topics related to cleaning up and reusing formerly utilized commercial and industrial properties. Sylvia Carignan will attend.
- California Attorney General Xavier Becerra, a leader among Democratic state law enforcement officials in challenging Trump administration environmental actions in court, will speak at a National Press Club news conference on Wednesday. Jennifer Lu is covering.
- The third U.N. Environment Assembly will take place Monday through Wednesday in Nairobi with the theme, "Towards a Pollution-Free Planet." Wachira Kigotho will track.

Quote of the Day

"Mining batteries is much more profitable than mining the ground."
—Larry Reaugh, president of American Manganese, which is patenting a method to draw out all of the metals in rechargeable batteries.

This Week's Events

On the Hill:

- **Tuesday, 9:30 a.m. • Flooding** • Sustainable Water Partnership hosts The Challenge of Too Much Water, featuring officials sharing experiences managing floods and mitigating their impacts.
- **Tuesday, 10:00 a.m. • Nominations** • Senate Energy and Natural Resources Committee considers nominations of Timothy Petty to be assistant Interior secretary for water and science and Linda Capuano to be Energy Information

Administration Administrator.
- **Wednesday, 2:30 p.m. • Superfund** • Senate environment committee's Superfund panel holds hearing on challenges facing Superfund and waste cleanup efforts after natural disasters.
- **Thursday, 10:00 a.m. • Interior** • House Natural Resources' oversight panel holds hearing on the Interior Department's transformation.

Elsewhere:

- **Monday-Tuesday, All Day • Clean Water Act** • The American Law Institute-Continuing Legal Education and the Environmental Law Institute are co-sponsoring a webcasted Clean Water Act seminar at the Hunton & Williams LLP offices in Washington.
- **Tuesday-Wednesday, All Day • Electricity** • gridCONNEXT conference brings together business, utility, and policymakers to explore topics affecting the electricity grid at the national, regional, state, and local levels. Scheduled speakers include Alaska Sen. Lisa Murkowski, chairman of the Senate's energy committee, and Bruce Walker, assistant secretary for the Energy Department's Office of Electricity Delivery and Energy Reliability.
- **Wednesday, 12:30 p.m. • Agriculture/Environment** • American Enterprise Institute sponsors talk with agricultural economists on conservation programs, Renewable Fuel Standard, and Clean Water Rule.
- **Friday, 6 p.m. • Climate** • Institute of Current World Affairs dinner features KC Golden, board chairman of environmental group 350.org and senior policy adviser at Climate Solutions, describing efforts to build a global grass-roots movement to tackle climate change.

Around the Web

- New York Democratic Gov. Andrew Cuomo has signed into law a bill making New York the fourth state to adopt an energy storage target, following Massachusetts, California, and Oregon.
- Trump's regulatory agenda puts at risk an estimated $2 trillion in consumer savings relating to energy and fuel efficiency standards, the Consumer Federation of America says in a report.
- Tennessee's environment department boasts the state has its cleanest air since the Industrial Revolution.

Subject: EPA to hold more hearings on Clean Power Plan withdrawal

By Emily Holden

12/06/2017 03:28 PM EDT

EPA will hold three additional public hearings on a proposal to withdraw the Clean Power Plan, in San Francisco; Gillette, Wyo.; and Kansas City, Mo., the agency announced today.

EPA Administrator Scott Pruitt in a press release said the change was "due to the overwhelming response" to two days of hearings in West Virginia last week. Many environmental advocates criticized EPA for initially scheduling hearings only in coal country.

The agency will announce the dates and locations of the meetings in the coming weeks, and speakers must register.

The Obama administration, by comparison, held public hearings on the proposed climate standards in 2015 in Pittsburgh, Denver, Atlanta and Washington, D.C.

WHAT'S NEXT: Comments on the draft withdrawal are due Jan. 16.

Subject: Morning Media: Rebuilding public trust — Brian Ross fallout continues — Amanpour is interim Charlie Rose replacement — Behind political Twitter 2017 — Jeremy Peters lands GOP book deal

By Michael Calderone and Jason Schwartz | 12/05/2017 06:00 AM EDT

"WE CANNOT AFFORD TO GET ANYTHING WRONG," New York Times White House reporter Peter Baker said Monday, given that any inaccuracy can be "weaponized" against journalists. "One small thing will be used as a club to beat you upside the head, 'See, fake news, you can't trust anything they do.'" The question of how the press can gain public trust in a hyper-politicized, polarized, and, at times, seemingly post-truth climate was hashed out among a few dozen political reporters, editors, and academics Monday at the Poynter Journalism Ethics Summit.

- Journalists suggested increasing transparency into the reporting process, supporting media literacy initiatives, and reframing threats to the First Amendment to emphasize how all Americans, and not just journalists, lose out when freedoms are curbed. During a morning panel, Baker said the Times recently hired a fact-checker in the paper's Washington bureau to scrutinize the work of reporters, like himself, prior to publication. Baker also said editors have scaled back the use of blind quotes in news stories given reader skepticism over anonymity.

- There is "no silver bullet," Poynter ethicist Kelly McBride said after a series of panels in which attendees offered various approaches to tackling the trust issue. Many agreed on the urgency of the matter, with moderator Dana Bash saying some of the findings in a new Poynter survey had crushed her soul. Forty-four percent of Americans said they believe the news media "fabricates stories about President Trump more than once in awhile," which isn't true, and high-information Republicans were found to be the most distrustful of the media. Nearly a third of Americans surveyed agreed with Trump's despot-like characterization of the news media as "the enemy of the people" and a quarter of respondents support abandoning the Constitution by allowing the U.S. government to "block news stories it sees as biased or inaccurate."

- The ethics summit played out Monday amid a major journalism scandal, with ABC News correspondent Brian Ross suspended for four weeks over a Friday Trump-Russia bombshell that wasn't. "There is such a desire among large swaths of the public to use any screw-up to dismiss everything," National Review's Jonah Goldberg said during an afternoon panel. "The damage that Brian Ross did by getting that story wrong is significant." Goldberg said hardcore Trump supporters, especially, "are looking for a reason to ignore you permanently."

- Indira Lakshmanan , the Newmark chair of journalism ethics at Poynter, and the lead organizer of Monday's conference, urged journalists to help educate those outside the media bubble about what goes on inside it. "We sort of think that we know what journalism is and everybody should know what journalism is," she said. "But when I talk to very smart people who aren't journalists, it constantly amazes me how they don't get what we do, they don't get why we do it, they don't get how we do it. And I just think the more we build that into our stories and show what we're doing, the more opportunities we have for building that kind of a trust with the

audience and across partisan barriers."

- Journalists can surely do more to open themselves up to the public, and yet there are limits to how successful such efforts can be when a significant segment of Americans reflexively dismisses fact-based journalism that doesn't validate their views. Weekly Standard editor Stephen Hayes praised the Post's transparency through a disclosure in its initial story on the four women accusers of Alabama Senate candidate Roy Moore, telling attendees that "there's no way you cannot believe what these women are saying when you know how the story was reported." And yet 71 percent of Alabama Republicans don't believe Moore's accusers, according to a new CBS poll. Among those who don't believe, 88 percent say the media is behind the women's claims.

Good morning and welcome to Morning Media. Please send tips to mcalderone@politico.com and @mlcalderone. Daniel Lippman (@dlippman) and Cristiano Lima (@viaCristiano) contributed to the newsletter. Archives. Subscribe.

ABC NEWS PRESIDENT SOUNDS OFF: "I don't think ever in my career have I felt more rage and disappointment and frustration," ABC News president James Goldston said during a more editorial call in reference to correspondent Brian Ross's erroneous reporting on former national security adviser Michael Flynn, according to audio obtained by CNN. Goldston scorched ABC News employees for the mistake and told them that Ross would no longer cover any stories related to the president. Goldston also said on the call that ABC News would undertake a full review of how the incorrect report made it to air.

- BuzzFeed's Steven Perlberg and Henry Gomez report that Ross's mistake has been "turned into a messaging weapon for Trump allies." One former White House official told BuzzFeed it "was an affirmation of what [conservative voters] already believe to an extent about the 'fake news' media. That's why it is so powerful."

- "All journalists make mistakes, but Ross's blunders have often been spectacular - and unusually plentiful for someone of his prominent status in broadcasting," The Washington Post's Paul Farhi writes in a look at Ross's high-profile errors over the years.

CHRISTIANE AMANPOUR IS IN FOR CHARLIE ROSE -- at least for now. PBS announced yesterday that "Amanpour," her CNN International interview show, will replace Rose's program "on an interim basis." CNN International will continue airing the show, which will now also reach a nationwide US audience. "Amanpour on PBS" will roll out in New York on Monday, and then to additional stations beginning Dec. 11. "'Amanpour on PBS' adds to the long tradition of public-affairs programming that has been a hallmark of public media for decades," PBS President and CEO Paula Kerger said in a statement.

O'REILLY SUED: Last fall, Bill O'Reilly told -- of all people -- Matt Lauer that his ouster from Fox News was "a political hit job." He also said to the New York Times that the harassment allegations against him were "politically and financially motivated," a fact he could prove with "shocking information." That no holds barred response looks like it has now led to a fresh lawsuit : Rachel Witlieb Bernstein, a former Fox News producer who was one of six women

reported to have reached a settlement with O'Reilly, filed a defamation and breach of contract suit against both him and Fox News on Monday. She alleged that public statements made by both parties violated her settlement and, according to the New York Times, "portrayed her as a liar and politically motivated extortionist."

- Bernstein reached her settlement with O'Reilly in 2002 after making repeated complaints to Fox News executives and HR officials, according to the suit. She alleges that O'Reilly, through his public statements, breached the agreement's confidentiality and non-disparagement clauses. Bernstein also targeted Fox News, saying that the network's claim that no employee had ever used a hotline to complain about O'Reilly was misleading. During her tenure at Fox News, she said, there was no reporting hotline.

- O'Reilly's lawyer issued a statement saying the suit had "no merit" and vowing to "respond aggressively in court." Fox News did not reply to a request for comment from POLITICO.

NEW YORK TIMES REPORTER JEREMY PETERS is writing a book for Penguin Random House's Crown imprint titled, "Insurgency: The Inside Story of the Battle for the Soul of the Republican Party," according to Vanity Fair's Joe Pompeo. The book, set for publication in 2019, reportedly sold in the high six figures.

WHITE HOUSE SPOKESMAN WOULDN'T SPEAK ON THE RECORD: The Los Angeles Times reports: "On Monday, the White House broke another precedent in limiting the press' ability to ask questions about the president's decisions. On a day filled with news, White House spokesman Hogan Gidley told reporters traveling with the president aboard Air Force One that he would not take any questions on the record."

TRUMP IS THE MOST TWEETED ABOUT WORLD LEADER, according to new data released this morning from Twitter. But none of Trump's tweets cracked the top 10 most retweeted posts this past year, with former president Barack Obama grabbing three spots. (First place went to the guy who wanted free Wendy's nuggets.) Obama also had the first and third most-liked tweets of 2017, with Ariana Grande in between. More data from Twitter below:

- Top tweeted U.S. elected officials: 1) @RealDonaldTrump 2) @VP 3) @SpeakerRyan 4) @BarackObama 5) @TedLieu 6) @SenJohnMcCain 7) @SenWarren 8) @SenateMajLdr 9) @SenSanders 10) @SenSchumer 11) @NancyPelosi 12) @RepAdamSchiff 13) @MarcoRubio 14) @MaxineWaters 15) @TedCruz

- Top followed new U.S. political accounts: 1) @PreetBharara 2) @SallyQYates 3) @brhodes 4) @PeteSouza 5) @SHSanders45 6) @AmbassadorRice 7) @SamanthaJPower 8) @SecretaryCarson 9) @BetsyDeVosED 10) @SecretaryZinke

-- Top tweeted news outlets and the top tweeted journalist/commentator at each: 1) @FoxNews - @SeanHannity 2) @CNN - @JakeTapper 3) @NYTimes - @MaggieNYT 4) @MSNBC - @JoyAnnReid 5) @WashingtonPost - @Fahrenthold 6) @TheHill - @JoeConchaTV 7) @NBCNews - @BraddJaffy 8) @ABC - @GStephanopoulos 9) @POLITICO - @ddiamond 10) @AP - @ZekeJMiller

- Most tweeted activism hashtags in the U.S.: 1) #Resist 2) #MAGA 3) #ImpeachTrump 4) #TrumpTrain 5) #WomensMarch 6) #NotMyPresident 7) #BlackLivesMatter 8) #NoDAPL 9) #TakeAKnee 10) #BoycottNFL

TODAY: The Fair Media Council will be holding "The News Conference: Real & Powerful" at the Garden City Hotel in Long Island. The event will feature more than 65 speakers, including WNET President and CEO Neal Shapiro, New York Daily News columnist Harry Siegel, The Daily Beast media reporter Lloyd Grove, Newsweek senior political reporter Celeste Katz, former Bloomberg News global legal counsel Charles Glasser. Topics include "Trump Effect on the News" and "Fake News vs. Wrong News."

WATCH: Megyn Kelly is slated to interview former Trump campaign hands and "Let Trump Be Trump" co-authors Corey Lewandowski and David Bossie on "Megyn Kelly Today" at 9 pm. It will be Kelly's first interview with Lewandowski since Fox News accused Lewandowski, then Trump's campaign manager, of threatening Kelly before a GOP presidential debate.

JOIN POLITICO PLAYBOOK - LIVE: Join Playbook co-authors Anna Palmer and Jake Sherman for a live taping of POLITICO Playbook. Featured guests include: Michael Barbaro, host of the *New York Times'* "The Daily" Podcast, DCCC Executive Director Dan Sena and NRCC Executive Director John Rogers, and Rachael Bade, Seung Min Kim, and Annie Karni. *Sixth and I - Dec 7 - Doors open 6:00 p.m. Get tickets: here.*

THAT TIME OF THE YEAR: Time magazine named its 10 finalists for "Person of the Year" yesterday: Jeff Bezos, the Dreamers, Patty Jenkins, Kim Jong Un, Colin Kaepernick, the #MeToo movement, Robert Mueller, Crown Prince Mohammed bin Salman, Trump, and Xi Jinping.

- Trump has professed a lack of interest in the award, but Twitter observers couldn't help but imagine the president's reaction if one of his favorite Twitter targets won. And not that Morning Media endorses this sort of thing, but for those interested, as of this writing, the British betting house Ladbrokes has #MeToo as the favorite at 2:1, with Trump at 8:1, followed by his Twitter bete noirs, Kaepernick (10:1), Mueller (12:1), Bezos (16:1), and Kim (16:1).

SOUNDBITES

"On Sunday we said MSNBC did not cover the Steinle verdict on Friday or Saturday at all. We were wrong. In that 48-hour span, they covered it a total of 2 minutes and 15 seconds." [Fox & Friends]

"Less talk about career rehab for Billy Bush. More talk about career rehab for all the countless women who've been pushed out, ignored and marginalized in this sexist system." [Kathleen McLaughlin]

"Welcome @jeffglor to the evenings. Congratulations and good luck as you start your new chapter at @CBSEveningNews" [Lester Holt]

MARK ZUCKERBERG ON INSTA WITH RUPERT MURDOCH? Fox News President for News Jay Wallace posted an Instagram shot of an internal Fox event on Friday, with what looked an awful lot like Mark Zuckerberg sitting next to Rupert Murdoch in the front row. Facebook confirmed on Monday that Zuckerberg, accompanied by other Facebook execs, did in fact pay a visit to Fox News last week. It was part of a meeting between the News Corp and Facebook leadership teams, according to a Facebook spokesperson, who said "it's something Facebook does regularly with other companies." The spokesperson declined to elaborate on what was discussed in the meeting. Fox News did not respond to request for comment.

NO MATTER WHERE NEWS BREAKS, you can now win a Pulitzer for it. The Pulitzer Prize Board announced a change in criteria to its "breaking news" award yesterday: previously, the category was restricted to local reporting by news outlets based near the story's location. Now any outlet is eligible to win for any breaking news stories. The award was often seen as a chance for local publications--like the East Bay Times last year and even The Tuscaloosa News in 2012--to nab a Pulitzer, and some worried that larger publications will now big-foot the competition.

- "Going to be a lot harder for the little guys to win this category," said Wall Street Journal reporter Ben Mullin. And Gizmodo Media CEO Raju Narisetti chimed in: "Was the one category where a "local" newsroom had a greater chance of winning a @PulitzerPrize, even with disproportionate resources vs national/intl media. This evens those odds, even as it is the right frame from an audience perspective."

ARMSTRONG WILLIAMS, the media mogul and Ben Carson confidante, told the Washington Post he's interested in buying Washington City Paper because "I just like to surround myself with the best." Williams also said he would commission more soft features on Trump staffers and allies.

TRUMP HAS OFTEN SUGGESTED that members of the media be sued for their work - now, if anyone ever follows through against Fox News Radio White House correspondent Jon Decker, he'll at least be able to save some money on representation. Decker was sworn in Monday to the D.C. bar, making him, so far as Morning Media knows, the only lawyer in the White House press corps.

CORRECTION: Yesterday, Morning Media misidentified the editor of the Opelika-Auburn News: It's Troy Turner. Apologies for the error.

REVOLVING DOOR

Gillian Turner has been named a full-time news correspondent for Fox News, based in D.C. The former National Security Council staffer had been a contributor at the network.

MSNBC has reportedly cut ties with **Sam Seder** over a 2009 tweet.

EXTRAS

- Steve Bannon, Sean Hannity, Ann Coulter, James O'Keefe, and Eric Trump were among the attendees at a book party for Corey Lewandowski and David Bossie, reports CNN's Oliver Darcy.

- Hello to the Indicator, Planet Money's faster, shorter, more frequent spinoff.

- Tucker Carlson explained to Business Insider why he hasn't covered Fox News' sexual harassment issues.

- Discovery Communications bought majority control of Oprah's network, OWN. You get a network! And you get a network! And you get a network!

- Netflix says it will resume production on "House of Cards" in early 2018, sans Kevin Spacey.

- NYC's City Council booted reporters from City Hall.

KICKER

"We're not supposed to be part of the resistance, that's not why we're here. But if journalism is attacked, we should resist" -- *CNN's Jim Acosta at Poynter's Journalism Ethics Summit yesterday.*

12/04/2017 07:00 AM EDT

By SARA SMITH (ssmith@politico.com)

Welcome to the December edition of the CEO Report, POLITICO Pro's high-level outlook on the policy issues driving the month ... and beyond.

TAX

Racing to reconcile two tax overhaul bills by Christmas: December is the make-or-break month for Republican plans to rewrite the tax code, at least if they want to meet their self-imposed deadline of getting a package to President Donald Trump by year's end, report Pro Tax's Brian Faler and Toby Eckert. The Senate and House have passed separate plans, and there are some big differences to work out, notably:

— The House version would cut the rate on pass-through businesses to 25 percent, while the Senate would give them a 23 percent tax deduction for certain income and continue to tax them overall at individual rates.

— The Senate wants to eliminate Obamacare's mandate that individuals have health insurance or pay a fine. The House bill would keep the mandate.

— The estate tax and alternative minimum tax — both long targeted by Republicans for elimination — are also treated differently. The House would boost the amount of money exempted from the estate tax and eventually eliminate it. The Senate would boost the exemption but keep the tax. The House would also abolish the AMT, which was created to ensure that wealthy people don't escape taxes entirely but has begun reaching into the middle class. The Senate decided to keep it.

— The House would cut the maximum mortgage interest deduction in half — limiting it to the interest on $500,000 in mortgage debt, down from $1 million now — and eliminate it entirely on mortgages for second homes. The Senate targeted only the interest write-off on home equity loans, which it would end.

The bills also differ on how they treat education-related tax breaks, corporate interest expenses and taxing multinational corporations, among others.

None of these, however, are considered deal-breakers.

House Speaker Paul Ryan today plans to appoint members to a conference committee to work out the differences, and Senate Majority Leader Mitch McConnell is expected to do the same this week.

** **A message from National Geographic:** National Geographic has given more than 13,000 grants to scientists and conservationists who explore our changing planet and help protect the things that make it amazing. We've helped protect 5.2 million square kilometers of ocean, prevented 2,600 big cat deaths, and much more. Make an impact with us at NatGeo.org. **

DATAPOINT

Pass-through deduction changes win support: The Senate's tax reform legislation includes last-minute changes to allow pass-through businesses to deduct a slightly higher percentage of business income. The move secured the support of Sen. Steve Daines, who had been concerned about the treatment of pass-throughs relative to C corporations. Sen. Ron Johnson has raised similar concerns, and he supported the bill as well. — *Taylor Thomas*

BUDGET & APPROPRIATIONS

Stopgap rollercoaster ride: Prepare for one shutdown scare after another this month as Republican leaders attempt a string of short-term funding extensions. The spending bill Congress cleared in September only keeps the government running through Friday. And since lawmakers have yet to settle on updated levels for the whole fiscal year, stopgap spending is back on the table — times two.

GOP leaders plan to subject themselves to multiple nail-biter funding votes over the next few weeks, with one wedged up against Christmas Eve. The idea is to extend funding until Dec. 22 and then pass another stop-gap that would fund the government until sometime in January, with the hope of clearing a full-year package not too long after the start of the new year.

The two-part plan is meant to appease defense hawks who refuse to close out December without at least a promise of elevated funding for the military. Leaders aim to

settle on overall caps for defense and non-defense money by that Dec. 22 deadline. But neither December vote is a sure bet for passage. Congress' fiscal conservatives say a pre-Christmas vote is never advantageous to their cause since it cedes leverage to the minority party. And in the Senate, leaders need the votes of at least eight Democrats, who may be willing to play hardball in an attempt to get concessions such as protections for young undocumented immigrants.

Always ripe for additions, any year-end spending bill is also at risk of getting tied up by other urgent efforts. This time, that could mean extending funding for the Children's Health Insurance Program, reauthorizing the National Flood Insurance Program, raising the debt ceiling or clearing another disaster aid package.

Speaker Ryan has said, however, that disaster relief funding is unlikely to hitch a ride on the spending bill Congress will try to pass this week. And the Congressional Budget Office has just provided a more optimistic assessment on the debt ceiling, predicting the nation won't risk defaulting on its loans until the end of March or early April — further down the road than the Treasury Department's previous estimate. — *Jennifer Scholtes*

CYBERSECURITY

The midnight hour is nigh: The day of judgment is finally arriving for a set of online surveillance tools that expire at year's end. Congress has just a few legislative days left to find a way to renew the powerful snooping effort authorized under Section 702 of the Foreign Intelligence Surveillance Act. And as the clock winds down, lawmakers have yet to coalesce around one approach to renewing — and possibly revising — the 702 statute.

After the House Judiciary Committee spent weeks pushing a renewal measure that contained significant alterations — including some fiercely debated warrant requirements for FBI officials seeking to view Americans' digital communications in certain situations — the Intelligence panels in the House and Senate decided to plow forward with their own renewal measures that contain fewer revisions and no warrant requirements. And the leaders of both Intelligence panels have indicated they may have to attach their 702 measures to a must-pass bill, such as legislation to avert a government shutdown.

The move has enraged privacy and civil liberties-minded lawmakers on both the right and left, who insist that a strict warrant requirement is necessary to protect the constitutional rights of Americans whose online chatter is incidentally sucked into the NSA's foreign surveillance database. But Trump administration officials have warned that such a provision would hamper criminal and terrorism investigations.

Protecting future elections: In the coming weeks, House Democrats will roll out a bill they believe will help harden the digital defenses of the country's election system. It will

be the latest in a slew of legislative offerings — many of them bipartisan — Capitol Hill has received this year to inoculate future U.S. elections from foreign meddling. But there's been few signals that Congress will take swift action. And for some critical targets, it might already be too late . By this point during the 2016 election cycle, Russian hackers had already been in the Democratic National Committee's networks for at least three months.

Tell her about it: Expect lawmakers to keep Uber in the spotlight after the ride-hailing giant recently revealed it had covered up a 2016 data breach by paying off the digital thieves to keep quiet. The incident — which has spawned multiple government investigations and lawsuits — has once again spotlighted the lack of a nationwide standard for when companies must notify victims and regulators following cyber intrusions. The issue was already front and center after the mammoth Equifax data breach, which exposed over 145 million Americans' private data, with several lawmakers introducing proposals for such a law. But none of the offerings have moved, and with a packed congressional calendar, lawmakers don't seem poised to act soon.

Kaspersky be gone: Federal agencies have until mid-December to start removing Russia-based Kaspersky Lab software from their computer systems. The Department of Homeland Security in September barred the government from using the antivirus giant's tools, citing concerns that the software could give the Kremlin a foothold in the U.S. government. For years, Kaspersky has fended off allegations that it assists the Kremlin with its digital espionage efforts. Those fears came to a head in October when several news outlets reported that Moscow had obtained secret National Security Agency cyber weapons through Kaspersky's software, which had apparently picked them up from an NSA employee's personal computer. Kaspersky has vehemently denied it handed the NSA tools over to the Kremlin, suggesting that Russia-linked malware on the staffer's computer nabbed the classified files. — *Cory Bennett*

TECHNOLOGY

Net neutrality vote : After months of buildup, the Republican-led FCC is poised to fully dismantle the agency's net neutrality rules this month. GOP commissioners are expected to approve the repeal at the FCC's Dec. 14 meeting over the objections of the minority Democrats. That will open the door, at least in theory, for internet service providers to block or throttle websites, or charge businesses for internet "fast lanes" to consumers. While the FCC says the Federal Trade Commission will be able to curtail companies that engage in anti-competitive behavior, digital activists fear the internet will slowly turn into something akin to cable service, with different tiers. They also warn it will create an uneven playing field for businesses, with startups and small firms unable to pay for the same access to consumers. The repeal is widely expected to end up in court, with some combination of public interest groups filing a lawsuit to challenge the decision. So in the end, judges, not regulators, may have the final say.

AT&T-Time Warner lawsuit : Another big telecom lawsuit is already playing out in court, as the Justice Department battles AT&T and Time Warner over the government's decision to block their $85 billion merger. It's shaping up to be a groundbreaking case, with the DOJ arguing the combined company would have too much power and the firms contending the government broke with years of precedent in rejecting their "vertical" deal, which doesn't eliminate a direct competitor. Hovering over the proceedings are the words of Trump, who has said he doesn't like the merger and makes a habit of attacking Time Warner's CNN over its coverage of his administration. While AT&T and Time Warner, in their initial legal response to the government's lawsuit, didn't make an issue of the president, many expect the companies will seek to explore potential White House meddling with the antitrust decision. When the negotiations began to break down in early November, sources close to the deal told POLITICO that it was clear the Justice Department wanted AT&T and Time Warner to get rid of CNN, something DOJ officials denied. — *Angela Greiling Keane*

ENERGY

Arctic oil drilling: Republicans are on the cusp of getting a policy change they've sought for more than two decades: opening the Arctic National Wildlife Refuge in Alaska to oil and gas drilling. The language, authored by Senate Energy Chairwoman Lisa Murkowski and attached to the GOP tax plan, directs Interior to hold two lease sales over the next decade, which the Congressional Budget Office has said would raise $1 billion. Previous attempts to open ANWR during the Bill Clinton and George W. Bush presidencies failed, and it faces staunch opposition from environmental groups and Democrats. But with the current legislation moving under the budget reconciliation process, it would avoid a Democratic filibuster.

Electric grid resiliency: The electricity market regulators at FERC have promised to take action by Dec. 11 on a proposal pushed by Energy Secretary Rick Perry to help keep coal and nuclear power power plants afloat in the name of bolstering grid resiliency. It's anyone's guess what the FERC action might look like, but Perry's push has drawn opposition from interests as varied as the renewable energy industry, many power generators and the oil and natural gas sector. The chief FERC proponent, Neil Chatterjee, has called for establishing an interim measure to protect coal and nuclear power plants, but he's likely to face opposition from his colleagues. — *Anthony Adragna*

FINANCIAL SERVICES

Interest rate watch: Federal Reserve policymakers will meet Dec. 12-13 to decide whether to raise interest rates. Though they are expected to hike rates for the third time this year, it's not a slam dunk. While outgoing Fed Chair Janet Yellen told lawmakers on Nov. 29 that she expects the economy to continue to expand and the job market to

strengthen, she has expressed puzzlement that inflation is so tame. Other Fed officials have underscored that concern, although they still seem to be leaning toward a December move. Gov. Jerome Powell, Trump's pick to replace Yellen as Fed chief, told senators last week that a case for raising rates "is coming together."

Less stress for lenders: On the bank regulation front, the Fed is also likely to propose making more information available about its annual stress tests for lenders. The idea is to help banks better gauge whether their estimated losses under extreme market conditions are in line with the Fed's models. Banks have complained the criteria for passing the tests has been vague — a perhaps intentional move by Fed officials to keep the examinations from becoming too predictable.

A bank bill with legs: The Senate Banking Committee on Tuesday is expected to approve a landmark bill that would ease regulations for a number of small and regional banks. The legislation — which has rare bipartisan support — is the most significant attempt by the Senate to rewrite financial rules since the 2010 Dodd-Frank law. Analysts say the bill probably has enough backing to clear the full Senate, though that might not happen until next year.

The committee also set its confirmation vote for Powell for that same day.

Blowing through flood insurance deadline: Congress appears unlikely to pass a long-term reauthorization and overhaul of the National Flood Insurance Program before the Dec. 8 expiration date. A short-term extension will likely be needed to keep the program fully functional. That could push the issue into 2018 — an election year — when lawmakers may be even more reluctant to debate a high-stakes program that millions of coastal Americans rely on.

Fannie-Freddie buffer: Officials at Treasury and the Federal Housing Finance Agency are working on a plan to let Fannie Mae and Freddie Mac maintain a capital buffer, and could make an announcement this month. The clock is ticking: Come January, both mortgage giants will have exhausted their financial assets as part of a bailout deal struck after the housing collapse. — *Mark McQuillan*

TRADE

WTO reproach? Front and center on the trade calendar is the Dec. 10-13 World Trade Organization ministerial conference in Buenos Aires, where U.S. Trade Representative Robert Lighthizer could offer a further rebuke of the failings he sees in a rules-based system. Lighthizer and other Trump administration officials have criticized the WTO and other global agencies for what they see as overreach and hindering economic growth.

Meanwhile, trade ministers from 11 countries working to salvage the Trans-Pacific Partnership could meet on the sidelines to advance the pact abandoned by the U.S.

earlier this year.

NAFTA slog: NAFTA talks will continue with chief negotiators meeting the week of Dec. 11 in Washington, D.C. The meeting will lay the groundwork for the formal sixth round of talks, in Montreal in late January. Mexican Economy Secretary Ildefonso Guajardo recently said he was optimistic negotiators could close chapters on food safety and inspection, regulatory practices, telecommunications and energy at the D.C. meeting.

Trade bill watch: On Capitol Hill, two bills could also find their way into stopgap spending discussions. Congress will have to act to prevent the Generalized System of Preferences, a program designed to boost developing countries' economies, from expiring by the end of the year and pass a new Miscellaneous Tariff Bill, which reduces or suspends import tariffs on certain products.

Big decisions: Meanwhile, the U.S. International Trade Commission will make its final injury determination on imports of Canadian softwood lumber on Thursday. Canada has already announced it will dispute U.S. anti-dumping and countervailing duties through a NAFTA panel and at the WTO. On Tuesday, the panel will also make a final determination on whether imports of biodiesel from Argentina and Indonesia are hurting U.S. producers. — *Adam Behsudi*

DEFENSE

Increasing defense spending : To boost spending to the level proposed by the defense policy bill, congressional leaders will have to cut a bipartisan deal to increase caps on defense and domestic spending. So far, Republicans and Democrats haven't agreed on spending levels, but congressional leaders had considered a two-year deal that would boost defense by $54 billion a year above the caps, putting the defense budget even with the president's $603 billion budget request. Without a deal, however, lawmakers will be forced to pass another continuing spending resolution by Friday to keep the government open through late December.

Defense policy bill finally on Trump's desk: The National Defense Authorization Act has been sent to the White House, where Trump is expected to sign it. The measure, which calls for nearly $700 billion in defense spending for the current 2018 fiscal year, easily cleared the House and the Senate last month.

Key Pentagon nuclear report in the offing: A major study of the nation's nuclear forces is wrapping up. The Nuclear Posture Review, expected to be finished early in the new year, will lay out the administration's roadmap for modernizing and structuring the U.S. nuclear arsenal — an endeavor that could cost $1.2 trillion. — *Connor O'Brien*

EMPLOYMENT & IMMIGRATION

Democrats threaten shutdown over DACA: The fate of nearly 800,000 undocumented immigrants approved for the Deferred Action for Childhood Arrivals program hangs in the balance as Congress races to reach a spending agreement by Friday. Congressional Democrats have said they are prepared to shut down the government if a year-end spending bill doesn't codify DACA, which otherwise will start to wind down in March. The program shields from deportation so-called DREAMers, undocumented immigrants brought to the U.S. as children.

McConnell has said he's open to a legislative solution, but that any such bill would also have to tighten legal immigration, a move most Democrats oppose. Attaching DACA to the spending bill, McConnell said Sunday, would be "ridiculous" because that's "a non-emergency that we can address anytime between now and March." (Trump opposes putting DACA into the spending bill, too.)

Immigration crackdown lags promises: U.S. Immigration and Customs Enforcement acting Director Thomas Homan has promised to ring in the new year by stepping up enforcement actions against businesses that employ undocumented workers.

The president made cracking down on illegal immigration a central focus of his first year in office, and in October, Homan said he wanted to increase worksite investigations "four to five times." Such investigations have never been popular with the pro-business Republican base. Even so, Homan said he was serious. "Not only are we going to prosecute the employers that have knowingly hired illegal aliens," he said. "We're going to detain and remove the illegal alien workers."

Should that occur, it would be a reversal of the trend under Trump thus far, which has been fewer rather than more worksite enforcement actions. Under Barack Obama, ICE conducted an average of 2,014 audits of I-9 worker authorization forms that businesses are required to complete each year. Under Trump, ICE conducted only 420 audits. Criminal arrests tied to workplace investigations are down, too. Under Obama, ICE averaged 416 such arrests per year; under Trump, that dropped to 97 arrests. — *Ted Hesson*

EDUCATION

Higher Education Act reauthorization heats up: The House and Senate education committees have started on the first reauthorization of the sweeping higher education law in nearly a decade. The House plan, which would make major changes to the law, including some likely to please for-profit colleges, has already drawn Democratic criticism. The Senate, meanwhile, has struck a more bipartisan tone, kicking off its reauthorization process with a friendly hearing on simplifying the application for federal student aid — something nearly everyone agrees should happen.

Confirmation hearings continue: Two more Education Department nominees will face the Senate HELP Committee this month. Kenneth Marcus, Trump's pick to lead the department's Office for Civil Rights, and Johnny Collett, the nominee to be assistant secretary for Special Education and Rehabilitative Services, will face questions from the committee on Tuesday. Both are likely to draw scrutiny from Democrats, who have been critical of the Trump administration's approach to civil rights and special education issues.

'Gainful employment' negotiations get underway: The Trump administration will kick off its efforts to rewrite the Obama-era "gainful employment" rule, which cuts off federal funding to career college programs that produce graduates with large student loan debt relative to their earnings. The first round of negotiations begins today at the Education Department.

More ESSA approvals on the horizon: States that submitted their Every Student Succeeds Act plans to the Education Department this fall should see federal feedback this month. The Trump administration's reviews of the state K-12 education plans have drawn criticism from Democrats, including Sen. Patty Murray (D-Wash.), the ranking member of the HELP Committee. She accused Education Secretary Betsy DeVos of violating ESSA and called for her to testify before the committee. — *Benjamin Wermund*

TRANSPORTATION

Dead calm on infrastructure, FAA plan: The two marquee legislative issues that have been pending for some time — Trump's promise of a $1 trillion infrastructure plan, and a House FAA bill that would separate air traffic control operations from the FAA — are both still pending, and likely will be through December. Pennsylvania Republican Bill Shuster, the architect of the House's FAA bill, hasn't given up hope yet — but each day that passes without the bill being brought to the floor makes it more likely the effort is kaput, at least for now. And Trump's long-promised infrastructure plan appears to be suffering the same fate — although a White House adviser promised recently that a 70-page draft of principles for Congress to follow in drafting a bill will be coming soon, possibly in January.

Driverless cars gain traction: There is one closely-watched piece of legislation that is moving — a package of policies intended to help grease the skids for developing and deploying driverless cars. The House has already passed its bill, and the Senate could follow suit soon. — *Kathryn Wolfe*

AGRICULTURE

Top lawyer in limbo? Agriculture leaders will be watching closely to see if the Department of Agriculture can finally get its top lawyer confirmed this month. General counsel nominee Stephen Vaden — who has functioned as deputy general counsel since March — had his hearing before the Senate Agriculture Committee in early November, but there's still no word on when the committee might approve him or when the full Senate might take up his nomination. That delay has sparked buzz about why he hasn't advanced. Vaden has come under fire from Democrats for past work on state voter ID laws, which some argue were designed to restrict the voting access of blacks and other minorities. And during his time at USDA, he's run afoul of the union that represents the department's lawyers.

Delays in USDA staffing: Bill Northey, the pick to head Agriculture Secretary Sonny Perdue's newly created farm services and conservation mission area, was expected to sail through the Senate after the Ag committee greenlighted his nomination in October. But he's been held up by Ted Cruz and eight other senators in a battle with the Trump administration over its plans for the Renewable Fuel Standard — which was released late last week without any input from Cruz and company, who had made a meeting to discuss the RFS a condition of the hold. The day after the RFS rule was released, it was reported Trump had agreed to a meeting, which is planned for Thursday.

Missing pieces: No one has been named for four undersecretary posts — natural resources and the environment; food, nutrition and consumer services; food safety; and, after Sam Clovis withdrew from consideration last month, undersecretary for research, education and economics. The result: USDA is heading into 2018 — a farm bill renewal year — with a skeleton leadership team.

PAYGO watch: Senate passage of the tax bill has raised questions about whether lawmakers will be able to waive the pay-as-you-go rule — a scenario that would force steep cuts to pay for the $1.5 trillion tax cut, and would target farm safety net programs, though the Supplemental Nutrition Assistance Program would be exempted. Republican leaders have pledged to waive the rule to avoid triggering such cuts — but in this Congress, anything can happen. — *Helena Bottemiller Evich*

HEALTH CARE

Trump's first Obamacare enrollment wrapping up: The first-ever Obamacare sign-up season of the Trump era comes to a close Dec. 15, with the law's supporters hoping for a major enrollment surge with less than two weeks to go. Roughly 2.8 million people signed up through HealthCare.gov as of late November, according to the most recent HHS figures, putting enrollment on pace to fall well short of last year's numbers. (Those numbers don't include enrollment in nearly a dozen state-run insurance marketplaces.) The pace tends to pick up near the end of the sign-up season, but there are a number of Trump-induced factors that could depress enrollment in the final weeks: The administration cut this enrollment period in half to six weeks, slashed advertising by 90

percent and is backing a provision in the tax bill to eliminate the requirement to have health insurance. — *Jason Millman*

EHEALTH

Advancing telemedicine? The health IT world is on the lookout for telemedicine nuggets in end-of-the-year spending legislation. Either of the expected continuing resolutions could include the Ways and Means "extenders" deal that would make it easier for private Medicare Advantage health care plans to offer and get reimbursement for telemedicine.

Data sharing : The Office of the National Coordinator for Health IT says it expects to release a draft of the trusted exchange framework, a set of principles to encourage increased health data sharing among providers, electronic health record vendors, and health information exchanges. The ONC's creation of the trusted exchange framework is a requirement of last year's 21st Century Cures Act. — *Arthur Allen*

** **A message from National Geographic:** At National Geographic, we're working for a more sustainable planet every day of the year. Since 1888, we've given out more than 13,000 grants to groundbreaking scientists and conservationists who explore our changing world and help protect the things that make it amazing.

We fund critical projects like the Big Cats Initiative, which has helped stop more than 2,600 big cat deaths, and the Pristine Seas project, which has helped protect more than 5.2 million square kilometers of the ocean's last wild places. Our Okavango Wilderness Project has explored 6,000 kilometers of one of the world's richest places for biodiversity... to help save it.

And with our planet's future at stake, we're focused on the guardians of that future: our children. National Geographic's education programs give teachers the tools they need to inspire new generations of responsible citizens and leaders.

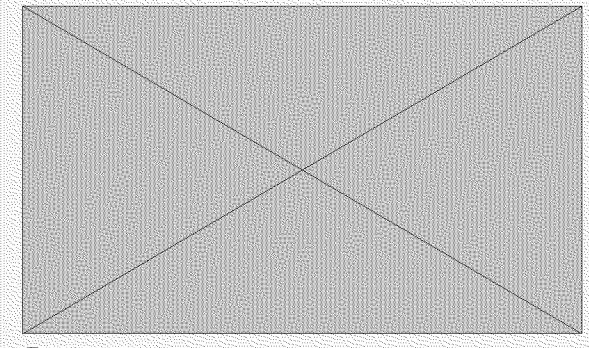
America needs to step up the military to keep China at bay

Dan Blumenthal | The Hill

China's grand strategy requires much of its military and security forces. It is no surprise that China has engaged in a vast, ambitious military modernization program, even as almost all other countries have significantly slowed their defense spending, including the United States. History will likely not look kindly on the US military drawdown during the

same years Washington became more concerned with China.

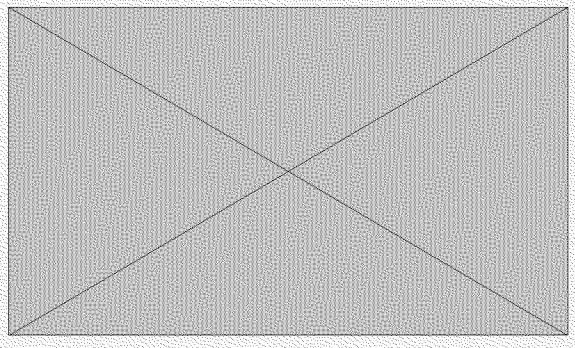


Reuters

Tax reform might tell us whether the individual mandate really works

Benedic N. Ippolito | AEIdeas

Few elements of the Affordable Care Act inspire as much controversy as the individual mandate — the requirement that all individuals buy health insurance or face a government-imposed penalty. Despite all the focus on the mandate, we don't really know whether it did much to expand insurance coverage. We may soon have the answer.



Reuters

Don’t be fooled by ‘secular stagnation’

Phil Gramm and Mike Solon | The Wall Street Journal

"Secular stagnation," a belief that America has fallen into a persistent state of low growth and investment, calls into question whether the American economy can grow by more than 2 percent over the next decade. Secular stagnation is a political excuse for bad policies that we don’t have to accept. We need better policies.

Watch: Islamist militancy in Africa

Emily Estelle | AEI video

There's been a rise of Islamist militancy across Africa in recent years, creating a growing threat to the US and Europe. There’s a dangerous misconception that African militant groups are too locally focused to pose a threat. The US should understand that addressing the challenge now is far cheaper than fighting another war later.

December 1, 2017

Today on Climate Beat . . .

. . . we went to Congress, where Sen. John Barrasso (R-WY), chairman of the Senate Environment & Public Works Committee, is urging EPA to conduct overdue studies of the environmental impacts of the renewable fuel standard (RFS), a day after EPA released biofuel volumes under the program for 2018 that disappointed both oil-sector opponents and environmentalist detractors of the RFS.

Over in the House, the oversight committee approved a bill to codify President Donald Trump's executive orders aimed at promoting agencies' deregulatory efforts, sending the legislation to the House floor.

We also highlighted some top stories from the past week, including news on EPA's CPP repeal hearing, its projections of major air pollution from "glider" trucks, as well as carbon tax and RFS updates.

And our daily news roundup looked at how climate policy could shift rightward due to reported White House plans to replace Secretary of State Rex Tillerson with CIA Director Mike Pompeo.

Subject: Democratic AGs sue EPA over missed ozone deadline

By Alex Guillén

12/05/2017 05:06 PM EDT

Fifteen Democratic attorneys general today sued EPA for missing a key deadline to implement the 2015 ozone standard.

EPA Administrator Scott Pruitt faced an Oct. 1 deadline to declare which parts of the country failed to meet the 2015 standard. Pruitt has issued designations for 85 percent of the nation's counties that either meet the standard or lack the data to make a decision. But he has not said which areas are in nonattainment, a designation that would require those states to write and implement a plan to clean up the air.

A number of the states involved face ozone pollution problems, including car-heavy California and New York as well as states in New England, which are often referred to as the "nation's tailpipe" since pollution from other states blows in their direction.

The AGs who joined the lawsuit include those from California, Connecticut, Illinois, Iowa, Maine, Maryland, Massachusetts, Minnesota, New York, Oregon, Pennsylvania, Rhode Island, Vermont, Washington and the District of Columbia.

WHAT'S NEXT: The AGs' lawsuit comes one day after environmental and public health groups sued over the same issue. Both are in the U.S. District Court for Northern California.

Driving the Day

Good Monday morning. JUST POSTED -- THE POLITICO PLAYBOOK POWER LIST: 18 TO WATCH IN 18. Next year -- 2018 -- is shaping up to be a momentous one in politics. Midterm elections are less than a year away, with the backdrop of an unfolding federal investigation into a foreign power's influence into our political system. The collective Playbook team -- reporters in six states and Washington -- selected 18 political figures worth keeping an eye on over the next 12 months. ***The list*** http://politi.co/2jKHziP

REMINDER -- BIG WEEK -- Congress must pass a government-funding bill by Friday, or else the federal government will shut down. The House is expected to try to pass a two-week funding bill early this week. Democrats are, for the moment, on the sideline, and don't seem to be in a cooperative mood. ***John Bresnahan:*** **"Congress faces frantic week with possible shutdown, taxes, Russia"** http://politi.co/2jMvNV7

-- THE HOUSE is expected to vote to go to conference this evening for the tax bill. ... **WSJ**: **"Key Issues to Resolve in Congress's Tax Bill"** http://on.wsj.com/2ihwMfL

CONGRESSIONAL INSIDERS involved in the tax debate say the conference could be wrapped up in roughly one week.

CAROL LEONNIG, JOHN WAGNER and **ELLEN NAKASHIMA: "Trump lawyer says president knew Flynn had given FBI the same account he gave to vice president":** "President Trump's personal lawyer said on Sunday that the president knew in late January that then-national security adviser Michael Flynn had probably given FBI agents the same inaccurate account he provided to Vice President Pence about a call with the Russian ambassador.

"Trump lawyer John Dowd said the information was passed to Trump by White House counsel Donald McGahn, who had been warned about Flynn's statement to the vice president by a senior Justice Department official. The vice president said publicly at the time that Flynn had told him he had not discussed sanctions with the Russian diplomat - a statement disproved by a U.S. intelligence intercept of a phone call between Flynn and then-Russian ambassador Sergey Kislyak.

"Trump was aware of the issue a couple of weeks before a conversation with then-FBI Director James B. Comey in which Comey said the president asked him if he could be lenient while investigating Flynn, whom Trump had just fired for misleading Pence about the nature of his conversations with the Russian." http://wapo.st/2jf2Odg

TALKER -- FIRST PERSON - BILLY BUSH in the NYT, "Yes, Donald Trump, You Said That": "He said it. 'Grab 'em by the pussy.' Of course he said it. And we laughed along, without a single doubt that this was hypothetical hot air from America's highest-rated bloviator. Along with Donald Trump and me, there were seven other guys present on the bus at the time, and every single one of us assumed we were listening to a crass standup act. He was performing. Surely, we thought, none of this was real. We now know better. Recently I sat down and read an article dating from October of 2016; it was published days after my departure from NBC, a time when I wasn't processing anything productively. In it, the author reviewed the various firsthand accounts about Mr. Trump that, at that point, had come from 20 women.

"Some of what Natasha Stoynoff, Rachel Crooks, Jessica Leeds and Jill Harth alleged involved forceful kissing. Ms. Harth said he pushed her up against a wall, with his hands all over her, trying to kiss her. 'He was relentless,' she said. 'I didn't know how to handle it.' Her story makes the whole 'better use some Tic Tacs' and 'just start kissing them' routine real. I believe her. Kristin Anderson said that Mr. Trump reached under her skirt and 'touched her vagina through her underwear' while they were at a New York nightclub in the 1990s. That makes the 'grab 'em by the pussy' routine real. I believe her." http://nyti.ms/2A0uYDc

WHAT THE PENTAGON IS READING -- "Trump's military buildup still a mirage," by Connor O'Brien and Bryan Bender in Simi Valley, Calif.: "President Donald Trump came into office pledging the largest defense spending spree since the administration of Ronald Reagan - assuring the troops that they would see 'beautiful new planes and beautiful new equipment.' But that vision remains little more than a mirage, top Pentagon officials, lawmakers and defense industry executives lamented during a gathering this weekend at Reagan's presidential library - undermined by congressional gridlock on spending priorities and a tax overhaul expected to add more than a trillion dollars to the national debt.

"'Nobody wants to pay more taxes, everyone wants to have the programs they like protected and everybody wants defense ... and they want the deficit to go away,' Gen. Robert Neller, the commandant of the Marine Corps, said in an interview, echoing the

sentiments of several leading advocates for a more robustly funded military. 'The math just isn't there.' ... lawmakers and the administration have taken few concrete steps to lock in any sustained increase in defense spending close to the 3 percent to 5 percent a year that Defense Secretary James Mattis says is needed to make the vision a reality." http://politi.co/2iMqfO0

THE LATEST ON TAX REFORM -- "Passage of Senate Tax Bill Puts R&D Tax Credit in Doubt," by WSJ's Rich Rubin: "Senate Republicans, in their push to pass a sweeping tax bill, undermined a research-and-development tax credit many companies use to encourage innovation, and business interests are in revolt. Late Friday, just hours before the Senate voted for the bill, Republicans decided to preserve the corporate alternative minimum tax instead of repealing it as planned. The change gave them money for lawmakers' other priorities, but it could force many companies to lose tax breaks the bill's authors intended to protect.

"Addressing this problem is one of many challenges congressional Republicans face as they shepherd a final tax bill with implications for middle-class households, American businesses and the health-care system. The House and Senate passed competing bills that will now be merged into one. Among other thorny issues, Republicans will wrangle over international tax rules, a new system for taxing pass-through businesses such as partnerships and the fate of the estate tax.

"Also surprisingly up for grabs: the corporate tax rate. President Donald Trump, after insisting on a 20% rate and getting it, this weekend said maybe it would land at 22%." http://on.wsj.com/2ieFsDv

THE WHITE HOUSE POLITICAL SHOP -- "Trump moves to block Romney from the Senate: The president is working hard to persuade 83-year-old Sen. Orrin Hatch to run for reelection, and Mitt isn't happy about it, people close to him say," by Alex Isenstadt: "Donald Trump is going all out to persuade seven-term Utah Sen. Orrin Hatch to seek reelection -- a push aimed in no small part at keeping the president's longtime nemesis, Mitt Romney, out of the Senate. Romney has been preparing to run for Hatch's seat on the long-held assumption that the 83-year-old would retire.

"Yet Hatch, the longest-serving Republican senator in history, is now refusing to rule out another campaign -- a circumstance Romney's infuriated inner circle blames squarely on the president. Their suspicions are warranted: Trump has sounded off to friends about how he doesn't like the idea of a Senator Romney. The president's mostly behind-the-scenes campaign to sway Hatch will burst into public view on Monday, when he arrives in Salt Lake City to hold a well-choreographed event designed to showcase his affection for the powerful Senate Finance Committee chairman." http://politi.co/2Bwmxvp

DARREN SAMUELSOHN -- "White House paranoid: 'Everyone thinks they're being recorded'": "Paranoia is enveloping the White House and President Donald Trump's network of former aides and associates as Robert Mueller's Russia probe heats up.

Former national security adviser Michael Flynn agreed to cooperate with investigators as part of the plea deal he reached last week, adding to the worry already inside Trump's circle surrounding the secret deal struck earlier this summer by former campaign aide George Papadopoulos, whose cooperation was kept quiet for months before being unsealed in late October.

"Both cases raise the possibility that other current or former colleagues have also flipped sides - and they're prompting anxiety that those people could be wearing wires to secretly tape record conversations. 'Everyone is paranoid,' said a person close to Trump's White House. 'Everyone thinks they're being recorded.' Mueller is doing little to abate those suspicions. Tucked inside last week's 10-page plea deal Flynn struck with government prosecutors is an agreement that the former White House national security adviser could avoid a potential lengthy jail term in part by 'participating in covert law enforcement activities.'" http://politi.co/2jO6amC

****** **A message from PhRMA**: A medicine's path from the biopharmaceutical company to the patient involves many entities across the supply chain. A new report examines how money flows through this system - which includes wholesalers, pharmacy benefit managers, pharmacies and insurers - and how that impacts what patients pay at the pharmacy. Read more: http://politi.co/2ngVlPj ******

BEHIND THE SCENES -- "George Papadopoulos' late night with the FBI," by Josh Gerstein: "When former Trump campaign foreign policy adviser George Papadopoulos stepped off a flight from Germany at Dulles Airport outside Washington last July, he had no inkling of the unwelcome surprise in store for him: FBI agents waiting to place him under arrest. For the 29-year-old Chicago native, it was going to be a long night.

"Jail records obtained by POLITICO show Papadopoulos was booked in at the Alexandria (Va.) city detention center at 1:45 a.m. the following morning. Despite the late arrival at the jail and the fact that Papadopoulos later agreed to cooperate with prosecutors, his Chicago-based defense lawyers Thomas Breen and Rob Stanley said in an interview that the FBI did not attempt to interrogate him right away." ***With his mugshot*** http://politi.co/2iMc7Eb

TWITTER EFFECT -- "Trump's uncontrollable tweeting triggers deeper anxiety among advisers," by Andrew Restuccia: "It took nearly 24 hours for President Donald Trump to tweet about the news that his former national security adviser Michael Flynn pleaded guilty to lying to FBI agents - a delay that Trump's advisers said was not uncommon for the president, who often tweets after catching up on cable news. Many Republicans at first saw the radio silence as a welcome sign of restraint.

"But by Sunday, the notoriously hot-headed president had already claimed Flynn was fired earlier this year in part for lying to the FBI and had moved on to accusing the nation's top law-enforcement agency of being 'in tatters.' 'Worst in History! But fear not, we will bring it back to greatness,' he tweeted. The tweets all combined to reignite fears among people close to Trump that the president is not taking the special counsel's

investigation seriously enough and is getting bad advice from his legal team." http://politi.co/2BFCmkw

JARED WATCH -- "Kushner upbeat, undeterred in first public remarks on Middle East peace process," by Annie Karni: "Shorter Jared Kushner: I'm still here. On Sunday, the president's son-in-law used his first-ever public remarks on the Middle East peace process to make a case for his own continued relevance in the Trump White House -- even as the Russia probe and the more stringent reign of chief of staff John Kelly have seemingly pushed him to the margins.

"'We do think it's achievable,' Kushner said of an Israeli-Palestinian peace deal. His comments came during a 30-minute question-and-answer session with Haim Saban, one of the Democratic Party's biggest pro-Israel donors, at the annual Saban Forum, held at the Willard InterContinental Washington Hotel. ...

"But his relaxed appearance -- a blue blazer over a black sweater, with no tie -- sent a clear message that Kushner is soldiering on, undeterred. His criminal attorney, Abbe Lowell, who is representing him in special counsel Robert Mueller's investigation of potential Russian interference in the 2016 election, was in the audience for Kushner's talk on Sunday. But other attendees said it was simply in Lowell's off-the-clock capacity as a longtime figure in Washington's power Jewish community, not as a legal representative." http://politi.co/2AL6ME4

-- INTERESTING BITE: HAIM SABAN: "To achieve [Middle East peace], the team has in it an entrepreneur -- you -- a real estate lawyer, a bankruptcy lawyer. I don't know how you've lasted eight months in this lineup. But that's for another day. And it's impressive that it's still going. There's not a Middle East macher in this group. How do you operate with people who basically...with all due respect, a bunch of orthodox Jews who have no idea about anything? What are you guys doing? Seriously I don't understand this." **KUSHNER:** "I'll definitely say it's not a conventional team." ***The clip*** http://bit.ly/2AsG0hg

PEACE PROCESS UPDATE -- "Talk of a Peace Plan That Snubs Palestinians Roils Middle East," by NYT's Anne Barnard in Beirut, David Halbfinger in Jerusalem and Peter Baker in D.C., with Maria Abi-Habib and Hwaida Saad in Beirut, Rami Nazzal in Ramallah, West Bank, Alissa J. Rubin in Paris and Nour Youssef in Cairo: "In a mysterious trip last month, Mahmoud Abbas, the Palestinian president, traveled to Saudi Arabia's capital for consultations with the hard-charging crown prince about President Trump's plans for Middle East peace. What was said when the doors were closed, however, has since roiled the region.

"According to Palestinian, Arab and European officials who have heard Mr. Abbas's version of the conversation, Crown Prince Mohammed bin Salman presented a plan that would be more tilted toward the Israelis than any ever embraced by the American government, one that presumably no Palestinian leader could ever accept.

"The Palestinians would get a state of their own but only noncontiguous parts of the West Bank and only limited sovereignty over their own territory. The vast majority of Israeli settlements in the West Bank, which most of the world considers illegal, would remain. The Palestinians would not be given East Jerusalem as their capital and there would be no right of return for Palestinian refugees and their descendants. ...

"The White House on Sunday denied that was its plan , saying it was still months away from finalizing a blueprint for peace, and the Saudi government denied that it supports those positions. ... Even if the account proves incomplete, it has gained currency with enough players in the Middle East to deeply alarm Palestinians and raise suspicions about Mr. Trump's efforts. ... One Lebanese government official who received a call was most surprised by what he said was a Saudi suggestion that the Palestinians could have Abu Dis, a suburb of East Jerusalem, as their capital." http://nyti.ms/2np5ZmS

SUSAN GLASSER talks with **ISRAELI AMBASSADOR RON DERMER** in the latest "Global POLITICO" podcast: **"Is Trump About to Blow Up Jared Kushner's Mideast Peacemaking?":** "President Trump has talked of 'the ultimate deal' he's going to strike, to finally make peace once and for all between Israel and the Palestinians. His son-in-law Jared Kushner has spent the last few months shuttling to and from the region, and speculation has been running high that the U.S. might soon unveil its own proposal for peace, or at least the basic outlines.

"Still, Israel's ambassador to the United States, a close ally of the Trump team who has been working closely with them on the plan, says in a new interview for The Global Politico that while he's an 'optimist,' chances are only 'moderate to high' of even restarting the dormant peace process over the next year. As for an actual deal, he wouldn't even speculate.

"And the ambassador, Ron Dermer, one of Israeli Prime Minister Benjamin Netanyahu's closest confidants, confirmed in a rare on-the-record conversation that Trump this week is likely to take a controversial step by recognizing Jerusalem as Israel's capital-a move that Palestinians have threatened will blow up any talks even before they start." http://politi.co/2ASIFVY ... ***The full transcript*** http://politi.co/2igOKyM

-- "Trump approves National Security Strategy," by Axios' Jonathan Swan: "The draft is almost completed, and all the principals - James Mattis, Rex Tillerson, Steven Mnuchin, etc. - have agreed on its core components. The document will be rolled out soon. ... The NSS ... will explain how Trump's 'America First' mantra applies to the vast range of threats America faces, including Chinese economic competition, Russian influence operations, and the weaponization of space. It's designed to guide the Trump administration's foreign policy and national security decisions, according to three sources familiar with it. ...

"Nadia Schadlow, a well-respected member of the National Security Council and trusted confidant of H.R. McMaster, spent months drafting the document, working with

Deputy National Security Adviser Dina Powell and McMaster. Schadlow and Powell met with dozens of members of Congress, cybersecurity and foreign policy experts, military strategists and CEOs." http://bit.ly/2nr2gp2

Subject: EPA Announces Additional Public Listening Sessions on Proposed Repeal of Clean Power Plan

EPA Announces Additional Public Listening Sessions on Proposed Repeal of Clean Power Plan

WASHINGTON (December 6, 2017) — The U.S. Environmental Protection Agency (EPA) will hold three additional public listening sessions on the proposed repeal of the Clean Power Plan in San Francisco, Calif., Gillette, Wyo. and Kansas City, Mo.

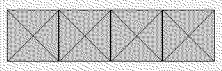
"Due to the overwhelming response to our West Virginia hearing, we are announcing additional opportunities for the public to voice their views to the Agency," **said EPA Administrator Scott Pruitt**.

Public listening sessions will be on EPA's proposed repeal of the Carbon Pollution Emission Guidelines for Existing Stationary Sources: Electric Utility Generating Units (commonly known as the Clean Power Plan). Dates and specific locations will be released in coming weeks; please see the website for details. All persons wanting to speak are encouraged to register in advance.

"The Trump administration is listening to the people of Wyoming," **said U.S. Senator John Barrasso (R-WY), chairman of the Senate Committee on Environment and Public Works (EPW)**. "Today's announcement that the EPA will hold a listening session in Gillette, on the impacts of the so-called 'Clean Power Plan,' demonstrates the administration's commitment to hear directly from the people who would have been hurt most by this punishing regulation. The Clean Power Plan would have meant lost jobs for energy workers in Gillette and across Wyoming. I am thankful to EPA Administrator Scott Pruitt for his leadership on this important issue."

Registration information will be posted at: https://www.epa.gov/stationary-sources-air-pollution/electric-utility-generating-units-repealing-clean-power-plan

Oral comments and supporting information presented at each session will be included in the docket for this proceeding.



Written comments about EPA's proposal must be received by the last day of the comment period, January 16, 2018. Comments should be identified by Docket ID No. EPA-HQ-OAR-2017-0355 and may be submitted by one of the methods listed on the Clean Power Plan Proposed Repeal: How to Comment web page.

Background:
Soon after the previous Administration issued the Clean Power Plan in 2015, 150 entities including 27 states, 24 trade associations, 37 rural electric co-ops, and three labor unions challenged the CPP, highlighting a range of legal and technical concerns. A few months later, the United States Supreme Court stayed the CPP, immediately halting implementation—the first time the Supreme Court had ever issued a stay to block the enforcement of a regulation.

On March 28, 2017, Administrator Pruitt signed a notice indicating the EPA's intent to review the

Clean Power Plan, in accord with the President's Energy Independence Executive Order. On October 16, the EPA proposed to repeal the Clean Power Plan, proposing that it is not consistent with the Clean Air Act. EPA is now taking comment on that proposal and has extended the public comment period to January 16, 2018.

Fracking Ban in Delaware Basin Falls Short, Environmentalists Say

By *Leslie A. Pappas*

Oil and gas companies could still use water from the Delaware River Basin to hydraulically fracture wells elsewhere and ship contaminated water back, despite a fracking ban proposed for parts of four states, environmental groups said.

Site of Retired Coal-Fired Plant to Be Wind Industry Hub

By *Adrianne Appel*

The shuttered site of what was the largest coal-fired plant in New England is poised to become a hub for the offshore wind industry.

Microgrids, Storage Could Make Puerto Rico Grid More Resilient

By *Rebecca Kern*

Energy Department lab tools and technologies have potential to transform Puerto Rico's electric grid in the future.

Today's News

SolarCity Corp. Dispute With Ariz. Utility Gets SCOTUS Review

By *Eleanor Tyler*

The U.S. Supreme Court agreed Dec. 1 to hear a dispute over electricity rates between Tesla Inc. subsidiary SolarCity Corp. and Arizona's largest utility that's divided appeals courts on the rights of state entities sued for their official actions.

U.S. Vastly Overstates Oil Output Forecasts, MIT Study Suggests

By Jim Polson and Tim Loh

Turns out, America's decade-long shale boom might just end up being a little too good to be true.

Fracking Helps New Mexico Leapfrog California as Oil Producer

By *Robert Tuttle*

New Mexico became the third-biggest U.S. oil-producing state in September, passing more traditional powerhouses California and Oklahoma, thanks to a fracking boom in the western section of the Permian Basin.

Boom in Arctic Tourism Raises Sustainability Concerns

By *Adam Allington*

Establishing a sea route over the top of the world has been a centuries-old navigation dream, with explorations in search of the famed Northwest Passage often ending with stranded sailors being forced to eat their boots—and in some cases, each other.

Cape Wind Developer Terminates Project Opposed by Kennedys, Koch

By *Brian Eckhouse*

Cape Wind **is officially dead.**

Too Few Highway Chargers Are Last 'Hurdle' for

Electric Cars

By *Elisabeth Behrmann*

Rolling out super chargers along highways in Europe and North America is key to unlocking sales of electric cars, according to the head of the biggest network provider.

Ruling Slaps Down Suit Over Calif. Hazmat Enforcement

By *Steven M. Sellers*

A California county has a First Amendment right to pursue a criminal prosecution, rather than an administrative proceeding, against a wastewater firm on a disputed agency finding that the firm stored a hazardous chemical, a California court of appeals ruled Nov. 30.

The Cobalt Crunch for Electric Cars Could Be Solved in Suburbia

By *Anna Hirtenstein*

Almost 9,000 miles from the dusty Congo savanna, miners have hit on an entirely new source of cobalt—the rare mineral at the heart of the electric-car boom. And not only can they take coffee breaks, when they take a break, they can grab a donut at Tim Hortons.

Jordan Counting on Cheaper Storage to Unlock Wind and Solar Boom

By *Brian Parkin*

Jordan is counting on a rapid drop in the price of power storage to unleash a boom in wind and solar electricity, according to a top official.

What It's Like to Be a Sustainable Investor Under Trump

By *Laura Colby*

Bloomberg asked investors who focus on environmental, social, and governance matters about their insights into how the U.S. administration is affecting their strategies.

Thursday Night Wrapup

Fracking Ban Proposed in Four Delaware River Basin States

By *Leslie A. Pappas*

Fracking would be banned in portions of four states overseen by the Delaware River Basin Commission as part of draft regulations unveiled Nov. 30.

DDT Cleanup Coverage Will Get Calif. Top Court Look

By *Steven M. Sellers*

The California Supreme Court agreed Nov. 29 to review long-running litigation

over insurance coverage for a Superfund cleanup where DDT was once produced.

Leading the News

Dicamba Woes Drain State Agencies, Vex Companies
By *Tiffany Stecker*
Cash-strapped state agriculture agencies are buckling under an increased workload due to the hundreds of herbicide damage complaints filed in 2017 and scuttling other priorities to fully investigate claims of crop injury.

Energy Research Arm Nominee Avoids Stance on Climate Change
By *Rebecca Kern*
Linda Capuano, the nominee to be administrator of the Energy Information Administration, told lawmakers Dec. 5 she is not taking a position on climate change: "For me to take a position would introduce a bias."

Interior Won't Say What It's Doing With Coal Health Study
By *Stephen Lee*
The Trump administration isn't sharing any details about its review of a coal mining study it halted three months ago.

GOP Bills Would Protect Bears Ears, Create New

National Park

By *Alan Kovski*

New mining claims and oil and natural gas leasing would be barred from the area of the Bears Ears National Monument in Utah under a bill unveiled by congressional Republicans Dec. 5.

Today's News

Trump Sued Over `Unlawful' Shrinking of Utah National Monuments

By Peter Blumberg

Environmental groups hit President Donald Trump with a lawsuit just hours after he announced he'll shrink two national monuments in Utah that contain stunning red-sandstone vistas, historic relics and energy resources.

Cities Vow to Fill U.S. Void on Climate Change

By *Stephen Joyce*

Dozens of cities will begin tracking and reporting their greenhouse gas emissions in an effort to meet the terms of an international deal the U.S. spurned.

Husqvarna Fined $2.8 Million for Air Pollution Violations

By *Jennifer Lu*

Husqvarna will pay more than $2.8 million in penalties to the EPA for air pollution testing violations from its leaf-blowers, trimmers, and chainsaws.

Maine Commission Votes to Delay Rollback of Solar Credit

By *Adrianne Appel*

The Maine Public Utilities Commission voted today to wait another four months before implementing rules widely viewed by renewable energy advocates as "anti-solar energy."

Latest Bull Case for Electric Cars: the Cheapest Batteries Ever

By Mark Chediak

The kind of battery that powers electric vehicles is now the cheapest it's ever been thanks to a global ramp-up in production.

Oil Firms Pledge to Plug Methane Leaks in Bid to Burnish Image

By *Jennifer A. Dlouhy*

As the Trump administration rolls back Obama-era curbs on greenhouse gas emissions, more than two dozen oil companies are uniting in a voluntary effort to pare methane leaks and better position natural gas for a clean-energy future.

For Nebraska Landowners, Keystone XL Fight Isn't Cheap

By Jillian Goodman

November is the end of harvesting season in northeast Nebraska, so on the morning of Nov. 6, 2015, Art Tanderup was out combining. Early that day, President Barack Obama rejected TransCanada Corp.'s application to build the Keystone XL pipeline, an extension of the existing Keystone system that carries heavy crude from the Alberta tar sands to refineries on the Gulf Coast. Tanderup is one of about 90 landowners in Nebraska who've refused to sign easements allowing the pipeline to be built on their property.

Tax Bill May Chill Clean Energy Investments by Large Banks

By Joe Ryan, Brian Eckhouse and Christopher Martin

Clean-energy developers are learning the hard way that every line of the U.S. tax code is connected. While the bill passed by Senate Republicans over the weekend would preserve crucial credits for wind and solar farms, it also imposes a minimum tax on foreign transactions for JPMorgan Chase & Co., Bank of America Corp. and other large investors that threatens to erode the value of those credits.

How Trump Did the Impossible: Got Solar, Oil Lobbyists to Unite

By Ari Natter and Jennifer A. Dlouhy

In his 20 years of promoting renewable energy in Washington, Gregory Wetstone has made common cause with a range of special interest groups: environmentalists, power utilities, even a handful of natural gas producers. But President Donald Trump's efforts to bail out the coal industry led Wetstone, the head of the American Council on Renewable Energy, to find a surprising new

partner: Big Oil.

Vatican Sees Way Around Trump on Climate Change, Official Says

By Chiara Albanese and Flavia Rotondi

The Pope's leading adviser on climate issues has called for the European Union or China to fill the void left by the U.S. after Donald Trump's decision to pull the country out of the Paris Climate Agreement.

China Assumes Green Power Mantle, Leaving Germany, U.S. Behind

By *Brian Parkin*

Chinese exports of environmental goods and services surged ahead of Germany

and the U.S., according to a report that shows how the climate change fight is shifting international trade.

Europe's Biggest Utility Bets on Italy Green Power Revival

By *Chiara Albanese* and *Giovanni Salzano*

Europe's biggest utility is betting on an Italian green power renaissance to lift business.

Statoil Greenlights Key $6 Billion Norway Arctic Oil Project

By Mikael Holter

Statoil ASA gave the final go-ahead to a flagship Arctic oil project after slashing costs by half.

Monday Night Wrapup

Coal Export Terminal Appeals Permit Denial in Washington State

By *Paul Shukovsky*

Backers of what would be the only U.S. terminal for exporting Powder River Basin coal to Asia appealed Dec. 4 the denial of a shoreline permit to construct terminal infrastructure on the Columbia River port of Longview, Wash.

Subject: Morning Energy: Trying to turn GOP climate talk into action — First lawsuits filed over Trump monument decision — Greens seek new reviews in Keystone XL saga

By Anthony Adragna | 12/05/2017 05:40 AM EDT

With help from Alex Guillén and Tanya Snyder

UPPING THE ANTE ON ANWR: Environmental advocates and Democrats are upping the pressure on the House GOP's self-styled climate hawks to withhold their vote on the final tax package H.R. 1 (115) if it contains a Senate provision allowing oil and gas drilling in the Alaska National Wildlife Refuge. But those efforts don't appear to have borne any fruit yet, Pro's Ben Lefebvre and your ME host report. The rider — a key priority for Senate Energy Chairman Lisa Murkowski — is just one of many dicey items Senate and House negotiators must work through as they go to conference to iron out differences in their bills, even as drilling opponents push Republican members of the Climate Solutions Caucus to back up their words with action.

Six of the 12 House GOPers who signed a letter last week opposing ANWR drilling backed the initial tax bill, and activists staged protests at the offices of Reps. Pat Meehan and Carlos Curbelo on Monday. Three of those six tax bill supporters who oppose ANWR — Reps. Dave Reichert, Ryan Costello and Curbelo — suggested the fate of the ANWR rider wouldn't determine their final vote. "It would be very disappointing, but I doubt that I would deny all of my constituents the opportunity to experience tax relief because of any one provision," Curbelo told ME at Monday votes.

Earthjustice, the Center for Biological Diversity and other groups sent a letter to Climate Solutions Caucus Republicans asking them, among other things, to work against opening ANWR. And Democrats say the final tax bill vote offered a concrete opportunity for members of the group to demonstrate their pro-climate stance. "It would certainly be nice if the symbolic power of them acknowledging climate change through this caucus translated into action at some point," Rep. Jared Huffman told ME. "This would be a good point."

Two interesting polls suggest there's no widespread public support for opening ANWR despite the vocal backing of Alaska's delegation. One, from the Harvard T.H. Chan School of Public Health and POLITICO, found 67 percent of respondents said opening ANWR "should not be a priority" for the federal government. The other poll, conducted for the Yale Program on Climate Change Communication, found that 70 percent of Americans oppose drilling in ANWR.

Late Monday, Speaker Paul Ryan named four lawmakers of particular note to ME fans to the House's conference committee: Natural Resources Chairman Rob Bishop, Energy and Commerce Chairman Greg Walden, John Shimkus and Don Young. Also joining the Republican conference party: Ways and Means Chairman Kevin Brady, Devin Nunes, Peter Roskam, Diane Black and Kristi Noem.

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and Squire Patton Boggs' Lem

O. Smith was first to identify Sen. Lamar Alexander as the one-time Trent Lott roommate. For today: Who was the original House sponsor of the Energy Policy Act of 2005? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

FIRST MONUMENT LAWSUITS FILED: A coalition of environmental groups filed the first lawsuit challenging President Donald Trump's long-expected move to shrink the Grand Staircase-Escalante National Monument just hours after he announced his decision to significantly pare two national monuments in Utah. The groups argue in their complaint filed in Washington federal court that the Antiquities Act "does not authorize Presidents to abolish [national monuments] either in whole or in part, as President Trump's action attempts to do." And the Native American Rights Fund, representing the Hopi Tribe, Navajo Nation, Pueblo of Zuni and Ute Mountain Ute Tribe, filed its own challenge the Bears Ears proclamation late Monday evening.

Report's coming today: While on hand for Trump's announcement in Utah, Interior Secretary Ryan Zinke told the press pool to expect the release of the results today of his review of several dozen national monument designations. And Natural Resources Chairman Rob Bishop, as well as Utah Reps. Chris Stewart and John Curtis, host a pen and pad briefing this morning at 11 a.m. where they'll discuss Trump's visit and the introduction of related legislation on Utah monuments.

Pro's DataPoint has whipped up a nifty graphic showing Trump's drastic reductions to the Bears Ears and Grand Staircase-Escalante national monuments in Utah. Check that out here.

The quote everyone's talking about: "Does he know the interior. He's knows it, he loves it. He loves seeing it and riding on it," Trump on Zinke.

NEW REQUESTS FOR KEYSTONE XL PROJECT: Environmental groups are asking the Trump administration to conduct a new supplemental environmental impact statement and Endangered Species Act consultation after the Nebraska Public Service Commission approved a modified path for the Keystone XL pipeline last month. "Now the administration has no choice but to update its assessment to reflect the pipeline's current proposed route," Doug Hayes, a senior attorney with the Sierra Club, said in a statement. That comes as the Nebraska regulators scheduled a Dec. 12 hearing for TransCanada and environmental groups to argue it should reconsider its decision on the controversial pipeline, Pro's Ben Lefebvre reports.

Meanwhile, the Pipeline and Hazardous Materials Safety Administration said a weight put in place to keep the Keystone pipeline from moving may have played a role in the 210,000 gallon oil spill in South Dakota last month, Reuters reports. It's a finding that could trigger costly inspections of tens of thousands of miles of underground pipelines.

KEEPING THE LIGHTS ON: House Republican leaders think they'll have enough votes from their caucus alone to pass a two-week, stopgap spending package to keep the lights on this week, Pro Budget & Appropriations Brief reports. But a warning signal went up Friday as the Florida and Texas delegations (that's 63 people for those counting at home) threatened to withhold

support unless they get a more generous disaster aid package. That threat didn't appear to refer directly to the two-week bill currently under consideration, but shows how much power the two delegations could exert on the spending debates going forward.

Even amid the now-routine House hiccups over the short-term package, Senate Majority Leader Mitch McConnell coolly predicted his chamber "will pass it before the end of this week."

Green groups launch new push: Ahead of the funding deadline, a collection of environmental and public health groups are unveiling a new website today highlighting local stories of the importance of environmental protections and what budget cuts could mean for health and safety. That comes as Mike Mikulka, president of the largest union for EPA Region 5 employees, warned a government shutdown would "create an unprecedented emergency for human health and our environment."

And a dozen environmental and union groups are sending a letter to congressional leaders calling for a disaster supplemental package that is "robust, funds recovery and rebuilding efforts in a way that results in stronger and more resilient communities." Link here.

Oh and ICYMI: House Republicans, including Ryan, weighed stripping House Appropriations Chairman Rodney Frelinghuysen of his gavel after the long-time New Jersey Republican voted against their tax bill, POLITICO's Rachael Bade and John Bresnahan report.

AMERICA FIRST FOR SOLAR PLAN: The Solar Energy Industries Association this morning rolls out its plan for Trump that it argues would keep America First and, at its core, reiterates the group's push against any tariffs or quotas on imported solar equipment. SEIA argues imposing tariffs represents a "bailout" for two foreign-owned companies that are exploiting U.S. trade law and would be a "bad deal for America." One idea floated in the plan is an import license fee that the group says would "get hundreds of millions of dollars in direct investment help to U.S. companies and our economy." They'll roll the whole thing out at 9:15 a.m. at the National Press Club.

DOT PUTS THE BRAKES ON ECP MANDATE: DOT Monday rescinded the mandate for trains carrying crude oil and ethanol to be equipped with electronically controlled pneumatic brakes, with the understanding that such brakes would reduce the risk of derailment in cases of emergency. The 2014 FAST Act ordered a scientific evaluation of ECP brake performance in emergencies, with a requirement for a final decision on the rule's fate by Monday — the two-year anniversary of the law's passage. The scientific study was inconclusive, and a GAO study found that DOT didn't have enough data to make a call. But a DOT analysis in October found that the costs outweighed the benefits of an ECP mandate by a factor of three. Commerce Committee Chairman John Thune praised the repeal decision. "Repealing this rule puts sound science and careful study ... over flawed guesswork," he said in a statement.

MOVING MORE NOMINATIONS: The Senate Energy and Natural Resources Commitee takes up the nominations of Timothy R. Petty to be Interior assistant secretary for water and science and Linda Capuano to run the Energy Information Administration today at 10 a.m. Watch here.

LAWSUIT ROUNDUP! SUIT FILED OVER MISSED SMOG DEADLINES: Ten environmental and public health groups filed a lawsuit Monday over a missed Oct. 1 statutory deadline for EPA to say which parts of the U.S. were meeting the 2015 ozone standard, Pro's Alex Guillén reports. A coalition of Democratic attorneys general is also expected to sue EPA soon.

Interior appeals loss in methane rule stay suit: The Interior Department said Monday evening it will appeal a federal judge's October ruling that said its delay of the Obama administration's methane waste rule was illegal. The judge said the Bureau of Land Management should have gone through notice-and-comment rulemaking to delay the rule since it had already taken effect. Interior proposed an 18-month delay and took public comments into November. It is unclear when that delay will be finalized. Interior's appeal will go to the 9th Circuit.

Are you new here? A lawsuit challenging EPA's delay of a regulation limiting power plants' toxic wastewater discharge was transferred from an Obama appointee to newly confirmed Judge Dabney L. Friedrich on Monday, Pro's Alex Guillén reports. Environmental advocates originally filed the case in May, and in September EPA finalized the delay of certain implementation deadlines.

ANOTHER HIRE AT EPA: Clint Woods, the head of an association that represents conservative state air agencies, will become the deputy assistant administrator of EPA's air office, Pro's Emily Holden reports. Woods is executive director of the Association of Air Pollution Control Agencies. He previously worked for the energy and environment subpanel of the House Science Committee and for the American Legislative Exchange Council. He'll begin his new job at EPA in mid-December.

NEW EPA PUSH ON PFAS: EPA announced Monday it was launching a cross-agency effort to address PFAS contamination around the country that will include identifying a set of near-term actions it can take to help local communities. No details were given though. You'll remember that concerns over PFAS contamination in North Carolina waterways were one of the major concerns for that state's senators in deciding they couldn't support Michael Dourson's nomination to run the agency's chemical office.

MUSICAL CHAIRS AT E&C: Mississippi Rep. Gregg Harper takes over as chairman of the Energy and Commerce Oversight and Investigations Subcommittee, Chairman Greg Walden announced Monday. Also of interest to ME readers: South Carolina Rep. Jeff Duncan joins both the Energy and Environment subcommittees.

PERRY'S IN UAE! Energy Secretary Rick Perry's swing through the Middle East next takes him to Abu Dhabi in the United Arab Emirates, where he'll co-chair the Carbon Sequestration Leadership Forum along with UAE Minister of Energy Suhail Mohamed Al Mazroui. Agenda here . The visit comes after he inked a memorandum of understanding with Saudi Arabia during his trip there to increase research and collaboration on carbon capture technologies. "This MOU outlines a future alliance not only in supercritical carbon dioxide, but also in a range of clean fossil fuels and carbon management opportunities," Perry said in a statement.

Also, guys, he's having the best time! Check out these pictures of Perry with his feet in the sand, shopping and doing other fun looking things here.

TAKE A GLANCE! The American Council for Capital Formation is out with a report today blaming the struggles of the California Public Employees' Retirement System, the nation's largest public pension fund, in part on investments in "certain political causes and issues at the expense of doing what's necessary to improve fund performance." It argues prioritizing environmental, social and governance investments frequently comes "at the expense of other investments more likely to optimize returns."

FOR YOUR VIEWING PLEASURE: Vice President Al Gore is hosting The Climate Reality Project's seventh-annual 24 Hours of Reality through 6:30 p.m. today with people like California Gov. Jerry Brown, San Juan Mayor Carmen Yulín Cruz, Mariah Carey, Sheryl Crow, Ellie Goulding and others talking up the importance of climate action and activism. Watch online here and a schedule of speakers is here.

STREAMLINING UTILITY SUSTAINABILITY REPORTING: The Edison Electric Institute announced Monday a pilot template that it said would help utilities more consistently provide investors with sustainability and other similar information. Utilities participating in the pilot project will begin using the template as they report 2016 information in the coming weeks.

LIGHTER CLICK! Pruitt tweeted out scenes from what seemed like a lovely holiday party in his office. Check them out here.

Climate-minded Republicans face heat in Arctic drilling debate Back

By Ben Lefebvre and Anthony Adragna | 12/04/2017 07:15 PM EDT

Pressure is mounting on House Republicans to oppose new Arctic drilling in the tax bill.

Protesters staged sit-ins Monday in two GOP lawmakers' offices, and environmental groups are working to grow the number who have expressed reservations about opening the Arctic National Wildlife Refuge to oil rigs. The fate of the ANWR rider — a top priority for Senate Energy and Natural Resources Chairwoman Lisa Murkowski (R-Alaska) — is one of several tricky issues Republican leaders will have to work out as they try to reconcile the differences between the House and Senate tax bills with the goal of getting their $1.5 trillion overhaul of the tax code to President Donald Trump's desk by the end of this year.

Despite its strong backing from Alaska's congressional delegation, the prospect of drilling in ANWR draws little support among the public at large, according to a new poll conducted by the Harvard T.H. Chan School of Public Health and POLITICO. It found 67 percent of those surveyed believe opening ANWR "should not be a priority" for the federal government, compared with 19 percent who said it was a "very" or "extremely important" priority. Among Republicans, 43 percent said ANWR should not be a priority, more than the 35 percent who said it was at least very important, according to the POLITICO-Harvard poll.

Another poll, conducted for the Yale Program on Climate Change Communication, found that 70 percent of Americans oppose drilling in ANWR.

A dozen House Republicans, six of whom supported the House tax bill, voiced their objections to the ANWR language in a letter to GOP leaders last week, although none has threatened to vote against the underlying bill if the provision remains. Environmentalists who are dead set against the Senate version's ANWR language have promised to make the issue a test for the 31 Republicans in the Climate Solutions Caucus.

"As Congress enters conference, we have two primary goals: Encourage the 12 House Republicans who signed the letter supporting the Arctic Refuge to stand strong and oppose the bill, and push other members to join them," said League of Conservation Voters spokeswoman Alyssa Roberts. "That includes members of the Climate Solutions Caucus. Any member who supports drilling in a pristine wildlife refuge that is feeling the impacts of climate change firsthand is doing the exact opposite of supporting 'climate solutions.'"

Protests started early Monday as advocacy group Sunrise Movement sent protesters to stage sit-ins Monday at the offices of caucus member Rep. Pat Meehan (R-Penn.) and co-chair Carlos Curbelo (R-Fla.).

Curbelo said he was sympathetic to the opposition to opening ANWR, but that it wouldn't swing his vote against the tax bill, H.R. 1.

"It would be very disappointing, but I doubt that I would deny all of my constituents the opportunity to experience tax relief because of any one provision," he said.

Murkowski wouldn't directly answer whether she's concerned about ANWR's prospects during the conference. "I am going to be obviously very engaged in trying to move ANWR throughout the whole process," she told POLITICO on Monday evening. "And, as I've been doing, I just said everything is one step at a time."

Sen. Maria Cantwell (D-Wash.), the top Democrat on the Energy and Natural Resources Committee, said she "certainly appreciate[s]" the 12 House Republicans opposing ANWR drilling and said the final vote would be an "awesome" opportunity for the Climate Solutions Caucus to show its power.

"We know there are more members of Congress that are concerned about the inclusion of that rider than the ones who signed that letter," said Lydia Weiss, the Wilderness Society's government relations director for lands. "This is one more headache for [House Speaker] Paul Ryan."

The House and Senate hope to start conferencing on the bill this week. But the versions of the bill the two chambers passed differ on key provisions in the package, including language Murkowski added to the Senate bill to open the ANWR for drilling.

ClearView Partners, a research firm, gave the bill an 80 percent chance of success in a note to clients Monday. "That said, we caution that the other 20 percent reflects the complexity of the conference process ahead," the analysts wrote.

Earthjustice, the Center for Biological Diversity and other groups also sent a letter to the caucus Republicans asking them, among other things, to work against opening ANWR. The letter was "an accountability mechanism," said Bill Snape, senior counsel for the Center for Biological Diversity, one of the groups that signed the letter.

A spokeswoman for Rep. Ryan Costello (R-Pa.), who backed the House plan on the floor but signed the GOP letter opposing ANWR, said he'd like the drilling provision taken out of the bill, though that was not a precondition for his support.

A spokeswoman for Curbelo would only say "the congressman does not believe the tax bill is the appropriate venue for addressing ANWR," but did not say whether the congressman would vote against the bill.

Rep. Dave Reichert (R-Wash.), a Ways and Means member who also opposes ANWR drilling, stopped short of threatening to oppose the final bill if the drilling provision stays. "It is my hope that there will be a robust conference discussion and in working through the differences between the two plans, improvements will be made," he said in a statement. "This includes protecting the Arctic."

Trump strips monument protections from 2 million acres in Utah Back

By Ben Lefebvre | 12/04/2017 03:10 PM EDT

President Donald Trump announced Monday that he is removing more than 2 million acres of protected territory from two national monuments in Utah, handing a political win to the state's lawmakers but setting off more protests from environmentalists and outdoor sports groups.

"You know how best to conserve this land for many, many years to come," Trump told a phalanx of the state's Republican lawmakers in Salt Lake City, as he took yet another swipe at the conservation legacies of former Presidents Barack Obama and Bill Clinton — and at regulators in Washington. "They don't know your land and truly they don't care for your land like you do. From now on that won't matter."

Trump's efforts to change the monuments' status started in April, when he signed an executive order directing Interior Secretary Ryan Zinke to review more than a hundred national monuments. Zinke said Monday that the finished report will be released Tuesday.

The long-expected announcement was a victory for Sen. Orrin Hatch, Rep. Rob Bishop and other Utah Republicans who had pressed the administration to shrink the territories of the Bears Ears and Grand Staircase-Escalante monuments from their combined 3.2 million acres. But Trump's

action enraged environmentalists and some Utah residents, who see the move as a first step toward allowing fossil fuel extraction near the monuments.

The planned cuts — essentially a rollback of the borders Obama and Clinton had set — was leaked to POLITICO and other news outlets last week. Obama set aside a total of more than 5.7 million acres of federal land into national monument parks, the most of any president under the Antiquities Act of 1906.

The new borders would shrink the 1.353-million-acre Bears Ears down to about 201,400 acres and break it into two new monuments called Indian Creek and Shash Jaa. That would free up oil, natural gas and uranium deposits for possible extraction.

Trump would also cleave the nearly 1.9 million-acre Grand Staircase-Escalante monument into three parts, totaling 997,490 acres: Grand Staircase, Kaiparowits and Escalante Canyons. The move would free up protections over areas high in mineral resources.

In the proclamations that reduced the monuments, Trump argued that many of the objects and physical features named in Clinton's and Obama's original designations "are not unique to the monument, and some of the particular examples of those objects within the monument are not of significant historic or scientific interest."

Environmental groups and Native American tribes have vowed to tie up Trump's move in courts. Southern Utah Wilderness Alliance plans to file a suit "within days, if not hours," legal director Steve Bloch said.

"The general gist of the argument regarding both national monuments is that the Antiquities Act is a limited grant of authority from Congress to the president to establish national monuments," Bloch said. "Nowhere in the act does Congress give the president the power to revoke or diminish national monuments, and by doing so the president is acting beyond his authority and unlawfully."

The Navajo Nation also promised to fight Trump's decision. The Navajos, who consider the Bears Ears monument of "critical importance" to the culture of many tribes in the region, said the White House ignored their requests to meet and discuss the issue.

"The decision to reduce the size of the Monument is being made with no tribal consultation," Navajo President Russell Begaye said in a press release. "The reduction in the size of the monument leaves us no choice but to litigate this decision."

A spokesman for the tribe did not immediately respond to questions.

Trump is also in danger of inflaming public opinion even while he appeases the Utah congressional delegation. Besides environmentalists, hunting and fishing groups have come out against the move, including some groups that had expressed early optimism about Trump and Zinke.

"Staircase Escalante in particular is troubling with a carve-out for the coal industry," said Land Tawney, president of Backcountry Hunters and Anglers. "That carve-out is smack dab in the middle of some of the most important habitat for desert bighorn sheep and will impact that species immensely, all for some coal that will most likely be sent to China."

Tawney had said a year ago that he hoped Trump and Zinke would oppose GOP efforts to "liquidate" federal lands. But more recently, as Zinke has carried out Trump's review of past presidents' monument designations, Tawney's organization has run ads out West asking, "What Happened to Ryan Zinke?"

Oil and gas companies, which have supported Trump and his push for American "energy dominance," welcomed the shearing back of the monuments' borders.

Trump strips monument protections from 2 million acres in Utah Back

By Ben Lefebvre | 12/04/2017 03:10 PM EDT

President Donald Trump announced Monday that he is removing more than 2 million acres of protected territory from two national monuments in Utah, handing a political win to the state's lawmakers but setting off more protests from environmentalists and outdoor sports groups.

"You know how best to conserve this land for many, many years to come," Trump told a phalanx of the state's Republican lawmakers in Salt Lake City, as he took yet another swipe at the conservation legacies of former Presidents Barack Obama and Bill Clinton — and at regulators in Washington. "They don't know your land and truly they don't care for your land like you do. From now on that won't matter."

Trump's efforts to change the monuments' status started in April, when he signed an executive order directing Interior Secretary Ryan Zinke to review more than a hundred national monuments. Zinke said Monday that the finished report will be released Tuesday.

The long-expected announcement was a victory for Sen. Orrin Hatch, Rep. Rob Bishop and other Utah Republicans who had pressed the administration to shrink the territories of the Bears Ears and Grand Staircase-Escalante monuments from their combined 3.2 million acres. But Trump's action enraged environmentalists and some Utah residents, who see the move as a first step toward allowing fossil fuel extraction near the monuments.

The planned cuts — essentially a rollback of the borders Obama and Clinton had set — was leaked to POLITICO and other news outlets last week. Obama set aside a total of more than 5.7 million acres of federal land into national monument parks, the most of any president under the Antiquities Act of 1906.

The new borders would shrink the 1.353-million-acre Bears Ears down to about 201,400 acres and break it into two new monuments called Indian Creek and Shash Jaa. That would free up oil, natural gas and uranium deposits for possible extraction.

Trump would also cleave the nearly 1.9 million-acre Grand Staircase-Escalante monument into three parts, totaling 997,490 acres: Grand Staircase, Kaiparowits and Escalante Canyons. The move would free up protections over areas high in mineral resources.

In the proclamations that reduced the monuments, Trump argued that many of the objects and physical features named in Clinton's and Obama's original designations "are not unique to the monument, and some of the particular examples of those objects within the monument are not of significant historic or scientific interest."

Environmental groups and Native American tribes have vowed to tie up Trump's move in courts. Southern Utah Wilderness Alliance plans to file a suit "within days, if not hours," legal director Steve Bloch said.

"The general gist of the argument regarding both national monuments is that the Antiquities Act is a limited grant of authority from Congress to the president to establish national monuments," Bloch said. "Nowhere in the act does Congress give the president the power to revoke or diminish national monuments, and by doing so the president is acting beyond his authority and unlawfully."

The Navajo Nation also promised to fight Trump's decision. The Navajos, who consider the Bears Ears monument of "critical importance" to the culture of many tribes in the region, said the White House ignored their requests to meet and discuss the issue.

"The decision to reduce the size of the Monument is being made with no tribal consultation," Navajo President Russell Begaye said in a press release. "The reduction in the size of the monument leaves us no choice but to litigate this decision."

A spokesman for the tribe did not immediately respond to questions.

Trump is also in danger of inflaming public opinion even while he appeases the Utah congressional delegation. Besides environmentalists, hunting and fishing groups have come out against the move, including some groups that had expressed early optimism about Trump and Zinke.

"Staircase Escalante in particular is troubling with a carve-out for the coal industry," said Land Tawney, president of Backcountry Hunters and Anglers. "That carve-out is smack dab in the middle of some of the most important habitat for desert bighorn sheep and will impact that species immensely, all for some coal that will most likely be sent to China."

Tawney had said a year ago that he hoped Trump and Zinke would oppose GOP efforts to "liquidate" federal lands. But more recently, as Zinke has carried out Trump's review of past

presidents' monument designations, Tawney's organization has run ads out West asking, "What Happened to Ryan Zinke?"

Oil and gas companies, which have supported Trump and his push for American "energy dominance," welcomed the shearing back of the monuments' borders.

Nebraska regulators set hearings to review Keystone XL decision Back

By Ben Lefebvre | 12/04/2017 03:40 PM EDT

Nebraska Public Service Commission will hold a hearing on Dec. 12 for TransCanada and environmental groups to argue it should reconsider its decision on the Keystone XL pipeline.

The PSC last month approved a route for the controversial Keystone XL that did not follow the path the Calgary-based company originally proposed. That could force TransCanada to apply for additional permits.

The company, which asked for the additional hearing in late November, has said it is still reviewing the PSC's decision.

Besides TransCanada, the Sierra Club and Nebraska landowners also requested to approach the board during the hearing, the notice said. Each party will have 20 minutes to discuss the commission's decision. The commission will not make a decision based on the hearings until a later date, the PSC said.

WHAT'S NEXT: The parties will meet for the hearing in Lincoln, Neb., on Dec. 12.

Trump, Democrats restart talks to avert shutdown Back

By Sarah Ferris, Jennifer Scholtes and Seung Min Kim | 12/04/2017 01:27 PM EDT

Senate Minority Leader Chuck Schumer and House Minority Leader Nancy Pelosi said Monday they will meet with President Donald Trump to resume high-stakes negotiations to avoid a government shutdown at week's end.

The Thursday sit-down at the White House with Trump and GOP leaders would amount to a do-

over of the meeting Democrats ditched last week over a fiery Trump tweet that slammed the Democrats and cast doubt on the prospect of reaching a deal. The boycott caused a political spectacle and temporarily halted talks on a broader spending deal congressional leaders have been negotiating behind the scenes.

"We hope the President will go into this meeting with an open mind, rather than deciding that an agreement can't be reached beforehand," the Democratic leaders wrote in a joint statement.

Government funding runs out Friday at midnight, though Republican leaders believe they have the votes to push back that deadline until just before Christmas. Both parties hope to have reached a bipartisan, two-year agreement on overall spending levels for defense and nondefense programs by the time funding runs out again on Dec. 22.

That year-end deal is also likely to include other long-stalled legislative priorities, including addressing funding lapses for the Children's Health Insurance Program and the National Flood Insurance Program.

South Dakota Sen. John Thune, the third-ranking Senate Republican, said "probably not all [GOP senators] but most of them" will support the brief, two-week funding fix when it hits the Senate floor later this week.

"It's a matter of just making the government function," Thune said.

Democratic leaders reiterated on Monday that they are seeking a compromise to extend protections for the hundreds of thousands of undocumented immigrants who came to the country as children and are protected by an Obama-era program that Trump is ending in March.

Though top congressional Republicans would prefer to defer the immigration battle to early next year, several key GOP lawmakers are getting impatient and trying to work up their own legislative fix for Dreamers in order to pressure leadership.

Sen. Jeff Flake (R-Ariz.) quietly began working with Sen. Michael Bennet (D-Colo.) several weeks ago in a new "gang" to craft Dreamer legislation that could pick up 60 votes, according to a Flake spokesman. Flake and Bennet worked together nearly five years ago to write the Gang of Eight comprehensive immigration reform measure. Aides declined to name all the senators who are involved, although Democratic officials said Sen. Dick Durbin of Illinois is also engaged in the talks.

"To have those kids go through another end of the year without knowing what their status is, is not good," Flake said Monday evening. "There are a couple of issues we still need consensus on, but we're getting close on a number of them."

House GOP leaders plan to pass a two-week stopgap on Wednesday to buy more time for striking a broader spending deal. House Majority Leader Kevin McCarthy promised on Saturday at the Reagan National Defense Forum that "we'll get out of this mess."

But the major question remains the Senate, where Republicans will need Democrats to pass any stopgap legislation and the Democratic leadership has declined to say whether it will offer votes to avert a government shutdown, even if some of its members say they'll vote for a stopgap bill.

"It doesn't make a difference whether we do [vote for the continuing resolution] or not," said Vermont Sen. Patrick Leahy, the top Democrat on the Appropriations Committee. "The Republicans are in charge."

Sen. Dianne Feinstein (D-Calif.) said she expects enough Democrats to support the bill: "The last thing we need is for the government to shut down."

Enacting the temporary patch would likely allow GOP leaders to postpone Democratic demands on prickly political issues like the deal for young immigrants and funding for the children's health care program.

The two-week stopgap does include language, however, that would make more funding available until month's end to states that are running out of money for administering the children's health program.

House GOP leaders believe they can secure enough votes from Republicans alone to clear this week's stopgap bill without making concessions to Democrats. But some conservatives have scoffed at the idea of punting until Dec. 22, which they fear will lead to a rash of spending before Christmas.

House Freedom Caucus members have asked Ryan for a stopgap through Dec.30 instead

"It's still up in the air," one House GOP staffer said about whether Republicans will back the two-week continuing resolution. "It's like a Kabuki dance in slow motion."

Defense hawks have also balked at the idea of a stopgap bill through the end of January, warning of budgetary uncertainty for the Pentagon.

With that in mind, some House Republicans are pushing a strategy that would include a full year's worth of funding for the Defense Department on one of the stopgap bills this month.

Rep. Mike Gallagher (R-Wis.) said that strategy would allow the House GOP to take a "bigger stand."

"I don't think there's an appetite among ... defense hawks in Congress for a long-term CR going into the next year," Gallagher, a member of the House Armed Services Committee, said at the Reagan National Defense Forum on Saturday.

Senate Majority Leader Mitch McConnell on Monday was confident Congress could pass a short-term funding bill. "We'll pass it before the end of the week," he said on the floor of the two-week measure.

And Republican leaders, despite some agitation from their rank and file, see no justification for Democratic demands for tying a so-called Dreamers deal to legislation intended to prevent a government shutdown.

"You hear our Democratic colleagues say, well, they're going to shut down the government unless we capitulate on the DACA fix, which is not going to happen," Senate Majority Whip John Cornyn of Texas said on Monday.

White House Budget Director Mick Mulvaney noted over the weekend that Democrats who are hell-bent on getting a Dreamers deal aren't the only ones threatening to withhold votes on government funding. Some House "right-wingers" have threatened opposition, he noted, as well as lawmakers from hurricane-hit states who want more disaster aid.

"This just sheds light on the fact that the spending system is broken when any little group can sort of hold the government hostage," Mulvaney said on CBS' "Face the Nation" on Sunday. "We need to get beyond that. I think that we will. I don't think you'll see a government shutdown."

Ryan weighed stripping Frelinghuysen of chairmanship Back

By Rachael Bade and John Bresnahan | 12/04/2017 03:13 PM EDT

Speaker Paul Ryan and his leadership team recently discussed replacing House Appropriations Chairman Rodney Frelinghuysen after he bucked the party and voted against the GOP tax bill, multiple sources told POLITICO.

Ryan, House Majority Leader Kevin McCarthy (R-Calif.) and Majority Whip Steve Scalise (R-La.) over the Thanksgiving recess considered calling up the GOP steering committee charged with selecting chairmen to force a roll call on whether Frelinghuysen should maintain his position. Scalise, three sources said, pushed hard for the move and was furious that the New Jersey Republican opposed the legislation that leaders believe is vital to maintaining their majority.

"Committee chairmen are expected to support the team," said one senior GOP leadership aide said. "How does he expect to win support for his own bills when he's unwilling to support the President and Speaker's number one priority?"

Spokespeople for Ryan's office and the Appropriations Committee declined to comment.

News about the talks comes after Ryan last week pulled out of a fundraiser for Rep. Lee Zeldin of New York, another centrist Republican who voted against the tax bill. Both Zeldin and Frelinghuysen share concerns about what repealing the state and local tax deduction would mean for their high-tax districts, where constituents use that benefit to lower their federal tax bill.

But Republican lawmakers are even more angry about Frelinghuysen, who's one of the most powerful chairmen in the conference. Chairmen are expected to support GOP leaders on tough votes or major pieces of legislation. And Frelinghuysen, who hails from a more moderate-minded swing district, was not given a green light to vote against the tax bill.

The chairman's "no" vote is particularly sensitive because Ryan, McCarthy and Scalise often have to strong-arm other Republicans to vote for government funding bills that come out of Frelinghuysen's committee. There's a fear that if the chairman is not punished, other lawmakers will balk when GOP leaders need them most on spending bills.

"If there's no perceived blowback against Frelinghuysen, Ryan's hand is weakened," said a second House Republican source familiar with the back-and-forth. "It's almost a political necessity. There has to be real or perceived blowback."

At the same time, many conservative Republicans grew angry when former Speaker John Boehner removed lawmakers from prized committees for voting against leadership on critical bills. Boehner punished former Rep. Tim Huelskamp by kicking him off the Agriculture Committee — which helped lead to his primary defeat just over a year later.

"I disagree with the chairman's vote, but he, like all of us, should vote according to the principles on which he was elected—as long as within bounds of the Constitution," said Rep. Justin Amash (R-Mich.) on Twitter. "Leaders would be wise to surround themselves with more people, not fewer, who hold alternative viewpoints."

It's not the first time Frelinghuysen has gone against leadership. Ryan and his top lieutenants had to work hard to flip him from "no" to "yes" on the Obamacare repeal bill earlier this year. The New Jersey Republican did not want to vote for the health bill and worried it would undercut his re-election effort, multiple sources told POLITICO at the time.

Frelinghuysen was also one of only two Republicans to vote in early October against a GOP bill to restrict abortions after 20 weeks except in instances of rape or where the mother's life is in danger.

Beyond floor votes, Frelinghuysen clashed with Ryan over a new, controversial Authorization for the Use of Military Force. Frelinghuysen, eager to embrace "regular order," allowed his panel in June to adopt a bipartisan amendment to a spending bill that would phase out the post-9/11 authority for military action overseas and call for new war guidelines.

Ryan called it a "mistake" at the time — and instructed the House Rules Committee to strip the language from the bill before it even hit the floor.

Then, again to the chagrin of GOP leaders, Frelinghuysen took the unusual step in July of allowing controversial immigration language to be adopted by voice vote during a committee markup. Using the same tactic as with the AUMF provision, GOP leaders again overrode the chairman's call by plucking the immigration language before it reached the floor.

The discussion about Frelinghuysen's fate comes as Congress barrels toward a potential shutdown at week's end. House Republicans are expected to pass a two-week spending stopgap without Democratic support on Wednesday, a painful vote for conservatives and appropriators who see "continuing resolutions" as bad policy.

Even if a shutdown is averted, conservatives are likely to be forced in the coming weeks to accept an increase in non-defense spending in order to win a Pentagon budget boost — then back a massive omnibus in January that could include additional spending for other programs that is not offset with cuts elsewhere.

National Academies study on rail ECP brake efficacy inconclusive Back

By Lauren Gardner | 10/05/2017 11:00 AM EDT

A National Academies committee tasked with reviewing DOT-conducted train brake testing could not conclude whether an advanced system that regulators have required for unit trains carrying hazardous materials like oil performs better in emergencies compared to others, according to a report released today.

That finding, based on results produced by DOT, may pave the way for the department to roll back a 2015 mandate for certain trains to install electronically controlled pneumatic brakes. Congress required studies of the requirement in the FAST Act and directed DOT to use the results to either justify its costs or repeal it by the end of 2017.

The latest report builds off an initial study released in February that determined DOT didn't adequately support why it planned to use certain parameters and factors to analyze ECP brakes and their performance relative to other systems. The panel made recommendations on that issue in advance of physical tests in the field and in a lab, which the members witnessed in the spring.

"DOT's efforts to validate its modeling and simulation approach in response to the committee's request do not instill sufficient confidence in DOT's comparison of the estimated emergency performance of ECP braking systems with that of" others, the report said.

A 2016 Government Accountability Office report on competing ECP braking studies from DOT

and the railroad industry concluded that both sides' studies suffered from a lack of data to support their claims, in part because at that time the railroad industry had shared limited data.

GAO: Data lacking in DOT and freights' arguments on ECP brakes Back

By Jennifer Scholtes | 10/12/2016 04:39 PM EDT

Special brakes for trains hauling flammable liquids might not be as beneficial as the DOT claimed in its rule last year strengthening protections for crude-by-rail, the Government Accountability Office reported this afternoon.

DOT has argued that electronically controlled pneumatic brakes not only allow trains to stop faster but also save money by reducing fuel consumption, operational inefficiency and wear. But GAO says those conclusions were based on limited data — at least in part because the information railroads have shared on their use is itself limited.

"Industry stakeholders claim that DOT overestimated benefits," GAO stated in its report. "DOT's use of limited data adds uncertainty to the estimates that DOT did not always acknowledge in the rule and its supporting analysis."

The railroad industry has deployed its own studies finding essentially the opposite.

It may not be possible to determine which side's studies are most accurate, considering GAO found DOT's modeling "lacked transparency as the information published may not be sufficient to enable an independent third party to replicate it." GAO also dinged industry studies that suffered from the same lack of data: "only two out of five railroads provided GAO extensive quantifiable data to support these claims."

DOT contends GAO's argument is lacking and has disagreed with its recommendations that DOT "acknowledge uncertainty" in revising its economic analysis on ECP brakes, collect data from railroads on their use of the technology and publish more information on brake modeling.

Revised ECP brake rule analysis shows costs greater than benefits Back

By Lauren Gardner | 10/13/2017 02:43 PM EDT

DOT's updated regulatory impact analysis of a 2015 braking mandate for certain unit trains found that its costs exceed its estimated benefits, putting the rule one step closer to repeal later this year.

While costs and benefits associated with the electronically controlled pneumatic braking requirement both decreased, the estimated benefits plummeted even more compared to the original analysis. DOT attributed the change to the decline of tank cars transporting flammable energy goods since 2015 and to railroads failing to order ECP brakes on new trainsets, meaning required installations would have to be done via costlier retrofits.

The FAST Act directed DOT to update its analysis to take into account studies by GAO and the National Academies on ECP brakes, though the department indicated it will review the National Academies report during the comment period. Freight railroads and some lawmakers had protested the ECP requirement, arguing that not enough data exists to justify the cost of retrofitting them onto locomotives.

DOT has until early December to justify the ECP requirements or repeal them.

The Association of American Railroads applauded the updated report and said it shows the rule should be thrown out. But the group took issue with DOT's citations of testing FRA conducted within the analysis, pointing to the National Academies study that couldn't conclude whether those brakes were more effective than others.

"Nothing could be further from the truth," the group said, regarding the study's validity.

Comments on the updated analysis are due Nov. 1.

Greens sue EPA over missed ozone designation deadline Back

By Alex Guillén | 12/04/2017 03:04 PM EDT

Ten environmental and public health groups today sued EPA for missing a key deadline to implement the 2015 ozone standard.

EPA faced a statutory deadline on Oct. 1 to say which parts of the U.S. were meeting the new ozone standard. Administrator Scott Pruitt said over the summer that he would delay that decision by one year, although he reversed course after several lawsuits were filed. EPA last month issued designations for 85 percent of all U.S. counties which it said met the standard or did not have enough information to decide.

But the agency has remained silent on the remaining 15 percent of the nation, which includes

many of the urban and downwind regions that face the worst smog pollution. Any area deemed in "nonattainment" will have to write a plan to reduce ozone-related pollution, and EPA's delay also puts off any requirement for those areas to act.

A coalition of Democratic attorneys general is also expected to sue EPA soon.

EPA has faced similar lawsuits after delaying designations under previous standards — such as the 2010 sulfur dioxide rule, for which environmental groups negotiated a consent decree with the Obama administration that set a series of designation deadlines lasting through 2020.

It's unclear whether a similar deal can be reached here. Pruitt recently issued a directive barring EPA from agreeing to such consent decrees. If EPA resists negotiations, the court may set its own timeline for the agency to act.

WHAT'S NEXT: The environmentalists' suit was filed in the U.S. District Court for Northern California. EPA has not indicated when it may act on the remaining designations.

Judge says Interior delay of methane waste rule was illegal Back

By Alex Guillén | 10/04/2017 07:32 PM EDT

A federal judge ruled today that the Bureau of Land Management's June postponement of key compliance dates for the methane waste rule was unlawful.

BLM relied on Section 705 of the Administrative Procedure Act to justify the delay. But Magistrate Judge Elizabeth Laporte of the U.S. District Court for Northern California said it was too late because the rule's effective date had already passed. That means BLM should have gone through a round of notice-and-comment rulemaking before suspending any part of the rule, she said.

Coincidentally, the ruling came on the same day that Interior proposed an 18-month delay of the methane waste rule as it works to rewrite it.

Laporte's ruling acknowledges the pending rulemaking but said it could be months before it is finalized and takes effect, and may not survive its own legal challenge, giving her no reason to pause now.

She vacated the delay and ordered the requirements reinstated. She rejected BLM's arguments that the delay should be kept in place, saying that doing so would create "a free pass for agencies to exceed their statutory authority and ignore their legal obligations under the APA, making a mockery of the statute." And Laporte said any company that misses upcoming January deadlines

because of Interior's delay is in "a problem to some extent of their own making."

Laporte previously used similar legal reasoning to strike down Interior's delay of a resource valuation rule.

WHAT'S NEXT: BLM will take public comment for 30 days on its new proposal to delay the methane waste rule.

BLM proposes 18-month delay to methane rule Back

By Ben Lefebvre | 10/04/2017 09:59 AM EDT

The Interior Department proposed to suspend enforcement of an Obama-era rule on methane emissions for 18 months as it plans to rewrite it, according to a document to be filed tomorrow in the Federal Register.

"The BLM is currently reviewing the 2016 final rule and wants to avoid imposing temporary or permanent compliance costs on operators for requirements that may be rescinded or significantly revised in the near future," the agency said in the document.

The agency said it is concerned that the final rule analysis "may have underestimated costs and overestimated benefits, and [BLM] is therefore presently reviewing that analysis for potential inaccuracies."

The 2016 rule was intended to require oil and gas developers on federal lands to capture more of the methane that leaked during their operations. The rule went into effect in January 2017 and survived an effort by Congressional Republicans to repeal it.

WHAT'S NEXT: BLM will accept public comments on the proposal for 30 days.

Trump judge assigned challenge to EPA water rule delay Back

By Alex Guillén | 12/04/2017 04:01 PM EDT

Environmentalists' lawsuit seeking to end EPA's delay of a regulation limiting power plants' toxic wastewater discharge has been assigned to a judge newly placed on the bench by President

Donald Trump.

The suit was reassigned today from Judge Ketanji Brown Jackson, an Obama appointee, to Judge Dabney L. Friedrich, who was confirmed by the Senate last week by a vote of 97-3.

Green groups filed the lawsuit in May after EPA stayed certain requirements under the rule, known as the steam electric effluent limitations guidelines. But in September, EPA finalized a delay of certain implementation deadlines as it works to reconsider those parts of the rule, and the agency argues that means this lawsuit should be dismissed as moot since the stay was ended.

EPA and environmentalists have been trading briefs on the matter in the months since.

Friedrich was a former White House attorney under George W. Bush and was formerly an aide to Sen. Orrin Hatch. From 2006 to 2016, she served on the U.S. Sentencing Commission, which creates sentencing guidelines for federal courts.

WHAT'S NEXT: Friedrich will have to determine whether to dismiss the suit, but will likely need time to get up to speed on the case.

EPA delays parts of power plant toxic discharge rule Back

By Alex Guillén | 09/13/2017 03:35 PM EDT

EPA has finalized a rule delaying by two years the key compliance dates for a 2015 regulation limiting toxic discharges in power plants' wastewater streams while it reconsiders those standards.

The delay provides "relief from the existing regulatory deadlines while the agency revisits some of the rule's requirements," EPA Administrator Scott Pruitt said in a statement.

Following industry requests, EPA specifically is delaying deadlines related to limits on discharges of flue gas desulfurization wastewater and bottom ash transport water, two waste streams associated with burning coal for electricity. EPA estimates the two-year delay of those requirements will provide annualized utility cost savings between $27.5 million and $36.8 million.

The agency said it will not revisit new standards for other types of waste streams — including fly ash transport water, flue gas mercury control wastewater and gasification wastewater — and will leave deadlines associated with those streams in place.

The delay will take effect two weeks after it is published in the Federal Register, and is open to

court challenges.

The Obama administration said the overall rule, known as effluent limitations guidelines or ELGs, ultimately would curb 1.4 billion pounds of aluminum, lead, mercury, arsenic and other toxic metals from entering waterways via discharge streams each year.

Head of conservative states' air group to take top EPA post Back

By Emily Holden | 12/04/2017 05:07 PM EDT

EPA is hiring Clint Woods, the head of an association that represents conservative state air agencies that have challenged federal pollution and climate regulations, to become deputy assistant administrator of the agency's air office.

Woods is executive director of the Association of Air Pollution Control Agencies. He previously worked for the energy and environment subpanel of the House Science Committee and for the American Legislative Exchange Council, an organization of conservative state legislators and businesses. Before that, he was government affairs manager for the Recreation Vehicle Industry Association.

Woods will work under the agency's air chief, Bill Wehrum, a former Hunton & Williams lawyer who has represented fossil fuel and chemical companies and was acting head of the air office under the Bush administration. Woods says he will also work with Principal Deputy Assistant Administrator Mandy Gunasekara, who took up the role last month, and David Harlow, an EPA air adviser from the same law firm as Wehrum.

Woods did not say what his specific duties would be but noted that his time with state and local agencies through AAPCA will "draw a lot of parallels" with EPA's work in implementing the Clean Air Act through cooperative federalism.

He is currently based in Lexington, Ky., and will assume his new position in mid-December.

AAPCA President Stuart Spencer, the associate director of the Arkansas Department of Environmental Quality, said Woods helped grow membership, increased engagement with EPA and produced reports on the state role in environmental protection.

Dourson at risk of rejection as more Republicans lean no Back

By Nick Juliano and Anthony Adragna | 11/16/2017 05:55 PM EDT

President Donald Trump's nominee to a key chemical safety job at the EPA is at risk of rejection after Republican senators balked amid accusations that he is too eager to cover for companies peddling dangerous products.

North Carolina's two GOP senators have said they will vote against confirming Michael Dourson as an EPA assistant administrator, citing a record that included work on a chemical linked to cancer deaths near a Marine Corps base in their home state. And Maine Republican Susan Collins said Thursday that she is leaning no as well — a vote that would be enough to sink his nomination.

Democrats are optimistic about turning four additional Republicans who they believe should be in play based on contamination issues back home.

Republican leaders have not decided what to do about Dourson's nomination, Senate Majority Whip John Cornyn (R-Texas) said Thursday.

"We'll have to see whether it's a viable nomination, and with two against him obviously that doesn't leave us a lot of room," Cornyn told POLITICO. "We haven't made a decisions on that yet, but we'll be revisiting it."

Critics say Dourson, a former industry-funded toxicologist, regularly downplayed the risks of chemicals such as PFOA and trichloroethylene that are contaminating soil and water in communities across the country. Dourson has already begun working at EPA as a senior adviser to Administrator Scott Pruitt, an arrangement Democrats have condemned as improper.

"There are all these local contamination issues across the country that have been bubbling up recently or have been out there for years, and because Dourson is this hired gun ... he's almost by nature of his job been working on these really controversial chemicals," said Jack Pratt, chemicals campaign director for the Environmental Defense Fund, which opposes Dourson's nomination.

Republican North Carolina Sens. Thom Tillis and Richard Burr said Wednesday that they could not support Dourson because of his past work as a toxicologist who was frequently hired by industry to rebut public health concerns about chemicals. Collins said Thursday that she is "leaning against" confirming him.

A legislative aide said Democrats are eyeing Republican Sens. Jeff Flake of Arizona, Lisa Murkowski of Alaska, Bob Corker of Tennessee and Pat Toomey of Pennsylvania, although Flake, Toomey and Corker told POLITICO they're still undecided.

"Sen. Toomey remains concerned about the PFOA issue in Bucks County and Montgomery County and remains dedicated to addressing it," a spokesman for the Pennsylvania Republican

said, naming two Philadelphia-area counties where toxic firefighting chemicals leached into the ground from two closed naval bases. Toomey is reviewing the nomination "with these concerns in mind," but the spokesman did not say how he plans to vote.

However, even if the nomination is pulled or rejected, Dourson will still be able to influence EPA's implementation of a major chemical safety law because he has already started working at the agency. Democrats have criticized that arrangement, though EPA says previous administrations allowed people to begin working there before being confirmed.

EPA's chemical safety office, which Dourson has been nominated to lead, has a heavy workload after Congress in 2016 passed a bipartisan law updating the Toxic Substances Control Act for the first time in nearly 40 years. The office has been charged with evaluating the safety of chemicals already in use and determining how to test new chemicals before they are allowed into the marketplace.

The near-universal support TSCA reform won in Congress last year may help explain the wariness among lawmakers about giving chemical industry allies too much of a foothold in EPA.

"They wanted to give the public some assurance that the products on their shelf are safe, and when you put the chemical industry in charge that's not going to happen," said Madeleine Foote, a legislative representative with the League of Conservation Voters.

Tillis and Burr stopped short of calling for Dourson to step down from his existing position at the agency. "I'll leave that up to the EPA to decide," Tillis told POLITICO.

Sen. Joe Manchin (D-W.Va.), who has supported several Trump nominees, said he would vote against Dourson but not object to him continuing to work at EPA.

Before joining EPA last month, Dourson was a professor at the University of Cincinnati College of Medicine's Risk Science Center, and he founded the nonprofit Toxicology Excellence for Risk Assessment, which was often conducted industry-funded research. He also previously worked at EPA from 1980 to 1995. Past clients of Dourson and his research group have included Dow Chemical, Koch Industries and Chevron, according to the Associated Press.

Critics say Dourson's research routinely concluded that chemicals were safer in far higher concentrations than those recommended by agencies like EPA, putting communities at greater risk of finding toxic substances like perchlorate, TCE or PFOA in their air or drinking water.

Pratt said Dourson's work followed a pattern.

"Over and over again these chemical companies would hire him, he'd look at the research, and say the standard that EPA or whatever regulatory body has is too strict — it should be looser," Pratt said.

EPA defended the nominee.

"Dr. Michael Dourson is a highly qualified scientist to lead EPA's Office of Chemical Safety and Pollution," EPA spokesman Jahan Wilcox said in a statement. "He worked at EPA for 15 years, founded a program that characterized the health hazards of chemicals, performed pro-bono work that saved a family near Cincinnati and his expertise on TCE contamination resulted in settlements that helped 130 families outside of San Francisco."

Dourson told the Environment and Public Works Committee at his confirmation hearing last month that he did not have a thumb on the scale.

"I can give you as many or more examples of situations where the science that we brought forward as a team actually lowered the safe dose or risk position for various sponsors," Dourson told Sen. Tom Carper (D-Del.) at the hearing. "If confirmed, I will rely on the guidance of EPA ethics officials."

Tillis and Burr said they could not support Dourson based on his record and North Carolina's history of chemical pollution problems, such drinking water at Camp Lejeune that was contaminated for decades by chemicals including trichloroethylene. TCE is one of the first 10 chemicals EPA must evaluate under the new safety law, but Dourson has previously endorsed health standards that are 1.5 to 15 times less protective than those backed by other researchers, according to EDF.

Retired Marine Corps Master Sgt. Jerry Ensminger, whose daughter died of leukemia linked to the contaminated water at Camp Lejeune, met with Tills and aides to Burr to urge their opposition, according to the Wilmington Star News.

Among his other industry-funded work, Dourson appeared before an EPA scientific advisory panel session concerning the pesticide chlorpyrifos on behalf of CropLife America. He led a 2008 paper on acrylamide, which can form during high-temperature cooking of some starchy foods, that received funding from major food companies like Burger King, Frito-Lay and McDonald's. And he studied 1-bromopropane, a solvent linked to some neurological and reproductive disorders, in 2004 with funding from Albemarle Corp. and Ameribrom Inc.

In all cases, he recommended standards many factors less protective than public health and EPA research suggested.

He also has done work for industry-friendly state governments. In the early 2000s, Dourson helped West Virginia set drinking water guidance limits for PFOA, also known as perfluorooctanoic acid or C8, at 150 parts per billion. That was 150 times less protective than manufacturer DuPont's own internal standard of 1 part per billion and more than 2,000 times less protective than EPA's recommendation of 70 parts per trillion.

During his confirmation hearing, Dourson argued that the research had evolved significantly since his recommendation to West Virginia, saying that "the science has progressed, significantly advanced since the time of 2004 and the new science indicates a lower level." And he defended the integrity of his work overall.

"Throughout my career — with EPA, TERA and now with the University of Cincinnati — I have been objective in my work and applied sound science to come to my conclusions," Dourson said.

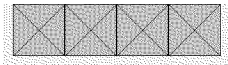
PHOTOS: EPA Administrator Pruitt Makes Stops in Iowa

Nevada, Iowa (December 1, 2017) — Today, U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt visited Iowa and met with the Iowa Association of Electric Cooperatives (IAEC), state officials, and farmers to discuss ongoing partnerships with the Agency.

"I was encouraged by the open dialogue with members of the electric cooperatives, Governor Reynolds, and Iowa farmers," **said EPA Administrator Scott Pruitt**. "We must continue to strengthen our partnerships with state and local leaders to further our goals of bringing regulatory certainty and clarity for Iowa and across the country."

Administrator Pruitt started the day at the IAEC annual meeting where he addressed more than 500 leaders from across the state about EPA's proposal to repeal the Clean Power Plan (CPP) and proposal to rescind the 2015 "Waters of the United States" (WOTUS) rule.

"We were honored to have Administrator Pruitt address our 500 attendees during our statewide annual meeting this morning," **remarked Chuck Soderberg, executive vice president of the Iowa Association of Electric Cooperatives**. "Iowa's not-for-profit electric cooperatives are committed to providing power that is safe, reliable, affordable and environmentally responsible. Hearing from Administrator Pruitt today made us feel confident the EPA is listening to our needs and concerns. We commend him for working to provide a common-sense regulatory framework that gives electric co-ops flexibility and certainty to meet the needs of our member-owners."



Following the electric cooperatives meeting, Administrator Pruitt met with over 150 Iowa farmers at a farm in Nevada. The dialogue was focused on the WOTUS rule, long-term plans for the Renewable Fuel Standards (RFS) program, and EPA's new standards for the use of the pesticide dicamba. Governor Kim Reynolds (R-IA) and other state officials joined Administrator Pruitt for the discussion.

EPA Administrator Scott Pruitt meets with members of the Iowa Association of Electric Cooperatives.

Chuck Soderberg, executive vice president of the Iowa Association of Electric Cooperatives, interviews EPA Administrator Scott Pruitt at the annual IAEC meeting.

EPA Administrator Scott Pruitt addresses local Future Farmers of America students in Nevada, Iowa.

Subject: Supreme Court to settle judicial procedure dispute in solar pricing case

By Alex Guillén

12/01/2017 03:34 PM EDT

The Supreme Court has agreed to hear an appeal stemming from a lawsuit over solar power pricing, but the justices will only weigh in on a dispute over judicial procedure in the case, not the underlying pricing issue.

The case involves a lawsuit brought by SolarCity against the Salt River Project Agricultural Improvement and Power District, an Arizona governmental entity and power supplier. The solar installer alleges the district created a penalty for homeowners who obtain their own electricity that caused a 96 percent drop in applications for home solar arrays in that area.

During proceedings in a trial court, the district argued to have the case dismissed because it is authorized by the state to set prices and thus should be considered immune from federal antitrust challenges. The trial judge denied that request.

The district subsequently challenged that ruling in the 9th Circuit Court of Appeals through what is supposed to be a narrow exception to how judicial orders are appealed known as the "collateral-order doctrine." Neither the 9th Circuit nor the Supreme Court has ever weighed in on whether "state-action" antitrust immunity can be appealed that way.

The 9th Circuit concluded in June that it cannot because it is "a defense to liability and not an immunity from" lawsuits. That decision was consistent with similar rulings from the 4th and 6th Circuits — but at odds with rulings from the 5th and 11th Circuits. The Supreme Court is more inclined to hear cases in which lower courts disagree.

WHAT'S NEXT: Oral arguments likely will occur in late winter or early spring of next year. The case is *Salt River Project Agricultural Improvement and Power District v. SolarCity*, 17-368.

Subject: BREAKING NEWS: Conyers to decide within days on political future

Rep. John Conyers (D-Mich.) will decide in the next few days whether to resign in the face of sexual harassment allegations involving three women, his attorney said.

"We will discuss in the next day or so what Mr. Conyers plans to do," the attorney, Arnold Reed, said at a news conference in Detroit. "As you know his health is not the best, is not what it should be, he has undergone a second round of examinations. I will meet and confer with doctors and it will be Congressman John Conyers who will be the one to decide what it is he's going to do."

Subject: Playbook Power Briefing, presented by PhRMA: MICHAEL FLYNN PLEADS GUILTY to lying to FBI -- The latest thinking on GOVERNMENT FUNDING -- FARENTHOLD settled sexual harassment claim -- MCCONNELL says GOP has votes for TAX BILL

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by PhRMA

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

BULLETIN -- AP at 12:01 p.m.: "WASHINGTON (AP) - Senate Republican leader Mitch McConnell on tax overhaul: 'We have the votes.'"

FLAKE, JOHNSON, DAINES ALL AT YES -- READ SEUNG MIN KIM, BRIAN FALER and **COLIN WILHELM** on taxes -- Story will be updated throughout the day. http://politi.co/2AkigOo

Good Friday afternoon. BOMBSHELL -- "Flynn has promised special counsel 'full cooperation' in Russia probe: Source," by ABC News' Brian Ross, Matthew Mosk, Josh Margolin, Adam Kelsey and Veronica Stracqualursi: "Retired Lt. Gen Michael Flynn has promised 'full cooperation' in the special counsel's Russia investigation and, according to a confidant, is prepared to testify that Donald Trump directed him to make contact with the Russians, initially as a way to work together to fight ISIS in Syria. ... A close confidant told ABC News that Flynn felt abandoned by Trump in recent weeks, and told friends about the decision to make the plea deal within the last 24 hours as he grew increasingly concerned about crippling legal costs he would face if he continued to contest the charges." http://abcn.ws/2kgesb2 ... ***The charge*** http://bit.ly/2j5VHDE

-- NYT'S EILEEN SULLIVAN, ADAM GOLDMAN and **MIKE SHEAR:** "President Trump's former national security adviser, Michael T. Flynn, pleaded guilty on Friday to lying to the F.B.I. about conversations with the Russian ambassador last December during the presidential transition, bringing the special counsel's investigation into the president's inner circle. ...

"The investigation has dogged Mr. Trump's first year in office. While Mr. Trump can point to the court documents and say they show no evidence of collusion with Russia, the special counsel's filings so far paint a damning portrait of Mr. Trump's associates. His former campaign chairman, two other campaign aides, and his former national security advisers have now all been charged with felonies.

"In one of the conversations described in court documents, the men discussed an

upcoming United Nations Security Council vote on whether to condemn Israel's building of settlements. At the time, the Obama administration was preparing to allow a Security Council vote on the matter.

"Mr. Mueller's investigators have learned through witnesses and documents that Prime Minister Benjamin Netanyahu of Israel asked the Trump transition team to lobby other countries to help Israel, according to two people briefed on the inquiry. Investigators have learned that Mr. Flynn and Mr. Trump's son-in-law and senior adviser, Jared Kushner, took the lead in those efforts. Mr. Mueller's team has emails that show Mr. Flynn saying he would work to kill the vote, the people briefed on the matter said.

"In the other discussion, according to court documents, Mr. Flynn asked Mr. Kislyak that Moscow refrain from escalating the situation in response to sanctions announced by the Obama administration that day against Russia over its interference in the presidential election. And Mr. Kislyak told Mr. Flynn that Russia 'had chosen to moderate its response,' the documents said. The following day, President Vladimir S. Putin of Russia said Moscow would not retaliate against the United States in response to the sanctions. Mr. Trump praised the Russian leader in a Twitter post. 'Great move on delay (by V. Putin) - I always knew he was very smart!' Mr. Trump wrote." http://nyti.ms/2ANYnjW

FLYNN'S STATEMENT: "After over 33 years of military service to our country, including nearly five years in combat away from my family, and then my decision to continue to serve the United States, it has been extraordinarily painful to endure these many months of false accusations of 'treason' and other outrageous acts.

"Such false accusations are contrary to everything I have ever done and stood for. But I recognize that the actions I acknowledged in court today were wrong, and, through my faith in God, I am working to set things right. My guilty plea and agreement to cooperate with the Special Counsel's Office reflect a decision I made in the best interests of my family and of our country. I accept full responsibility for my actions."

TY COBB'S STATEMENT: "Today, Michael Flynn, a former National Security Advisor at the White House for 25 days during the Trump Administration, and a former Obama administration official, entered a guilty plea to a single count of making a false statement to the FBI.

"The false statements involved mirror the false statements to White House officials which resulted in his resignation in February of this year. Nothing about the guilty plea or the charge implicates anyone other than Mr. Flynn. The conclusion of this phase of the Special Counsel's work demonstrates again that the Special Counsel is moving with all deliberate speed and clears the way for a prompt and reasonable conclusion."

-- Flynn was dismissed from the Obama administration. He was director of the Defense Intelligence Agency.

GET SMART FAST -- "The definitive Trump-Russia timeline of events," by Matt Nussbaum http://politi.co/2zINcEI

BY THE WAY... -- "Special counsel Robert Mueller's investigation tops $5 million," by ABC News' Pierre Thomas: "Those expenses include money for a staff of more than 16 attorneys, dozens of FBI agents, support staff, travel and office supplies. A more detailed breakdown of those expenditures is expected to be released in the coming days. Investigations of this nature can take years to resolve and run into the tens of millions of dollars." http://abcn.ws/2kcGunD

ONE WEEK UNTIL THE GOVERNMENT RUNS OUT OF MONEY -- HOUSE REPUBLICAN LEADERS faced backlash this morning when they pitched their idea to keep government open past Dec. 8. Here's what they want to do: they want to pass a stopgap funding bill next week, which would last until Dec. 22. Then they'd work to pass a tax bill, and set up a major spending-cap deal. Then at the end of December, they'd look to pass another funding bill that could potentially be loaded up with lots of elements, including renewing a children's health-care program and boosting spending caps. That would be a really, really tough vote.

-- CONSERVATIVES DON'T LIKE THIS. Rep. Jim Jordan (R-Ohio), a top conservative, told us that he wants a one-month government funding bill, with some additional money for the military.

WE SPOKE TO HOUSE MAJORITY LEADER KEVIN MCCARTHY (R-CALIF.) after the meeting. He laughed and said it went "wonderful."

-- MCCARTHY said, "Someone brought up a very good idea." He said someone floated the idea of setting the expiration of government funding to after Christmas. That would screw up everyone's last week of December. "I wouldn't be opposed to it."

-- NO DACA THIS YEAR, MCCARTHY SAID: "I don't think the solution for DACA -- I don't see it out there right now. So I don't see how you would get it done this month ... DACA's timeline is further out in March, you still have time to solve that problem."

-- THIS IS A MAJOR BLOW to operatives and moderate Republicans pushing a DACA fix before the end of the year. They were hoping that McCarthy would be the key advocate they needed in House Republican leadership to make their case.

TRUE FACT -- This is going to be a really, really long month.

****** **A message from PhRMA: How much are hospitals marking up medicine prices?** According to new Moran Company analysis, hospitals mark up medicine prices nearly 500 percent. The analysis of 20 medicines also found a hospital is paid 2.5 times what the biopharmaceutical company, who brought the medicine to market, receives. Read more: http://onphr.ma/2hSaqox ******

FARENTHOLD SETTLED SEXUAL HARASSMENT CLAIM -- RACHAEL BADE SCOOP: "Rep. Blake Farenthold used taxpayer money to settle a sexual harassment claim brought by his former spokesman -- the only known sitting member of Congress to have used a little-known congressional account to pay an accuser, sources told POLITICO. Lauren Greene, the Texas Republican's former communications director, sued her boss in December 2014 over allegations of gender discrimination, sexual harassment and creating a hostile work environment.

"Greene claimed in the lawsuit that another Farenthold aide told her the lawmaker had 'sexual fantasies' and 'wet dreams' about Greene. She also claimed that Farenthold 'regularly drank to excess' and told her in February 2014 that he was 'estranged from his wife and had not had sex with her in years.' When she complained about comments Farenthold and a male staffer made to her, Greene said the congressman improperly fired her. She filed a lawsuit in U.S. District Court in the District of Columbia, but the case was later dropped after both parties reached a private settlement." http://politi.co/2kewYRa

THE EMBASSY WILL REMAIN IN TEL AVIV -- "Trump to declare Jerusalem the capital of Israel on Wednesday," by Axios' Jonathan Swan: "President Trump is giving a speech Wednesday declaring Jerusalem the capital of Israel, according to two sources with direct knowledge. A White House spokesman refused to confirm the report: 'The President has always said it is a matter of when, not if. The President is still considering options and we have nothing to announce.'" http://bit.ly/2kePI8C

SPOTTED -- Former Pennsylvania Republican Rep. Tim Murphy wearing a members pin and digging into breakfast at the Longworth cafeteria this morning. Murphy resigned effective Oct. 21 after the anti-abortion lawmaker allegedly encouraged his lover to terminate a pregnancy. ***Pic*** http://bit.ly/2AjGBUL

REX TILLERSON on reports of his impending ouster: "It's laughable." ***Video from the State Department*** http://bit.ly/2zEJOuG

FALLOUT FROM THE PRESIDENT'S TWEETS -- "Donald Trump's 'working visit' to UK dropped as tensions with Theresa May grow over president's far-Right retweets," by The Telegraph's Ben Riley-Smith and Kate McCann: "U.S. diplomats have dropped plans for Donald Trump to conduct a visit to Britain in January amid a war of words between the two countries' leaders. Mr Trump, the US president, had been pencilled in for a 'working visit' in the first month of 2018 to formally open America's new London embassy.

"The trip, a scaled down version of a state visit with no meeting with the Queen, was intended to allow Mr Trump to come to the UK while avoiding the mass protests a full state visit would likely trigger. However, The Telegraph can reveal that the trip has been pushed into the long grass, with no new date in the diary picked." http://bit.ly/2zF0ja0

REMEMBER THE CFPB FIGHT? -- "U.S. consumer financial watchdog official defies Trump from within agency," by Reuters' Patrick Rucker and Pete Schroeder: "In an email to CFPB managers Thursday evening, [Leandra] English reminded them of the pending enforcement actions and said other routine reports on consumer protections are due in December. English wrote colleagues that she wants 'to be sure that these are still on track,' according to the email seen by Reuters. She signed the email, 'Leandra English, Acting Director.'" http://reut.rs/2kdbKmG

SUBTWEET -- "Former President Barack Obama: 'Think before you tweet'," by the AP's Nick Perry in New Delhi: "When former President Barack Obama spoke to a leadership forum in India's capital on Friday, he never once used the words 'Donald Trump' and was careful to avoid any direct reference to his successor in the White House. Yet Obama made plenty of veiled references, from climate change to the perils of using Twitter. The responses often drew laughter from the audience at the Hindustan Times Leadership Summit, which was part of a three-country tour Obama is undertaking in one of his first global outings as a private citizen after leaving office." http://bit.ly/2nlTKYk

ON THE WORLD'S STAGE -- NHK: "Japan to set April 30, 2019 for abdication": "Japan's Prime Minister says the Imperial House Council reached a consensus on the date for the upcoming abdication of Emperor Akihito. Shinzo Abe says council members prefer April 30, 2019 for the historic occasion... the first abdication in 2 centuries. The following day will be Crown Prince Naruhito's accession." http://bit.ly/2kfLXtZ

WATCH THIS CASE -- "Gold dealer implicates Turkey's president in corruption scheme," by WaPo's Devlin Barrett and Erin Cunningham: "A Turkish gold trader testified Thursday that he was told his scheme to move billions of dollars in Iranian oil profits in violation of U.S. sanctions was approved by Turkish president Recep Tayyip Erdogan. The testimony by Reza Zarrab in federal court in New York marks the first time the U.S. case has implicated Turkey's president, who had railed against the prosecution and lobbied senior U.S. officials to release Zarrab." http://wapo.st/2zEI98q

TOP-ED -- MARK WALLACE and FRAN TOWNSEND in the NYT, **"The Case for Removing Extremist Videos From the Internet":** "A major victory in the fight against extremism was secured last month when YouTube announced that it had taken down the lectures and sermons of Anwar al-Awlaki, an American who had turned into a firebrand preacher and notoriously effective recruiter for Al Qaeda in the Arabian Peninsula. ... [The Islamic State's] sophisticated exploitation of the internet to spread its message must be matched by a systematic and resource-intensive effort that includes website hosting companies such as WordPress, encrypted communications platforms such as Telegram and file-sharing platforms such as JustPaste.it, apart from video platforms such as YouTube." http://nyti.ms/2AvYMaf

TODAY'S BEYOND THE BELTWAY -- Cuomo and de Blasio ramp up feud -- Phil Murphy vows to fight GOP tax bill http://politi.co/2kfkqsA

TV TONIGHT -- Shawna Thomas of VICE News, **Erica Werner** of the Washington Post and **Jonathan Swan** of Axios join Bob Costa on PBS' "Washington Week" to talk about taxes, the budget and sexual misconduct on Capitol Hill.

AFTERNOON READ -- "The Unlikely Strategy Behind Buffett's Investments in Encyclopedias," by Bloomberg Businessweek's Noah Buhayar: "[H]ere we are more than three decades later, as World Book celebrates its 100th anniversary, underlining a quirk of the Berkshire method: One of the world's greatest investors has created a conglomerate that holds on to a bunch of companies that are well past their prime. ... Buffett contends that this loyalty helps him buy more companies. The conglomerate, he's said, has no 'exit strategy' for the businesses it buys -- it doesn't flip acquisitions for a quick profit. 'That's one reason why Berkshire is usually the first -- and sometimes the only -- choice for sellers and their managers,' he wrote to shareholders in 2003." https://bloom.bg/2zHhTuj

PLAYBOOK METRO SECTION -- "High confidence that major dose of wintry weather is coming to D.C. late next week," by WaPo Capital Weather Gang's Wes Junker and Jason Samenow: "Over the next week, the weather pattern will rearrange itself from mild and fall-like to unambiguously winterlike. Colder-than-normal temperatures are on the way and, yes, above-normal chances for snow." http://wapo.st/2zGT55o

COMING ATTRACTIONS -- The Saban Forum, hosted by Brookings, kicks off tonight. Sen. Tom Cotton (R-Ark.) and former Israeli Prime Minister Ehud Barak will participate in a conversation moderated by Jeffrey Goldberg tonight, and Jared Kushner and Haim Saban will have a conversation on Sunday. ***Livestream and full schedule*** http://brook.gs/2BDQPxd

SPOTTED: Fox News Chris Wallace on a Virgin America flight from Dulles to Los Angeles. Fox News Sunday broadcasts from the Reagan Library this weekend ... Phil Mudd, former deputy director of the CIA's Counterterrorism Center, exiting the Yellow line train at Pentagon City. "He's just like us: did the awkward left-right scan for the escalator," per our tipster.

****** **A message from PhRMA:** According to new analysis from the Moran Company, hospitals mark up medicine prices, on average, nearly 500 percent. The analysis of 20 medicines also found a hospital is paid 2.5 times what the biopharmaceutical company, who brought the medicine to market, receives. While hospital markups lead to higher costs for patients, employers and payers, these markups are often overlooked in conversations about medicine costs. As the provider market continues to become more concentrated and the number of medicines being administered in hospital-owned facilities is growing, the amount hospitals mark up medicine prices needs greater scrutiny. http://onphr.ma/2Ba0TOa ******

Subject: BREAKING NEWS: Trump: 'Is time to officially recognize Jerusalem as the capital of Israel'

The U.S. will officially recognize Jerusalem as Israel's capital and begin the process of moving its embassy there from Tel Aviv, President Donald Trump announced Wednesday, making good on a campaign promise that critics fear could shut the door on Israeli-Palestinian peace talks and ignite fresh violence in the region.

"Today we finally acknowledge the obvious: That Jerusalem is Israel's capital," Trump said. "This is nothing more or less than a recognition of reality. It is also the right thing to do. It's something that has to be done."

He also said the U.S. still wanted to see a peace agreement and would not take a position on "the specific boundaries of the Israeli sovereignty in Jerusalem or the resolution of contested borders."

Justice Anthony Kennedy, the Supreme Court's champion of gay rights, seemed troubled Tuesday by Colorado officials' treatment of Masterpiece Cakeshop owner Jack Phillips after he turned down a gay couple's request for a custom cake to celebrate their wedding in 2012.

"Tolerance is essential in a free society. Tolerance is most meaningful when it's mutual," Kennedy said during oral arguments. "It seems to me the state in its position has been neither tolerant nor respectful of Mr. Phillips' religious beliefs."

However, Kennedy also expressed concern for the plight of gay couples who might be refused services.

Subject: Federal Insider: Despite Trump, federal employee morale improves under Trump

Despite Trump, federal employee morale improves under Trump

By Joe Davidson

A report says federal employee engagement has improved under President Trump. (Susan Walsh/AP)

If the top office on my job was unexpectedly filled with a racist, Islamophobe caught boasting about groping women, it would hurt my morale.

Not so, apparently, with many federal employees.

Although President Trump has repeatedly disgraced the nation, not to mention proposing cuts to federal employees' retirement and their workplaces, the morale of federal workers has gone up on his watch.

So say the data.

The Best Places to Work in the Federal Government rankings released Wednesday by the Partnership for Public Service and the Deloitte consulting firm, indicate, with notable exceptions, the federal government is a better place to work since Trump took office. Overall, there was a 2.1 point increase in 2017 employee engagement over 2016. The 61.5/100 score is the highest since 2011.

The rankings are based largely on the Federal Employee Viewpoint Survey that was conducted in May and June by the Office of Personnel Management (OPM). That survey, released in October, also indicated the highest level of employee engagement since 2011, predicting the Best Places findings. But the data's big picture conflict with the workplace image drawn by many federal employees who have expressed disgust and anxiety over the Trump administration. This year's increase is part of a three-year upward trend that began under former president Barack Obama. The scores are based on

Bill Valdez, president of the Senior Executives Association, explained it this way: "Those agencies that have not been dramatically impacted by changes in mission during the recent presidential transition — NASA, Transportation, HHS (Department of Health and Human Services) — have continued to build on the momentum begun in the Obama Administration to improve employee engagement, while those civil servants at agencies where their mission importance has increased in the new Administration — DHS (Department of Homeland Security), in particular — are seeing dramatically increased engagement scores. Those agencies with missions that are being reevaluated — State Department, Environmental Protection Agency — have decreased scores, which is a reflection of the uncertainty about how their missions are valued."

The largest federal union, the American Federation of Government Employees, had no comment.

Noting declines at important agencies, such as the Justice and State departments, Rep. Gerald E. Connolly (D-Va.), a Trump critic and federal employee advocate, said the overall score "masks some real exceptions." Improved rankings at some large agencies, especially the Defense Department, by far the government's biggest, somewhat skews the general report, he said, "because they are so big and have disproportionate impact."

Among the Best Places highlights:

- NASA, for the sixth year running, tops the large agency category.
- DHS was the most improved large agency. That's good news even as it remains last in its category.
- In the agency subcomponent group, Immigration and Customs Enforcement, better known as ICE, was the most improved, jumping by 11.5 points since last year. Note: The National ICE Council and National Border Patrol Council were the only federal unions to endorse Trump.

Among the agencies that fell are those that have struggled with threats of staffing cuts and mission change.

- State suffered its largest single-year drop, including a major fall of 9.2 points in staff views of senior leaders. For the first time since 2011, State was not among the top five large agencies.
- The Environmental Protection Agency (EPA) is one place facing employee complaints about distorted mission and diminished protection for the environment under Trump. Its score dropped for the first time since 2014, and EPA's Office of Air and Radiation experienced the largest decrease among small agencies and subcomponents.

Other results include:

- The best and worst score — The Tennessee Valley Authority Office of Inspector General reigns supreme at 92.1, while the Secret Service wallows with 33.0.
- OPM and the Office of Management and Budget (OMB) push policies affecting the workforce, but they are not model agencies. OMB joined the EPA office in the largest fall from grace in their category, tumbling 7.3 points. OPM's score dropped and the agency ranks 17 out of 25 in its category. OPM had no comment about their failings or the administration's larger achievements.

"While we are glad to see the improvement overall, we are certainly disappointed in our score and look to redouble our efforts to improve," said Coalter Baker, OMB's deputy press secretary. "We will strive to seek and balance a proper and appropriate work environment so that the dedicated public servants here at OMB can focus on making a positive difference in our country."

ADVERTISEMENT

Whistleblowers take note: OMB's score on a question about employees believing they "can disclose a suspected violation of any law, rule or regulation without fear of reprisal" dropped by 6 points, more than any other agency this year.

OPM initially withheld data on 186 agencies and subcomponents, for first time since the Best Places reports began in 2003. OPM relented Tuesday afternoon in the face of critical questions. Now the Partnership expects to revise the rankings early next year.

That's a headache, but Max Stier, the Partnership's president and chief executive, took the high road.

"OPM's decision to now provide more complete government-wide data will make it easier for agencies to compare themselves to their federal counterparts," Stier said, "and help Congress and the Trump administration engage in comprehensive oversight of federal workforce management."

Subject: BREAKING NEWS: Gillibrand calls on Franken to resign

Sen. Kirsten Gillibrand (D-N.Y.) called for Sen. Al Franken (D-Minn.) to resign in the wake of multiple sexual misconduct allegations against him.

"While Senator Franken is entitled to have the Ethics Committee conclude its review, I believe it would be better for our country if he sent a clear message that any kind of mistreatment of women in our society isn't acceptable by stepping aside to let someone else serve," Gillibrand said in a Facebook post.

Gillibrand is the first of Franken's fellow Senate Democrats to take that step.

Subject: EPA watchdog to examine Pruitt's meeting with mining group

By Anthony Adragna

12/06/2017 11:15 AM EDT

The EPA's inspector general has agreed to establish a "factual record" about a meeting Administrator Scott Pruitt held with the National Mining Association that could be used to determine whether he violated anti-lobbying laws.

In its response released today, the inspector general cautioned that due to "numerous other pending projects" it is "not sure when we can begin this engagement." The letter said the inspector general's findings would be used by the Government Accountability Office in its own probe into Pruitt's actions.

House Energy and Commerce ranking member Frank Pallone made the request to EPA's inspector general in a late September letter. That came after POLITICO first reported NMA would support pulling out of the Paris climate agreement after meeting with Pruitt personally.

What's next: The inspector general's "factual record" will be used by the GAO in its own probe into Pruitt's actions, though it's unclear when the IG can begin its work.

Subject: POLITICO's Morning Transportation: Chao: Infrastructure next year — PreCheck and Global Entry could merge — ELD rumblings grow

By Tanya Snyder | 12/06/2017 10:00 AM EDT

With help from Stephanie Beasley

2018 IS WHERE IT'S AT: The new ETA for the Trump administration's infrastructure package is early January, Transportation Secretary Elaine Chao said Tuesday. "You're going to see it, just not at the original timeframe," Chao said at a POLITICO event, noting that the administration can't control the legislative calendar. (A brief history lesson: President Donald Trump said during his campaign that he would release an infrastructure package in his first 100 days. Then it slipped to May, then to the fall, then after the tax bill and recently other priorities seem to be creeping up too, including a health care rematch and changes to the welfare system.)

#ChaoToo: Chao also said she's had her own #MeToo moment and that the perpetratoris "still here." She wouldn't say more and in fact advised survivors from against going public with such experiences: "It's not worth my while to go back and revisit those negative moments," she said. "It's too corrosive, it's too negative and it does you a double injury because it holds you back." Get the full story and check out all the highlights from POLITICO's Women Rule Summit here.

Reality check: Sen. John Barrasso (R-Wyo.), chairman of the Environment and Public Works Committee, said Chao's infrastructure timeline seems realistic to him and said he's working closely "with the administration as well as both sides of the aisle to move in that direction." He wouldn't give a specific timeline for the infrastructure bill that he's been crafting for months.

IT'S WEDNESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ships. Tanya is in the MT cockpit. Send tips, feedback and song lyrics to tsnyder@politico.com or @TSnyderDC.

"And she'll have fun fun fun / 'Til her daddy takes the T-bird away."

LISTEN HERE: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) about lonely highways and south-bound trains?

NIELSEN TAKES OVER: The Senate confirmed Kirstjen Nielsen Tuesday to head the Homeland Security Department with a 62-37 vote Tuesday that mostly fell along party lines, though Democrats who voted yes included Bill Nelson (Fla.) and Joe Manchin (W. Va.).

YOUR DAILY SHUTDOWN BAROMETER: The House is planning a Thursday vote on a two-week appropriations patch to avoid a government shutdown before the Friday deadline. But Republicans are still fighting amongst themselves about whether it should last until Dec. 22 or Dec. 30, and GOP leaders are promising they won't cut deals with Democrats on immigration or anything else. Meanwhile, Trump's meeting with Senate Minority Leader Chuck Schumer (D-

N.Y.) and House Minority Leader Nancy Pelosi (D-Calif.) is still on for Thursday.

IN OTHER NEWS: The House voted Monday night to go to conference with the Senate over the tax bill, and McConnell pledged Tuesday that the Senate would take action later in the week.

IT'S COMPLICATED: Tax reform could cast a shadow on an otherwise rosy outlook for infrastructure in 2018, according to the latest outlook report from Fitch Ratings. While the GOP's proposed overhaul would "increase costs for capital improvements for U.S. transportation assets in the near term and may limit issuer options," said Cherian George, the group's managing director, "it would deepen the pool by opening up investments to a larger investor base."

TSA/CBP MULL 'TRUSTED TRAVELER' MERGER: With just over 100 days on the job, TSA chief David Pekoske signaled that he's already thinking big. Pekoske told an audience at an aviation security summit Tuesday that he and Customs and Border Protection Acting Administrator Kevin McAleenan have begun discussing a possible consolidation of TSA's PreCheck and CBP's Global Entry programs. "I don't know whether we're going to be able to do that or not," he told POLITICO. "It's something that we looked at and we said, 'hey, let's at least take a look at this to see if it is feasible.'" Pekoske said it would simplify the process for travelers if there was just one vetting program that they had to register for to gain expedited service at airport security checkpoints.

It may not be optional: Such a merger would be mandatory if a Senate Commerce Committee-approved TSA reauthorization (S. 1872 (115)) is enacted. Under the bill, TSA and CBP would be required to examine how to "streamline and integrate the requirements and operations of such programs to reduce administrative burdens" and allow the public to access both programs through one online portal.

COMING SOON: Pekoske also said TSA is on track to begin deploying the computed tomography scanners to airports in late 2018, Stephanie reports. But it could take several years to complete the process of replacing all of the 2D X-ray machines at U.S. airports with new CT scanners, he said. "That will be several years in the future," he said before adding that "not all airports can handle the CT technology from a space and weight perspective."

STICKY WICKER?: Eno Transportation Weekly broke the news Monday evening that Sen. Roger Wicker (R-Miss.) was responsible for a Republican hold on the autonomous car bill (S. 1885 (115)). However, he's still being coy about it. "I might want to make a statement about that at some point but not right now," he told reporters Tuesday. Scuttlebutt suggests it could have something to do with auto dealers, who could face major disruptions if driverless cars are rolled out in shared fleets, as expected, rather than for private ownership.

'Cautiously optimistic': Sen. Gary Peters (D-Mich.) said Tuesday that despite concerns raised by both Republicans and Democrats, "they're things that we think we can work through" and that he's still "cautiously optimistic" that the bill can pass before year's end.

RUMBLINGS GROW LOUDER AGAINST ELD IMPLEMENTATION: As the Dec. 18 deadline for trucks to install electronic logging devices gets closer, the opposition to the mandate

from small truck drivers is growing louder. Truck drivers held protests Monday in more than 40 locations across the country, and Tuesday, a bipartisan group of 20 senators wrote to Majority Leader Mitch McConnell and Minority Leader Chuck Schumer expressing support for a provision in the House-passed THUD appropriations bill delaying the deadline in order to give FMCSA time to adjust the rules for livestock haulers.

HOLIDAY TRAVEL CRYSTAL BALL: Airlines for America is projecting that 51 million passengers will fly globally on U.S. airlines over the winter holiday, a a 3.5 percent increase over last year's number.

YOUR FLIGHT IS DELAYED. BUT WHY? In the seventh installment of its Aviation Insights series, the Eno Center for Transportation asks the question, "What do we know about aircraft delays?" The answer: not much. Scheduling and reporting data lack transparency and granularity, they say. What we do know is that 81 percent of domestic flights are reported on-time -- the same as in 2003.

RAA ASKS FAA FOR NEW TRAINING PATHWAYS: The Regional Airline Association, which supports efforts to overhaul the 1,500 flight hour training rule for pilots, is urging the FAA to approve new "safety-enhancing structured training pathways" for airline first officers. In comments submitted as part of DOT's regulatory review, RAA asked DOT to approve more pathways as a way of addressing the pilot shortage, which, they say, has caused the regional airline industry to contract. RAA says FAA already has the existing authority to approve new flight training protocols but also supports GOP Commerce Committee legislation that would make that authority clear in statute.

FORGET I WAS EVER HERE: International consumer and privacy groups sent joint letters to automakers and car rental companies Tuesday, calling on them to ensure drivers and passengers that the data collected during their car rental is private. The groups want car rental and car-share companies to delete driver and passenger information when drivers return cars, explain to consumers how they can delete their own data, and only process personal data "with driver/passenger unambiguous consent, or if strictly necessary for the delivery of the service." The letters were based on a report one of the groups, Privacy International, recently released.

THE AUTOBAHN:

- "US issues travel warning for Jerusalem's Old City, West Bank amid embassy dispute." The Hill.

- "German pilots ground 222 flights after refusing to deport asylum seekers." The Independent.

- NGO details automakers' history of undercutting rules on safety and the environment. Union of Concerned Scientists.

- "New Jersey considers barring operating a drone while drunk." The Morning Call.

- "'All-you-can-fly' airline begins accepting Bitcoin and Ether." Coindesk.

- "How will autonomous vehicles change the way architects think about cities?" The Architect's Newspaper.

- "Fuel still a wild card for airline profitability." Gulf News.

- "Which sectors are benefiting from the autonomous vehicle industry?" TechWire Asia.

THE COUNTDOWN: DOT appropriations run out in 3 days. The FAA reauthorization expires in 116 days. Highway and transit policy is up for renewal in 1,030 days.

Subject: POLITICO's Morning Score: Senators grumble over Trump backing Moore — Flake writes check for Jones — DNC hires email director

By Daniel Strauss | 12/06/2017 10:00 AM EDT

With Scott Bland, Zach Montellaro and Elena Schneider

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

ONE WEEK TO GO - "GOP senators grumble over Trump, RNC backing Moore," by POLITICO's Seung Min Kim and Kevin Robillard: "Senate Republicans are still trying to keep their distance from Alabama Republican Roy Moore, creating a fresh break with President Donald Trump and the Republican National Committee, which have re-embraced Moore less than a week before a key special Senate election despite accusations of child molestation against the GOP candidate. Both the National Republican Senatorial Committee and Senate Leadership Fund, a super PAC controlled by allies of Senate Majority Leader Mitch McConnell, said they planned on staying out of the contest. Several Republican senators protested the RNC's decision furiously on Tuesday." **Full story.**

- "Bannon welcomes Moore back to GOP fold at Alabama rally," by POLITICO's Kevin Robillard: "At a rally here Tuesday in a barn at Oak Hollow Farm, in an affluent suburb on the eastern shore of the Mobile Bay, Bannon, Moore and a host of other staunch backers of the president took turns taking shots at the media, the GOP establishment, and Moore's Democratic opponent, former U.S. Attorney Doug Jones. The rally here was a replay of a rally Bannon and a host of other conservative figures held for Moore on the eve of the September runoff. Both men delivered their standard pitches: Bannon's speech, heavy on talk about rolling back free trade and restricting immigration, told the crowd they were leading a revolution. Moore delivered a speech heavy on religious rhetoric and social conservatism." **Full story.**

- "In major speech, Doug Jones portrays election as referendum on decency," by AL.com's Howard Koplowitz: "'We need to look at this as parents, not voters. Will we tell our daughters that if you are abused and if you speak out, you will be believed, and Alabama will stand with you regardless of when you come forward?' Jones said in a speech live streamed on his Facebook page. "Or will we tell our young sons this behavior, this disturbing behavior is O.K.? If you're powerful enough or important enough, Alabama will simply look the other way. ... By any objective standard... It is crystal clear that these women are telling the truth and Roy Moore is not." **Full story.**

- "Republican Flake tweets check made out to Alabama Democrat's campaign," by POLITICO's Nolan D. McCaskill: "A Republican senator on Tuesday posted a picture of a check made out to the campaign of Democratic Alabama Senate candidate Doug Jones. Sen. Jeff

Flake tweeted an image of a completed check for $100 for Jones' Senate campaign. The check to Jones' campaign ... is for 'Country over Party,' Flake wrote on Twitter." **Full story**.

- "Pro-Jones super PAC hits Moore on charity spending," by Campaign Pro's Daniel Strauss: "The latest ad from a super PAC supporting Democrat Doug Jones in the Alabama Senate race frames Republican Roy Moore as a candidate that isn't actually 'for us.' The 30-second statewide TV ad comes a week before the special election between Jones and Moore. The ad will be aired by Highway 31, a recently formed super PAC backing Jones. 'Roy Moore says he's for us ... but what he does says otherwise,' the narrator in the ad says. 'Moore got paid $180,000 a year from his personal charity. A health care plan, a bodyguard and a private jet for part-time work.'" **Full story.**

MEANWHILE, A RESIGNATION - "Conyers vs. Conyers? Congressman backs son for seat," by The Detroit News' Jonathan Oosting, Michael Gerstein, and Melissa Nann Burke: "As the longest-serving member of Congress effectively resigned Tuesday amid sexual harassment allegations, U.S. Rep. John Conyers Jr. tried to keep his legacy alive by endorsing his oldest son, John Conyers III, to succeed him in Congress. It was an unexpected move by the Detroit Democrat in what promises to be a heavily contested primary in the heavily Democratic 13th District. State Sen. Ian Conyers of Detroit - the 88-year-old congressman's great-nephew who has been in the state Legislature for a little over a year - has already announced plans to run. ... Other names circulating Tuesday as potential candidates included state Sens. David Knezek of Dearborn Heights and Coleman Young II of Detroit, former state Rep. Rashida Tlaib of Detroit, Westland Mayor Bill Wild, Detroit City Council President Brenda Jones and Councilwoman Mary Sheffield." **Full story.**

NOT RESIGNING - "Nevada Democrat accused of sexual misconduct says he won't resign," by ABC's John Parkinson and Mary Bruce: "Amid allegations of sexual harassment, embattled freshman Democratic Rep. Ruben Kihuen vowed he will not resign from his post, despite calls from Democratic leaders that he step aside. Instead, Kihuen is digging in with a shocking allegation of his own, taking aim at the leaders of his own party, [saying they] knew last year about a former campaign staffer's allegations of misconduct but stood by his campaign nonetheless. Kihuen questioned why they are calling for his resignation now. ... 'I do find it interesting that the DCCC, Leader [Nancy] Pelosi and Chairman Ben Ray Lujan -- they knew about these allegations last year,' Kihuen said. 'They looked into them. They didn't find anything, and they continued investing millions of dollars in my campaign. They went out there and campaigned for me.' House Minority Leader Nancy Pelosi and Rep. Ben Ray Lujan, the chairman of the Democratic Congressional Campaign Committee, who are both demanding Kihuen's resignation, adamantly deny knowing about the allegations against Kihuen before BuzzFeed published a report last week." **Full story.**

Days until the 2018 election: 335

Thanks for joining us! You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com, dstrauss@politico.com and mseverns@politico.com.

You can also follow us on Twitter: @politicoscott, @ec_schneider, @politicokevin, @danielstrauss4 and @maggieseverns.

HE'S RUNNING - "Ex-Ohio AG, CFPB leader Richard Cordray announces run for Ohio governor," by the Cincinnati Enquirer's Jessie Balmert: "Touting support from former President Barack Obama and Sen. Elizabeth Warren, former Consumer Financial Protection Bureau leader Richard Cordray announced he would run for Ohio governor. 'I'm announcing today that I'm running to be the next governor for the state of Ohio,' Cordray said Tuesday at a packed Lilly's Kitchen Table, a diner in his hometown of Grove City." **Full story.**

BIG GET - "Lexington Mayor Jim Gray running for Congress," by The Lexington Herald-Leader: "After months of will-he, won't-he whispering among Kentucky Democrats, Lexington Mayor Jim Gray made it official early Tuesday: He's running for Congress. ... Gray enters the race as the presumed favorite in a Democratic field that includes former Marine Corps fighter pilot Amy McGrath, state Sen. Reggie Thomas and perennial candidate Geoff Young. ... Gray has the ability to self-finance a campaign, having spent $2.5 million of his own money over the course of his Senate campaign, but he's playing catch-up." **Full story.**

SEXUAL HARASSMENT IN 2018 CAMPAIGNS - "Wisconsin Republicans say Tony Evers 'bowed to union pressure' in Middleton teacher case," by the Madison Capital Times' Jessie Opoien: "The Republican Party of Wisconsin says state Superintendent Tony Evers 'bowed to union pressure' and did not do all he could to keep a teacher accused of harassing a colleague and watching pornography out of the classroom. But a Department of Public Instruction spokesman says the agency had no legal authority to do so at the time, and only in rare cases would the agency have the authority to revoke a license because of sexual harassment. Evers is seeking the Democratic nomination to challenge Republican Gov. Scott Walker in 2018. A spokesman for his campaign said Republicans are rehashing old news to avoid their own weaknesses on the issue of sexual misconduct. The Republican Party of Wisconsin has gone after Evers relentlessly for the 2009 case, in which DPI and Evers did not revoke the license of Middleton-Cross Plains middle school science teacher Andrew Harris after he viewed sexually explicit images on his school computer." **Full story**.

- Expect this to be a big part of the 2018 governor's race in Wisconsin, says one Republican with knowledge of party plans: "It's a fair bet that this attack will be a central component of Republicans' messaging strategy over the long haul. From the day-to-day knife fight to the long arc of paid advertising if it becomes necessary, Tony Evers will be facing this question as long as needed."

STAFFING UP - The Democratic National Committee has hired Robin Curran as its new email director. According to DNC spokeswoman Xochi Hinojosa, "The email director oversees our communications with grass-roots supporters, donors, and volunteers. As part of their role, they determine our overall strategy, testing, and optimization of the DNC email program." Curran comes from Revolution Messaging and previously served as the digital production director for Bernie Sanders' presidential campaign.

DEPT. OF BIO VIDEOS - Pat Ryan releases video on military career: Democrat Pat Ryan,

who's vying to challenge New York Rep. John Faso, is out with a biography video that describes his military career and criticizes Faso for his position on health care. "I remember the commander of this unit looking at me and saying, 'Pat, this is going to save lives,'" Ryan says, explaining a technology company he started. **Watch the video here.**

CODA - QUOTE OF THE DAY: "When it happens to one of us, we're guilty until proven innocent." - **Rep. Marcia Fudge** on the difference in how Congress handles sexual misconduct allegations against black lawmakers compared with white lawmakers.

Subject: POLITICO's Morning Energy: Senior Republicans feeling upbeat on ANWR's chances — Pruitt's unusual Thursday congressional appearance — Zinke recommends shrinking two more monuments

By Anthony Adragna | 12/06/2017 10:00 AM EDT

With help from Emily Holden, Catherine Boudreau and Eric Wolff

ODDS LOOKING GOOD FOR ANWR: Senior House Republicans said Tuesday they were optimistic a provision opening the Arctic National Wildlife Refuge to oil and gas drilling would make it into Congress' final tax package, even as a handful of their colleagues expressed unease. "I've been asking for ANWR for a long, long time," said Natural Resources Chairman Rob Bishop, who is on the conference committee sorting out the differences between the House and Senate bills. "And so have most rational people. I expect it to be part of the final product." Alaska Republican Rep. Don Young, also a conferee, said he was "feeling pretty good" about the provision's chances of making it through conference.

Alaska Sen. Dan Sullivan summed up the state of play over ANWR: "You don't want to jinx it and we're going to continue to work hard, but we're confident and we're going to have good representation on the conference." Senate Energy Chairman Lisa Murkowski is expected to join Young as a conferee once the Senate votes to go for conference. Sullivan added his vote on the package would be in jeopardy if the ANWR provision doesn't make it into the finished product.

Grassley ready to rumble: Senate Judiciary Chairman Chuck Grassley suggested he'd throw his weight around to alter provisions in the House-passed bill that would change qualification terms for some renewable energy projects and trim the renewable production tax credit. "I would think they'd be embarrassed of even putting it in," he told reporters. "What is there about wind that would cause them to do something that they haven't done for anything else?" Grassley also said changing the tax credits went against a promise he'd received from Treasury Secretary Steven Mnuchin back in January. A coalition of right-of-center clean energy groups sent a letter outlining their own concerns about the House and Senate bills on Tuesday.

Extenders package coming together: Legislation extending expired tax provisions, including short-term tax benefits to promote renewable energy sources like biodiesel and solar power, is expected to come together in the next couple of weeks, Pro Tax's Aaron Lorenzo and Bernie Becker report, citing senior GOP senators. Multiple sources say a package could hitch a ride with an end-of-year government funding agreement. Sens. Johnny Isakson and Tim Scott are advocating to extend a 2020 deadline on tax credits for new nuclear energy projects, while Grassley has pushed a biodiesel credit.

Meanwhile, senior congressional Republicans are drawing a line in the sand by promising they won't grant Democrats concessions in a second short-term spending bill later this month to keep the government open, Pro Budget & Appropriations Brief's Jennifer Scholtes and Sarah Ferris report. "If we pass a bill on or about the 22nd and go home, then the Senate will need to make up

its mind about what to do about that," Rep. Hal Rogers said. "The option is either: Pass or have a shutdown in place."

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and the ClearPath Foundation's Spencer Nelson was first up to identify Joe Barton as the original sponsor of the Energy Policy Act of 2005. For today: What was the *smallest* national monument ever created in the U.S.? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

Legislative Compass - Preferred Pricing for 2017: Test out POLITICO Pro's powerful, easy-to-use tool that simplifies federal and state legislative tracking. **Get started.**

NEVER HEARD OF THIS BEFORE: EPA Administrator Scott Pruitt will only stay for an hour during a Thursday appearance at an Energy and Commerce subcommittee before returning later in the afternoon. "Congressional Republicans need to grow a backbone and stand up to President Trump and the members of his cabinet, like Administrator Pruitt, who have repeatedly ignored any Congressional oversight," ranking member Frank Pallone told ME in a statement. "It's clear that we're simply not going to get any real oversight of the Trump Administration from Congressional Republicans anytime soon." A committee spokesman confirmed the arrangement and said it was to accommodate a meeting at the White House. EPA didn't respond to request for comment.

Context here: ME's never heard of a Cabinet official taking a lengthy break in the middle of a congressional hearing, regardless of the reason. And, remember, this is slated to be Pruitt's first appearance before the Energy and Commerce Committee.

Ahead of the appearance, more than 1,000 scientists asked congressional leaders to question Pruitt about efforts to overhaul the agency's science advisory panels. "Without the best available scientific advice, the EPA will be ill-equipped to tackle emerging environmental and public health challenges, and the American people will suffer," they write.

GOOD DAY, SUNSHINE: TRADE REP TO HEAR SOLAR CASE: The U.S. Trade Representative will hear arguments today at 9:30 a.m. for what kind of tariffs or quotas - if any - the president should impose on imported solar panels. The hearing will likely be a rehash of arguments that were made to the U.S. International Trade Commission before that body proposed its own set of remedies for the damage done to U.S. trade manufacturers by low cost imports.

Trump gets to make the call: The president will ultimately have full latitude to impose penalties on imported solar cells and panels, and the Solar Energy Industries Association is hoping to influence his decision by recasting their arguments against a tariff in Trump's preferred terms. The group rolled out its America First Plan for Solar Energy, saying rejecting tariffs would promote "U.S. energy dominance," help national security and save jobs. Trump must make a decision by Jan. 26.

Republicans urge no tariffs: 35 House and six Senate Republicans sent letters ahead of the hearing urging the Trump administration not to slap tariffs on imported solar equipment.

ZINKE FLOATS SHRINKING MORE MONUMENTS: Interior Secretary Ryan Zinke urged Trump in his 20-page final recommendations to downsize Nevada's Gold Butte and Oregon's Cascade-Siskiyou national monuments, in addition to the drastic scalebacks of Bears Ears and Grand Staircase-Escalante national the president announced Monday. Management plans at half a dozen other monuments would be changed, though their boundaries would not be altered. And Zinke suggests creating three new national monuments: Camp Nelson in Kentucky; Medgar Evers's home in Mississippi; and the Badger II Medicine Area in Zinke's own homestate of Montana.

CITIES RALLY ON CLIMATE: Some 36 U.S. mayors signed an agreement Tuesday vowing to do their part to curb greenhouse gas emissions even as the Trump administration has signaled its intent to leave the Paris agreement. Former President Barack Obama later delivered brief remarks to the gathering in Chicago thanking cities for showing "the kind of leadership that is needed at the moment" and mayors for helping to keep "our word on the world stage." Obama said "cities and states and businesses and universities and nonprofits have emerged as the new face of American leadership on climate change."

MCINTYRE MIA? It's been 34 days since Jones Day attorney Kevin McIntyre was confirmed by the Senate to be a FERC commissioner, and two weeks since he got his signed commission. Commissioners basically get to decide for themselves when they want to get sworn in, so speculation has swirled about why the would-be chairman hasn't shown up for work. McIntyre still has a webpage at Jones Day, which usually is one of the first things to go when a big firm lawyer takes a government job. An out-of-office reply from his work email account said he he would be back on Dec. 14. The White House did not respond to a request for comment, and a FERC spokesman said, "We have nothing on that at this time."

AIN'T NO THING: Grassley is downplaying the significance of the meeting that Sen. Ted Cruz secured with Trump and several Cabinet members on Thursday to discuss biofuels and vehicle fuel-efficiency policy. "The president keeps doing what he told the voters of Iowa, as well as me and Senator [Joni] Ernst , which is supporting ethanol," Grassley told reporters Tuesday, adding that it's not unusual for the president to accept a meeting request from senators. The Iowa Republican also said he thinks Cruz's leverage has diminished since the EPA last week released the rule setting 2018 blending requirements for biofuels - which kept flat the levels for corn ethanol.

SWEET TREAT: Bishop gave Trump a special little treat during his Monday visit to Utah to unveil his monument recommendations: a box of chocolates from a store in his district. "It was cheesy but I thought why not?" he said. "He says he likes chocolates." No word on what Trump thought of the candy, which Bishop said was the store's popular nut roll.

And another gift: At a tax event at the White House on Tuesday, North Dakota state Sen. Jessica Unruh gave Trump a Make Coal Great Again hat as she praised the tax overhaul. "The production tax credit has destroyed the energy market, especially in the Midwest. We don't have a lot of electricity produced from natural gas in North Dakota. So wind production has really eroded our state tax base and replaced coal production when it comes to electricity production," she said. "We're also very thankful for all the regulatory reform we've seen come from your office."

NO NOMINATION VACATION: The Senate Environment and Public Works Committee takes up R.D. James' nomination to run the Army Corps of Engineers this morning at 10 a.m. in Dirksen 406. The nomination earlier this month cleared the Senate Armed Services Committee on a voice vote, though the crowded December to-do list suggests he may not get a floor vote until next year.

In the afternoon, an EPW subcommittee holds a hearing entitled "Challenges Facing Superfund and Waste Cleanup Efforts Following Natural Disasters." Witnesses are from Texas and California alone.

SEE YOU IN COURT (AGAIN): Joining environmental and public health groups, a coalition of 15 Democratic attorneys general sued EPA on Tuesday for missing a key deadline related to implementation of its 2015 ozone standard, Pro's Alex Guillén reports.

MAIL CALL! DON'T TURN THE CAR (STANDARDS) AROUND: At least 22 Democratic senators, led by Ed Markey, Sheldon Whitehouse and Kamala Harris , are sending Pruitt a letter this morning urging him not to weaken emissions standards for model years 2021 through 2025. "Regulated industries should not be able to undermine technically sound standards that have clear environmental and health benefits," they'll say in letter which ME has glimpsed. And their letter comes as the Union of Concerned Scientists releases a new report arguing automakers have for decades repeated a "familiar pattern" of attacking new policies as technologically infeasible.

TAKE A LOOK PLEASE! Seven Democratic senators asked GAO in a letter to examine how the Trump administration developed its lower social cost of carbon figure. In particular, they asked for an examination of how other states and countries created similar measures. Link here.

FIGHTING PARK SERVICE CUTS: The NRDC Action Fund is launching a five-figure, TV ad campaign in Montana today against the Trump administration's proposed cuts to the National Park Service and urging Sen. Jon Tester to continue fighting them. Watch it here.

FOR YOUR RADAR: The American Legislative Exchange Council is meeting today through Friday in Nashville and conservative legislators will weigh a model resolution calling on EPA to review the endangerment finding, which requires regulations to limit

greenhouse gas emissions. ALEC members will vote on the proposal Thursday. Exxon Mobil, a private sector member of ALEC, is opposing the push, particularly because of its language questioning climate science, The Hill reports.

STUDY BUDDIES: E2, former DOE head Ernest Moniz's Energy Futures Initiative and the National Association of State Energy Officials are teaming up on a detailed analysis of energy jobs for every state, including jobs in solar, wind, energy efficiency and clean transportation. The groups expect the report out by Spring 2018.

HOW TO DIGITIZE AN ELECTRIC GRID: The Bipartisan Policy Center released a series of recommendations Tuesday for how to digitize the electric grid. Among their suggestions: Having DOE convene a task force on the issue and including funding for modernizing grid investment as part an infrastructure package. Read the whole report here.

Subject: BREAKING NEWS: Mueller Russia probe cost $3.2 million in first months

Special counsel Robert Mueller's Russia probe cost $3.2 million in its first four-and-a-half months, the Justice Department said in a report released Tuesday.

The spending totals include $1.7 million for salaries and benefits, though $1.2 million of that total accounts for Justice employees who have been detailed to the Mueller probe, which is examining ties between Moscow and President Donald Trump's 2016 campaign.

New hires have cost $500,696 for the period between Mueller's appointment in mid-May and the end of September.

Mueller also spent $733,969 to acquire office equipment for the investigation, which the DOJ report explained will remain federal government property after the probe is finished.

The special counsel also spent $223,643 for travel, almost entirely for staffers who have made temporary relocations to the investigation's headquarters in Washington.

The Mueller probe has also spent $157,339 for a variety of contractual services, including $111,245 for information technology, $24,456 for transcription and $17,217 for building services.

Subject: BREAKING NEWS: Another woman says Franken tried to forcibly kiss her

A former Democratic congressional aide says Sen. Al Franken tried to forcibly kiss her after a taping of his radio show in 2006.

The woman ducked to avoid his lips, prompting Franken to tell her, "It's my right as an entertainer" as she quickly left the room, according to the former staffer. POLITICO is withholding the woman's name to protect her identity.

Franken (D-Minn.) denied the accusation. "This allegation is categorically not true and the idea that I would claim this as my right as an entertainer is preposterous. I look forward to fully cooperating with the ongoing ethics committee investigation," the senator said in a statement.

Subject: New York Times suing EPA for Pruitt schedules

By Emily Holden

12/05/2017 10:39 AM EDT

The New York Times is suing EPA to try to force the agency to regularly release Administrator Scott Pruitt's full daily schedule and details on who he meets with.

In a lawsuit filed Monday in the U.S. District Court for D.C., the Times and Washington-based reporter Eric Lipton allege EPA is violating public records laws by failing to routinely release those records.

Since joining EPA, Pruitt has met with automobile, chemical, fossil fuel and steel executives, and with lobbyists who worked with him when he was Oklahoma Attorney General to challenge federal environmental rules, according to records released in response to an earlier Freedom of Information Act request from the nonprofit group American Oversight. The Times says FOIA requires EPA to release that level of information for other Pruitt meetings, and to regularly respond to requests for updated copies of Pruitt's schedule.

EPA chiefs under previous presidents have routinely released detailed calendars in response to regular records requests from reporters and public interest groups. Pruitt's EPA has been intermittently updating a vague list of appointments, which the lawsuit called insufficient.

"Agency heads' daily schedules have long provided a valuable way for the public to be knowledgeable about important agency decisions, including those that affect the health and safety of their families and themselves," the suit says. "When the public knows who has the ear of an agency head and for how long, and what interests they represent, the public is better equipped to ensure that agencies remain accountable and free from undue and undisclosed influence."

Subject: BREAKING NEWS: Conyers announces he's leaving Congress, endorses son as successor

Rep. John Conyers (D-Mich.), facing several allegations of sexual harassment, announced he is leaving Congress and endorsed his son to replace him.

"I am retiring today," Conyers, 88, told a Detroit radio station. "And I want everyone to know how much I appreciate the support - the incredible, undiminished support I've received across the years from my supporters, not only in my district but across the country as well."

Summaries

ENDANGERED SPECIES
Endangered/Threatened Status Petitions
ENDANGERED SPECIES

Notice of the U.S. Fish and Wildlife Service announces the availability of 12-month findings on petitions to list the blackfin sucker, the Mohave shoulderband snail, the white-tailed prairie dog, and the Woodville Karst cave crayfish as threatened or endangered. The agency has determined that listing any of the species is not warranted at this time. Comments on the petition findings may be submitted at any time. Contact: Lee Andrews; USFWS, Kentucky Ecological Services Field Office; 502-695-0468. Citations: 50 CFR 17

Regulatory Update

ENDANGERED SPECIES
Northwest Atlantic DPS/Leatherback Turtle Status Review
ENDANGERED SPECIES

Notice of the National Marine Fisheries Service announces a 90-day finding and listing determination on a petition to identify the Northwest Atlantic subpopulation of the leatherback turtle as a distinct population segment (DPS) and list it as threatened. The agency has determined that the petition presents substantial information indicating that listing the DPS may be warranted and announces the initiation of a status review. Comments are due Feb. 5, 2018. Contact: Jennifer Schultz; NMFS, Office of Protected Resources; 301-427-8443; jennifer.schultz@noaa.gov. Citations: 50 CFR 223, 224

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
California/Don Pedro Hydroelectric Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces that a new major license application for the Don Pedro Hydropower Project, on the Tuolumne River in Tuolumne County, Calif., is ready for environmental analysis. The application, filed by the Modesto and Turlock irrigation districts concerns the existing Don Pedro dam, reservoir, and spillway; outlet works; a power intake and tunnel; and a powerhouse with an average annual generation of about 550,000 megawatt-hours. The applicants propose to conduct coarse sediment augmentation, provide certain gravel mobilization flows, conduct experimental gravel cleaning, implement a boulder placement program, and contribute $50,000 to assist with the removal of water hyacinth and other non-native flora. The applicants also propose to conduct fall-run Chinook spawning improvement and restoration activities and implement a predator control and suppression program, flow-related measures, and various management plans. A draft environmental impact statement is expected to be issued in July 2018, and a final EIS is expected in February 2019. Comments and motions to intervene are due Jan. 29, 2018. Contact: Jim Hastreiter; FERC; 503-552-2760; james.hastreiter@ferc.gov

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
California/La Grange Hydropower Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces that a new major license application for the La Grange Hydropower Project on the Tuolumne River in Stanislaus and Tuolumne counties, in California, is ready for environmental analysis. The application, filed by the Modesto and Turlock irrigation districts, concerns the existing La Grange dam, reservoir, and spillway and a powerhouse with an average annual generation of 19,638 megawatt-hours. The applicants propose to provide a specified minimum flow to the plunge pool downstream of the La Grange diversion dam, install a fish exclusion barrier, and conduct dissolved oxygen monitoring near the powerhouse. The applicants also propose to construct a recreational foot trail and develop an historic properties management plan. A draft environmental impact statement is expected to be issued in August 2018, and a final EIS is expected in March 2019. Comments and motions to intervene are due Jan. 29, 2018. Contact: Jim Hastreiter; FERC; 503-552-2760; james.hastreiter@ferc.gov

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
FDA Centers and Offices/Regulatory Reform
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the extension of the comment period for seven requests for comments and information published on Sept. 8, 2017 (82 FR 42492, 82 FR 42494, 82 FR42497, 82 FR 42499, 82 FR 42501, 82 FR 42503, and 82 FR 42506) concerning regulations and related paperwork requirements of multiple FDA centers or offices that could be modified, repealed, or replaced. The comments are intended to help the agency implement Executive Order 13771 (82 FR 9339; 02/03/2017) and Executive Order 13777 (82 FR 12285; 03/01/2017), which provide

guidance and direction to federal agencies to evaluate existing regulations and make recommendations based on factors including impacts on job creation, necessity, effectiveness, cost-benefits, and consistency with other regulatory reform initiatives. Comments now are due Feb. 5, 2018. Contact: Megan Velez; FDA, Office of Policy; 301-796-4830; megan.velez@fda.hhs.gov. Citations: 21 CFR 1 through 1299

82 FR 57560 (12/06/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Louisiana, Texas/Louisiana Connector Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing of an amendment to an application for a certificate of public convenience and necessity by Port Arthur Pipeline LLC, of Houston, regarding the Louisiana Connector Project in Jefferson and Orange counties in Texas and Allen, Beauregard, Calcasieu, Cameron, Evangeline, and St. Landry parishes in Louisiana. The project involves a 131-mile-long pipeline and appurtenant facilities that would provide about 2,000 million cubic feet per day of natural gas to supply a proposed natural gas liquefaction and export project in Jefferson County. The applicant proposes to revise the rate schedules and general terms and conditions to reflect the pro forma tariff for the project. The applicant also proposes to revise the allowance for funds used during construction, the rate for service under the proposed rate schedule enhanced hourly firm transportation, and the precedent agreement between Port Arthur Pipeline and Port Arthur LNG LLC, which was executed in association with the open seasons conducted in November 2016 and in August and September 2017. The agency plans to complete an environmental impact statement or issue a notice of schedule of environmental review by Feb. 18, 2018. Comments are due Dec. 21, 2017. Contact: FERC, Office of External Affairs; 866-208-3676; FercOnlineSupport@ferc.gov

82 FR 57593 (12/06/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
New Jersey/Gateway Expansion Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing of an application requesting a certificate of public convenience and necessity authorizing the Gateway Expansion Project in Essex and Passaic counties in New Jersey. The project, proposed by Transcontinental Gas Pipe Line Co., of Houston, would expand existing interstate gas transmission and enable Transco to provide an additional 65,000 dekatherms per day of firm transportation service. The project would consist of installing 27,500 of additional horsepower at Transco's Station 303 and replacing a 12-inch diameter header, meter skid, and associated equipment with two six-inch diameter ultrasonic meter skids and associated equipment at the Paterson meter and regulator (M&R) facility. The project also would provide for the installation of a 36-inch-diameter mainline block valve at the Roseland M&R facility and an electric transformer at the Roseland electric substation. The agency will complete an environmental assessment or issue a notice of schedule of environmental review by March 6, 2018. Comments are due Dec. 21, 2017. Contact: FERC, Office of External Affairs; 866-208-3676; FERCOnlineSupport@ferc.gov

82 FR 57594 (12/06/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Oregon Air National Guard Military Airspace Expansion
GENERAL ENVIRONMENT AND SAFETY

Notice of the Federal Aviation Administration announces its record of decision for the proposed establishment and modification of the military operation areas, air traffic controlled assigned airspace, and warning areas for the Oregon Military Training Airspace. The FAA adopts the U.S. Air Force's final environmental impact statement for the modification to existing airspace and the establishment of new airspace in Nevada, Oregon, and Washington to support the Oregon Air National Guard's F-15 training operations and to implement practicable mitigation (82 FR 42803; 09/12/2017). The FAA conduced an independent review for the FEIS and has determined that it adequately assesses and discloses the environmental impacts of the FAA's proposed aeronautical action. Contact: Paula Miller; FAA, Office of Airspace Services; 202-267-7378

82 FR 57643 (12/06/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Use of Serological Tests/Trypanosoma Cruzi Infection
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the availability of a revised guidance for industry regarding use of serological tests to reduce the risk of transmission of Trypanosoma cruzi infection in whole blood and blood components. The amended guidance expands the scope of the existing guidance to include the collection of such components, other than source plasma, for use in manufacturing a product, including donations intended as a component of, or used to manufacture, a medical device. The amended guidance also removes the recommendation to ask donors about a history of Chagas disease. In addition, the amended guidance provides a recommendation for a reentry algorithm for donors deferred on the basis of screening test results for antibodies to T. cruzi or on the basis of a positive response to the Chagas screening question. The guidance supersedes a Dec. 6, 2010, guidance for industry (75 FR 75809) on the same topic. Comments may be submitted at any time. Contact: Tami Belouin; FDA, Center for Biologics Evaluation and Research; 240-402-7911

82 FR 57601 (12/06/2017)

Regulatory Update

HAZARDOUS MATERIALS TRANSPORTATION
Assessment of Truck Parking Facilities
HAZARDOUS MATERIALS TRANSPORTATION

Notice announces the intention of the Federal Highway Administration to seek OMB approval for a new information collection request regarding an evaluation of the capability of states to provide adequate parking and rest facilities for commercial motor vehicles engaged in interstate transportation. The collection concerns a survey of state officials, private sector facility

operators, trucking companies, and truck drivers regarding the location, number of spaces, and availability and demand for truck parking in their state at rest facilities. The survey also will address truck parking information systems, truck parking plans, and any impediments to providing adequate truck parking capacity. Comments are due Feb. 5, 2018. Contact: Jeff Purdy; FHWA, Office of Operations; 202-366-6993

82 FR 57645 (12/06/2017)

Regulatory Update

RADIATION

Standard Review Plan for Nuclear Power Plant Safety Analysis Reports
RADIATION

Notice of the NRC announces the availability of a draft standard review plan for the review of safety analysis reports for nuclear power plants (NUREG-0800). The plan provides guidance to NRC staff for the review of combined construction and operating licenses and operating license applications and amendments for environmental qualification of mechanical and electrical equipment. Comments are due Feb. 5, 2018. Contact: Mark Notich; NRC, Office of New Reactors; 301-415-3053; Mark.Notich@nrc.gov. Citations: 10 CFR 52

82 FR 57625 (12/06/2017)

Regulatory Update

WATER

Guam, Navajo Nation/NPDES Permits
WATER

Notice of the EPA announces the availability of two proposed National Pollutant Discharge Elimination System general permits for discharges from facilities with discharges classified as low threat in the Navajo Nation (NNG990001) and for discharges from bulk fuel storage facilities in Guam (GUG000001). The new Navajo Nation permit would provide coverage to entities that discharge wastewater that is relatively pollutant free, below a specified volume, and/or for a limited time, within the territory. The new Guam permit would replace individual NPDES permits for five bulk fuel storage facilities and provide coverage for new eligible bulk fuel facilities. Comments are due Feb. 5, 2018. Contact: Gary Sheth; EPA Region 9, Water Division; 415-972-3516; sheth.gary@epa.gov

Subject: Today on Climate Beat

November 30, 2017

Today on Climate Beat . . .

. . . we went to court, where two states opposing the Bureau of Land Management's rule requiring oil and gas operations on federal lands to capture waste methane are now backing a renewed industry call for a federal district court to enjoin the rule's enforcement during the litigation, but environmentalists are opposing the injunction.

Speaking of litigation, the Center for Biological Diversity is suing EPA under the Freedom of Information Act to gather information on Administrator Scott Pruitt's recent directive that seeks to curb so-called "sue-and-settle" agreements the agency reaches, often with environmental groups, to set a deadline to take a mandatory action.

In Congress, the House oversight committee was poised to mark up legislation the would codify President Donald Trump's executive orders that require EPA and other agencies to roll back rules, including Executive Order 13771 that requires agencies to scrap two existing rules for every new measure adopted.

And our daily news roundup looked at recent testimony from the Trump administration's pick to lead NOAA agreeing that humans are the "main" cause of climate change, statements that go much further on the issue than most administration officials, including EPA Administrator Scott Pruitt.

Highlights

Leading the News

House Set to Renew Brownfields Program for First Time in 15 Years

By *Sylvia Carignan* and *Dean Scott*

The House is poised to put its stamp of approval on a brownfields program reauthorization bill that has won widespread support from environmental engineers, developers and municipalities.

$22.6M DuPont Cleanup Plan May Not Be Enough: Environmentalists

By *Alex Ebert*

Environmentalists say a $22.6 million plan to clean up arsenic, lead, zinc, and cadmium at an E. I. du Pont de Nemours and Co. site near Chicago may not be sufficient to keep the heavy metals from further spreading through groundwater and a local river.

EPA Eyes Imported Products' Release of Flame Retardant

By *Pat Rizzuto*

The EPA wants to figure out whether imported products release a flame retardant that is restricted or banned by some states, an agency attorney said Nov. 29.

Today's News

Don't Leave Your Kids a Toxic Inheritance

By *Peter Hayes*

The owner of a decades-old family business dies. His children inherit everything, including the site of the business.

House Panel OKs Bills That Benefit Peabody, Arch Coal

By *Stephen Lee*

House Republicans pushed forward two bills Nov. 30 that would benefit such coal companies as Peabody Energy, Cloud Peak Energy, and Arch Coal, by limiting new regulations and barring moratoriums on coal leasing on federal lands.

Pipeline Opponents Make Reviews Longer, Energy Regulator Says

By Rebecca Kern (Bloomberg Environment) and Christine Buurma (Bloomberg)

Increased litigation from pipeline opponents in federal courts is making federal review for natural gas pipelines take longer, Federal Energy Regulatory Commission Chairman Neil Chattejee said.

How Do You Advertise to a Machine? Big Oil Is Seeking the Answer

By Anna Hirtenstein and Rakteem Katakey

The anticipated proliferation of driverless cars will bring a brand new problem for the world's biggest oil companies— how to advertise to a machine.

Satellites Could Transform Ocean Monitoring, Protection

By *Adam Allington*

Environmental monitoring of oceans will dramatically improve over the next decade as large numbers of atmospheric satellites are launched and provide much higher-quality data.

Environmental Streamlining Dropped From Arctic Drilling Plan

By *Alan Kovski*

Proposals that would have streamlined environmental analyses for oil drilling in

the Arctic National Wildlife Refuge have been left out of a Senate budget and tax bill.

North Dakota Farmers to Face Restrictions on Monsanto's Dicamba

By *Christopher Brown*

North Dakota soybean farmers will face new restrictions in 2018 on the use of Monsanto's new formulation of the herbicide dicamba that the Farm Bureau and manufacturer says could be onerous and without scientific justification.

EU Is Heading for First Brexit Compromise in Carbon Market Plan

By *Ewa Krukowska*, *Mathew Carr* and *Ian Wishart*

The European Union and the U.K. will be able to boast of the first compromise on Brexit after voting Nov. 30 on a contingency plan for the world's biggest emissions market.

U.S. West Coast Follows Canada's Lead in Rejecting Oil Projects

By *Robert Tuttle*

Canadian oil producers can take heart that they aren't only ones facing barriers in getting crude to the Pacific Coast.

German Energy Company Faces Court Case Over Climate Change Role

By *Karin Matussek*

German electricity company RWE AG is facing an inquiry into its role in global warming after a German court ruled to allow a case by a Peruvian farmer to proceed.

VW's Flagship Brand Vows Faster Turnaround with Electric Cars

By *Christoph Rauwald*

Volkswagen AG's main car brand pledged to speed up turnaround efforts and accelerate a push into electric cars as cost cuts and an expanding lineup of sport-utility vehicles help boost profit.

Gas Producers Question Basis of Pennsylvania Fracking Permits

By *Leslie A. Pappas*

A Pennsylvania plan to to reduce methane leaks from hydraulic fracturing operations has generated concern among natural gas industry advocates who say it lacks a scientific basis.

French Utility Under Pressure: How to Help Nuclear Giant

By *Francois de Beaupuy*

Electricite de France SA is under pressure, and its biggest shareholder—the government—is the one turning the screws.

From Amazon to Etsy, Tech Giants Fight Trump's Plan to Save Coal

By Emma Ockerman

Selling custom nose rings, *crocheted bunnies* and hand-carved Santas is energy-intensive stuff.

California Is Plenty Green but Iowa Has the Cleanest Power

By *Joe Ryan* and *Christopher Martin*

California may be America's clean-energy capital, but let's give Iowa and North Dakota some credit too. Iowa has one of the nation's least ambitious clean-energy targets and gets as much as 40 percent of its power from wind and solar farms.

Brazil's Asbestos Ban Will Shutter One Mine, Tile Maker

By *Michael Kepp*

The owner of Brazil's only asbestos mine and that country's sole manufacturer of corrugated roofing tiles containing asbestos must shut down immediately after the country's Supreme Court banned use of the mineral, Federal Judge Guilherme Feliciano, president of the National Association of Labor Magistrates, told Bloomberg Environment.

Sherwin-Williams Seeks to Upend Lead Paint Nuisance Ruling

By *Peter Hayes*

Sherwin-Williams Co. asked a California appeals court to reconsider its decision to uphold but trim a lead paint public nuisance ruling.

Musk's Battery Boast Will Be Short-Lived as Rivals Go Bigger

By Perry Williams and Kanika Sood

Billionaire Elon Musk defied his doubters to beat the 100-day deadline Dec. 1 and

install the world's biggest battery in the Australian outback. He'll probably relinquish that crown by February.

Toyota Plans California Fuel Cell Plant to Make Power, Hydrogen

By John Lippert and Christopher Martin

Toyota Motor Corp. said it will build a renewable fuel-cell power-generation plant, plus a hydrogen fueling station, to support its operations at the Port of Long Beach.

Rep. Joe Barton Says He Won't Seek Re-Election

By Laura Curtis and Ari Natter

Former House Energy and Commerce Committee Chairman Joe Barton of Texas announced Nov. 30 that he won't seek re-election, a week after a nude photo of him and graphic text message surfaced on the Internet.

Wednesday Night Wrap Up

California Identifies Chlorpyrifos as Reproductive Toxicant

By *Carolyn Whetzel*

Scientific advisers for California's Office of Environmental Health Hazard Assessment identified the pesticide chlorpyrifos as a reproductive toxicant, triggering the need for warnings and other regulatory requirements.

EPA Is Said to Reward Iowa by Holding the Biofuel Mandate Steady

By *Jennifer A. Dlouhy* and *Mario Parker*

The Trump administration is set to keep biofuel quotas for motor vehicles largely unchanged, a move likely to draw tepid applause from Iowa corn growers and disappoint soy-based biodiesel producers.

Subject: BREAKING NEWS: Barton to retire after nude selfie fallout

Rep. Joe Barton (R-Texas) announced Thursday that he won't run for reelection in 2018, following a string of stories about him sending lewd texts and nude photos and videos to women.

Barton, the ninth most-senior member of the House, told the Dallas Morning news in an interview, "There are enough people who lost faith in me that it's time to step aside." Local GOP leaders had begun calling for Barton to step down in recent days.

EPA Says Methane ICR Withdrawal Shows Success On 'Deregulatory' Steps

A top EPA official on a deregulatory "task force" says the agency has met its 2017 goals for implementing President Donald Trump's executive orders (EOs) on reducing regulatory burdens, citing the withdrawal of an Obama-era information collection request on oil and gas methane emissions as a qualifying "deregulatory action."

Key Trump Picks At Odds Over EPA's Power To Weigh Costs In Air Standards

Key Trump administration environment nominees are at odds over whether EPA has sufficient legal authority to consider compliance costs when setting national ambient air quality standards (NAAQS), even though a unanimous Supreme Court opinion found that the agency lacks such power under the Clean Air Act (CAA).

Barrasso Backs Rule Fix To End Democrats' Holds On Trump's EPA Picks

Senate environment committee chairman John Barrasso (R-WY) is publicly supporting GOP efforts to limit debate on executive branch nominees in an effort to end continuing Democratic delays on a suite of Trump administration nominees for EPA and other top environmental policy slots.

Subject: Mueller probe: Trump White House caught off guard by Flynn plea

No one in the White House was prepared.

Friday began with the now-routine flurry of tweets from President Donald Trump - two about the acquittal of an undocumented immigrant accused of a 2015 killing in San Francisco, one about his tax legislation. White House staffers, fresh from their in-house holiday party Thursday, prepared to welcome the press to the annual media party later in the afternoon.

There were no leaks in advance that former national security adviser Michael Flynn planned to plead guilty to a single count of lying to FBI agents - lies he told in January, after Trump took office, about his contacts with Russia's then-ambassador to the U.S., Sergey Kislyak, during the presidential transition last December. Flynn has promised to cooperate fully with the Mueller investigation and, according to prosecutors, says his Russia outreach was ordered by two other top members of Trump's transition team, claims that bring the probe deeper than ever into the Trump White House.

Driving the Day

Good Friday morning. HOUSE REPUBLICANS are feeling pretty good. Steve Scalise came back to the Capitol in a fairly dramatic and emotional fashion. The GOP tax plan was embraced by all of the party's key constituencies, from outside groups to the House Freedom Caucus. The budget is expected to hit the floor next week, which will be the first step in setting up tax reform. **OF COURSE,** there are plenty of obstacles ahead -- see the stories below for a peek at those. **FINGERS ARE CROSSED** across the Capitol that President Donald Trump doesn't turn against the tax framework, something that rank-and-file House Republicans are increasingly worried about after he left them high and dry on health care.

AROUND THE TAX REFORM HORN ...

-- MOST EXPERTS DISAGREE WITH THIS: TREASURY SECRETARY STEVEN MNUCHIN on tax reform: "Not only will this tax plan pay for itself, but it will pay down debt" http://on.wsj.com/2hAGFYC

-- THIS IS A PROBLEM: WSJ'S RICH RUBIN and **SIOBHAN HUGHES: "Republican Tax Plan Quickly Hits First Hurdle:** GOP lawmakers from high-tax states oppose repealing individual deduction for state and local taxes": "A day after announcing their ambitious tax plan, Republicans debated scaling back one of their largest and most controversial proposals to pay for lower tax rates: repeal of the individual deduction for state and local taxes.

"Faced with the potential for defections by House Republicans from high-tax states such as New York and New Jersey, Republicans are exploring ways to satisfy those lawmakers without backing off the lower tax rates they promised. 'The members with

concerns from high-tax states have to be accommodated. This has to be dealt with,' said Rep. Peter Roskam (R-Ill.), a senior member of the House Ways and Means Committee whose district outside Chicago ranks 37th out of 435 in use of the deduction. 'So, you can imagine a soft landing on this that creative people are putting much time and energy into.'

"The fight over the state and local deduction, with more than $1 trillion at stake over a decade, is an early signal of the bruising battle ahead for Republicans trying to pass a tax bill that hasn't garnered Democratic support and that faces narrow GOP margins in the House and Senate. It is the most obvious case of a bloc of pivotal lawmakers holding a specific concern, but it won't be the only one. 'The notion that you fix this and then it's smooth sailing?' Mr. Roskam said. 'How naive.'" http://on.wsj.com/2xKu2jx

-- MORE RICH RUBIN: "The Treasury Department has taken down a 2012 economic analysis that contradicts Secretary Steven Mnuchin's argument that workers would benefit the most from a corporate income tax cut. The 2012 paper from the Office of Tax Analysis found that workers pay 18% of the corporate tax while owners of capital pay 82%. That is a breakdown in line with many economists' views and close to estimates from the nonpartisan Joint Committee on Taxation and Congressional Budget Office. The JCT, which will evaluate tax bills in Congress, estimates that capital bears 75% of the long-run corporate-tax burden, with labor paying the rest. ...

"Asked about the paper's disappearance, a Treasury spokeswoman responded Thursday: 'The paper was a dated staff analysis from the previous administration. It does not represent our current thinking and analysis.'" http://on.wsj.com/2xKwiXL

-- FACT CHECK: "Gary Cohn says a typical American family earns $100,000 a year -- here's how much they really make," by CNBC's Esther Bloom: "In actuality, the average American family makes $74,000 a year before taxes, or about $26,000 less than that, according to the Bureau of Labor Statistics. The median American family income is roughly half of Cohn's estimate, or only about $55,000. And some critics are seizing on Cohn's assertion that, with $1,000, a family 'could renovate their kitchen, they could buy a new car.'" http://cnb.cx/2xQeEm7

THAT TOOK ABOUT TWO SECONDS -- "Lobbyists Rally to Save Tax Breaks Under Threat in Trump Plan," by NYT's Alan Rappeport and Thomas Kaplan: "Republicans' release of a sweeping plan to rewrite the tax code has set off a scramble among Washington lobbyists and trade groups to protect valuable tax breaks and other long-ingrained provisions. The plan's scant details make it hard to know what, exactly, is on the chopping block. But within hours of the plan's unveiling on Wednesday, flash points emerged over measures that supporters said could hurt the housing market, raise borrowing costs and increase the tax burden on families in high-tax states.

"The response put Trump administration officials on the defensive as they embark on a campaign to sell the plan. 'The lobbyists shouldn't have input, but the people in Congress should have input, and we'll be working with them closely as we turn this into

a bill and get it to the president to sign this year,' Steven Mnuchin, the Treasury secretary, said on Fox Business Network on Thursday." http://nyti.ms/2xLnKjD

-- BLOOMBERG'S SAHIL KAPUR: "Trump's Tax Cut Fate in the Hands of These Six Key GOP Senators": "Bob Corker ... John McCain ... Rand Paul ... Pat Toomey ... Orrin Hatch ... Susan Collins". https://bloom.bg/2hzes4z

VIDEO DU JOUR -- @SteveScalise: "The outpouring of love, warmth, and prayer means so much to me. I am so glad to be back." ***2-min. video*** http://bit.ly/2xPOvUk

ALL SPOTTED at Fiola Mare last night: Tom Price, Ivanka Trump and Mick Mulvaney

****** **A message from Morgan Stanley**: "Green Buildings" can power savings and returns. Read more about disruption in the development sector from Morgan Stanley. ******

ANOTHER RACHANA PRADHAN and **DAN DIAMOND SCOOP -- "Price took military jets to Europe, Asia for over $500K:** Accompanied by his wife, the HHS secretary journeyed to Geneva, Berlin, Beijing, Tokyo and other cities for events": "The White House approved the use of military aircraft for multi-national trips by Health and Human Services Secretary Tom Price to Africa and Europe this spring, and to Asia in the summer, at a cost of more than $500,000 to taxpayers.

"The overseas trips bring the total cost to taxpayers of Price's travels to more than $1 million since May, according to a POLITICO review. ... [O]ne of Price's recent predecessors, Kathleen Sebelius, who served for five years under President Barack Obama, said she never took a military plane on her many trips overseas; she always flew commercially. Sylvia Mathews Burwell, who served as HHS secretary for the final 2½ years of the Obama administration, used a military jet for travel to Havana, Cuba, according to former HHS aides.

"Price's overseas trips on government planes included stops in Berlin, Geneva, Beijing, Ho Chi Minh City and Tokyo, where he attended world health meetings and met with other high-level officials. In May, Price also visited Liberia, where he discussed the nation's response to the Ebola virus that ravaged the West African country three years ago." http://politi.co/2xJZoXh

-- "Price chalks up jet travel to Trump's 'very ambitious agenda,'" by Cristiano Lima: "Price, who came under investigation after POLITICO revealed that he had taken at least 26 charter flights on official business since May, at a cost of more than $400,000, said in an interview on Fox News that he regretted the impact his decisions had on taxpayers.

"But the secretary also continued to defend the trips for having been approved through the 'normal process' and thus having been 'deemed appropriate official travel.' Pressed on how he could square the costly travel with his fiscally conservative ideals,

Price said the flights were booked partially out of a desire to fulfill Trump's plans." http://politi.co/2xCxUE2

-- "Tom Price Wanted To Reopen His Department's Executive Dining Room, Sources Say," by BuzzFeed's Adrian Carrasquillo: "Price ... asked a White House official within the first two months of the administration to let President Trump know that he wanted to reopen his department's executive dining room ... A separate source confirmed Price's interest in 'reconstituting' the executive dining room more recently. The room had been closed as a dining room for top officials since the George W. Bush administration." http://bzfd.it/2hzXwLm

-- NYT's Katie Rogers, Glenn Thrush and Maggie Haberman: "Mr. Trump has grown incensed by Mr. Price's liberal renting of expensive planes, which he views as undercutting his drain-the-swamp campaign message, according to several administration officials with direct knowledge of the president's thinking. Through intermediaries and the media, Mr. Trump has let it be known that offering reimbursement as repentance was no guarantee that Mr. Price would keep his job." http://nyti.ms/2xKB1Zu

--@chrislhayes: "The punchline to this story is that a year from now Tom Price will be making seven figures as a health industry lobbyist."

-- "Interior Secretary Zinke traveled on charter, military planes," by Ben Lefebvre: "Interior Secretary Ryan Zinke and his aides have taken several flights on private or military aircraft, including a $12,000 charter plane to take him to events in his hometown in Montana and private flights between two Caribbean islands, according to documents and a department spokeswoman. Zinke is at least the fourth senior member of the Trump administration to have used non-commercial planes at taxpayer expense, along with EPA Administrator Scott Pruitt, Treasury Secretary Steven Mnuchin and HHS Secretary Tom Price. President Donald Trump has fumed at Price's pricey travel, and Democrats say the revelations demonstrate a cavalier attitude by Cabinet members toward excessive spending." http://politi.co/2xKJY5p

WAPO: The charter plane for the Montana flight was owned by the executives of an oil and gas company http://wapo.st/2fW95J5

BEHIND THE SCENES -- "Trump Goes Rogue on Iran: The disjointed effort by Team USA to rewrite the nuclear deal," by Bloomberg's Nick Wadhams: "The tension boiled over at the Sept. 20 diplomatic meeting at the UN to discuss the Iran accord. [Nikki] Haley wasn't originally invited, but at the last minute, she took a spot reserved for a senior adviser to Tillerson without asking the State Department. She then tried to sit at the main table in a space reserved for another U.S. official but was told to sit in the back, according to two people familiar with the situation. Haley's office called that version of events false and said she participated with encouragement from the White House." https://bloom.bg/2fvs5xg

-- JOSH ROGIN, "In private remarks, Trump opines on North Korea, Afghanistan and catapults": "Over lengthy remarks, the president recalled how he came to reverse course on deploying troops to Afghanistan, calling that country 'the Wharton school of finance for terrorists,' referring to his alma mater. Trump also praised his own handling of the North Korea nuclear crisis, touted his relationship with Chinese President Xi Jinping and explained how he came up with his latest nickname for Kim Jong Un. Although Trump called Kim 'Rocket Man' in his first address to the United Nations, he thought it was not an insult and could even be seen as a compliment, Trump said at the dinner, according to attendees. But after Kim issued a statement calling Trump a 'dotard,' Trump upped the ante. 'So I said, all right, so now I'll call him Little Rocket Man,' Trump said.'" http://wapo.st/2ycS5sN

-- "Trump to unleash more global arms sales," by Bryan Bender and Tara Palmeri: "President Donald Trump is preparing to ease some restrictions on U.S. weapons sales overseas, sparking concerns about further flooding the international market with high-tech weapons and inflaming feuds in hot spots like the Middle East. The changes, which could include enlisting the State Department and Pentagon to more actively advocate on behalf of American arms manufacturers, are set to be included in an executive order or presidential memorandum that Trump will issue this fall, according to three administration officials involved in the deliberations." http://politi.co/2hASDS8

TROUBLE IN PUERTO RICO -- "Puerto Ricans say U.S. relief efforts failing them," by AP's Danica Coto in San Juan and Laurie Kellman in D.C.: "The Trump administration declared Thursday that its relief efforts in Puerto Rico are succeeding, but people on the island said help was scarce and disorganized while food supplies dwindled in some remote towns eight days after Hurricane Maria devastated the U.S. territory of 3.4 million people. President Donald Trump cleared the way for more supplies to head to Puerto Rico by issuing a 10-day waiver of federal restrictions on foreign ships delivering cargo to the island. And House Speaker Paul Ryan said [FEMA's] disaster relief account would get a $6.7 billion boost by the end of the week." http://bit.ly/2fCHEaq

-- "'We don't even know when we're coming back': Puerto Ricans evacuate to Florida on a cruise ship," by L.A. Times' Molly Hennessy-Fiske in San Juan: http://lat.ms/2ywj7HC

THE LATEST ON HEALTH CARE -- WILL MCCONNELL AND RYAN BITE? -- "Alexander, Murray inching toward deal to stabilize Obamacare," by Jen Haberkorn and Burgess Everett: "A pair of deal-making senators is inching toward a bipartisan agreement to fund Obamacare's insurance subsidies and provide some certainty to health insurance markets just two days after the GOP's latest Obamacare repeal effort failed.

"Senate Health, Education, Labor, and Pensions Committee Chairman Lamar Alexander (R-Tenn.) and ranking member Patty Murray (D-Wash.) are moving toward a plan to stabilize Obamacare in the short term after meeting on Wednesday. Though

they have not yet clinched a deal, their progress could ignite a new battle over how or whether to improve the law. 'Maybe by the end of next week, we will go and hand a piece of legislation to Sen. [Mitch] [Mitch] McConnell and Sen. [Chuck] Schumer,' Alexander said on Thursday." http://politi.co/2hBYTc9

MORE EMAIL DRAMA -- "White House launches probe of private email accounts," by Josh Dawsey and Andrea Peterson: "The White House has launched an internal probe of private email use, pulling batches of emails on the White House server to and from private accounts of senior aides, according to four officials familiar with the matter. The effort began this week after POLITICO reported that Jared Kushner and a number of other senior White House officials used private email accounts throughout the year to conduct government business.

"Of particular interest is Kushner and Ivanka Trump's private email domain, because they still work in the White House, two officials said. Accounts of other White House officials also are being reviewed. The probe could take several weeks or even months to complete ... [O]fficials are searching for all emails sent or received about government business. The White House counsel's office is reviewing the accounts to determine whether the messages are germane to any investigations such as the ongoing Russia probes by Congress and special counsel Robert Mueller." http://politi.co/2fvNzdw

-- "Kushner didn't disclose personal email account to Senate intel committee," by CNN's Jake Tapper: "In his closed interview with the staff of the Senate intelligence committee, White House senior adviser and presidential son-in-law Jared Kushner did not share the existence of his personal email account, which he has used for official business, CNN has learned. CNN has also learned that the chair and vice chair of the committee were so unhappy that they learned about the existence of his personal email account via news reports that they wrote him a letter via his attorney Thursday instructing him to double-check that he has turned over every relevant document to the committee." http://cnn.it/2ybRMhM

THE BIG PICTURE -- "Beyond the daily drama and Twitter battles, Trump begins to alter American life," by Reuters' John Whitesides: "Even without delivering on his biggest campaign promises, President Donald Trump has begun to reshape American life in ways big and small. Over his first nine months, Trump has used an aggressive series of regulatory rollbacks, executive orders and changes in enforcement guidelines to rewrite the rules for industries from energy to airlines, and on issues from campus sexual assault to anti-discrimination protections for transgender students.

"While his administration has been chaotic, and his decision-making impulsive and sometimes whimsical, Trump has made changes that could have far-reaching and lingering consequences for society and the economy. Some have grabbed headlines but many, no less consequential, have gone largely unnoticed amid the daily controversies and Twitter insults that have marked Trump's early months in office.

"Under Trump, oil is flowing through the Dakota Access Pipeline. Arrests of

immigrants living illegally in the United States are up. More federal lands are open for coal mining. The administration has left its mark in smaller ways, as well. Trump has rolled back or delayed Obama-era rules and regulations that protected retirement savings from unscrupulous financial advisers, made it harder for companies that violated labor laws to land federal contracts and restricted what internet service providers could do with their customers' personal data.

"Those kinds of low-profile policy shifts are far from the dramatic change promised by the headline-loving Trump, who won the White House with a vow to fundamentally reshape Washington. But the effects can be just as real." http://reut.rs/2xFH7Jk

COMING ATTRACTIONS -- "Alabama Victory Provides Blueprint for New Bannon Alliance," by NYT's Ken Vogel and Jeremy W. Peters: "Stephen K. Bannon and two of his longtime benefactors are putting together a political coalition designed to ensure that the victory of a Republican insurgent in the Alabama Senate primary this week was just the beginning of the surprises that await the party establishment. ...

"[T]he Bannon-Mercer alliance is likely to be a potent factor in widening the divisions laid bare by the Alabama race and the intraparty battles that have crippled the Republican agenda in Congress. It could put Mr. Bannon and the Mercers on a collision course with not just the Republican establishment but with other donor-driven political organizations, including the one built by the billionaire brothers Charles G. and David H. Koch - and potentially with Mr. Trump." http://nyti.ms/2wnMGux

RUSSIA WATCH -- "Trump skips ceremony for FBI director amid Russia investigation," by Josh Meyer: "President Donald Trump was conspicuously absent from the installation ceremony of his handpicked new FBI director Thursday because the bureau is involved in the special counsel investigation into whether Trump associates colluded with Russia to influence the 2016 election, a White House official said. By avoiding the high-profile event for former Justice Department lawyer Christopher Wray -- who assumed the director's post upon being sworn in on Aug. 2 -- Trump broke an informal protocol, in which presidents have overseen the largely ceremonial occasion." http://politi.co/2x1w2Af

-- "Pence sent lawyer to meet with Mueller over the summer," by Matt Nussbaum: "Vice President Mike Pence's outside lawyer met privately with special counsel Robert Mueller at Pence's request last summer, according to a person familiar with the meeting. The meeting, which has not been previously reported, was held at Pence's request to express his willingness to cooperate with Mueller's investigation, the person said. Pence retained Richard Cullen, chairman of McGuireWoods and a former U.S. attorney, in June to represent him in the Russia probe. The meeting with Mueller took place soon after Cullen accepted the job." http://politi.co/2yLqNXy

TRUMP'S FRIDAY -- PRESIDENT TRUMP is speaking at the National Association of Manufacturers board meeting this morning. He will have lunch with VP Mike Pence and Florida Gov. Rick Scott. He will leave this afternoon for Bedminster, N.J.

-- YOM KIPPUR begins at 6:35 p.m. The fast ends tomorrow night at 7:32 p.m. To those observing, have an easy fast.

FOR YOUR RADAR -- NYT's SCOTT CACCIOLA: "Commissioner Still Expects N.B.A. Players to Stand for Anthem" http://nyti.ms/2wnmiRe

THE OPPOSITION -- "Bernie backers give Dem incumbents a pass in 2018," by Gabe Debenedetti: "Democrats have long been terrified that the Sanders-Clinton slugfest of 2016 would set off a prolonged civil war in the party, forcing incumbents to fight off primary challengers from the left in Senate and gubernatorial races. It hasn't happened. In a surprising reversal of the post-2008 dynamic - when Republicans were shut out of power, then saw a raft of tea party primary challengers take on their incumbents - Democrats have largely been spared of that predicament.

"Instead, it's Republican incumbents yet again facing heat from the right, as arch-conservative Roy Moore's defeat of incumbent Sen. Luther Strange (R-Ala.) this week emphatically showed. 'What Democrats right now care about more than anything is winning,' veteran Democratic pollster Jefrey Pollock said of divisive Democratic primaries. 'I don't think the ultra-progressives have abandoned their principles - not at all - but I think they looked at the challenge and said, 'This is not the right place.'" http://politi.co/2xFD4MQ

ADAM JENTLESON in POLITICO Magazine, **"The Myth of Mitch McConnell, Political Super-Genius** : The Senate majority leader has been coasting on an inflated reputation for too long. This week exposed just how little he has achieved": "For the uninitiated, the Myth goes something like this: A calculating Kentuckian, he sees three steps ahead while playing eight-dimensional chess on his solved Rubik's cube with one hand, while using the other to hold an inside straight close to his vest, which is embroidered with Masonic secrets that only he can read and that unlock true mastery of the Senate, along with eternal enlightenment, for good measure.

"In the Myth of McConnell, grand achievements are conjured out of last-minute, crisis-driven exercises in can-kicking-like extending the U.S. borrowing authority and government funding-all things that used to happen routinely before McConnell became leader of the Republican Caucus and unleashed his unique brand of unprecedented obstructionism on the Senate, manufacturing the very crises that made the last-minute deals necessary. Meanwhile, humdrum political events, like winning reelection in a deep red state in a strong year for Republicans-as McConnell did in 2014-are recast as achievements of Machiavellian brilliance." http://politi.co/2fCKAU7

BEYOND THE BELTWAY - "Trump-Russia pundit may run for Illinois AG post," by Josh Gerstein: "A former federal prosecutor who's become a prominent media pundit about special counsel Robert Mueller's investigation into the Trump campaign and White House is considering a run for office. Renato Mariotti, who spent nearly 10 years in the U.S. Attorney's Office in Chicago, said Thursday he's mulling a bid for Illinois attorney general. ... The current attorney general, four-term Democrat Lisa Madigan, surprised the Illinois political establishment two weeks ago by announcing that she does not plan to run for re-election next year." http://politi.co/2fCtje4

****** **A message from Morgan Stanley**: The energy-efficiency movement has evolved into a tech-savvy, industrial-strength global business offering substantial savings-and investment opportunities. The building sector of today focuses on delivering state-of-the-art building materials, equipment and energy management, driven by rising global demand for "green buildings." Read more. ******

MEDIAWATCH -- "Eric Holder-Inspired U.S. Attorney General Drama Series With Jerry Bruckheimer Producing In Works At CBS," by Deadline's Nellie Andreeva: "The former U.S. Attorney General has teamed with top producer Jerry Bruckheimer for 'Main Justice,' a legal drama series project, which has been set up at CBS. Written by Sascha Penn (Survivor's Remorse) and executive produced by Holder and Bruckheimer, 'Main Justice' was inspired by Holder's life and work. Centered around the U.S. Attorney General, the show takes us into the tumultuous world of the 5th floor of the Department of Justice where he takes on the biggest legal and investigative cases in the country all while being the youngest person to ever hold such an esteemed position." http://bit.ly/2ybWXhN

--"The Wall Street Journal to Stop Publishing Europe, Asia Print Editions," by WSJ's Lukas I. Alpert: "The Wall Street Journal will cease publishing the European and Asian print editions of the newspaper over the next week, as the company shifts its focus to digital amid an increasingly challenged print advertising market. The final print edition in Europe will be this Friday, with Asia's print publication ceasing after next Friday, company officials confirmed. After that, the printed newspaper will no longer be sold in some markets and will be replaced by the U.S. edition in others-such as Tokyo-at a later date." http://on.wsj.com/2yxpL0b

****** **A message from Morgan Stanley** : Turn off the lights when you leave the room. Seal all windows for winter. Close the blinds to keep out summer heat. Sound familiar? These quaint refrains from the 1970s' energy-efficiency movement have given way to a high-tech, industrial-strength sector focused today on delivering state-of-the-art building materials, equipment and energy management. Much of its growth is fueled by rising global demand for "green buildings" that can yield significant savings at every scale of construction, operations and maintenance. But technological advances in material science, low-cost connected sensors and chips, and advanced software for managing "smart buildings" make up the other side of this story. With residential, commercial and public buildings accounting for an estimated 30% of the world's energy consumption, increased interest can not only help boost corporate bottom lines, but also lower public budgets, stimulate productivity and create jobs. Read more from Morgan Stanley. ******

Subject: Morning Media: Newsrooms tackle latest mass shooting -- Hoaxes spread on social media -- Las Vegas Review-Journal swarms -- Gawker archives may be deleted

By Michael Calderone | 10/03/2017 05:38 AM EDT

NEWSROOMS HAVE THE GRIM ROUTINE DOWN BY NOW. After initial reports of yet another mass shooting in America, journalists are scanning social media, getting details from authorities, wading through misinformation online, researching the suspect, and interviewing witnesses and family members. Reporters and anchors are dispatched across the country. Coverage dominates cable. There are news conferences. The president makes a statement. Gun stocks rise.

-- If the suspect is of Middle Eastern descent, attention inevitably turns to international terrorism. If the suspect is white -- as was the case in the shooting massacre in Las Vegas that left at least 59 dead and more than 500 injured -- other motives, such as politics and mental illness, are considered. There are immediate calls for gun control, countered by claims that it's too early to talk about gun control. Congress will probably do nothing.

-- Journalists are doing essential work on the ground and on the phone. They're telling harrowing stories of survivors, tragic stories of victims, and inspiring stories of first responders, trauma surgeons, and ordinary people who just thought they were going to a country music concert and ended up saving lives.

-- But The Onion's Monday headline -- "'No Way To Prevent This,' Says Only Nation Where This Regularly Happens" -- went viral given the all-too-familiar nature of these grave news events. The satirical site has run the same headline for several years, changing the accompanying photo and dateline from Isla Vista, California to Charleston, South Carolina to Roseburg, Oregon to San Bernardino, California. And that's only a handful of the mass shootings that have occurred in the United States, of which there have been 273 this year.

-- CNN's Jake Tapper recalled previous mass shootings in Newtown, Connecticut and Orlando, Florida at the start of Monday's show, suggesting that this latest massacre is unlikely to be the last. "I wish I could tell you this is the last time I'm ever going to report to you about the deadliest mass shooting in modern American history," he said. "But I cannot tell you that."

Good morning and welcome to Morning Media. You can reach me at mcalderone@politico.com and follow at @mlcalderone. Morning Media is edited by Alex Weprin (@alexweprin), with contributions from Jason Schwartz (@dlippman) Archives. Subscribe.

MUST-WATCH: Jimmy Kimmel's emotional monologue Monday night.

-- "I want this to be a comedy show. I hate talking about stuff like this. I just want to laugh about things every night," Kimmel said. "But it seems to becoming increasingly difficult lately.

It feels like someone has opened a window into hell. What I'm talking about tonight isn't about gun control. It's about common sense. Common sense says no good will ever come from allowing a person to have weapons that can take down 527 Americans at a concert."

HOAXES, MISINFORMATION SPREAD AFTER VEGAS SHOOTING: As Facebook and Twitter face continued scrutiny for allowing rampant misinformation to spread during the 2016 election, the social platforms, as well as Google, faced deserved criticism as bogus stories flowed in the immediate aftermath of the shooting.

-- "Google and Facebook Have Failed Us," writes The Atlantic's Alexis Madrigal: Hoaxers "used the infrastructure that Google and Facebook and YouTube have built to achieve wide distribution. These companies are the most powerful information gatekeepers that the world has ever known, and yet they refuse to take responsibility for their *active role* in damaging the quality of information reaching the public."

-- "The Big Tech Platforms Still Suck During Breaking News," writes BuzzFeed's Charlie Warzel. "This is just the latest example of platforms who've pledged to provide accurate information failing miserably to do so. Despite their endless assurances and apologies and promises to do better, misinformation continues to slip past. When it comes to breaking news, platforms like Facebook and Google tout themselves as willing, competent gatekeepers. But it's clear they're simply not up to the task."

-- Pro-Trump site Gateway Pundit, for one, misidentified the suspect in a now-deleted post that also framed the shooting as the work of a "left-wing loon."

DID SOME MEDIA PLAY INTO ISIS'S HANDS? POLITICO's Jason Schwartz surveys how different news outlets covered ISIS's claim of responsibility -- without evidence -- for the Las Vegas shooting and looks at whether outlets that reported the claims in headlines were helping fuel the terrorist group's desire for publicity.

AT THE SCENE: Photographer David Becker, who was supposed to be covering the music festival for Getty Images, recalled shifting to cover a tragedy. "It would stop and then more shots, then a lull and then more shots. I could hear people yelling at them to shut off the lights, to be quiet. People were cowering, they were very fearful for their lives. This was at a time before I had looked at any of the photographs and I still didn't know exactly what was happening." (*Warning: graphic images*).

REVIEW-JOURNAL SWARMS: The Las Vegas paper had about 50 of its 140 journalists covering the shooting on Sunday night and dozens more yesterday, editor-in-chief Keith Moyer told The Washington Post's Paul Farhi. "The Review-Journal treated the episode as a community emergency, directing readers to blood banks and centers where people could find information about lost relatives and victims," Farhi wrote.

SOUND BITE

-- "That Las Vegas authorities have ruled out terrorism at this early stage is another example of

how the idea has all but been racialized. Essentially, by the definition currently in common currency, a white person cannot be a terrorist." [Jamelle Bouie]

TRUMP'S "POLITICAL SKILLS" WERE A DOMINANT STORYLINE over first 100 days, per new Pew study: "Looking at the total coverage across all 24 outlets, five topics accounted for two-thirds of the coverage during this time period (Jan. 21-April 30): stories about the president's political skills (17%), immigration (14%), presidential appointments and nominations (13%), U.S.-Russia relations (13%), and healthcare (9%). None of the remaining 39 topics accounted for more than 4% of stories."

KELLY CAN'T SHUT OFF FOX: A "longtime Trump adviser" tells BuzzFeed news that chief of staff John Kelly has been increasingly vetting information coming into the Oval Office but hasn't taken away the president's remote: "He cannot stop the president's voracious consumption of television, and therefore Fox is still probably his greatest single influence as far as what he sees monitoring cable and political coverage."

EVERYTHING PUBLISHED ON GAWKER MAY BE DELETED. The site, shuttered last year after the company lost an invasion of privacy lawsuit brought by Hulk Hogan, is up for sale. And according to the Wall Street Journal, the buyer can do whatever he or she wants with the Gawker.com domain, its social media accounts, and nearly 200,000 published articles. If the would-be buyers preserve all the articles, they could be legally responsible for them, leading to fears that whoever acquires the site will delete some or all of the pieces.

-- Gawker veterans are understandably concerned. "I imagine most of the people who would be good stewards of the Gawker archives are too scared of being pursued legally to make that purchase," Intercept reporter **Sam Biddle** told The Journal. "The threat isn't just credible. It's come to pass." And **Hamilton Nolan**, now with Splinter News, warned in a tweet: "To be clear, it is LIKELY someone will delete the Gawker archives unless a righteous buyer steps up to save them."

CBS NEWS ERRONEOUSLY REPORTED TOM PETTY'S DEATH. CBS had attributed the information to the LAPD, which said it couldn't confirm it, leading the network to walk back the report. TMZ has reported that the legendary rocker suffered full cardiac arrest and is "clinging to life."

WHAT TO DO WHEN YOUR REPORTER IS ARRESTED: Media law professor and CJR press freedom correspondent Jonathan Peters surveyed 10 media lawyers and news executives over how to respond when a reporter is arrested: "Should the organization cover or otherwise amplify the arrest and underlying incident, as the Post-Dispatch did? What should the organization's editors do? Should the arrested reporter tweet about his or her experience?"

WASHINGTONIAN'S MOST POWERFUL WOMEN IN WASHINGTON: Several women in media made Washingtonian's list, including POLITICO editor **Carrie Budoff Brown**, New York Times Washington bureau chief **Elisabeth Bumiller**, BuzzFeed Washington bureau chief **Kate Nocera**, Associated Press Washington bureau chief **Julie Pace**, and Univision White House correspondent **Janet Rodriguez**. Full list **here**.

ANTHONY SCARAMUCCI LAUNCHED THE SCARAMUCCI POST last night, and according to The Hill, told attendees at his restaurant event that "we have no idea what the Scaramucci Post is and neither do you."

EXTRAS:

-- CBS fires legal executive for insensitive Facebook post after the Las Vegas shooting.

-- There was a big national media presence already in Las Vegas on Sunday night, prepared to cover O.J. Simpson being released from jail, reports Hadas Gold.

-- Google is doing away with "first click free" as it updates paywall policy for news sites.

-- Bloomberg's new European headquarters has been deemed the world's most sustainable building.

-- Congressman held fake "hearing" for Ukrainian TV.

-- The Times' John Koblin revisits S.I. Newhouse's purchase of The New Yorker, which was followed by outrage from some old timers. He's now seen as the savior of the magazine. (Flashback, Jan. 1987: "Staff Members Upset, Meet At New Yorker")

Subject: Today on Climate Beat

September 1, 2017

Today on Climate Beat . . .

. . . we headed West, reporting that a federal district judge has rejected Wyoming's bid for separate Clean Air Act and other penalties against Volkswagen for its emissions cheating scandal, saying the air law bars states from enforcing EPA-approved limits on pollution from "new" vehicles unless they adopt California's emissions standards.

Speaking of states, those that support EPA's Clean Power Plan greenhouse gas rule for power plants are reviving arguments over whether the rule's deadlines would be delayed, or "tolled," to account for each day of legal challenges if courts ultimately uphold the regulation, though it might take years for those arguments to become relevant again.

In biofuel news, supporters and detractors of EPA's proposed rule setting volumes under the renewable fuel standard for 2018 have filed dueling comments on the issue, with many focusing on the agency's proposal to reduce the volume of low-carbon cellulosic fuels that must be blended into the nation's fuel supply.

We highlighted some of this week's top stories, including report on how Hurricane Harvey will spur debate on climate and flood policy, as well as novel environmentalist litigation against oil firms, biomass CO2 and California's tractor trailer GHG rules.

And our daily news roundup checked in on a small natural gas plant with carbon capture technology that could be a "game changer" for the climate and clean energy world.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

August 31, 2017

Latest News

9th Circuit Avoids Deference Fight In Ruling Backing CWA 'Adjacency' Rule

A federal appeals court has rejected a lawsuit claiming the Corps lacked discretion for what petitioners argued was a too-narrow application of a Clean Water Act (CWA) rule exempting some wetlands from the law's jurisdiction, teeing up a potential Supreme Court fight over agency deference even though the ruling avoids that dispute entirely.

Court Rejects Environmentalists' Call To Stay RMP Delay Pending Review

Federal appellate judges have denied environmental and labor groups' request to stay or vacate the Trump EPA's final rule delaying an Obama-era overhaul of the agency's facility accident prevention program, saying groups have failed to meet "stringent standards" for a stay, though the court also rejected EPA's request to slow briefing.

EPA Broadens Harvey Fuel Waivers, Providing Limited Support For E15 Call

EPA has expanded the scope of its emergency clean fuel waivers to address the impacts of Hurricane Harvey by temporarily waiving requirements for reformulated and low volatility gasoline in the southeast and Mid-Atlantic, a move the renewable fuel sector says grants in part its request for a broader waiver that would allow for the sale of higher-volume ethanol blends.

Small Fuel Retailers' Lawsuit Seeks To Change EPA RFS 'Obligation' Point

Small fuel retailers are suing EPA in a bid to force a change to the renewable fuel standard's (RFS) "point of obligation" compliance duty from refiners and fuel importers to blenders or others, ahead of the agency's expected rejection of petitions seeking the change -- a decision said to have spurred presidential adviser Carl Icahn to quit that position.

EPA Approval Of State's CWA List May Signal Weaker Controls On Minerals

EPA's approval of Arkansas' delayed Clean Water Act (CWA) list of impaired waters

could signal that the agency is preparing to allow states to weaken controls on waters with high mineral content, sources say, seeing it as part of a broader switch to taking a more hands-off approach to states' decisions on environmental regulation.

Environmentalists Defend Court's Order For EPA To Craft Conductivity Plans

Environmentalists are urging a federal appeals court to uphold a district judge's finding that West Virginia has unlawfully abandoned any effort to craft Clean Water Act (CWA) cleanup plans for a host of waters across the state, including many with high conductivity from mining, saying the state will not advance those plans unless ordered to.

EPA Fights 'Speculative' Bid To Vacate Ozone NAAQS Designations Delay

EPA is fighting several states' request for a federal appeals court to vacate the agency's since-withdrawn notice delaying by one year designations for which areas are attaining the 2015 ozone air standard, saying it is “speculative” for the states to say the delay was unlawful and that EPA should be prevented from trying it again.

Daily Feed

Industry urges high court to reject suit over flooding damages

Industry urges the justices to decline to hear a damages case that charges that drilling in Louisiana damaged the coastal ecosystem and made it more vulnerable to flooding from hurricanes and other storm events.

FOIA suit targets industry role in EPA's TSCA rules

Environmental and government watchdog groups are investigating whether the chemical industry influenced changes EPA made to Toxic Substances Control Act rules before finalizing them.

Quote-Unquote: Hurricane Harvey, climate change, ozone NAAQS and NSR

Featuring some beginning assessments of whether climate change was a contributor to the severity of Hurricane Harvey.

Ewire: Harvey's pollution effects start to be seen

By Aug. 29, “74 incidents of excess air pollution have been reported since the hurricane hit, totaling more than one million pounds of emissions."

EPA sends final utility ELG delay rule for OMB review

The rule is likely to face challenges as environmentalists are already suing over a related preliminary action that had the same effect of delaying the underlying rule.

EPA finalizes CWA testing methods rule update

EPA has finalized a Clean Water Act effluent test methods update rule after the Trump administration held it up for additional review earlier this year.

Boards of Directors

Any Board Ignoring Sustainability Not Doing Its Job, Report Says

When agribusiness Bunge Ltd. bought a stake in a palm oil processor this week, sustainable sourcing was one of the topics that came up in boardroom discussions about the $946 million deal.

Climate Change

Monster Storms Change Coastlines, Not Minds on Climate Change

Back-to-back hurricanes fueled by warm Atlantic waters may have altered the coasts of Texas and Florida, but there's no indication they are shifting the politics of climate change.

Climate Policy

Carbon Capture Bill Gains Steam But Still Needs Republicans

A bill to boost carbon capture incentives would seem to have the right ingredients to hit the Senate floor: It's backed by both the oil and gas industry and environmentalists and is led by an unlikely alliance of Democratic climate hawks and Republican climate policy critics.

Climate Regulation

De Blasio Eyes Greenhouse Gas Cuts from City's Buildings

Greenhouse gas emissions from thousands of buildings in New York City would have to be sharply reduced under a plan by Mayor Bill de Blasio (D) targeting the city's top source of heat trapping emissions.

Coal-Fired Power Plants

Coal Refuse Industry Hopes for Help From Congress

Power companies that generate energy from decades-old waste piles they clean up would get a lifeline under a bill House Republicans have started moving forward.

Coal-Fired Power Plants

EPA to Reconsider Obama-Era Coal Ash Regulations

The EPA said it will reconsider "substantive provisions" of a final rule regulating electric power plants' coal combustion residuals as hazardous waste.

Congress

House Clears EPA Funding Bill Full of Poison Pills for Senate

A funding bill passed by the House Sept. 14 offers a more modest cut to environmental programs than sought by the Trump administration but is so laden with poison pill amendments that it will be little more than a starting point for negotiations with Senate

Democrats.

Energy

Arizona Regulator to Head Energy Department Government Affairs

Doug Little, the former chairman of Arizona's public utility commission, was appointed to lead the Energy Department's intergovernmental and external affairs work.

Energy

Federal Energy Regulatory Chairman Changes Tune on Coal

Federal Energy Regulatory Commission Chairman Neil Chatterjee seemed to back away from previous pro-coal comments today in his first public testimony since taking office in August.

Renewable Energy

Germany's Energy Transition Creates Costly Problems With Grid

Bolstering Germany's renewable output and expanding its electricity grid will be among Chancellor Angela Merkel's priorities if she prevails in upcoming federal elections.

Water Pollution

Judges Weigh Objections to EPA Approach on Cooling Water Intakes

Federal appeals court judges sought to determine why industry and environmental groups object to the EPA's consultation with other agencies about species protection from cooling water intakes.

Massachusetts Moves to Curb Power Plant Carbon, Methane

Posted August 11, 2017, 11:52 A.M. ET

By Adrianne Appel

Massachusetts power generators and gas companies will be required to lower their carbon dioxide, methane, and sulfur emissions by 2020 under new rules released today.

The six new rules are designed to curb the state's contribution to climate change and require the industries to reduce their greenhouse gas emissions 25 percent from 1990 levels by 2020.

The Massachusetts Department of Environmental Protection issued the rules to bring the state into compliance with a 2008 climate change law. An environmental organization, the Conservation Law Foundation, successfully sued the state in 2016 for falling behind in meeting the emissions targets required in the law. The environmental group backs the rules, it said in a joint statement with the governor.

"These rules re-establish the Commonwealth as a national leader in developing sensible, enforceable standards to transition our economy to a low-carbon future," Conservation Law Foundation President Brad Campbell said in the statement.

Troubled Georgia Nuclear Project Is Said to Seek Aid from Trump

Posted August 11, 2017, 7:33 A.M. ET

By Ari Natter and Mark Chediak

President Donald Trump has vowed to revive America's dying nuclear industry. Backers of a troubled Georgia nuclear project want him to prove it.

They have asked the administration to come to the aid of a project to build two reactors to the Southern Co.'s Vogtle power plant, according to people familiar with the talks. That could include increasing or speeding up disbursements of $8.3 billion in loan guarantees to the companies behind the nuclear plant, the people said. They asked not to be identified discussing ongoing negotiations.

A Georgia public service regulator was in Washington to make a case for the project, the last

nuclear plant under construction in the U.S., and Southern has hosted congressional staff members at the construction site.

"We have asked anybody that would help us achieve the best commercial outcome possible," Southern chief executive officer Tom Fanning said in an interview Aug. 2.

With Southern set to tell regulators in Georgia by the end of this month whether it plans to continue with construction plans for the plant, federal support could be crucial. Last week, Southern said it estimated its portion of the cost to complete the reactors was at least $11.5 billion, excluding $1.7 billion in guaranteed payments from Toshiba. Given Southern's 46 percent stake in the project, that would put the total cost estimate at $25 billion.

After Energy Secretary Rick Perry turned down a request for $3 billion in aid for Scana Corp.'s nuclear plant in South Carolina, it's not clear how much the federal government will help. Scana abandoned its V.C. Summer nuclear projects last month after it concluded the two reactors would end up costing it more than $20 billion to build.

"This thing is in our national security interest," Fanning said. "That's why we've preserved the option to go forward. That's why government has been helpful."

In general, the Trump administration has said it's studying the nuclear issue.

"A complete review of U.S. nuclear energy policy will help us find new ways to revitalize this crucial energy resource," Trump said during a visit to the Energy Department earlier this summer.

The Energy Department is close to issuing a study on how to help baseload power, which is primarily coal and nuclear power. Plants using those fuels are struggling as cheap natural gas and renewable energy has kept wholesale power prices largely flat.

The request for help could be in addition to, or part of, the $8.3 billion loan guarantee provided by the Energy Department under the Obama administration. As of June 30, Southern has borrowed $2.6 billion through the loan guarantee pact, but disbursements from that financing agreement were put on hold until it decides if construction will continue, according to a company filing.

Both the Summer and Vogtle projects hit additional delays and cost overruns after Westinghouse Electric Co., the U.S. unit of Toshiba Corp., went bankrupt in March. Westinghouse was building both plants.

Instead of giving Scana a grant, Perry suggested the company apply for a loan guarantee, according to an Energy Department official. Kevin Marsh, Scana's CEO, told state regulators he got "no response" on the company's grant request.

"When Scana showed up on Perry's doorstep dragging the carcass of Westinghouse behind it, it's understandable the administration blanched and turned away," Peter Bradford, a former member of the Nuclear Regulatory Commission, said in an interview.

An Energy Department spokeswoman didn't respond to a request for comment. Southern continues to talk with the administration and Congress and has found support from Washington to be "critical to the project," spokesman Schuyler Baehman said in an emailed statement.

"On Vogtle and nukes in general the Trump administration is what the Texans call 'Big Hat and No

Cattle,'" said James Lucier, an energy analyst and managing director at Capital Alpha Partners. "They don't have any ammo in the gun."

Good Game

"You hear them talking such a good game about nuclear power and base load power, but the reality is there isn't a lot they can do," he added. Beyond rejiggering or expanding the loan guarantee, direct aid for Southern would literally require an act of Congress, and getting that done is uncertain.

Tim Echols, the vice chairman of the Georgia Public Service Commission, was in Washington this week to brief lawmakers about the project. If Westinghouse comes through with the payment of $3.68 billion it has promised toward the project, it should be in good shape, he predicted.

"We are not going to throw in the towel like South Carolina," he said in an interview.

Week Ahead: Integrating Energy, Water Use to Be Explored at Forum

Posted August 11, 2017, 03:25 P.M. ET

By Chuck McCutcheon

A hydropower and tidal power executive will outline the importance of assessing water and energy issues in an integrated fashion at a Tuesday forum, one of several energy and environment events—including numerous webinars—the week of Aug. 14.

Trey Taylor, president of Verdant Power International Inc. of New York, will speak at the U.S. Energy Association about the company's research and development efforts at its Roosevelt Island Tidal Energy (RITE) Project in New York City's East River. USEA is a group of public and private energy-related organizations, corporations, and government agencies.

The Federal Energy Regulatory Commission (FERC) in 2012 issued a pilot commercial license for the Roosevelt Island project, in which a system of underwater turbines, similar to those used for wind power, continuously make use of tidal power to generate electricity.

A 2014 Department of Energy report said several trends underscore the need to address the water and energy in an integrated and proactive way. Those trends include climate change; increasing population growth and regional migration that each complicate managing energy and water systems; and new technologies in energy and water that shift demands in those areas.

"Because energy and water are interdependent, the availability and predictability of water resources can directly affect energy systems," then-Energy Secretary Ernest Moniz said in the report. "We cannot assume the future is like the past in terms of climate, technology, and the evolving decision landscape. These issues present important challenges to address." David Schultz will cover the event.

In Other News

Mercury convention: A long-awaited United Nations treaty to phase out and limit mercury use becomes legally binding on Wednesday. The European Union and seven of its member countries in May ratified the Minamata Convention on Mercury, signed in 2013, taking the pact beyond a 50-country threshold for entry into force. The Minamata Convention is intended to prevent environmental contamination by highly hazardous mercury by requiring the phaseout of mercury extraction; limiting its use in products and processes; and implementing measures to reduce mercury emissions into air, soil or water. It is the first international environmental convention adopted in about a decade. Bloomberg BNA staff will monitor.

Inorganic Byproducts: The Environmental Protection Agency will hold its second meeting on Wednesday and Thursday to negotiate strategies to ease the chemical reporting burden faced by electronic equipment, metal, petroleum, power plant, and other companies when they produce inorganic chemicals—mostly metals—as byproducts of their regular manufacturing. A committee of EPA, company, state and environmental organization officials will discuss simplifying reporting requirements, expanding reporting exemptions, improving data collected and other strategies. Pat Rizzuto will cover.

Gasoline additives: EPA science advisers will meet Tuesday through Thursday to evaluate agency risk reviews for two gasoline additives. Sylvia Carignan will track.

Pipeline project: Minnesota's Commerce Department is scheduled Thursday to release its final environmental impact statement regarding a fuel pipeline replacement project proposed by Enbridge Inc. The project is expected to ship light, medium and crude oil from northern Canada to Wisconsin, transiting through Minnesota. Stephen Joyce will follow.

Webinars Offered

Lead rule: EPA's Office of Water on Thursday will host its final webinar series on its rule regarding lead in drinking water. The agency is updating its set of lead standards, known as the Lead and Copper Rule, with a goal of releasing a draft version of the update later this year.

Water emergency preparedness: The Water Research Foundation will hold a Thursday webinar discussing the findings of its recent report on preparedness and response practices. Participants will learn about practices in other sectors that could be used in the water sector.

Climate and agriculture: Agriculture is responsible for one-third of global greenhouse gas emissions. The Environmental Defense Fund's Jenny Ahlen will lead a Wednesday webinar on best practices for agriculture in reducing greenhouse gas emissions. The Food and Agriculture Organization of the United Nations will hold a separate Thursday webinar on how climate information services—the packaging and dissemination of climate information to specific users—can help with planning for climate adaptation in agriculture.

Renewable fuels: The Renewable Fuels Foundation and Pinnacle Engineering Inc. will hold the first in a series of webinars on Wednesday to educate the renewable fuels industry about oil release planning, prevention, and impact mitigation.

London Solar Auctions Aim to Make City Greenest on Earth

Posted August 11, 2017, 01:42 P.M. ET

By Jessica Shankleman

London Mayor Sadiq Khan said he wanted to try city-wide auctions as part of an environment strategy proposed to more than double the capital's solar energy generation capacity by 2030.

The reverse auctions would be similar to the Solarize NYC model already used in New York, where multiple buyers pool together and panel sellers compete for one single contract, according to a draft solar action plan.

The plan includes a new interactive map of the city to show potential hotspots for sun power as well as a change in planning guidance to favor photovoltaics on new developments. It also envisions a grant program for community solar and pilot programs to test how batteries can be delivered alongside photovoltaics. Those steps could help double London's capacity for the technology to about 200 megawatts over the next 13 years, the mayor's office said in the strategy document.

"I've set out my plans to improve London's environment by fighting pollution, tackling waste and promoting cleaner energy so we can make London a healthier city that adapts to the impacts of climate change," Khan said in a statement.

The mayor's forecast "seems pretty trivial to achieve and may well happen anyway as a result of businesses and homeowners installing solar panels to save on electricity bills," said Jenny Chase, head of solar analysis at Bloomberg New Energy Finance. Similar reverse auctions in the Netherlands have successfully brought down costs, she said.

Khan also urged the national government to develop a solar strategy applying to the whole country, saying the step could help increase capacity to 2 gigawatts by 2050. A gigawatt is about as much as a new nuclear reactor produces.

The solar proposals were announced as part of an Environment Strategy Consultation, which includes a new 9 million-pound ($11.66 million) Greener City Fund to boost tree planting and green infrastructure. The mayor's office said the changes could make London "one of the greenest cities on Earth."

Khan said he wanted London to become the first "National Park City" in 2019, which would protect and increase the amount of green space in the capital. Those include using planning regulations to protect undeveloped land and encouraging the installation of so-called "green roofs" that are covered with plants.

The plan could help reduce London's air pollution, which is some of the worst in Europe and causes almost 10,000 premature deaths a year, according to research by the Environmental Research Group at King's College London.

Threat of Venezuelan Oil Ban Pits Oil Boss Against Refiners

Posted August 11, 2017, 02:40 P.M. ET

By Jennifer A. Dlouhy, Bill Allison and Meenal Vamburkar

The prospect of a U.S. blockade of crude oil imports from Venezuela has ignited fierce lobbying in Washington pitting domestic energy producers such as oil tycoon Harold Hamm, who favor a get-tough approach, against refiners that depend on those supplies.

Hamm said hitting Venezuelan President Nicolas Maduro where it counts would deter the socialist leader's moves to undermine democracy and consolidate power. In an interview, the Continental Resources, Inc. chief executive officer urged President Donald Trump to block the oil, a vital source of revenue for Venezuela.

"If the president wants to make an immediate impact on Venezuela to stop these human rights abuses and restore the situation, he's got the ability to," said Hamm, speaking as head of the Domestic Energy Producers Alliance, whose members include producers, oilfield service companies, and independent oil and gas associations.

Opposing the ban are refiners such as Chevron Corp., Phillips 66, and Valero Energy Corp., which have warned that choking off shipments of Venezuelan crude would starve refineries designed to process the country's heavy oil, leaving them searching for alternative supplies and driving up gasoline prices.

The stakes are high for both countries. Venezuela is the third-biggest supplier of oil imports to the U.S.—more than 270 million barrels worth about $10 billion last year—and that trade is a major source of revenue for the South American country.

Hamm was a vocal supporter of Trump's presidential bid, eventually agreeing to advise him on energy policy. Trump, in turn, repeatedly lavished praise on Hamm, during campaign stops in front of industry-heavy audiences in North Dakota and Pennsylvania.

When it is unified, the oil industry is a lobbying powerhouse in Washington, leaning on allies in the top ranks of the Trump administration as well as on Capitol Hill to advance its policy priorities. Oil and gas interests rank fourth among industry lobbying, with $64 million spent through the first six months of 2017, according to the not-for-profit Center for Responsive Politics, which analyzes lobbying and campaign finance data.

U.S. Pressures Maduro

Refiners have been pressing their case with the Trump administration since June, as the White House considers ways to pressure Maduro and discourage a rewrite of Venezuela's constitution. On Aug. 9, the Trump administration froze the assets of eight Venezuelans, building on previous sanctions against 13 people associated with the Maduro regime.

White House officials have prepared a menu of possible additional sanctions against Venezuela but are divided over whether—and when—to take actions that could exacerbate the country's deteriorating humanitarian and economic situation. The progressive approach envisioned by administration officials includes blocking exports of U.S. oil to Venezuela followed by limits on oilfield service firms doing business in the country and, finally, restricting imports of Venezuelan crude to the U.S. Those restrictions could be phased in gradually.

The prospect has inspired frantic appeals by companies that spent billions optimizing at least 20 different refineries to process heavy crude from the country. The leading refining trade group, the American Fuel and Petrochemical Manufacturers, sent two letters to Trump last month warning that a blockade would destabilize crude markets, causing an increase in oil prices as refiners scramble to replace Venezuelan supplies with ill-fitting, higher-cost substitutes and leading to bigger gasoline bills for consumers.

Sanctions may not even work as intended, as Venezuela finds other outlets for its crude beyond the

U.S., said AFPM President Chet Thompson.

"We think that the United States could take this action, and it won't have the desired effect, but it will have the unintended consequences of hurting consumers and refiners," Thompson said in an interview. "This is more than just a passing concern."

"Folks have spent many billions of dollars over the last several years to really optimize around Venezuelan crude, so any disruption of it could be a really big deal," Thompson said.

Refiners Fear Ban

Besides Venezuelan-owned Citgo Petroleum Corp., the refiners most dependent on Venezuelan crude are Valero, Phillips 66, Chevron and PBF Energy Inc. They are also the most active in lobbying against a crude import ban, according to accounts by four people familiar with the activity.

Last year, Valero took in roughly 54 million barrels from Venezuela while Phillips 66 and Chevron imported 46 million barrels and 33 million barrels, respectively. And while companies are already working to pare their dependence on Venezuelan crude, that is a heavier lift at some refineries. For instance, Venezuelan oil accounted for 43 percent of Chevron's Pascagoula refinery's capacity last month, according to U.S. Customs data compiled by Bloomberg. It represented 62 percent at Valero's St. Charles facility.

Refiners have made direct appeals to administration officials and are courting Gulf Coast lawmakers, asking them to amplify their concerns with the White House. Those efforts paid off Aug. 10 when the U.S. senators from Texas and Louisiana sent a letter to Trump arguing crude sanctions would be self defeating.

Sanctions targeting the oil sector would increase the likelihood of a disorderly default, hastening Russian consolidation of Venezuelan and Citgo oil assets, while diverting Venezuelan crude to China, harming the global competitiveness of U.S. businesses and raising costs for consumers, they said.

Asked about Chevron's lobbying on the issue, a spokesman said the company "engages with the administration and Congress to provide our perspectives on complex energy issues to help shape an effective and responsible U.S. energy policy."

Phillips 66 declined to comment. Representatives of PBF and Valero didn't respond to requests for comment.

Oilfield service providers also have been discouraging the Trump administration from imposing sanctions that limit their business in the country, including contracts with the state-owned oil company Petroleos de Venezuela SA, or PDVSA. That option had been presented by some refiners as an alternative to throttling down Venezuelan crude imports.

Ban Won't Further Democracy

Excluding U.S. companies from working in Venezuela doesn't help further democracy there, the oilfield service firms argue; instead, it blocks their ability to recoup debt and gives competitors a chance to gain a foothold in the market.

The world's four biggest oil service providers—Schlumberger Ltd.; GE's Baker Hughes; Halliburton

Co., and Weatherford International Plc—have kept a presence in Venezuela in order to work for some large, integrated oil companies, James West, an analyst at Evercore-ISI, said in an email. None of the companies give specifics for how many wells they are drilling or the size of their crews there.

Hamm is advocating that the Trump administration also cut off Venezuela's access to light sweet, U.S. oil—like the kind flowing from Texas and North Dakota, where his Continental Resources is pulling crude from the Bakken formation. Venezuela blends U.S. light oil with its heavy crude before shipping the mixture to foreign refiners.

Hamm said his recommendation has been conveyed to the White House, though he did not elaborate on how.

Sector-Based Sanctions a Concern

Oil companies are still reeling from their last lobbying fight—a battle to weaken possible sanctions in legislation targeting Russia. The industry scored a partial win, when lawmakers agreed to set a threshold for Russian involvement high enough to remove the threat to some U.S. oil company projects around the world.

The threat of more sector-based regional sanctions is a disturbing trend, lobbyists said.

Citgo has made overtures to the Trump administration. It contributed $500,000 in December to the incoming president's inaugural committee, according to Federal Election Commission records. The company didn't contribute to inaugurations in 2005, 2009 or 2013.

Citgo has hired three lobbying shops, including Avenue Strategiescq, the firm co-founded by former Trump campaign manager Corey Lewandowski, paying it $80,000 from April to June. Lewandowski, who was not a registered lobbyist for Citgo, left Avenue Strategies in May. Two other veterans of the Trump campaign, senior adviser Barry Bennett and Arkansas state chairman Bud Cummins, represent the company.

They list the potential impact of "energy and foreign policy restrictions" on its client as a specific issue, and are lobbying the Treasury Department and the White House. Neither Bennett nor Cummins returned phone calls seeking comment.

Energy and Climate Report

To: Jackson, Ryan[jackson.ryan@epa.gov]
From: Morning Energy
Sent: Fri 10/20/2017 2:03:24 PM
Subject: POLITICO's Morning Energy, presented by the National Biodiesel Board: Midwest senators win RFS concessions from EPA — Republicans split on when Pruitt should return to EPW — Opening for ANWR preserved in Senate budget

By Anthony Adragna | 10/20/2017 10:00 AM EDT

With help from Emily Holden and Esther Whieldon

PUTTING MAJOR RFS CONCESSIONS INTO WRITING: Sen. Joni Ernst released a letter late Thursday from EPA Administrator Scott Pruitt outlining a number steps the agency intends to take on the Renewable Fuel Standard that will be music to the ears of a small bloc of Midwest corn-state Republicans. Those include:

- A decision to be finalized "within 30 days" not to move the point of obligation downstream to fuel wholesalers (as previously reported),

- A commitment to finalize biofuel volumes on time by Nov 30 at levels equal to or greater than those in the proposed rule,

- Direction for EPA staff to "actively explore" whether the agency has legal authority to grant a waiver allowing year-round sale of gasoline with 15 percent ethanol. Pruitt also expressed openness to working with Congress on "definitive analysis" on the agency's ability to issue a waiver, and,

- A pledge not to make biofuel exports eligible for credits, known as RINs.

In a statement, Ernst said: "I am appreciative of Administrator Pruitt's pledges to rural America, and I will continue to work collaboratively with the EPA going forward on this and other issues." She didn't specifically say she'd vote for EPA air nominee Bill Wehrum in light of these public commitments - remember Ernst said Wednesday she needed public evidence of the administration's biofuels support - but ME would be surprised if the nomination didn't move forward now.

EPW REPUBLICANS SPLIT ON PRUITT APPEARANCE: At least some EPW Republicans are ready for Pruitt to come before their committee again (he hasn't testified since his confirmation hearing in January), but that feeling is not universal. "I wouldn't think that would be necessary," Deb Fischer said of Pruitt testimony right now. And John Boozman and Jim Inhofe both wanted to focus on getting lower-level nominees confirmed and into their roles at the agency first. "I'd like to get him beefed up with his staff and not only get him back, but actually get some undersecretaries with some authority," Boozman said.

But that sentiment wasn't unanimous: Others voiced interest in having Pruitt back to testify even as they applauded his early efforts at EPA. "I think he's doing a really good job, but I think regular updates are useful," Dan Sullivan told ME. West Virginia's Shelley Moore Capito was

more succinct on her desire for an appearance: "That would probably be a good idea. It's been a while."

What's the holdup? Chairman John Barrasso told ME on Wednesday he'd extended an invitation to Pruitt, but the committee didn't respond to further requests for comment. "We will respond to the Senate EPW Committee through the proper channel," Jahan Wilcox, an agency spokesman, said about when Pruitt might testify. ME would note Barrasso could definitely expedite Pruitt's appearance if he actually wanted to make it happen.

For the record: Former Administrator Lisa Jackson made her first post-confirmation appearance at the committee in May 2009.

TRUMP THROWS LIFELINE: In phone calls this week, President Donald Trump told EPW senators Barrasso, Fischer and Sen. Roger Wicker he'd back their 2018 reelection bids over any insurgent primary challengers, POLITICO's Burgess Everett reports. "Sen. Barrasso is grateful that President Trump would take the time to call him directly to express his support," said Dan Kunsman, a top aide to Barrasso, said. Formal endorsements are expected to eventually follow.

TGIF EVERYONE! I'm your host Anthony Adragna, and LCV's Tiernan Sittenfeld correctly identified Sens. Harry Reid, Jim Jeffords and Bob Smith as your three EPW chairmen in 2001. For today: Which congressman co-wrote Elizabeth Smart's bestseller, *My Story*? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

ANWR LANGUAGE STAYS: Senators refused, by a vote of 48-52, to strip out language from their fiscal 2018 budget resolution that could open the door for drilling in ANWR, your ME host reports. Sen. Susan Collins was the lone Republican to vote for the amendment, while Sen. Joe Manchin was the lone Democrat to oppose it. Though the budget doesn't explicitly mention ANWR, it calls for the Senate Energy and Natural Resources Committee to identify ways of raising an additional $1 billion in revenue. Chairman Lisa Murkowski said on the floor her committee is "prepared to meet this instruction" by "expanding our energy development in our federal areas" that would almost certainly include ANWR. "We can and we must do more as a nation to responsibly develop our energy resources," she said.

Just the beginning? A coalition of 20 environmental groups said the vote was just the beginning of a "long fight" to remove the rider from any subsequent reconciliation package. "There is no reason why Congress should hijack the budget with a controversial rider to drill in the Arctic Refuge," the groups, which include Clean Water Action, the National Audubon Society and the Sierra Club, said.

Two Lee amendments fail: Senators rejected one amendment from Sen. Mike Lee that would have barred regulating species that exist only in one state under the Endangered Species Act by a vote of 49-51. Another amendment, which would have made the federal government compensate local governments for the full value of the property taxes they are losing when much of their jurisdiction is covered by federal land, actually failed by a tally of 50-50 since Vice President Mike Pence wasn't available to break the tie.

The budget passed 51-49 just after 9:30 p.m., following a mere six-and-a-half hours of vote-a-rama.

BIG PROMISE: Speaking to the Texas Oil and Gas Association in the Woodlands, Texas, Pruitt vowed his agency would respond to permit requests within six months by the end of the year, Reuters reports. "It can be done. It's just a matter of having the process in place to achieve results," Pruitt said. That comes after the administrator held a roundtable with representatives of the Texas Health and Environmental Alliance, Galveston Bay Foundation, Houston Advance Research Center and Harris County Attorney Vince Ryan concerning the cleanup of the San Jacinto Superfund site during his Texas swing (pictures).

CHATTER ON REBUILDING PUERTO RICO'S GRID: During an appearance with Trump on Thursday, Puerto Rico Gov. Ricardo Rosselló floated the idea of using public-private partnerships to help rebuild the island's electric grid. Rosselló said he hoped to "rebuild a much modern, much stronger platform, and not only have Puerto Rico have energy but actually be a model of sustainable energy and growth towards the future." Trump replied: "You were talking about rebuilding your electric plant long before the hurricane; you've been wanting to do that for a long time. So maybe this is a reason that we can do it. And we'll help you and we'll all do it together."

Side note: Seems like Trump is referring to the electric grid when he refers to the "electric plant."

Patience is a virtue: Trump said it would be a "period of time" before electricity could be restored on the island given its electric infrastructure had been "totally destroyed." The president floated one potential policy idea: "It would be wonderful if you could have underground wire. It makes it a lot better in these storms." (Side note: Underground wires didn't fare so well during Hurricane Sandy in New York and it would hugely expensive for the whole island).

Rosselló promises corruption crackdown: "If there is a public official that is purposefully mishandling the food that should go to the people of Puerto Rico, there is going to be some hell to pay," he said.

HOLD UP: Senate Majority Whip John Cornyn has placed a hold on Russell Vought's nomination to be deputy director of the Office of Management and Budget unless he gets more funding for Texas hurricane relief, Axios reports. That comes as Florida Sen. Bill Nelson said Thursday he'd also placed a hold on Vought's nomination after the administration kicked funds for his state's citrus growers to a later disaster relief package.

** **Presented by the National Biodiesel Board:** President Trump repeatedly pledged to protect biodiesel and the Renewable Fuel Standard (RFS). But EPA's latest actions threaten the 64,000 jobs supported by biodiesel. A strong RFS will be key to keeping these jobs and upholding his promise. Mr. President: please stop EPA from thwarting growth in rural America. http://bit.ly/2xn5Sgm **

IT'S NOT UNUSUAL: He doesn't like it and vehemently opposes his nomination, but EPW ranking member Tom Carper sees nothing irregular in EPA chemical pick Michael Dourson joining the agency early. "I don't see it as going around us - there's plenty of precedence for this in earlier administrations," he told ME. "What I find troubling most recently is his abject failure to respond to basic questions."

Whitehouse disagrees: Sen. Sheldon Whitehouse told ME in a statement Dourson's move showed contempt for the Senate's advice and consent role. "Not only is this move contemptuous of the Senate as an institution, it risks undermining the legal validity of EPA actions involving the nominee," he said. "The administration may find it easier to nominate individuals with bipartisan support and a commitment to the EPA's mission rather than industry-funded hacks."

UPTON WAVERS ON SENATE BID: While he was once 95 percent likely to mount a Senate bid, former House Energy and Commerce Chairman Fred Upton is now "more like 50-50" on challenging Michigan incumbent Debbie Stabenow, according to the Detroit News. "He's gone coy over the last few days," one source told columnist Ingrid Jacques, citing fears in particular about Steve Bannon's potential involvement.

STILL MOVING FORWARD: Senate Agriculture Chairman Pat Roberts hopes to schedule a hearing on Trump's controversial pick to be chief scientist at USDA, Sam Clovis, next week, Pro Ag's Helena Bottemiller Evich reports. "Hopefully, we can get that done next week," Roberts said, noting staff continues to assemble all of Clovis' past statements. Democrats say Clovis doesn't fit legal requirements for the job and condemned past statements that climate change is a hoax.

Garrett too: Even as the business community has come out strongly against his nomination, the Senate Banking Committee announced an Oct. 1 hearing on Scott Garrett's selection to run the Export-Import Bank.

PLEASE, NO CH-CH-CHANGES: Some of the state-focused climate change web pages EPA took down in April reappeared in late July as "energy resources," according to a report from watchdog group Environmental Data and Governance Initiative. The agency removed all 15 references to "climate," on the main page, as well as several climate-specific links and tools, including webinars and example policies. The website still hosts information about renewable power and energy efficiency.

LAWSUIT LODGED OVER RFS ENVIRONMENTAL IMPACTS: The Sierra Club filed a lawsuit in federal district court Thursday alleging EPA has failed to conduct required environmental impact and air quality analyses for the Renewable Fuel Standard. "Today's lawsuit is a reminder to Administrator Pruitt that his duty is to the American people, and we will continue to hold him accountable for both his harmful actions and inaction alike," attorney Devorah Ancel said in a statement.

GETTING ANTSY IN UTAH: Gov. Gary Herbert hasn't heard a peep from the Trump administration on the status of Interior Secretary Ryan Zinke's review of national monument designations but wants a decision ASAP. "Whether the president will act on those

recommendations and, if so, how, whether he'll modify them, I don't think anybody knows for sure," he told local reporters in video posted by KUED. "I hope he makes a decision soon so we can all get past the uncertainty." Trump must make the final call, but Zinke suggested shrinking several monuments previously designated under the Antiquities Act.

MAIL CALL! WYDEN SAYS ABANDON GRID RESILIENCY PROPOSAL: Oregon Sen. Ron Wyden urged FERC to withdraw Energy Secretary Rick Perry's grid resiliency plan from consideration. "Arbitrarily propping up a dying industry goes against what the GOP has long claimed is its goal - an all-of-the-above energy strategy," he wrote in a letter. "This rule clearly picks winners and losers in energy resources, which robs taxpayers of the benefits of competitive markets."

ABOUT THAT ROAD...: Two House Democrats are questioning whether Zinke can transfer land that would clear the way for a road to be built through Alaska's Izembek National Wildlife Refuge - a long-time pet issue of Murkowski. The Washington Post on Sunday reported the agency is mulling transferring land to the tribal King Cove Corp. even though the agency previously found allowing the 12-mile road would hurt migratory birds, caribou and other species. In the Thursday letter, House Natural Resources Committee ranking Democrat Raul Grijalva and subcommittee top Democrat Donald McEachin asked Zinke to describe his authority to transfer or exchange the land and whether the agency will conduct a new public environmental review before making the call.

KEEPING GAO BUSY: Grijalva asked GAO to examine whether and how much public revenue has been lost due to changes in how Interior leases drilling parcels in the Gulf of Mexico. Link here.

TAKE A GLANCE! The National Wildlife Federation released a report Thursday on the dramatic rise in wildfire activity, which it links to unhealthy forest conditions, insufficient forest restoration activities, rapid climate change and increasing housing development in high-risk and fire-prone areas. "By restoring and better managing U.S. forests, it is possible to reduce fire risks to communities, increase populations of cherished wildlife species, and protect our climate by enhancing the carbon sequestration and storage potential of our forests," it concludes.

LIGHTER CLICK: The Sierra Club launched a spoof airline Pruitt-Zinke Airlines, or PZ Air, over their non-commercial travel. Watch the video here.

Subject: Yergin supports ending Trump policy advisory forum

By Ben Lefebvre

08/16/2017 03:41 PM EDT

Daniel Yergin, an energy expert who sat on President Donald Trump's Strategic and Policy Forum, "fully supports" the forum's decision to disband, his spokesman told POLITICO.

"As our members have expressed individually over the past several days, intolerance, racism and violence have absolutely no place in this country and are an affront to core American values," forum members said in a prepared statement. "We believe the debate over forum participation has become a distraction from our well-intentioned and sincere desire to aid vital policy discussions on how to improve the lives of everyday Americans. As such, the president and we are disbanding the forum."

Yergin, vice chairman of consulting agency IHS Markit, advises many of the country's largest energy companies and helps organize the industry's largest annual conference. He sat on the White House forum with the heads of General Motors, JPMorgan Chase and other major companies. An IHS spokesman said he supported the forum's decision to disband.

A steady stream of CEOs and other executives had left the forum and a separate White House manufacturing council in recent days to protest Trump's claim that both sides were responsible for violence at a white supremacist march in Charlottesville, Va., last weekend that left three people dead.

As the defections mounted today, Trump said he was disbanding both groups of business advisers.

Subject: Interior IG probing Zinke call to Murkowski over health care vote

By Esther Whieldon

08/03/2017 04:18 PM EDT

The Interior Department's inspector general's office told lawmakers today that it has launched a preliminary investigation into Secretary Ryan Zinke's effort to get Sen. Lisa Murkowski to back Obamacare repeal last week.

In a letter to Reps. Raúl Grijalva and Frank Pallone, Deputy Inspector General Mary Kendall said she is looking into "potential legal and ethical violations" by Zinke. The secretary called Murkowski July 26 to convey the administration's dissatisfaction with her vote against a motion to proceed on the GOP health care bill.

Murkowski today said that pressure from the administration was one of several reasons she delayed a markup that had been scheduled for July 27 to consider several nominees. The panel voted today to advance the nominees.

"But we also were dealing with the very proximate timing of issues coming out of the White House related to health care that really had nothing to do with energy and yet some had made it tied to energy," Murkowski told POLITICO today. "But ... even if that had not happened, we still were looking at whether or not the timing was right to move forward with the markup."

Murkowski said that she did not take Zinke's call as a threat and that his department has not done anything to stop or slow down the issues she cares about since then.

Zinke posted a photo on Twitter today of him and Murkowski sharing a beer. "My friends know me well," he wrote.

Murkowski characterized their relationship as "very strong, professional, friendly, cordial and respectful."

WHAT'S NEXT: Murkowski said she is hopeful the Interior and Energy department nominees that cleared her committee today will be confirmed by the full Senate before adjourning for recess, which is expected later tonight. They were not part of a large batch of nominations confirmed earlier this afternoon, but negotiations continue.

Subject: Blue states can help defend 2015 ozone rule, court says

By Alex Guillén

08/02/2017 11:54 AM EDT

The D.C. Circuit Court of Appeals today said Democratic state officials will be allowed to defend EPA's 2015 ozone standard in lawsuits challenging the rule, which the Trump administration has begun rolling back.

Six states and the District of Columbia previously had filed a "friend of the court" brief supporting the rule, but last month they asked to be upgraded to intervenor status, which will allow them to actively defend the rule and seek appeals if the Trump EPA does not. EPA Administrator Scott Pruitt has suspended initial implementation deadlines for the ozone rule while he considers rewriting the Obama-era standard.

Both the Trump administration and the industry groups and states challenging the rule opposed upgrading the blue states, saying it was too late in the process. The states replied that they were prompted to step up by EPA's recent suggestions "that it is sympathetic to arguments that had been raised by" the challengers that the Obama EPA had previously rejected.

The states involved are California, New York, Vermont, Washington, Massachusetts and Delaware, along with D.C.

Various environmental and public health groups were previously granted intervenor status to defend the ozone standard.

WHAT'S NEXT: The ozone lawsuit currently is on hold while EPA reconsiders the 2015 standard. Many of the same states on Tuesday sued EPA over Pruitt's delay in implementing the rule.

EPA Review of Model Year 2021 Limits Splits Auto Industry

Posted September 06, 2017, 03:59 P.M. ET

By Abby Smith

The EPA's review of model year 2021 mileage standards for light-duty vehicles is causing a split in the automotive industry between major car companies and the manufacturers that supply their equipment.

Major automobile manufacturing groups—like the Alliance for Automobile Manufacturers, which represents the Ford Motor Co., Fiat Chrysler Automobiles, General Motors, BMW and others— have urged greater flexibility in the Environmental Protection Agency's light-duty vehicle greenhouse gas standards, including now for model year 2021.

But a group representing manufacturers and suppliers of auto equipment—the Motor & Equipment Manufacturers Association—is warning that any relaxation of the model year 2021 standards would have a detrimental impact on manufacturing jobs in the United States. The group is asking the model year 2021 limits remain unchanged.

The EPA in March re-opened a feasibility review of the greenhouse gas and fuel efficiency standards for model years 2022-2025, reversing a determination made in the final days of the Obama administration to maintain current standard levels for those years. The agency, along with the National Highway Traffic Safety Administration, began accepting comments on that review Aug. 10, and expanded the review to include potential changes to model year 2021 limits, drawing criticism from environmentalists and other supporters of the Obama-era rules.

The motor vehicle suppliers group is also urging the EPA to "remain on course" with the model year 2021 target the industry had agreed to. Any relaxation of those limits would cause a "significant increase in the level of uncertainty in an already uncertain time," Laurie Holmes, senior director of environmental policy for the Motor & Equipment Manufacturers Association, said at a Sept. 6 public hearing hosted by the EPA.

Ann Wilson, vice president of public affairs for the group, told Bloomberg BNA that motor vehicle suppliers are the "largest employer of manufacturing jobs in the United States." Many of those jobs "have been contingent on compliance with the new" NHTSA and EPA vehicle standards, she said, noting suppliers have already dedicated millions of dollars in research and development.

Maintaining the model year 2021 limits, and forward progress from there, is necessary for "these investments to continue to bear fruit" and "to continue to have this level of employment in the United States," Wilson said.

But also at the hearing, Chris Nevers of the auto alliance and Julia Rege of Global Automakers urged officials to consider tweaks to model year 2021 limits to advance "harmonization" with the NHTSA program.

"We never meaningfully reached the goals of harmonization," Rege said during her testimony. An adjustment to the model year 2021 standards "would advance our request" to align the two programs.

Threat to Oil Becomes Real as Climate Crashes Norway Election

Posted September 06, 2017, 8:59 A.M. ET

By Mikael Holter

Politicians and activists who have been fighting to rein in Norway's mighty oil industry are eyeing a breakthrough.

Several parties opposed to further oil exploration could emerge as kingmakers in the Sept. 11 election. That will threaten a push to search for about 9 billion barrels in Arctic crude and natural gas, which is necessary to prolong the petroleum age that made Norway one of the world's richest countries.

"I'm very worried," said Stale Kyllingstad, chief executive officer of IKM Gruppen AS, one of the biggest suppliers to the oil industry.

Big oil's enemies are now gaining ground with both moral and financial arguments. Norwegians are increasingly questioning how to reconcile their role as western Europe's biggest oil and gas producer with fighting climate change and whether searching for more petroleum is the financially sound thing to do in a world where renewable energy is taking over more and more.

The Green Party, which wants to end exploration immediately and phase out the industry in 15 years, is poised to become a key parliamentary force. The race is too close to call between Conservative Prime Minister Erna Solberg's government and the opposition, headed by Labor leader Jonas Gahr Store. Polls suggest both blocs could fail to win a majority.

Labor, a historic supporter of the oil industry, has seen its backing plunge in recent weeks, making it dependent on support from smaller parties seeking to curtail drilling. A key Labor politician last month even suggested reviewing tax subsidies for exploration, shocking the industry before the party clarified that it wasn't about to change a system prized by oil companies for its stability.

That failed to reassure Kyllingstad, who said he feared a weak Labor Party would be forced to "prostitute itself" to "extremist parties."

The Socialist Left (Labor's government partner until 2013) and the Red Party, which both want to end license awards and new field developments, also stand to gain.

To be sure, Labor and the current government parties, the Conservatives and the Progress Party, all industry backers, are likely to remain the three biggest groups after the election, sharing well over half the votes.

But the smaller parties, which for now have had little more to celebrate than a ban on drilling off the Lofoten islands, could extract deeper concessions, said Anders Holte, an analyst at Danske Bank A/S in Oslo. That could include fewer license awards and possibly jeopardize a program that lets loss-making companies collect 78 percent of exploration expenses in cash, he said.

For an industry that lost 50,000 jobs during the oil crash, it would be a bad blow. It could especially threaten an expansion in the Arctic Barents Sea, which holds the bulk of the country's undiscovered oil and gas resources and is seen as key to maintaining production 10 years from now after it already dropped by 12 percent since a 2004 peak.

"For the first time in a long while, there's increasing political risk," Holte said.

The outgoing government has pushed hard to stimulate exploration in the Arctic, overseeing a record search for oil in the Barents Sea, including Norway's northernmost well, and offering the most blocks ever in that region in a licensing round. On Sept. 6, the Petroleum Ministry said it received a record amount of applications in a round focusing on mature blocks after Barents acreage had been boosted.

Rasmus Hansson, the only Green lawmaker for now, said the top priority is to end exploration for new oil. That's a moral obligation because of climate change and a financial imperative because spending on exploration could be throwing money into the sea if the resources are never used as the world moves beyond fossil fuels, he said.

"It's particularly naïve to believe that the oil industry will be profitable for a long time to come," he said in an interview last week. "An increasing number of Norwegians are saying in polls that they see a future after oil."

One survey showed last month that 44 percent of Norwegians would be willing to leave some oil in the ground if it helped cut emissions.

At Statoil ASA, Norway's biggest oil company, outward appearances are cool for now.

"I'm registering that there's a greater diversity and a bigger stretch in the views on the Norwegian oil and gas industry," Eldar Saetre, the company's CEO, said in a phone interview this week.

Saetre said he wasn't worried about a change in the fundamental framework conditions for oil companies. The powerful Norwegian Oil and Gas Association and the country's biggest oil union, Industry Energy, also said they trusted the big parties to safeguard the industry because of its importance for jobs, value creation and government income.

But the industry could be overplaying its hand and Solberg has vowed to help the country wean itself off oil. Its dominance is slowly fading, and production now comprises about 12 percent of the economy, down from more than 20 percent pre-oil crisis. To be sure, that doesn't factor in how oil cash seeps through other sectors of the economy.

"I understand that people in the oil industry are worried," said Frode Alfheim, who represents thousands oil workers as head of the union. "I'm pretty certain that once one or the other

constellation starts running the country after the election, the broad lines will remain firm."

France Proposes to End Oil Output by 2040 with Exploration Ban

Posted September 06, 2017, 8:13 A.M. ET

By Francois de Beaupuy

France will stop granting new exploration permits next year as it seeks to end all oil and gas production by 2040, according to a draft bill presented at a Sept. 6 cabinet meeting.

The move would allow the government to turn down more than 40 exploration requests already made, while some existing permits may be extended to respect contracts, the presentation showed. That includes the Guyane Maritime license off French Guiana, in which Total SA has a stake, according to an adviser to Ecology Minister Nicolas Hulot, who briefed reporters in Paris.

This legislation would "allow us to progressively free ourselves," Hulot said after the cabinet meeting, also confirming that current exploration permits off French Guiana would remain valid. "It will allow investors to go much further in their renewable investments. Currently oil and gas leave us dependent on geopolitics."

The proposed legislation is part of President Emmanuel Macron's broader plan to take the lead against climate change, after U.S. counterpart Donald Trump ditched the landmark Paris agreement to fight global warming. While France's oil and gas output is small, the plan may affect companies such as Vermilion Energy Inc., which has several concessions, and will reduce the prospect of discoveries off French Guiana.

France pumped 6 million barrels of oil in 2015, covering just 1 percent of its demand, according to the presentation. Oil and gas exploration and production on French soil generates as much as 300 million euros ($358 million) in annual revenue, and accounts for as many as 5,000 jobs, directly and indirectly. Existing production licenses wouldn't be extended beyond 2040 under the proposed law.

"We do not expect this new legislation, if passed, to have a material impact on Vermilion as our operations are focused on development activities such as well-workovers, infill drilling and waterflood optimization," the Calgary-based company said previously.

Under a plan presented by Hulot in July, France will end the sale of gasoline- and diesel-powered vehicles by 2040. It will also progressively increase taxes on fossil fuels, close coal-fired power plants by 2022 and invest more in renewable energies.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

September 8, 2017

Latest News

Novel Enforcement Case Driving GOP Effort To Overhaul EPA's IRIS Program

Republicans on the House science committee are citing novel EPA and state enforcement efforts at a Louisiana chemical plant, based on a cancer risk estimate for chloroprene from the agency's Integrated Risk Information System (IRIS), to make the case for their efforts to de-fund or overhaul the program, starting with a budget rider that would eliminate any IRIS funding in fiscal year 2018.

EPA Rejects IG's Call For Broad Review Of Agency Risk Screening Tools

Top EPA officials are rejecting a call from their Inspector General (IG) for an agency-wide review of its web-based tools used for screening communities for environmental risks, though the IG says such an assessment is needed given anticipated EPA budget cuts that make it vital to avoid duplication in agency activities.

As Another Storm Looms, EPA Vows Strong Response Despite Budget Cuts

With a second major hurricane looming, EPA Administrator Scott Pruitt is vowing a strong response to Hurricane Irma and noting that agency regional officials are already securing Superfund sites in the storm's path though former agency officials say Trump administration efforts to cut agency funding will cripple EPA's disaster responses.

House Panel Opens Door To Scores Of Amendments In EPA Spending Bill

House lawmakers are one step closer to taking up a barrage of amendments that could place new limits on EPA's power or, in some cases, restore funds to some programs, after the House Rules Committee ruled the proposals in order, though the committee also rejected some amendments that would have restricted Trump administration deregulatory efforts.

EPA Officials Acknowledge Challenges Implementing Superfund Reforms

EPA officials are acknowledging a host of challenges to implementing the Superfund reforms that are among Administrator Scott Pruitt's top priorities, conceding smaller

budgets, retiring staff and a series of other hurdles will make the revisions more difficult to enact, even as the officials note that the agency has begun to implement them.

Daily Feed

Trump nominates Wehrum to head EPA air office

The former acting head of EPA's air office appears more likely to win Senate confirmation than he was during the Bush administration.

EPA says CPP repeal proposal due this 'fall'

The agency says it previously "inadvertently classified" its Clean Power Plan repeal rule as a "long-term action," which is intended for policies that are expected to take more than a year to complete.

Trump nominates former DOJ official Katsas to D.C. Circuit

If confirmed, Gregory Katsas would join the appellate court that hears the majority of challenges to EPA's regulations.

Carper probes EPA's cost analysis of CWA rule repeal

The senator is asking whether EPA unjustifiably scrapped projected benefits from the Obama-era Clean Water Act jurisdiction rule in order to bolster its planned repeal.

Ewire: Criticism of EPA toxics nominee grows

Growing criticism of Michael Dourson's work on behalf of industry is likely to inform the Senate debate over his nomination.

DOJ renews bid to undercut plaintiffs' standing in '2-1' EO suit

The Trump administration says a 1987 circuit court ruling shows why citizen groups' challenge to the executive order on regulatory reform is fatally flawed.

Subject: BREAKING NEWS: Trump pardons former Sheriff Arpaio

President Donald Trump pardoned attorney former Sheriff Joe Arpaio on Friday.

Arpaio had been convicted of federal contempt. The outspoken immigration opponent has long backed Trump. The president teased a pardon during a campaign rally in Phoenix on Tuesday.

The White House cited a lifetime of public service in announcing Apraio's pardon.

Today's POLITICO Playbook presented by American Bankers Association

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman) and DANIEL LIPPMAN (daniel@politico.com; @dlippman)

Listen to the Playbook Audio Briefing

Driving the Day

BREAKING at 5:02 a.m. -- **HOUSTON CHRONICLE: "Explosions reported at flooded Crosby chemical plant,"** by Keri Blakinger, Matt Dempsey and Andrew Kragie: "The Harris County Emergency Operations Center is reporting two explosions and black smoke coming from the Arkema chemical plant in Crosby, according to a statement from the company.

"Arkema said Harris County officials notified the company about the explosions around 2 a.m. Thursday ... The company said it had agreed with local authorities that, because of the volatile chemicals involved, 'the best course of action is to let the fire burn itself out.'

"Within two hours of the explosions, sheriff's deputies were dispatched to block off roads in the area. One deputy was taken to the hospital after inhaling fumes, the Harris County Sheriff's Office tweeted about 4 a.m. Thursday. ... A spokeswoman for the county fire marshal's office warned that it's not clear whether all residents had followed the evacuation order given for the area with 1.5 miles of the plant." http://bit.ly/2wV21GB

SPOTTED -- GARY COHN with two other gentlemen and a bottle of red wine sitting outside at Fiola Mare just hours after the president failed to mention him in his tax reform speech. **SUSAN RICE** was sitting at a table nearby.

Good Thursday morning and happy final day of August. **BEHIND THE SCENES OF LAST NIGHT'S GOP LEADERSHIP CALL ON HARVEY AID -- COMING IN SEPTEMBER --** House Majority Leader Kevin McCarthy (R-Calif.) organized a call yesterday to help get lawmakers on the same page on Hurricane Harvey aid. One Republican on the call told us afterwards that **THE PRICE TAG MIGHT EXCEED**

KATRINA, a sentiment shared by many lawmakers and members of the administration.

HOUSE MAJORITY WHIP STEVE SCALISE (R-La.) -- who was shot two-and-a-half months ago -- joined in on the call with OMB Director Mick Mulvaney, officials from FEMA and DHS, members of the Texas delegation and House Appropriations Chairman Rodney Frelinghuysen of New Jersey. Mulvaney talked about the massive package that Congress would need to pass to rehab Houston after the storm, and noted it would be complicated because the U.S. government is nearing the end of a fiscal year, and the debt ceiling is approaching. Whatever Congress spends might impact the time frame with which Congress needs to lift the debt ceiling, multiple people on the call told us.

CONGRESS NEEDS TO GET SOMETHING DONE IN SEPTEMBER -- that was the message on the call. Aid is likely to come in installments, because officials are not sure about the extent of the damage.

REP. TED POE (R-TEXAS), who represents a slice of western, northwestern and northeastern Houston, said on the call that it was very helpful that President Donald Trump came to Texas to show that Washington is acting. ***More details from Rachael Bade, John Bresnahan and Sarah Ferris*** http://politi.co/2erFYQo

GOP CONGRESSIONAL LEADERS still want to marry a government funding bill, Harvey aid and the debt ceiling. We'll see if that's possible.

TRUMP is meeting with H.R. McMaster in the morning and OMB Director Mick Mulvaney in the afternoon.

THE NEXT BATTLE -- "Trump Administration Wants to Stabilize Health Markets but Won't Say How," by NYT's Robert Pear: "A Trump administration official said Wednesday that the administration wanted to stabilize health insurance markets, but refused to say if the government would promote enrollment this fall under the Affordable Care Act or pay for the activities of counselors who help people sign up for coverage.

"The official also declined to say whether the administration would continue paying subsidies to insurance companies to compensate them for reducing deductibles and other out-of-pocket costs for low-income people. Without the subsidies, insurers say, they would sharply increase premiums. The administration, the official suggested, will do the minimum necessary to comply with the law, which Mr. Trump has called 'an absolute disaster' and threatened to let collapse. 'I don't think we can force people to sign up for the program,' the official said." http://nyti.ms/2x8oKOC

-- WE KEEP HEARING about the prospect of some sort of fall health care deal. No one knows what would be in a package like that. But Republicans, when they're being honest, would say they want to continue CSR payments to stabilize Obamacare markets, but need some serious reforms to the law. The politics of taking up a health care bill after failing to repeal and replace Obamacare for Republicans is tricky to say the least.

HOUSTON CHRONICLE A1 -- "THREATS RISE FROM RESERVOIRS, RIVERS: As sun finally returns, a devastated region tallies the damage." http://bit.ly/2elnIEB

HOUSTON CHRONICLE -- "More than 30 people reported dead from Harvey, and officials expect toll to rise" http://bit.ly/2grYQzl

THE LATEST ON HARVEY -- "The Sun Came Out in Houston. Here's What Residents Saw," by NYT's Monica Davey in Houston: "The water has receded in some parts of the city, leaving cakes of mud, branches and garbage baking in the heat wherever the current dropped them. Abandoned cars, too, appear every so often, left where they were in the moment the storm overtook them. The downtown streets are dry now, but the gleaming office towers are mostly empty and the wide sidewalks oddly quiet. Some streetlights flash red. Along neighborhood streets, long strips of businesses sit shuttered, darkened and with stools atop tables and handwritten signs promising to reopen soon. On one dry block, a jogger ran by in the steamy Houston heat, as neighbors collected debris that had grown tangled in their lawns.

"Not far away, barricades marked off a street where darkened houses and cars suddenly vanished into a murky brown soup that showed no sign of retreat. In the silence, a shredded tree bobbed in the water near the tops of submerged cars. Such were the scenes of Houston on Wednesday, as the sun appeared at last - the first sign of blue sky in nearly a week - and as some in the city began to come out of their homes to see what was left. The images were a study in contrast in this vast city: of neighborhoods moving on and of others doing anything but that." http://nyti.ms/2vup2Qx

-- "Birds-eye view of flooded Houston captures Harvey's totality," by AP's Paul J. Weber: "Flying over the Houston area most days is a postcard of America: crisscrossing highways, skyscrapers, hulking shopping plazas, oil refineries, big houses, cattle pastures. Then there's the view after Harvey. 'I had an idea, but once you can get up there and actually physically see it, the water is never-ending,' said David Phillip, an Associated Press photographer who has called Houston home for two decades. Phillip got a bird's-eye view this week after Harvey dumped more than 50 inches (127 centimeters) of rain in and around the nation's fourth-largest city. His photographs show rows of suburban streets turned into canals and brownish floodwaters creeping up to rooftops. In one photo, a mansion's long cul-de-sac driveway resembles a drawbridge over a moat." ***With 14 pix*** http://bit.ly/2gl6Le9

-- "How Harvey Will Change Texas: The storm's most lasting legacy might be the end of the Lone Star State's rugged individualism," by Richard Parker in POLITICO Magazine: "Texans might pride themselves on their rugged individualism, but this time, they'll have no choice but to accept years of state and federal help for the recovery. By the time Harvey leaves the city on Wednesday, Greater Houston will have been drenched with 1 trillion gallons of water and an estimated 30,000 people will be living in temporary housing. [FEMA] expects to receive at least 450,000 claims for damage caused by the storm. And early estimates point to least $150 billion in total economic

losses." http://politi.co/2xP3gUg

****** **A message from the American Bankers Association:** The banking industry is the single most important supplier of credit to the nation's agriculture sector, providing nearly 50 percent of all loans to America's farmers and ranchers. Learn how banks are helping farmers grow. http://politi.co/2wwho81 ******

THE BIG PICTURE -- "The reality beneath Trump's tax reform talk," by Brian Faler: "President Donald Trump's tax plans hardly match his populist rhetoric. Though he sold his plan to rewrite the tax code as a boon to the average American worker in a speech Wednesday, he mostly focused on the taxes paid by America's largest corporations. Trump argued that his plans to cut the 35 percent corporate tax rate for the first time in 30 years would benefit regular wage earners by putting more money in corporate coffers, which he said business leaders would then use to hire more people and raise wages.

"But most economists say companies' shareholders would be the primary beneficiaries of a corporate tax rate cut. That's because it would make companies more profitable, which would boost their stock price while also leaving them with more money to pay out dividends. The official Joint Committee on Taxation, as well as the Treasury Department and the independent Tax Policy Center, all say shareholders bear roughly three-quarters of the burden of the corporate tax, and therefore would be the main winners were it cut." http://politi.co/2vumf9T

FOR YOUR RADAR -- "Federal judge blocks Texas' tough 'sanctuary cities' law," by AP's Paul J. Weber and Will Weissert in Austin: "A federal judge late Wednesday temporarily blocked most of Texas' tough new 'sanctuary cities' law that would have let police officers ask people during routine stops whether they're in the U.S. legally and threatened sheriffs with jail time for not cooperating with federal immigration authorities. The law, known as Senate Bill 4, had been cheered by President Donald Trump's administration and was set to take effect Friday. It was widely viewed as the toughest immigration measure in the nation since Arizona passed what critics called a 'Show Me Your Papers' law in 2010, which was later partially struck down by the U.S. Supreme Court." http://bit.ly/2xArvWY

SPLIT -- **"Top advisers in more displays of disagreement with Trump,"** by Reuters' Jonathan Landay and Jeff Mason: "Defense Secretary Jim Mattis openly differed with his commander in chief over North Korea on Wednesday, the latest example of a once-rare public display of disagreement by top U.S. aides that has become more frequent under President Donald Trump. 'We are never out of diplomatic solutions,' Mattis told reporters, just hours after Trump said in a tweet that 'talking is not the answer' to the standoff over North Korea's nuclear weapons and missile programs." http://reut.rs/2wkmjli

CANADIAN PRIME MINISTER JUSTIN TRUDEAU on **DONALD TRUMP** to **DANIELLE WEISBERG** and **CARLY ZAKIN** of **theSKIMM:** "It may be surprising to some that he's

... [long pause] ... he's authentic in that the person he is on-camera, in public, is very true to the person he is in private. There's a consistency there that one can work with."

THE LATEST ON RUSSIA -- "Russian lobbyist testifies to Mueller grand jury," by FT's Katrina Manson: "Rinat Akhmetshin, the lobbyist and former Soviet army officer who met senior Trump campaign aides at a controversial meeting last year, has given evidence before a grand jury investigation, according to two people familiar with the matter. Mr. Akhmetshin gave testimony under oath for several hours on Friday August 11, in a sign that special counsel Robert Mueller is looking at the 2016 meeting as part of his investigation into links between Donald Trump's election campaign and Russia. ... In an interview with the Financial Times, Mr. Akhmetshin refused to comment on the grand jury appearance. 'I don't know what you're talking about ... I'm not commenting on anything,' he said, adding he has 'deference' for Mr Mueller's probe and promises 'full co-operation' with any investigations. Peter Carr, spokesman for the special counsel's office, also declined to comment." http://on.ft.com/2ekN2uj

-- "Trump Lawyer 'Vehemently' Denies Russian Collusion," by NYT's Maggie Haberman and Matt Apuzzo: "President Trump's longtime lawyer, Michael D. Cohen, has given Congress a point-by-point rebuttal of a dossier alleging that he has deep ties to Russian officials - an effort to clear his name as the Justice Department and congressional committees investigate Russia's attempts to disrupt last year's election. ... In an eight-page letter to the House Intelligence Committee, a lawyer for Mr. Cohen offered a full-throated rejection of any suggestion that Mr. Cohen was involved in an effort to work with Russia to disrupt the election. 'We have not uncovered a single document that would in any way corroborate the dossier's allegations regarding Mr. Cohen, nor do we believe that any such document exists,' wrote the lawyer, Stephen M. Ryan. 'Mr. Cohen vehemently denies the claims made in the dossier about him, which are false and remain wholly unsubstantiated.'" http://nyti.ms/2elhPai

JOSH DAWSEY SCOOP -- "Mueller teams up with New York attorney general in Manafort probe": "Special counsel Robert Mueller's team is working with New York Attorney General Eric Schneiderman on its investigation into Paul Manafort and his financial transactions, according to several people familiar with the matter. The cooperation is the latest indication that the federal probe into President Donald Trump's former campaign chairman is intensifying. It also could potentially provide Mueller with additional leverage to get Manafort to cooperate in the larger investigation into Trump's campaign, as Trump does not have pardon power over state crimes.

"The two teams have shared evidence and talked frequently in recent weeks about a potential case, these people said. One of the people familiar with progress on the case said both Mueller's team and Schneiderman's have collected evidence on financial crimes, including potential money laundering. No decision has been made on where or whether to file charges. 'Nothing is imminent,' said one of the people familiar with the case." http://politi.co/2x74Xzq

-- "Paul Manafort's Overseas Political Work Had a Notable Patron: A Russian

Oligarch," by WSJ's Brett Forrest: http://on.wsj.com/2il2xRW

AT FOGGY BOTTOM -- "With Departure of Top Lawyer, State Department Exodus Continues," by Foreign Policy's Colum Lynch and Robbie Gramer: "A senior State Department lawyer, Todd Buchwald, is stepping down in the coming weeks, joining scores of career civil and foreign service officers fleeing an administration that critics say has diminished the standing of U.S. diplomacy, according to friends and colleagues. ... Buchwald's imminent resignation follows last week's exodus of three other top career diplomats who oversee the department's policies on Europe, the United Nations, and narcotics and law enforcement, respectively." http://atfp.co/2wpUgFx

LAST CHANCE! -- PLAYBOOK ON THE ROAD -- Send us a photo of yourself, or others reading Playbook during your travels this month. Email photos to Daniel daniel@politico.com, or tweet photos with #PlaybookLoyal for a chance to be featured tomorrow in our last Playbook on the Road installment and be entered into a contest to win a signed Matt Wuerker cartoon.

REMEMBERING ROLLIE MASSIMINO -- Philadelphia Inquirer: "Rollie Massimino, the crafty little coach whose successful and sometimes controversial career at Villanova will be colored forever by the Wildcats' startling 1985 NCAA championship and by his role in the downfall of a beloved Philadelphia basketball institution, died Wednesday. Mr. Massimino, 82, had been battling lung cancer for several years." http://bit.ly/2vHvq2N

Playbook Reads

PHOTO DU JOUR: Evacuees from Tropical Storm Harvey fill the Max Bowl as others continue to pour in for shelter at the business in Port Arthur, Texas, on Aug. 30. | Kim Brent/The Beaumont Enterprise via AP

THE OPPOSITION -- "Dems' 2020 dilemma: Familiar 70-somethings vs. neophyte no-names," by Isaac Dovere in Manchester, N.H.: "Old but well-known vs. fresh but anonymous: That's how the 2020 Democratic presidential field is shaping up so far - and it's causing anxiety within a party starting to acknowledge that President Donald Trump could be harder to beat for reelection than the base would like to admit. The older generation - Joe Biden, Elizabeth Warren and Bernie Sanders-would be tested and experienced on the national stage, with high name recognition and built-in support. They'd also all be in their 70s, people who've been around forever for Donald Trump to use as perfect foils for exactly what he stands against.

"Then there's everyone else looking at a White House run who could embody a new start, separate from the Washington and political establishment that repel voters. But they're virtually unknown, and they'd be running against the most famous man in the world who's proven he can dominate every news cycle. If only, Democrats say, there was some person under 55 who had any profile. 'That person doesn't exist,' said

Howard Dean, the 2004 presidential candidate and former [DNC] chair. Dean, who's 68, is clear on which option he wants: 'I have nothing against any of the people my age who will run, but I really do believe that if we're going to appeal to the younger generation, we've got to change the party.'" http://politi.co/2x7XZdp

****** **A message from the American Bankers Association:** America's banks play a critical role in generating economic growth while delivering safety and convenience for customers. The two million women and men who work for America's banks safeguard $12.9 trillion in deposits and originate $2.4 trillion in home loans. They provide $331 billion in loans to small businesses and $175 billion in loans to farmers and ranchers. Banks' fraud protection measures stop at least $11 billion in attempted fraud each year. And thousands of banker volunteers deliver financial literacy lessons annually to millions of young Americans to help them become financially successful adults. Find out more at www.aba.com/AmericasBanks, #AmericasBanks ******

THE FAM -- "Kushners' China Deal Flop Was Part of Much Bigger Hunt for Cash," by Bloomberg's David Kocieniewski and Caleb Melby: "Jared Kushner, Donald Trump's son-in-law and top adviser, wakes up each morning to a growing problem that will not go away. His family's real estate business, Kushner Cos., owes hundreds of millions of dollars on a 41-story office building on Fifth Avenue. It has failed to secure foreign investors, despite an extensive search, and its resources are more limited than generally understood. As a result, the tower poses a significant challenge to the company. Over the past two years, executives and family members have sought substantial overseas investment from previously undisclosed places: South Korea's sovereign-wealth fund, France's richest man, Israeli banks and insurance companies, and exploratory talks with a Saudi developer, according to former and current executives. These were in addition to previously reported attempts to raise money in China and Qatar." https://bloom.bg/2wLioFI

IVANKA WATCH - "Ivanka Trump supports rollback of Obama's policy to close gender pay gap," by The Guardian's Sabrina Siddiqui: "Ivanka Trump, who came into her father's administration vowing to fight for women in the workplace, has blessed a White House plan to roll back an Obama-era policy aimed at eliminating the gender pay gap. The initiative, which was unveiled by Barack Obama in January 2016, would have required employers to collect data on how much they pay their workers, broken down by gender, race and ethnicity. ... 'Ultimately, while I believe the intention was good and agree that pay transparency is important, the proposed policy would not yield the intended results,' Trump said in a statement." http://bit.ly/2gqVIDN

HMM -- "The Militarization of the Hamptons: Why is a heavily armed counterterrorism force patrolling the parties of the rich and famous?" by Joe Nocera in Bloomberg View: "Yes, it's true, the town of Southampton, New York, with its 55,000 year-round residents -- and its deserved reputation as a summer playground for the rich and famous -- now has its very own counterterrorism squad. Its members were first sighted in April, when cops wearing bulletproof vests and carrying fully loaded AR-15s showed up at the Bridgehampton Half Marathon, where they spent most of their

time milling around the finish line." https://bloom.bg/2xA5TtU

SPOTTED: OMB's Douglas Sellers at Joe's Stone Crab yesterday celebrating his departure from OMB to join the OPIC team (h/t Craig Crutchfield).

TRANSITIONS -- Nate Tibbits has been promoted to be Qualcomm's SVP of global government affairs and public affairs. Nate most recently served as the acting head of government affairs at the company. ... **John Collison** has been named Of Counsel at gov't relations firm Ervin Hill Strategy. He most recently was a senior staffer to Sen. Jim Inhofe (R-Okla.).

... Jennifer Mullin started as director of public advocacy at Exelon. She's a Tom Vilsack and Tom Harkin alum and was most recently at Uber as a senior member of the public affairs team. ... The Atlantic Council has named **Jason Marczak** as the new director of its Adrienne Arsht Latin America Center.

WELCOME TO THE WORLD - Scott Jennings, principal at RunSwitch Public Relations in Louisville and a Bush WH alum, and **Autumn Jennings,** senior accountant for American Society of Oncology in Alexandria, email friends and family: "Autumn and I are pleased to announce that baby #4 has arrived! Our latest came this morning (August 30) at 9:25 a.m. He weighed seven pounds and is 19 and ¾ inches long (the smallest of the four Jennings brothers). Mama and baby are resting comfortably at Baptist East Hospital in Louisville, KY. The baby came quickly [Wednesday] morning - we walked into this place at 8 a.m.! This baby has a name: Harlan Lowell Mitchell Jennings." ***Pic*** http://politi.co/2wV4a5l

BIRTHDAY OF THE DAY: NYT congressional correspondent **Thomas Kaplan** . How he's celebrating: "This is my first birthday in Washington - I moved here at the start of the year - and I'll be getting drinks with friends in Shaw. This should be a big improvement over my birthday last year, when my celebration consisted of sitting around for hours in the Cincinnati airport after covering a Hillary Clinton speech." **Read his Playbook Plus Q&A:** http://politi.co/2ilwFwH

BIRTHDAYS: Tommy Vietor, cohost of "Pod Save America," host of "Pod Save the World" and founder of Crooked Media ... NYT's Patrick Healy ... Michael Finnegan ... Ryan Stanton, director of U.S. gov't affairs and comms at Rio Tinto and a Sphere and

Levick alum (hat tip: Jim Courtovich) ... Hillary DeParde ... Lauren Fine, press secretary for Whip Scalise ... former Rep. Marlin Stutzman (R-Ind.) ... Politico's Kim Hefling and Paul Demko ... Ed Goeas, president and CEO of the Tarrance Group ... Rachel Oliver ... Lenny Stern, co-founder of SS+K (h/t Jon Haber) ... Politico Europe's Mathilde Ciocci ... Alison Schwartz ... Paul Garrahan ... Scott Shalett ... Jennifer Shutt ... Christopher Dickey, Paris-based foreign editor for The Daily Beast ... Ryan Ellis, tax consultant and Akin Gump consultant ... Mattie Duppler, who celebrated her 30th with a training ruck last night with her friends as they prepare for their October GORUCK to raise money for the Third Option Foundation ...

... Alex Schriver, SVP of public affairs at Targeted Victory ... Brian Johnson, aka the Hungry Lobbyist, federal affairs director at American Petroleum Institute, who celebrated with friends at Dacha in Shaw yesterday, the one year anniversary of his engagement -- he gets married to Morgan Gress in a month ... Meghan Barr ... Jess Levin ... Nick Horowitz ... Fox News' Leland Vittert ... Justin Meyers ... Alison Fox ... Ramzi Nemo ... Jordan Ball ... Kaylin Minton ... Sam Merchant ... Ida Rukavina ... Brian Garcia ... Lori Stith ... Deadspin editor Tim Marchman ... Adam Dolin, associate at the Global Impact Investing Network (h/t Michael Knopf) ... West Foster ... Neil Alpert ... Bennett Resnik, manager of gov't relations/regulatory affairs at Cardinal Infrastructure ... Elizabeth Pemmerl ... Elizabeth Whitehouse ... Kent Klein ... Jill Rackmill ... Beth Roberts ... Iris Krasnow ... John Leary ... Liz Kurantowicz ... Steve Smith (Calif.) ... Tricia Yates ... Karisa Johnson ... Ethan Gray ... Barb Helmick ... Philip Smucker ... Gabbrealle Allen (h/ts Teresa Vilmain)

MONEY TALKS - "Historic glut of well-funded Democrats endanger GOP House" by Campaign Pro's Elena Schneider: "An unprecedented wave of well-funded Democrats have launched campaigns against Republican members of Congress this year, setting the stage for a true battle for control of the House of Representatives in the 2018 midterm election. Animated by opposition to President Donald Trump and Republicans' congressional majorities, at least 162 Democrats in 82 GOP-held districts have raised over $100,000 so far this year, according to a POLITICO analysis of FEC data. ... The Democrats' fundraising success, especially from a glut of candidates who have never run for office before, has set off alarm bells for GOP strategists watching the House landscape develop. 'That's something that should get every Republican's attention in Washington,' said Jason Roe, a Republican strategist who works on House races. 'These first-timers are printing money.'" **Full story.**

OL' VIRGINNY - "'Our democracy is at stake,' Obama says on Virginia campaign trail" by Politico's Edward-Isaac Dovere: "Fresh from New Jersey after making an appearance for the Democratic gubernatorial candidate there, Phil Murphy, his own former ambassador to Germany, [former President Barack] Obama uncorked. He argued that this year's elections are an existential moment that should - if Democrats do what he's kept telling them to do, without much success, and vote - be the start of reasserting an American politics and society that turns away from what's embodied by President Donald Trump. 'We need you to take this seriously. Our democracy is at stake,' Obama said." **Full story.**

-NEW THIS A.M. - Americans for Prosperity launches $1 million mail, ad blitz: Americans for Prosperity's Virginia chapter is launching a direct mail and digital ad blitz targeting Democratic gubernatorial candidate Ralph Northam, to go along with the Koch-backed group's ever-present field program. The $1 million program includes mailers attacking Northam for supporting tax increases as part of a 2013 transportation deal, and a 30-second digital ad featuring a charter school vice principal from Richmond criticizing Northam for voting against education savings accounts. Watch the ad here.

OPTING OUT - "Ohio's Tiberi to leave Congress," by Campaign Pro's Elena Schneider: "Ohio Rep. Pat Tiberi will not seek reelection and plans to resign early to lead the Ohio Business Roundtable, according to a statement the incumbent Republican released [Thursday]. 'Today, it

is with a humble and thankful heart that I announce I will not be seeking reelection,' Tiberi said in a statement. 'While I have not yet determined a final resignation date, I will be leaving Congress by January 31, 2018.' A Republican official briefed on Tiberi's thinking said the Ohio Republican plans to stick around 'to help the House pass tax reform.'" **Full story.**

- A handful of GOP names are already floating as possible replacements, including state Rep. Mike Duffey, state Sen. Kris Jordan and state Sen. Jay Hottinger. Tiberi's district is reliably Republican.

- "Syracuse mayor won't run for Congress," by POLITICO New York's Jimmy Vielkind: "Syracuse Mayor Stephanie Miner, a Democrat who will be forced from office this year by term limits, said she will not mount a challenge to GOP Rep. John Katko in the state's 24th District. ... The 47-year-old is also pondering a gubernatorial run, and this weekend met with New York City Councilman Jumaane Williams. Both have criticized Gov. Andrew Cuomo, a nationally aspirant Democrat who says he will seek a third term in 2018." **Full story.**

OPTING IN - "Salt Lake County Mayor Ben McAdams jumps into U.S. House race against Rep. Mia Love," via The Salt Lake Tribune's Taylor W. Anderson: "Ben McAdams, the Democratic mayor of Salt Lake County, announced he is running for Utah's 4th Congressional District, teeing up a 2018 challenge against two-term Republican Rep. Mia Love. McAdams, a former state senator who was re-elected to his second term as mayor of the state's largest county in 2016, is known as one of the state's most politically popular and ambitious Democrats." **Full story.**

AT HEADQUARTERS - "Shake-Up at Democratic National Committee, Longtime Officials Ousted," via NBC News: "A shake-up is underway at the Democratic National Committee as several key longtime officials have lost their posts, exposing a still-raw rift in the party and igniting anger among those in its progressive wing who see retaliation for their opposition to DNC Chairman Tom Perez. ... The removal and demotion of a handful of veteran operatives stood out, as did what critics charge is the over-representation of Clinton-backed members on the Rules and Bylaws Committee, which helps set the terms for the party's presidential primary, though other Sanders and Ellison backers remain represented." **Full story.**

- "Lawmakers unveil bill to thwart Russian election ads on social media," by POLITICO's Ashley Gold and Nancy Scola: "A bipartisan group of lawmakers on Thursday unveiled a bill

to make it harder for Russia to secretly interfere with future U.S. elections, by forcing social media companies to disclose the buyers of online political ads. The measure from Sens. Amy Klobuchar, (D-Minn.), Mark Warner (D-Va.) and John McCain (R-Ariz.), and Reps. Derek Kilmer (D-Wash.) and Rep. Mike Coffman (R-Colo.), would expand political ad disclosure rules beyond print, radi, and television to the internet. It would include not only material that is explicitly an advertisement, but also other forms of online paid content like so-called sponsored posts. If the bill becomes law, the major online platforms like Facebook and Google - and any site with 50 million or more U.S. monthly unique visitors - would be required to attach what the lawmakers call 'clear and conspicuous' disclosures like the 'Paid for by Candidate Smith' that appear on ads in other mediums. More than that, though, the bill would make the tech companies keep records of anyone who even attempted to purchase a political ad, as long as the ad buys total $500 in any one year." **Full story.**

AIR WAR - Super PAC ad in Wisconsin highlights Nicholson's military service: "A super PAC backing businessman and veteran Kevin Nicholson in Wisconsin's Senate race is out with an focusing on Nicholson's military service." **Watch the ad here. Full story.**

- Great America Alliance attacks Jones in new Alabama ad: "Great America Alliance, a 501(c)(4) backing President Donald Trump's agenda, is out with a new television ad attacking Democrat Doug Jones in Alabama's Senate race. The ad attacks Jones, a former U.S. attorney in the state, over his stance on abortion. The ad will run digitally this week and move to television next week." **Watch the ad here. Full story.**

- Super PAC launches to back Braun in Indiana race: "A top Republican strategist will lead a super PAC backing state legislator and businessman Mike Braun in Indiana's Senate race. Norway Hill Associates President Dave Carney, a New Hampshire-based strategist who has worked for Texas Govs. Rick Perry and Greg Abbott and Wyoming Sen. John Barrasso, will lead the group, called Our Indiana Voice." **Full story.**

REVOLUTION ROADBLOCKS - "Mega donor Foster Friess battles against Steve Bannon's war on GOP establishment," by Fox Business' Brian Schwartz: "Conservative mega donor Foster Friess said in an interview with FOX Business that he will not be joining Bannon's ranks in his fight against Republican leaders such as Sen. Mitch McConnell (R KY) because he believes the best way to pass legislation is to do it the conventional way: go after the opposing party. 'I can understand [the] frustrations of some of my fellow Republicans, but I believe they are wrong,' Friess said in an email to FOX Business. 'While Steve Bannon wants to replace Republican incumbents I want to champion the effort [and for] that money be devoted instead to replacing the ten Democrats in states where President Trump won. I do not intend to raise money to defeat fellow Republicans. My efforts will be spent on raising money to defeat Democrats so we have more Republicans to pursue our agenda.'" **Full story.**

THE MORE YOU KNOW - "Inside the Campaign Merch Graveyard," by GQ's Elaina Plott: "So what happens with all the stuff that a company like Hammerstone can't sell? Campaign volunteers are usually gifted the T-shirts and other basic apparel: a Republican operative who worked on the Rubio campaign tells me that kind of merch is given out first to volunteers, with the rest donated to someplace like Goodwill. Similarly, Moira Muntz of the Bernie Sanders

campaign says they were able to get rid of most stuff by sending it to volunteers. As for leftover yard signs, [My Campaign Store director Jason] Worrix says he encourages campaigns to give them to the Boy Scouts and Girl Scouts." **Full story.**

CASH INFUSION - The Democratic Governors Association announced Thursday that it's putting another $1 million into Northam's gubernatorial campaign in Virginia. Per a press release: "Today the DGA announced it is sending another $1 million to Ralph Northam in the Virginia governor's race. The donation brings the DGA's total investment in the race to just over $5 million. Northam already has a cash advantage over his opponent Ed Gillespie. This latest donation puts the campaign in a strong position heading into the final weeks of the campaign. 'This latest $1 million investment will help continue Ralph Northam's momentum heading into the final stretch of the campaign,' said DGA Executive Director Elisabeth Pearson. 'The DGA is committed to supporting Ralph's campaign to bring economic opportunity to all Virginians. We look forward to continuing to support Ralph's campaign over the final 3 weeks.'"

- The Republican Attorneys General Association has sent Virginia attorney general candidate John Adams an additional $775,000, bringing the organization's investment in the race to $3.525 million. During the second and final debate between Adams and Attorney General Mark Herring, a Democrat, the group plans to use a special snapchat filter during the debate in Leesburg hitting Herring for giving "staff backdoor pay raises." Finally, RAGA has taken out a full-page color ad in Loudoun Now to also ding Herring on pay raises.

"Honestly, voters in the Commonwealth should be deeply troubled by Mark Herring's backdoor pay raises for staff. This decision was wrong, and he knows it," RAGA executive director Scott Will said. "Unfortunately, it's the norm and not the exception for Mark Herring. He is a political activist masquerading as the attorney general."

THIRD QUARTER FUNDRAISING - Virginia Republican Senate Candidate Corey Stewart raised about $190,000 and has about $150,000 on hand.

FROM THE COURTROOM - Menendez defense could rest next week, via POLITICO New Jersey: "The defense for Sen. Bob Menendez (D-N.J.) and co-defendant Salomon Melgen could rest as soon as next week, attorneys said Wednesday. Menendez attorney Abbe Lowell told Judge William Walls during a sidebar conference Wednesday morning that if Menendez and Melgen don't testify, he anticipates wrapping up at the end of next week." **Full story.**

STAFFING UP - Lujan Grisham's chief-of-staff joins campaign: Dominic Gabello has left as chief of staff to New Mexico Rep. Michelle Lujan Grisham to join the congresswoman's gubernatorial campaign as manager.

CODA - QUOTE OF THE DAY: "There's no perfect way to make that phone call" - White House chief of staff John Kelly during a press briefing Thursday discussing calling the families of fallen soldiers.

Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

Methane Hot Spot in West Troubles Regulators and Industry

Posted August 03, 2017, 7:01 A.M. ET

By Alan Kovski

The Four Corners area of northwestern New Mexico and southwestern Colorado has been described as an especially prominent hot spot for methane leaking and venting—and illustrates why the Obama administration issued tougher federal regulations in 2016 to govern oil and gas operations on federal and Indian lands.

Emissions of natural gas—mostly methane—contribute to climate change. Some of the hydrocarbon molecules in the mix of gases also add to ground-level ozone, which is linked to respiratory and cardiovascular effects at high levels of exposure. From a business perspective, the emissions are a waste of natural resources.

The Bureau of Land Management's 2016 Methane and Waste Prevention Rule, commonly called the venting and flaring rule, put oil and gas companies and some state officials on the defensive. They argued that it would add significant costs; that existing regulations were adequate; and that companies already had an economic incentive to capture the gas and sell it for a profit.

Companies in the Four Corners areas produce natural gas from layers of coal and separate gas deposits. ConocoPhillips Co. was for years the the largest operator in the region but on July 31 completed the sale of its assets there to Hilcorp Energy Co. Other notable producers in the area include BP Plc and WPX Energy Inc. Chevron Corp. sold its assets in the area in the second quarter.

It's not necessarily easy to say why the Four Corners area may be worse for methane emissions than other areas. Geology, weather, local infrastructure, state regulations, and the limitations of methane detection systems all play a role.

Charged Political Issue

Some states have taken action to varying degrees and report declining emissions. More federal action awaits Interior Department decisions on how the Trump administration will change the venting and flaring regulations.

The Bureau of Land Management, an Interior Department agency, didn't criticize any state when it issued the venting and flaring rule. But the Four Corners' methane plume became a charged political issue, nevertheless.

Sens. Maria Cantwell (D-Wash.) and Michael Bennet (D-Colo.) singled out the New Mexico portion of the methane plume when they participated in a Washington press conference May 9. One day later, they helped defeat a congressional attempt to rescind the BLM rule.

In June, the Interior Department suspended compliance with those parts of the rule not already in effect and said it will either rescind or revise the rule. The suspension of the regulations pending judicial review was quickly challenged in court by the attorneys general of California and New Mexico.

"Believe me, this was not done without some serious discussions with the lawyers at the Department of Interior," attorney Vincent DeVito, counselor to the Interior secretary on energy policy, said July 27 at an annual meeting of the U.S. Energy Association.

Satellite and Airborne Detection

A 2014 NASA report turned the spotlight on the Four Corners, when satellite detection of methane plumes found the largest single plume over that area.

A later study, led by a scientist at NASA's Jet Propulsion Laboratory at the California Institute of Technology, used two airborne spectrometers in April 2015 for infrared measurements that identified 250 methane point sources in the Four Corners area.

"This finding confirms earlier assumptions that most of the enhanced methane is related to natural gas extraction, as well as coal mining but also that there is not a single source explaining most enhancements," the 2016 report said, referring to enhanced emissions. It was published in the Aug. 30, 2016, issue of the Proceedings of the National Academy of Sciences.

The most prominent identified leaks came from gas processing facilities, storage tanks, a couple of gas pipelines, and a venting coal mine. The spectrometers could detect individual plumes, but not measure volumes, which were inferred from the plume sizes.

All of which doesn't mean the states were sitting by idly while methane leaked.

Colorado Takes Action

Colorado and New Mexico have tightened their emissions regulations during the past three years, as have other states. For Colorado, 2015 was the first full year of new regulations requiring, among other things, hydrocarbon leak detection, which includes methane detection.

Although the regulations don't specify infrared cameras, in practice that has been what companies use, according to Jeremy Neustifter, a planner in the Air Pollution Control Division of the Colorado Department of Public Health and Environment.

"It's still early to tell what effects we have seen" from the relatively new regulations, especially given that 2016 results have not been fully vetted yet, Neustifter told Bloomberg BNA July 27. And the program gets good marks from an industry group.

"The leak detection and repair program has been working fairly well," according to Scott Prestidge, spokesman for the Colorado Oil & Gas Association.

Colorado has seen declines in methane and ethane emissions and ozone concentrations, but specifying the exact reasons for the declines isn't so simple, Neustifter said.

The drop in emissions of volatile organic compounds in Colorado from 2011 to the present, not just under the latest regulations, have been significant, "and the oil and gas industry is responsible for three-quarters of that reduction," Prestidge said.

Individual companies didn't respond to requests for information on methane control strategies.

New Mexico Acts

New Mexico has for several years required operators to obtain special permission for venting or flaring after 60 days of drilling operations. Starting May 1, 2016, the state also requires a gas capture plan for all new applications for permits to drill.

But the New Mexico gas capture plan doesn't require leak detection, according to Jon Goldstein, director of regulatory and legislative affairs for the conservation group Environmental Defense Fund. That leaves New Mexico behind both Colorado and Wyoming, Goldstein said.

Venting and flaring in the state have gone down, David Catanach, director of the Oil Conservation Division within the New Mexico Energy, Minerals and Natural Resources Department, said. The percentage of total gas production in New Mexico was almost 1.5 percent in January 2016 and down to 0.89 percent in January 2017, he said.

The 2016 BLM regulations would have gone beyond New Mexico's by requiring leak detection that would have resulted in infrared camera use, said Dave Mankiewicz, assistant field manager for minerals in the BLM Farmington, N.M., field office.

Why Worse in Four Corners?

Mankiewicz, a geologist with much industry and government experience, offered some details on why the Four Corners area—also known to geologists as the San Juan Basin—might appear to have more methane leakage than other areas.

First there are topography and meteorology. The area has a bowl shape where atmospheric inversions often occur, trapping gases longer near the surface of the Earth, where satellites can spot them. By contrast, oil and gas production areas like the oil-rich Permian Basin of western Texas and eastern New Mexico are in flatter lands, where gases quickly disperse via air currents, he said.

Goldstein agreed that topography and air inversions were a basic problem for the area.

Neustifter in Colorado said inversions also trouble Wyoming, where winter inversions trap volatile organic compounds (a broad category including natural gas) and nitrogen oxides. Wyoming requires quarterly leak inspections on new and existing wells.

Then there's the oil and gas companies' heavy reliance in the Four Corners area on gas-driven equipment, such as pumps and compressors, rather than electrically powered equipment—meaning

more opportunities for gas leaks.

The gas to drive the equipment comes from the leases in the San Juan Basin, amounting to 38 percent of all on-lease use of gas in the U.S., Mankiewicz said.

Another problem is the large number of gas seeps. The Four Corners area includes the Fruitland Formation, one of the most gas-rich coal outcrops, Mankiewicz said. And while gas operations appear to dominate the leaks, there also is coal mine venting and leaking.

'Market Failure'

Two industry groups, the American Petroleum Institute and Western Energy Alliance, said operators faced the prospect of significant expenditures to comply with provisions of the BLM rule that were scheduled to start operating in January 2018. Those now are suspended pending review.

Western Energy Alliance specifically noted that the requirement for leak detection and repair programs, and the standards for storage tanks and pneumatic devices would require operators to begin purchasing and installing tens of thousands of replacement parts in the near future.

Companies have an economic incentive to capture gas and sell it, but the incentive is not strong enough, especially with gas prices low, Environmental Defense Fund's Goldstein told Bloomberg BNA.

"It's just not a strong enough driver," Goldstein said. "It's a market failure."

If the BLM chooses to revise rather than simply rescind the rule, it could retain the leak detection and repair requirements while jettisoning much else, but the agency has not revealed its plan. It's very likely that whatever the agency does will be tested in court for compliance with the National Environmental Policy Act, Administrative Procedure Act, Mineral Leasing Act, and Federal Land Policy and Management Act.

Nuclear Plant Closure Quashes Tax Credit Need, Graham Says

Posted August 03, 2017, 02:05 P.M. ET

By Brian Dabbs

An early extension of a high-profile nuclear tax credit is no longer needed following the closure of a nuclear plant in South Carolina, Sen. Lindsey Graham (R-S.C.) told Bloomberg BNA Aug. 3.

The statement marks a reversal of the senator's position on the production tax credit, which currently sunsets at the beginning of 2021. Graham previously spearheaded the early extension effort in the Senate.

But the July 31 decision by Scana Corp. to abandon an expansion project at the V.C. Summer plant in South Carolina shows that a tax credit won't prop up the industry, Graham said.

"That's probably the end of a nuclear renaissance," he told Bloomberg BNA. "Why do you need production tax credits if you're not building reactors?"

Scana said the move would save utility customers $7 billion.

Brouillette Heads to Energy Department Following Heller Sign-Off

Posted August 03, 2017, 12:42 P.M. ET

By Brian Dabbs

The Energy Department is set to add a deputy for Secretary Rick Perry following the Senate's confirmation of Dan Brouillette Aug. 3.

The chamber, on a vote of 79-17, approved Brouillette after Sen. Dean Heller (R-Nev.) lifted a hold on his nomination. Brouillette formerly served at the Energy Department during the George W. Bush administration.

As recently as Aug. 1, Heller said he was blocking the nomination because Brouillette hadn't responded to his inquiry over the nominee's position on the Yucca Mountain nuclear waste repository. A spokeswoman for Heller said the senator made "progress" on resolving the standoff with Brouillette.

Heller sent the inquiry, which focused on the nominee's support for consent-based siting of a waste repository, nearly two months ago. The spokeswoman didn't respond to a followup request by Bloomberg BNA to obtain more details. Heller was the lone Republican to vote no on the nomination.

A hold is an informal Senate tactic that typically signals a senator will force full debate on a nomination or legislation. The Brouillette nomination received only 15 minutes of debate prior to the vote, an indication that the hold had been lifted.

The Nevada congressional delegation largely opposes the permanent repository at Yucca Mountain, arguing the project presents risks to the environment and surrounding communities. A bill sponsored by Heller (S. 95) would require any such facility to first receive consent from the state's governor, Indian tribes and local governments. Gov. Brian Sandoval (R-Nev.) opposes a repository at Yucca.

Brouillette has been senior vice president of the United Services Automobile Association, an organization providing financial services to military personnel, veterans, and their families. Before that he was a vice president at Ford Motor Co. He served as an assistant secretary of energy for congressional and intergovernmental affairs from 2001 to 2003.

Brouillette previously worked in Congress for the House Energy and Commerce Committee and for lobbying firms, including FleishmanHillard Inc. His clients at that firm included Entergy Corp., Allegheny Energy Inc., and Peabody Energy Corp., according to OpenSecrets.org, a project of the Center for Responsive Politics that tracks money in politics.

Electric-Car Revolution Shakes Up Biggest Metals Markets

Posted August 03, 2017, 7:35 A.M. ET

By Mark Burton and Eddie van der Walt

The revolution in electric vehicles set to upturn industries from energy to infrastructure also is

creating winners and losers within the world's biggest metals markets.

While some of the largest diversified miners like Glencore Plc argue that fossil fuels such as coal and oil still play a crucial role supplying energy needs, they also will benefit the most from a move to electric cars, requiring more cobalt, lithium, copper, aluminum, and nickel.

The outlook for greener transportation got a boost this year as the U.K. joined France and Norway in saying it would ban fossil-fuel car sales in coming decades. That's as Volvo AB announced plans to abandon the combustion engine and Tesla Inc. unveiled its latest, cheaper Model 3. Such vehicles will outsell their petroleum-driven equivalents within two decades, Bloomberg New Energy Finance estimates.

"For some of the metals, it's a complete game-changer," said Simona Gambarini, a commodities economist at Capital Economics Ltd. in London. "We've already seen a big impact on some metals like cobalt and lithium, which have soared over the past couple of years."

Electric cars contain about three times more copper than a regular vehicle, according to Glencore. Even more is needed for charging stations, with Exane BNP Paribas seeing such infrastructure adding about 5 percent to demand by 2025. Lithium, cobalt, graphite, and manganese used in batteries also will see more demand.

Copper and Cobalt

Glencore will get a boost as rising electric-vehicle sales lend support to copper prices, as well as from its position as the world's largest cobalt producer, according to Jefferies Group LLC. Freeport-McMoRan Inc. and First Quantum Minerals Ltd. are also top picks for long-term investors looking to benefit from the trend, the brokerage said in a note Aug. 2.

Markets are responding. Cobalt has surged 70 percent on the London Metal Exchange this year, after jumping 37 percent in 2016. Lithium prices have extended gains in recent years. Copper is also up 14 percent in 2017 on signs of resurgent economic growth, particularly in China.

On the flip side, lead producers such as Recylex SA and Campine SA may have to adapt operations to the new era. The main end-use for lead is in starter batteries for petrol and diesel engines. Electric vehicles, by contrast, are powered by lithium-ion units.

"It's a serious risk for lead demand, unless you find different applications to make up for the decline," said Michael Widmer, head of metals market research at Bank of America Merrill Lynch in London.

Lithium vs. Lead

Yet with lead prices up 17 percent this year, the best of any major industrial metal traded in London, investors see only distant risks. "I'm not so sure things will turn out" so badly for lead, as cheap oil prices will help keep conventional cars competitive, said Herwig Schmidt, head of sales at metals brokerage Triland Metals Ltd. If demand for lead does drop, it will do so gradually, he said. "Maybe that will be the case in 10 years or so."

In the meantime, stricter emissions rules could raise demand for hybrid cars that rely on advanced lead-intensive batteries to cope with frequent engine stops and starts, according to the International Lead and Zinc Study Group.

It's not just shifts in use of batteries and wires that are forcing change.

Lightweight metals like aluminum are replacing steel to allow cars to travel further on less power. That already expanded demand by about 1.6 million metric tons, or 2.7 percent of global output, from 2013 to 2016 in a trend that's likely to accelerate, Widmer said.

Aluminum vs Steel

Aluminum is up 14 percent this year as rising use by automakers has run into supply curbs in China, pushing the market into deficit.

Steelmakers are fighting back. AK Steel Holding Corp. has teamed up with General Motors Co. to try to use nanotechnology to make lightweight vehicle bodies. ArcelorMittal and Tata Steel Europe also are among those developing lighter, stronger alloys to fend off the competition.

"The development of ultra-high–strength steel is meant to address that," said Sylvain Brunet, an analyst at Exane BNP Paribas. There's been "some success in Europe."

Platinum also could struggle to cope with the end of petroleum.

Almost half the precious metal used last year was sold to the auto industry for use in catalytic converters to curb diesel pollution, according to research from Johnson Matthey Plc, one of its top refiners.

"A lot of commodities that are in demand right now, like oil and platinum, may not be in demand in the future," said Bernard Dahdah, a commodities analyst at Natixis SA in London. "It's not that commodities overall will become less relevant, but we will see a reshuffling in terms of what is important in the next 15 years."

The platinum industry sees a continued need for converters in diesel-hybrid engines. Umicore SA, a maker of raw materials for batteries and engine catalysts, expects hybrids to still outnumber full-electric cars in 2025, Chief Executive Officer Marc Grynberg said Aug. 1.

"Given the expected evolution of battery costs, there may still be an advantage to buying a hybrid," he said.

Fuel-cell vehicles being developed by Toyota Motor Corp. and Hyundai Motor Co. that rely on platinum as a catalyst to generate energy from hydrogen promise the greatest opportunity for demand growth in the next 10 years, according to the World Platinum Investment Council lobby.

Yet, until such technology has been proven commercially, the industry is at risk from the shift away from fossil fuels.

"Diesel looks set to be the clear loser out of this substitution towards electric vehicles," said Brunet at Exane BNP Paribas.

German automakers, fighting for diesel's future, faced a setback last month after a Stuttgart court ruled in favor of banning the technology in the home city of Mercedes-Benz and Porsche.

Perhaps the most immediate danger from electric vehicles, though, is to analysts' predictions. Given

the tectonic shift away from oil and the competing technologies to replace the fossil fuel, the outlook for demand from the auto industry has never been so clouded.

"What it comes down to is the extent to which electric vehicles gain popularity," said Bank of America's Widmer. "For metals like copper and nickel, if you underestimate electric vehicle sales by one percentage point, you can add one percentage point to global demand."

U.K. Policy Change Seen Too Frequent for Smooth Energy Shift

Posted August 03, 2017, 8:51 A.M. ET

By Mathew Carr

The U.K.'s energy policies are confusing markets and limiting investment needed to spur a transition away from fossil fuels, according to a pro-business environmental group.

The government's willingness to move by itself in Europe to set a carbon-price floor and its threat to cap household energy tariffs is undermining the country's ability to win spending on clean energy and smart networks, said Volker Beckers, former chief executive officer of RWE AG's U.K. unit. Beckers was speaking in an interview before a report Aug. 3 by Forum for the Future, a pro-business environmental group, for which he was consulted.

"It's absolutely paramount we get this sorted," Beckers said by telephone. "The more political intervention we have in the markets, it'll undermine the ability of markets to deliver a true wholesale price of electricity—governments need to decide whether they believe in a fully competitive and free market, or they want to intervene more, as they're already doing."

The report concludes that governments, including Britain's, have been caught off guard by the pace and scale of the transition away from fossil fuels. European utilities have lost more than 100 billion euros ($119 billion) of value since 2008 and new companies are beginning to gain traction, it said.

The Department for Business, Energy and Industrial Strategy didn't immediately comment on the criticism contained in the report, when contacted by email.

The report draws on interviews with six former executives and policy makers: Beckers, Ed Davey, energy secretary in 2012–2015; Charles Hendry, U.K. energy secretary in 2010–2012, Steve Holliday, CEO of National Grid Plc in 2007–2016; Joan MacNaughton, director general of energy at the former Department of Trade and Industry in 2002–2006; and Ian Marchant, CEO of SSE Plc in 2002–2013.

The U.K. carbon price floor has made both coal and cleaner natural gas generation less profitable. With doubt about future carbon and wholesale power prices, there's a risk that free markets may not recover to levels high enough to sustain a cleaner system, Beckers said. Two gas plants commissioned by him before 2010 were needing prices of 70 pounds per megawatt-hour to break even, he said. That's about 56 percent more than average prices since then.

"You can easily work out that the economics of these power stations do not stack up," Beckers said. "Hence, we've seen massive impairments of generation assets across Europe."

Governments need to boost the EU carbon price, which will help lift power contracts, and they probably will do so after about a decade of trying, Beckers forecast. European policy makers are seeking to install a market reserve in 2019 to deal with a glut in their emissions program, while the U.K. is consulting how to price or tax its emissions after it exits the European Union.

Plunging costs for wind and solar technology have complicated policy making, MacNaughton said by phone. Still, the U.K. government had made it more difficult to meet its emissions targets cheaply by having an aversion to onshore windfarms and by favoring the EDF SA nuclear project at Hinkley Point, which was encouraged in an "expensive" fashion, she said. EDF is guaranteed to earn 92.50 pounds a megawatt-hour for the power it generates at the nuclear site over 35 years.

"We've had a very strong signal from the Climate Change Act and the carbon budgets, but it's not quite strong enough," she said.

Arsenal Soccer Club Tackles Climate Change With Clean Energy

Posted August 03, 2017, 12:15 P.M. ET

By Jessica Shankleman

Arsenal Football Club plans to power its stadium with renewable energy produced from wasted food and solar panels in a bid to reduce greenhouse gas pollution.

The North London club signed a contract with Octopus Energy Ltd. to source energy from anaerobic digestion plants and solar farms. It will offset carbon dioxide emissions from fossil fuels.

The contract was signed Aug. 3 for an undisclosed value followed a yearlong trial by Arsenal, a spokeswoman for the utility said by phone. Wasted food from the club will be sent to the plants that break down organic waste to create biogas and electricity.

Octopus was started in April 2016, backed by renewable energy investors at Octopus Capital Ltd. In the first year the switch helped Arsenal save 2.32 million kilograms (5.1 million pounds) of carbon dioxide, according to the statement.

Arsenal isn't the only soccer club to use green energy. Forest Green Rovers, a vegan team based in Gloucestershire that's owned by the clean-energy supplier Ecotricity Group Ltd. Chairman Dale Vince, already uses a solar-powered robot lawnmower. Vince also wants his club to be the greenest in the world and is building a new stadium made almost entirely of wood.

Other companies like Apple Inc., Facebook Inc. and Google parent company Alphabet Inc. all plan to run only on green energy over the next few years, marking a growing drive by corporations to buy renewable energy.

Germany Giving Gigafactory a Home in Latest Challenge to Tesla

Posted August 03, 2017, 8:34 A.M. ET

By Brian Parkin

German executives are preparing to announce a new home for a lithium-ion battery plant designed to rival the output at Tesla Inc.'s Gigafactory.

Terra E Holding GmbH will choose one of five candidate sites in Germany or a neighboring country next month to build its 34 gigawatt-hour battery factory, Frankfurt-based Chief Executive Officer Holger Gritzka said in an interview. The former ThyssenKrupp AG manager has helped to assemble a consortium of 17 German companies and won government support for the project, which will break ground in the fourth quarter of 2019 and reach full capacity in 2028, he said.

The battery factory is the latest sign that German industry, the motor behind the world's fourth-biggest economy, is gearing up for a new stage in the energy revolution. Lithium-ion batteries can help stabilize intermittent flows of wind and solar power on electricity networks. They're also projected to power millions of plug-in cars expected to roll off German production lines beginning early next decade.

"We have to be better in process technology than competitors, a constant step ahead," said Gritzka, who emphasized that Terra E will be counting on Germany's competitive edge in manufacturing robotics and automated production to make money.

Global battery-making capacity is set to more than double by 2021, reaching 278 gigawatt-hours, up from about 103 gigawatt-hours in the second quarter, according to Bloomberg New Energy Finance. Asia electronics makers including South Korea's LG Ltd. and Samsung SDI Co. currently control the market. Tesla will become the world's No. 2 battery maker once it finishes building its $5 billion, 35 gigawatt-hour Gigafactory in Nevada, according to the London-based researcher.

Merkel's Endorsement

Some of Terra E's consortium members also may become its clients, according to Gritzka, who declined to name companies participating. The project, which won 5.2 million euros ($6.2 million) in subsidies from Germany's Ministry of Education and Research, expects to need upwards of a billion euros before completion, the CEO said.

Terra E will be seeking strategic investors that are attracted by the government-paid research embedded in Terra's technology and German Chancellor Angela Merkel's endorsement of the company, said Gritzka. In May, Merkel broke ground at another 500 million-euro plant to assemble lithium-ion energy-storage units for Daimler AG, which produces Mercedes-Benz and Maybach luxury cars.

The company will focus its batteries on stationary units, according to Gritzka. The project aims to tap an emerging market for mobile and non-automotive power and storage, he said. The bet rests on projected faster demand for lithium storage in the next decade.

Turkey Awards First Wind-Power Contract to Siemens Gamesa

Posted August 03, 2017, 01:24 P.M. ET

By Onur Ant and Anna Hirtenstein

A consortium led by Siemens Gamesa Renewable Energy SA won the right to build 1 gigawatt of wind power in Turkey, outbidding competitors from China to the U.S. in the country's first wind auction.

The group won with a low bid of 3.48 U.S. cents a kilowatt-hour to sell electricity to Turkey's government, according results distributed Aug. 3 at the auction in Ankara. Siemens Gamesa partnered with Turkey's Turkerler and Kalyon at the auction, which needed 29 rounds to find a price.

"The aggressive bidding at 50 percent below the ceiling price shows that Siemens Gamesa really wanted to get into this market," said Keegan Kruger, wind analyst at Bloomberg New Energy Finance. "This tender also shows there's a shift in mentality among the turbine makers away from just being suppliers."

Eight groups participated in the auction, which set out rules requiring the winning bidder to build a turbine factory in Turkey and agree to employ a mostly local workforce. Energy Minister Berat Albayrak estimated that development costs for the wind projects will be more than $1 billion.

Capacity will be spread throughout Turkey. Before the auction, the government had selected seven regions for developers to choose from, including Eastern Thrace near Bulgaria, an area close to Ankara, and the city of Sivas in central Turkey.

German Investors

The participation of Siemens Gamesa, a Vizcaya, Spain-based company majority owned by Germany's Siemens AG, should improve ties with Berlin's government, Albayrak said after the tender, an apparent reference to months of diplomatic discord between Turkey and Europe's biggest economy.

The win by a German firm is "really important in showing bilateral problems between the Turkish and German governments is not getting in the way of German business interests in Turkey," Tim Ash, an emerging-market strategist at BlueBay Asset Management in London, said in an e-mailed note. "The Turkish government has been really keen to demonstrate this and re-assure German business."

Invenergy Issues Green Bond to Finance Wind Park in Uruguay

Posted August 03, 2017, 01:01 P.M. ET

By Vanessa Dezem

Invenergy Wind LLC, a Chicago-based energy company, issued a $137 million green bond to finance a wind park in Uruguay.

It is the first green bond in Uruguay, according to Emilio Fabbrizzi, head of project finance Latin America at DNB Markets, who structured the transaction. The deal was backed by the Inter-American Investment Corporation, known as IIC.

"It is an innovative way to issue a bond," said Fabbrizzi. "Issuing it together with a multilateral bank

is more comfortable for investors as a country such as Uruguay is not big for the capital market. It is an investment grade country, attractive for this type of transaction."

The 70-megawatt Campo Palomas Wind Farm in the Salto Department of Uruguay was acquired by Invenergy last year from an Uruguayan subsidiary of Abengoa SA. Project financing was provided by the IIC, with DNB acting as the mandated lead arranger.

The goal of the bond issuance is to refinance the wind park, which is already operating. The state-owned utility Administracion Nacional de Usinas & Trasmisiones Electricas, known as UTE, will buy the plant's output under a long-term lease agreement.

"You can get more interest from investors when the bond is certified as green," said Salvatore Santoro, head of investment banking Sweden at DNB. "Demand for green bonds is increasing as insurance companies, asset managements, pension funds, among other players, are chasing opportunities to comply with requirements of allocating a portion of the money for sustainable activities."

Invenergy and its affiliates have more than 12,000 megawatts of projects in operation, construction or advanced development, including wind, solar, natural gas fueled power generation and energy storage.

From: Anna Palmer Jake Sherman Daniel Lippman
Sent: Mon 12/4/2017 6:11:26 PM
Subject: Playbook Power Briefing, presented by PhRMA: TRUMP backs ROY MOORE -- CORRINE BROWN sentenced to 5 years in prison -- WHITE HOUSE invites PELOSI and SCHUMER to meeting -- FREEDOM CAUCUS schedules emergency meeting

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by PhRMA

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

BREAKING -- THE WHITE HOUSE has invited **SENATE MINORITY LEADER CHUCK SCHUMER** (D-N.Y.) and **HOUSE MINORITY LEADER NANCY PELOSI** (D-Cailf.) to a meeting Thursday to discuss the "year-end agenda."

-- *Excerpt from their joint statement:* "We need to reach a budget agreement that equally boosts funds for our military and key priorities here at home including the opioid crisis, pension plans and rural infrastructure. We have to provide funding for community health centers and CHIP, as well as relief for the millions of Americans still reeling from natural disasters. And we must also come together on a bipartisan deal to pass the DREAM Act along with tough border security measures. There is a bipartisan path forward on all of these items."

GOVERNMENT FUNDING runs out on Friday.

WELCOME TO DECEMBER -- ATTN. PRESIDENT TRUMP -- THE HOUSE FREEDOM CAUCUS has scheduled an emergency meeting before the 6:30 p.m. vote series this evening. Many in the three-dozen member conservative caucus have voiced opposition to the leadership's strategy to fund the government for two weeks, and they have lingering tax concerns. And with a series of important votes coming up -- including the motion to begin formal Senate-House tax negotiations -- the HFC could have some leverage. If they stick together, they have the ability to single handedly block anything that comes to the floor.

-- MEANWHILE ... BUSY WEEK AHEAD: @StewSays: "This week the #Senate will confirm the nomination of Kirstjen Nielsen to be Secretary of @DHSgov, pass a clean, two-week CR and go to conference with the House on the #TaxReform bill."

Good Monday afternoon. Can't get enough of our latest Playbook Power List: 18 to Watch in 2018? Jake, Anna and Zach recorded a bonus Audio Briefing discussing some of the honorees and how we picked the list. ***Listen*** http://bit.ly/2BHOrFO ... ***The list*** http://politi.co/2jLwZIs

TRUMP BACKS MOORE -- WHITE HOUSE STATEMENT, via the pool at 12:40 p.m.**:** "The President had a positive call with Judge Roy Moore during which they discussed the state of the Alabama Senate race and the President endorsed Judge Moore's campaign," principal deputy press secretary Raj Shah said in a statement.

-- @realDonaldTrump at 6:17 a. m. : "Democrats refusal to give even one vote for massive Tax Cuts is why we need Republican Roy Moore to win in Alabama. We need his vote on stopping crime, illegal immigration, Border Wall, Military, Pro Life, V.A., Judges 2nd Amendment and more. No to Jones, a Pelosi/Schumer Puppet!" ... **at 7:00 a.m.:** "Putting Pelosi/Schumer Liberal Puppet Jones into office in Alabama would hurt our great Republican Agenda of low on taxes, tough on crime, strong on military and borders...& so much more. Look at your 401-k's since Election. Highest Stock Market EVER! Jobs are roaring back!"

-- REMEMBER: Ivanka said: "There's a special place in hell for people who prey on children. I've yet to see a valid explanation and I have no reason to doubt the victims' accounts."

-- @MooreSenate at 12:37 p.m.: "'Go get 'em, Roy!' - President Trump[.] Just got off the phone with President Trump who offered his full support and said he needs a fighter to help him in the US Senate. I look forward to fighting alongside the President to #MAGA!"

LEXINGTON HERALD LEADER -- "Jeff Hoover had sex with staffer and used donors to fund settlement, lawsuit alleges," by John Cheves: "The communications director for the Kentucky House Republican caucus sued the Legislative Research Commission on Monday, alleging that she is being unfairly punished for shedding light on sexual harassment claims by a female colleague who was in an 'inappropriate sexual relationship' with then-House Speaker Jeff Hoover of Jamestown.

"In her whistle-blower lawsuit, filed in Franklin Circuit Court, Daisy Olivo said she and a House aide who was in a relationship with Hoover both were targeted for punishment by Hoover's chief of staff, Ginger Wills. Wills and other House GOP staff members and lawmakers have shunned her in the weeks since the harassment scandal publicly broke and Hoover resigned as speaker, making it impossible for her to perform her duties, Olivo alleged.

"Olivo's suit contains several new or more specific allegations. She said her female colleague told her that the 'secret settlement' that resolved her harassment complaint against Hoover and three other Republican state representatives was constructed 'to avoid media scrutiny, and it was paid off the public record with private funds pooled from prominent campaign donors.'" http://bit.ly/2BxGC4z

FROM 30,000 FEET -- " Women Line Up to Run for Office, Harnessing Their Outrage at Trump," by NYT's Michael Tackett in Leesburg, Virginia: "For Wendy

Gooditis, a real estate agent in the Northern Virginia suburbs, the crystallizing moment came when she heard her state delegate suggest that he had fought gerrymandering in Virginia when his record said otherwise.

"For Mai-Khanh Tran, a pediatrician in Southern California, it was the day after the presidential election in 2016 and she looked into the eyes of a young patient with a brain tumor whose family had only recently obtained health insurance.

"For Andrea Ramsey, the president of a nonprofit children's health clinic in Kansas City, Kan., it was in May when her local congressman voted to repeal the Affordable Care Act.

None of the women had seriously contemplated running for public office before. They had no money or organization. But they were dismayed with the direction of the country, they said, starting with the election of President Trump, and finally decided to act. ...

"The largest increase by far is in the number of female House candidates -- 354 -- which includes 291 Democrats and 63 Republicans, according to data from the Rutgers center. The number of women challenging incumbents is almost four times the number at the same period in 2015. In the Senate, there are almost double the number of female candidates - 25 Democrats and 13 Republicans so far - than there were at this point in 2015, and about 10 times the number in the 2012 and 2014 elections." http://nyti.ms/2BH6wDO

CORRINE BROWN SENTENCED TO FIVE YEARS IN PRISON -- Florida Times-Union's Christopher Hong and Steve Patterson: "Former U.S. Rep. Corrine Brown was sentenced Monday to five years in federal prison for fraud and tax crimes that included raising about $800,000 for a sham charity. Brown's longtime chief of staff, Ronnie Simmons, was sentenced to 48 months in prison, and the charity's founder, One Door for Education President Carla Wiley, was sentenced to 21 months.

"U.S. District Judge Timothy Corrigan said he believed Brown used her position in Congress to achieve an 'admirable record of service.' However, he also said she abused the trust of that office in order carry out a criminal conspiracy." http://bit.ly/2ALI3km

HMM -- "Trump's lawyer claims responsibility for president's problematic tweet," by NBC News' Kristen Welker and Max Burman: "President Donald Trump's personal lawyer took responsibility Sunday for a tweet that Trump sent the previous day, in which the president said for the first time that he knew his former security adviser, Michael Flynn, had lied to the FBI before he fired Flynn in February. ...

"Interfering in the FBI's investigation could be construed as obstructing justice, potentially creating legal jeopardy for Trump. Within a few hours, Trump's personal lawyer, John Dowd, stepped in to say that he wrote the tweet, not the president. Dowd told NBC News that he drafted the tweet and then sent it to White House Social Media

Director Dan Scavino to publish. When asked for the original email he sent to Scavino, Dowd said he dictated it orally. 'I'm out of the tweeting business,' Dowd said with a chuckle. 'I did not mean to break news.'" http://nbcnews.to/2AILYgJ

THE PRESIDENT WEIGHS IN on the charge against Mike Flynn, per pooler S.V. Date of HuffPost: "I feel badly for Gen. Flynn. I feel very badly. He's led a very strong life, and I feel very badly about it. I will say this. Hillary Clinton lied many times to the FBI and nothing happened to her. Flynn lied, and it destroyed his life, and I think it's a shame. Hillary Clinton on the 4th of July weekend went to the FBI, not under oath, it was the most incredible thing anyone has ever seen, lied many times, nothing happened to her. Flynn lied, and it's like -- it ruined his life. It's very unfair."

NEWS FROM RICHMOND -- RICHARD CULLEN is stepping down as chairman of McGuire Woods. The former Virginia attorney general is representing VP Mike Pence in the Mueller investigation. Jon Harmon will take his slot.

COREY LEWANDOWSKI BOOK EXCERPT -- "'I've Got a Crook Running My Campaign': Donald Trump, Paul Manafort and me" in POLITICO Magazine -- an excerpt from "Let Trump Be Trump," by Corey Lewandowski and David Bossie: http://politi.co/2ijM03z

TAX UPDATE -- "Rep. Kevin McCarthy Calls For Corporate AMT Repeal," by WSJ's Rich Rubin: "A top House leader says Republicans need to repeal the corporate alternative minimum tax and reverse a late Senate change that has companies up in arms. 'That has to be eliminated because that would destroy R&D,' House Majority Leader Kevin McCarthy (R-Calif.) said on CNBC on Monday. Retaining the 20% corporate AMT creates a parallel tax structure. Companies would have to pay whichever tax is higher, and the AMT denies the research and development tax credit. That's a particularly important break for California's high-tech industry." http://on.wsj.com/2iNCVUL

FALLOUT FROM NRCC VS. NRSC TIFF -- "NRSC staffers resign after digital break-in," by Kevin Robillard: "Two fundraising staffers for the [NRSC] who broke into the computer servers of the House GOP campaign arm resigned late last week, Republican sources told POLITICO. The staffers, Laura Kleffner and Krista Madaio, had previously worked at the [NRCC]. Three Republican sources said last week that the NRSC aides used their old NRCC passwords to collect information on more than 200,000 donors." http://politi.co/2ANQBWC ... ***Last week's story*** http://politi.co/2AMi0Za

WAR REPORT -- "Did American Missile Defense Fail in Saudi Arabia?," by NYT's

Max Fisher, Eric Schmitt, Audrey Carlsen and Malachy Browne: "The official story was clear: Saudi forces shot down a ballistic missile fired by Yemen's Houthi rebel group last month at Saudi Arabia's capital, Riyadh. It was a victory for the Saudis and for the United States, which supplied the Patriot missile defense system. ...

"But an analysis of photos and videos of the strike posted to social media suggests that story may be wrong. Instead, evidence analyzed by a research team of missile experts appears to show the missile's warhead flew unimpeded over Saudi defenses and nearly hit its target, Riyadh's airport. The warhead detonated so close to the domestic terminal that customers jumped out of their seats." http://nyti.ms/2ANQsmp

HAPPENING TOMORROW -- Don't miss POLITICO's fifth annual Women Rule Summit featuring informative and forward-looking conversations with Kellyanne Conway, Kate Bosworth, Sec. Elaine Chao, Sen. Kirsten Gillibrand, Sen. Marco Rubio, Camille Hearst, and many more as they discuss how women are harnessing their power to make an impact. TODAY'S BEYOND THE BELTWAY -- Steinle family repeatedly said they do not want their daughter's death used politically -- Primary challenger emerges to Gov. Rauner http://politi.co/2jMh1gV

MEDIAWATCH -- POSTCARD FROM ZACH AT THE POYNTER JOURNALISM ETHICS SUMMIT -- CNN's Jim Acosta: "This is a different kind of president, it is going to require a different kind of playbook." ... "We are not part of 'the Resistance' but ... if journalism is attacked, we should resist. That is up to us." ... **Bloomberg's Margaret Talev:** "One of the challenges that seems new to me ... is that it feels like, in some sense, the press corps, particularly people in the briefing room have ... among some American news consumers, it feels like we've become a proxy for all their frustrations." ...

... The Weekly Standard's Stephen Hayes: "Asserting accuracy is not going to work. You have to demonstrate accuracy and earn that respect." ... "Too often in discussions like this ... we don't spend enough time looking at why people -- particularly conservatives -- are so skeptical of the kind of accuracy and the kind of news reporting we provide." ...

... WaPo's Marty Baron: "We're not in the business of pandering to anybody, we're not in the business of placating anybody ... I think we have to know who we are, have a strong sense of self, purpose and mission, and do that everyday." ... "I think we should've seen Donald Trump coming, or someone like him coming, before he

descended the escalator."

WAPO'S BEN TERRIS: "Why does conservative Armstrong Williams want to buy the liberal Washington City Paper?": "Williams is a small man ... [who] speaks without a filter - something that made him a go-to for reporters for much of the 2016 campaign - which gives the impression that he always means what he says. Even if that's not always the case. He volunteers that he's 55, though public records suggest he is 58. 'Either one works,' Williams says graciously, noting that at various times in his life it has been convenient to appear older or younger than he actually is. (Carson once said of his close friend that he's 'not necessarily the epitome of truth . . . He doesn't speak all things that are correct.')" http://wapo.st/2AVDzHj

Trump's Sluggish Pace of Staffing May Slow Hurricane Response

Posted September 06, 2017, 03:02 P.M. ET

By Todd Shields, Jennifer A. Dlouhy and Christopher Flavelle

The Trump administration's slow pace of appointments has left vacancies in key posts related to emergency response, something that may hamper efforts to help victims of Harvey's record rainfall and Hurricane Irma's punishing winds.

Deputies are missing from the Federal Emergency Management Agency, which spearheads relief in the early days after disasters, and at the Department of Housing and Urban Development, which helps get storm victims back into lodgings. The Environmental Protection Agency doesn't have a regional director in Texas whose duties would include responding to Harvey's inundation of polluted Superfund sites.

President Donald Trump has said he doesn't intend to fill "unnecessary" positions, and his administration is behind the appointments pace of the Obama and Bush White Houses. He has proposed slashing the EPA's budget by almost a third, HUD's by 13 percent, and FEMA's by 11 percent.

"To the extent that those kind of remarks and his indifference to appointments at senior levels reflect an animus toward government itself, there is undoubtedly a price to pay in the effectiveness of the country to respond to a variety of disasters," Paul Bledsoe, a lecturer on environmental policy at American University in Washington and a former official under President Bill Clinton, said in an interview.

EPA and FEMA public relations offices didn't immediately respond to emailed queries.

At the housing department—led by a skeptic of government, Secretary Ben Carson—nine of 12 top positions aren't filled, according to a tally kept by the Partnership for Public Service and the Washington Post. In six cases the Trump administration hasn't nominated somebody to fill the post; two nominees await Senate confirmation including Pamela Hughes Patenaude as deputy secretary

responsible for day-to-day operations.

Carson, in an interview broadcast Sept. 6 by National Public Radio, said his agency would take care of families left homeless by the storm.

"There's no question that it's harmful that we don't have our complete complement of people," Carson said, faulting the Senate for not confirming two high-level picks. "Fortunately, we have many people who have stepped up to the plate and we're working very hard to keep things moving in a positive direction."

Carson's department wins praise from some.

"HUD already has good, capable, competent, experienced leadership in place to run a successful recovery program," said Marion McFadden, who in 15 years with HUD helped lead disaster responses. She cited Neal Rackleff, a former housing director for the city of Houston, who is in place as a deputy at HUD with responsibility for disaster recovery.

"We have every indication he's well placed to take on this responsibility" after working effectively for the city including guiding flood relief, said McFadden, who is vice president with Enterprise Community Partners Inc., a nonprofit group based in Columbia, Maryland, that works on affordable housing.

At FEMA, where Administrator Brock Long has been in place since June, two top aides await Senate confirmation, including one whose position was created in response to shortcomings in the response to 2005's Hurricane Katrina, according to the Partnership for Public Service.

On Sept. 6, the House passed $7.4 billion for a disaster-relief fund. The measure must now be considered by the Senate. The Trump administration made its first relief request for Harvey on Sept. 1, and Category 5 Hurricane Irma is headed toward Florida Sept. 8, portending more damage.

Regional Offices

The EPA's response to Harvey will be hampered with few political staff installed in key posts, said Christine Todd Whitman, a Republican who led the agency under former President George W. Bush from 2001 to 2003.

Among the vacancies are the heads of almost all of EPA's 10 regional offices, who are on the front lines of interactions with states and local governments. A regional administrator just took the reins at Atlanta-based Region 4, but Dallas-based Region 6—which oversees activity in Texas, Louisiana and three other southern states—does not yet have a Trump-approved leader.

"It makes it difficult, because what you've got is a lot of career people in the regions without a leader who are worried every day about their job anyway," Whitman said. "They are afraid if they put a foot wrong they've signed their exit from the agency."

Hundreds of EPA workers are voluntarily leaving as Administrator Scott Pruitt works toward a one-fifth reduction of head count through buy-outs and other incentives.

"The agency is going to be hugely stressed if Irma comes on shore as it looks like she might, because a Category Five is a monster storm," Whitman said. "Without people in the regions, without your political people who can give some guidance to the career staff as to what they should be

doing, they're left to do it on their own, and that's just not an optimum way to organize a response to a crisis."

The federal response could benefit from one overall leader that works across agencies, said Amy Liu, director of the Metropolitan Policy Program at the Brookings Institution, a policy group in Washington.

"We need one person who wakes up every day and thinks about: How can the federal government be a steady partner to the Texas community—and even Florida if that becomes the case," Liu said.

EPA Harvey Response Hampered by Budget Cuts, Democrats Say

Posted September 06, 2017, 01:49 P.M. ET

By Dean Scott

The one-two punch of buyouts and budget cuts at the EPA could hamstring its efforts in the aftermath of Hurricane Harvey even as another storm bears down on South Florida, House Democrats warned today.

The EPA's counsel to the Inspector General, Alan Larsen, told members of a House Energy and Commerce Committee panel that the Environmental Protection Agency has key responsibilities in the wake of Harvey, which slammed Texas last week, including assessing and addressing fuel shortages; monitoring public water systems; securing Superfund sites; and assessing damage at major industrial facilities.

But Rep. Paul Tonko, (D-N.Y.) said the agency is being hamstrung by Trump administration budget cuts and a clampdown on climate and other environmental policies.

"Sadly, this administration is aggressively working to dismantle the EPA with unsound science," Tonko said. "These are foolish cuts, proven to be foolish, when we have disasters right before our very eyes," he said.

The EPA Inspector General's office as well as a representative from the Government Accountability Office appeared before the House Subcommittee on Oversight and Investigations to give an update on the EPA's implementation of their offices' recommendations to improve agency operations, including nearly 50 changes to environmental cleanup, pollution prevention, and hazardous and other waste programs.

About 20 percent of those recommendations, some dating back a decade, have yet to be implemented at the EPA, according to a GAO report unveiled at the hearing.

Several Republicans worry that the EPA has been ignoring other suggestions, including a GAO recommendation dating to 2010 that called on the agency to better evaluate its workforce.

"The agency is about people," Rep. Susan Brooks (R-Ind.) said. "I'm concerned that this agency has for a long period of time not accepted" recommendations that the EPA establish a mechanism to evaluate workforce planning and placement of employees.

EPA Last Inspected Flooded Arkema Plant in 2003

Posted September 06, 2017, 03:51 P.M. ET

By Sam Pearson

It's been 14 years since EPA inspectors last visited an Arkema Corp. facility in Crosby, Texas, that saw chemical explosions caused by flooding from Hurricane Harvey, a company official told Bloomberg BNA.

Arkema spokesman Stan Howard, and David Gray, a spokesman for the Environmental Protection Agency's Region 6 office in Dallas, both said the plant was last inspected under the agency's risk management program in 2003. The EPA is more likely to inspect high-risk facilities under the program "where offsite consequences impact a large number of people or they have had an accident," Gray said in an email Sept. 6.

Arkema's Crosby facility came under scrutiny after power failures due to an estimated 40 inches of rain at the plant during Harvey caused electricity and multiple backup generators to fail and volatile chemicals to overheat and catch fire.

The lack of inspections at the Crosby plant doesn't surprise many. According to a Sept. 1 letter Sen. Tom Carper (D-Del.) sent to EPA Administrator Scott Pruitt, the agency has "about 30 inspectors" who can complete between 300 and 350 inspections per year of around 12,500 facilities in the program—information the senator's spokeswoman told Bloomberg BNA came from a telephone briefing with EPA staff last week.

That means it would take at least 35 years to check all of the sites once.

Carper told Bloomberg BNA Sept. 6 the inspection gaps are "way too long."

Jim Frederick, assistant health and safety director at the United Steelworkers union, said the long timeframe between checks at the Crosby site wasn't surprising.

"Both EPA and OSHA are certainly not staffed to a level to have the reach to be able to inspect facilities on a very frequent basis," Frederick said.

Several other Arkema facilities had more recent EPA inspections. The agency inspected Arkema's Axis, Ala., plant in 2015, 2009, and 2004; a plant in Beaumont, Texas, in 2008 and 2003; the Alsip, Ill., plant in 2007; and facilities in Piffard, N.Y. and Calvert City, Ky., in 2010, according to EPA data obtained by Bloomberg BNA.

Lawmakers Interested

How often the inspections occur is a focus for lawmakers interested in learning more about Arkema's problems.

The letter from Carper, the ranking member of the Environment and Public Works Committee, asked Pruitt provide inspection data for the Crosby plant and other Arkema facilities. Carper said the plant's risk management plan seemed insufficient given the hurricane's impact on the plant.

"The failure of both of Arkema's emergency backup power supply measures and subsequent

evacuation of on-site personnel clearly raise questions related to the sufficiency of Arkema's plan and its implementation," Carper wrote.

Under the EPA's program, Arkema is required to submit a risk management plan every five years. The company filed its most recent plan for the Crosby facility in 2014, which didn't mention the organic peroxides that exploded since those chemicals are not covered under the risk management program. But the company's plan did identify the risk of hurricanes, power failures and power surges, and flagged the 66,260 pounds of anhydrous sulfur dioxide that, if released, could threaten more than 1 million residents within 23 miles of the plant.

Mark Farley, a partner at the law firm Katten Muchin Rosenmann LLP in Houston, told Bloomberg BNA Sept. 6 he didn't think including organic peroxides in the risk management plan would have made a difference at Arkema's plant.

"The company and the government knew that these chemicals were highly hazardous and the employer had redundant systems in place to try to mitigate that risk," Farley said. "What should they have done? Had a fourth backup system?"

OSHA, Contractors Help Too

EPA regional offices may also use consultants to check plants, and OSHA process safety management inspectors are on the lookout for many similar types of violations, Stephen Richmond, a principal at the law firm Beveridge and Diamond PC, told Bloomberg BNA Sept. 6.

A typical inspection involves as many as five inspectors, who scour the plant over several days, Richmond said.

"They're pretty intensive," Richmond said. "The inspection, if you have five inspectors on site for as much as a week, they can cover a lot of ground."

Other agencies that made it to the Crosby plant sometimes found violations.

OSHA inspectors that visited the site in 2016 issued 10 citations for serious violations, nine of which involved management of highly hazardous chemicals, records show. The U.S. Chemical Safety Board, which is investigating the incident, may also make recommendations to EPA if it finds the agency could better enforce existing regulations.

Given the magnitude of what happened, Carper wrote, reducing EPA inspections further through budget cuts "seems shortsighted at best."

Manufacturers Share Chemical Data With EPA to Make Safety Case

Posted September 06, 2017, 7:01 A.M. ET

By Pat Rizzuto

The BASF Corp., the Dow Chemical Co. and Honeywell International Inc. are sharing chemical data with the EPA in a bid to persuade agency scientists that the compounds they make or use are safe and should stay on the market.

During the next few years, the Environmental Protection Agency will study and consider regulations for the 10 compounds that are under review if the agency determines they are unsafe—part of the agency's implementation of last year's amended toxics law. At stake are hundreds of uses of chemicals in factories, households, and construction sites that hinge on EPA's upcoming reviews.

Faye Graul, executive director of the Halogenated Solvents Industry Association (HSIA), said industry's goal for providing information about the 10 chemicals to the EPA is to "to make our case that they should stay on the market."

Sept. 19 Deadline

In meeting with the EPA, some companies are making the case that certain chemicals are small impurities in the manufacturing process and thus can be safely ignored. Others are providing use and exposure information on major industrial products such as solvents used in manufacturing. Still others are opting not to share data with the EPA, instead waiting to learn more about the process based on this first group of 10 reviews. All have an EPA deadline of Sept. 19 to submit information for this first round of chemical risk reviews.

By the end of the year, the EPA will craft blueprints for studying the health and ecological risks of 10 chemicals that will rely in part on the companies' use, exposure, and toxicity data they share with the agency. The EPA will augment this data with studies in its own databases, the scientific literature, and other sources. Those 10 blueprints also will include the relevant exposure scenarios, human populations, and environmental conditions of interest.

"While some stakeholders have indicated they may or plan to submit to the docket, they have not necessarily indicated what they would submit," the EPA told Bloomberg BNA by email. "At this time, EPA has no basis to characterize how much information may be submitted."

Firms Reach Out

The BASF Corp. is offering hazard and exposure information to support the n-methylpyrrolidone (NMP) and 1,4-dioxane risk evaluations, company spokeswoman Donna Jakubowski told Bloomberg BNA. NMP is a commonly used solvent in industrial and some consumer chemical formulations.

1,4-dioxane is primarily an impurity that occurs during chemical manufacturing, but the chemical also is a processing aid used for wood pulping, pharmaceutical manufacture, and other purposes, the EPA said in a preliminary risk evaluation plan for the chemical.

BASF is submitting some information directly to the EPA and providing data through trade associations, including the American Chemistry Council and the NMP Producers Group, Jakubowski said.

The members of the NMP Producers Group—Ashland Inc., BASF, and Lyondell Chemical Co.—have worked to encourage their customers and other trade associations that represent companies using the solvent to provide the EPA chemical use, exposure, and other data, Kathleen Roberts, manager of the NMP group, told Bloomberg BNA.

HSIA members make solvents that are used by manufacturers large and small to strip paint, degrease machine parts, and clean factory surfaces.

The group also explained how the agency's risk evaluation differs from a rule the agency proposed to limit NMP's use in paint strippers, and how these actions differ from some possible EU solvent regulations, Roberts said.

In addition to HSIA, the Consumer Specialty Products Association—which represents the makers of chemical-intensive home care and other consumer products—also provided solvent data to the agency.

Member companies Ecolab, the Sherwin Williams Co., and W.M. Barr & Co. met with the EPA to discuss 1-bromopropane, methylene chloride, NMP, perchloroethylene and trichloroethylene, Steven Bennett, vice president of scientific affairs at the association, told Bloomberg BNA. They offered data on what markets and for what types of customers—consumer, institutional or industrial—the solvents are used by, he said. Honeywell, a diversified technology and manufacturing company, was among the downstream companies that met with EPA staff to discuss its use of perchloroethylene during the hydrofluorocarbon manufacturing process, a company spokeswoman told Bloomberg BNA.

"The Honeywell staff explained that all Honeywell hydrofluorocarbon manufacturing processes take place in a closed system with full pollution control devices. This approach minimizes any emissions of perchloroethylene, with low potential for human exposure," she said. The EPA previously has concluded similar chemicals manufactured in sufficiently closed systems do not pose unreasonable risk, she said.

Dow Chemical Co. provided use information to the EPA before it issued its preliminary risk evaluation plans in June, Johnathan DiMuro, regulatory services leader, told Bloomberg BNA. The company does not plan to provide more information, he said.

Firemen, Labs and Legacy Carve-Outs

The International Association of Fire Fighters, state officials, the AFL-CIO, environmental groups, and the American Public Health Laboratories association also have provided the EPA chemical toxicity, use and exposure information.

Firefighters, for example, have a higher risk of getting various cancers than does the general population, Larry Petrick, director of health and safety for the International Association of Fire Fighters, told Bloomberg BNA. Firefighters are exposed to building materials such as old ceiling tiles, insulation, asbestos, and furniture sprayed with flame retardants, Petrick said.

Firefighters hope to persuade the EPA to reconsider its June decision to exclude legacy uses from its 10 risk reviews, he said. Petrick referred to decisions the EPA announced in 10 documents it released June 22 describing its preliminary plans to assess hazards, uses of, and exposures to each chemical.

"In the case of asbestos, legacy uses and associated legacy disposals will be excluded from the scope of the risk evaluation. These include asbestos-containing materials that remain in older buildings or are part of older products but for which manufacture, processing, and distribution in commerce are not currently intended, known, or reasonably foreseen," the agency wrote in a preliminary evaluation plan for that mineral.

The agency made a similar conclusion for carbon tetrachloride, which the U.S. Consumer Product Safety Commission banned in 1970, but which the EPA said may still be used in some paints,

coatings, rubber, cement, and asphalt formulations. "Legacy uses and associated legacy disposals will be excluded from the scope of the risk evaluation," EPA said in its preliminary risk evaluation plan.

Firefighters want the EPA to consider their current legacy-use-based occupational exposures to hazardous chemicals, Petrick said.

The American Public Health Laboratories—which represents a network of state health and environmental labs—wants to share its measurements of the 10 chemicals in air, water, people's bodies, and other places the chemicals reside, Julianne Nassif, director of environmental health, told Bloomberg BNA.

Shying Away

Asked why more companies didn't chime in when asked about the information they may plan to give the EPA, several reasons, including lack of familiarity and a desire to stay off the radar, were given.

Especially for manufactured goods producers, it is a new idea to give the EPA information about the chemicals they use, Mark Duvall, a principal in the Washington office of Beveridge & Diamond, P.C. told Bloomberg BNA.

"Companies and trade associations may be looking for experience and guidance to gauge what information EPA actually needs and in what level of detail," he said. "In addition, EPA's information requests, where made, tend to be fairly general, which may lead to fairly general responses."

Companies also may be reluctant to give data that may restrict their products by providing information that EPA might use to decide a chemical should be scrutinized, Duvall said.

Chemical manufacturers can ask their customers to send EPA information, but they're usually not in a position to insist on it, the NMP group's Roberts said. Companies that buy chemicals to make consumer and industrial goods may not see a reason to provide the EPA information at this early stage, she said. They may not feel compelled to until the agency proposes to restrict their particular use of chemical, Roberts added.

Beyond the First 10 Chemicals

The American Chemistry Council's Center for Chemical Safety Act Implementation is working with chemical and product manufacturers to discuss ways companies may contribute to future risk evaluations the EPA will undertake, David Fischer, who helps manage that center told Bloomberg BNA.

Even if EPA isn't evaluating a chemical a company currently makes or uses, the agency may do so down the road. Chemicals already listed on an EPA "work plan" list of about 90 chemicals are potential candidates for future risk evaluations as are chemicals of concern identified in other parts of the world, such as the European Union's Substances of Very High Concern list.

If a company is aware of data gaps for such chemicals, "it may be good to start talking to EPA now," Fischer said. "There's an opportunity now, to start filling data gaps." he said.

Companies also can nominate a chemical for the agency to evaluate or choose to submit their own risk evaluation for it, Fischer said. The company's risk evaluation would have to meet guidance the

EPA published June 22.

Deadlines, State Preemption

The EPA plans to release draft risk evaluations for public comment and peer review as early as 2018. It aims to publish final risk evaluations by the end of 2019, although the amended TSCA law gives the agency until mid-2020 to complete them.

Those risk evaluations could find that some of the 10 chemicals pose no risks. That finding largely would preempt states from regulating the same chemical or chemical use under the amended TSCA law.

The EPA's risk evaluations also could affect markets even before the reviews are finished. If the science appears to show a chemical or certain uses of it may raise health or ecological concerns, chemical makers could voluntarily drop those uses. Sales of those chemicals also could drop ahead of the completion of a risk review if the market responds to feedback from consumers or watchdog groups.

The EPA's evaluation would trigger a regulation if the agency concluded one or more uses of any of the 10 chemicals poses an unreasonable risk to people or the environment. Such regulations would be intended to benefit human or environmental health by reducing disease, lost productivity, and other costs.

EPA Review of Model Year 2021 Limits Splits Auto Industry

Posted September 06, 2017, 03:59 P.M. ET

By Abby Smith

The EPA's review of model year 2021 mileage standards for light-duty vehicles is causing a split in the automotive industry between major car companies and the manufacturers that supply their equipment.

Major automobile manufacturing groups—like the Alliance for Automobile Manufacturers, which represents the Ford Motor Co., Fiat Chrysler Automobiles, General Motors, BMW and others— have urged greater flexibility in the Environmental Protection Agency's light-duty vehicle greenhouse gas standards, including now for model year 2021.

But a group representing manufacturers and suppliers of auto equipment—the Motor & Equipment Manufacturers Association—is warning that any relaxation of the model year 2021 standards would have a detrimental impact on manufacturing jobs in the United States. The group is asking the model year 2021 limits remain unchanged.

The EPA in March re-opened a feasibility review of the greenhouse gas and fuel efficiency standards for model years 2022-2025, reversing a determination made in the final days of the Obama administration to maintain current standard levels for those years. The agency, along with the National Highway Traffic Safety Administration, began accepting comments on that review Aug. 10, and expanded the review to include potential changes to model year 2021 limits, drawing criticism from environmentalists and other supporters of the Obama-era rules.

The motor vehicle suppliers group is also urging the EPA to "remain on course" with the model year 2021 target the industry had agreed to. Any relaxation of those limits would cause a "significant

increase in the level of uncertainty in an already uncertain time," Laurie Holmes, senior director of environmental policy for the Motor & Equipment Manufacturers Association, said at a Sept. 6 public hearing hosted by the EPA.

Ann Wilson, vice president of public affairs for the group, told Bloomberg BNA that motor vehicle suppliers are the "largest employer of manufacturing jobs in the United States." Many of those jobs "have been contingent on compliance with the new" NHTSA and EPA vehicle standards, she said, noting suppliers have already dedicated millions of dollars in research and development.

Maintaining the model year 2021 limits, and forward progress from there, is necessary for "these investments to continue to bear fruit" and "to continue to have this level of employment in the United States," Wilson said.

But also at the hearing, Chris Nevers of the auto alliance and Julia Rege of Global Automakers urged officials to consider tweaks to model year 2021 limits to advance "harmonization" with the NHTSA program.

"We never meaningfully reached the goals of harmonization," Rege said during her testimony. An adjustment to the model year 2021 standards "would advance our request" to align the two programs.

China Seeks to Move Hazardous Chemical Makers Away From Cities

Posted September 06, 2017, 8:33 A.M. ET

By Michael Standaert

Efforts are underway to encourage and provide financial incentives for hazardous chemical production facilities to relocate further away from urban areas in China, a State Council announcement indicated.

Small and medium-sized hazardous chemical facilities that produce and store materials within urban areas that propose "significant risks" will need to relocate, fully upgrade facilities, or face being closed down in order to minimize risks in urban areas by 2018, with all relocations and upgrades required to be completed by 2020, the State Council said Sept. 4.

Larger facilities will have a different window, between 2020 and 2025.

The government will provide financial support to help companies meet requirements or relocate, according to the statements, but no details on amounts or how these companies will apply for them were released.

The central government pledged to open channels for bank loans, bonds and other financial products to back the relocation or upgrade of facilities. Local governments will also be expected to bare some of the burden of the restructuring, the State Council said. The government did not say how many facilities would need to upgrade or relocate.

"The relocation faces great difficulties, with biggest problem being financial," Yang Ting, Secretary-General of Party Working Committee of the China Petroleum and Chemical Federation said in a statement on its website on Sep. 6.

"For larger facilities the costs will be high," Yang said. "During times when production is halted, there will be major losses in economic profit and it will be difficult to repay loans to the major banks. Without government compensation it will be difficult to move this forward."

Facilities will be required to be at "safe distances" according to both health and safety standards, with different distances calculated depending on the amounts of chemicals produced or stored, what they are, and other factors.

France Proposes to End Oil Output by 2040 with Exploration Ban

Posted September 06, 2017, 8:13 A.M. ET

By Francois de Beaupuy

France will stop granting new exploration permits next year as it seeks to end all oil and gas production by 2040, according to a draft bill presented at a Sept. 6 cabinet meeting.

The move would allow the government to turn down more than 40 exploration requests already made, while some existing permits may be extended to respect contracts, the presentation showed. That includes the Guyane Maritime license off French Guiana, in which Total SA has a stake, according to an adviser to Ecology Minister Nicolas Hulot, who briefed reporters in Paris.

This legislation would "allow us to progressively free ourselves," Hulot said after the cabinet meeting, also confirming that current exploration permits off French Guiana would remain valid. "It will allow investors to go much further in their renewable investments. Currently oil and gas leave us dependent on geopolitics."

The proposed legislation is part of President Emmanuel Macron's broader plan to take the lead against climate change, after U.S. counterpart Donald Trump ditched the landmark Paris agreement to fight global warming. While France's oil and gas output is small, the plan may affect companies such as Vermilion Energy Inc., which has several concessions, and will reduce the prospect of discoveries off French Guiana.

France pumped 6 million barrels of oil in 2015, covering just 1 percent of its demand, according to the presentation. Oil and gas exploration and production on French soil generates as much as 300 million euros ($358 million) in annual revenue, and accounts for as many as 5,000 jobs, directly and indirectly. Existing production licenses wouldn't be extended beyond 2040 under the proposed law.

"We do not expect this new legislation, if passed, to have a material impact on Vermilion as our operations are focused on development activities such as well-workovers, infill drilling and waterflood optimization," the Calgary-based company said previously.

Under a plan presented by Hulot in July, France will end the sale of gasoline- and diesel-powered vehicles by 2040. It will also progressively increase taxes on fossil fuels, close coal-fired power plants by 2022 and invest more in renewable energies.

Threat to Oil Becomes Real as Climate Crashes Norway Election

Posted September 06, 2017, 8:59 A.M. ET

By Mikael Holter

Politicians and activists who have been fighting to rein in Norway's mighty oil industry are eyeing a breakthrough.

Several parties opposed to further oil exploration could emerge as kingmakers in the Sept. 11 election. That will threaten a push to search for about 9 billion barrels in Arctic crude and natural gas, which is necessary to prolong the petroleum age that made Norway one of the world's richest countries.

"I'm very worried," said Stale Kyllingstad, chief executive officer of IKM Gruppen AS, one of the biggest suppliers to the oil industry.

Big oil's enemies are now gaining ground with both moral and financial arguments. Norwegians are increasingly questioning how to reconcile their role as western Europe's biggest oil and gas producer with fighting climate change and whether searching for more petroleum is the financially sound thing to do in a world where renewable energy is taking over more and more.

The Green Party, which wants to end exploration immediately and phase out the industry in 15 years, is poised to become a key parliamentary force. The race is too close to call between Conservative Prime Minister Erna Solberg's government and the opposition, headed by Labor leader Jonas Gahr Store. Polls suggest both blocs could fail to win a majority.

Labor, a historic supporter of the oil industry, has seen its backing plunge in recent weeks, making it dependent on support from smaller parties seeking to curtail drilling. A key Labor politician last month even suggested reviewing tax subsidies for exploration, shocking the industry before the party clarified that it wasn't about to change a system prized by oil companies for its stability.

That failed to reassure Kyllingstad, who said he feared a weak Labor Party would be forced to "prostitute itself" to "extremist parties."

The Socialist Left (Labor's government partner until 2013) and the Red Party, which both want to end license awards and new field developments, also stand to gain.

To be sure, Labor and the current government parties, the Conservatives and the Progress Party, all industry backers, are likely to remain the three biggest groups after the election, sharing well over half the votes.

But the smaller parties, which for now have had little more to celebrate than a ban on drilling off the Lofoten islands, could extract deeper concessions, said Anders Holte, an analyst at Danske Bank A/S in Oslo. That could include fewer license awards and possibly jeopardize a program that lets loss-making companies collect 78 percent of exploration expenses in cash, he said.

For an industry that lost 50,000 jobs during the oil crash, it would be a bad blow. It could especially threaten an expansion in the Arctic Barents Sea, which holds the bulk of the country's undiscovered oil and gas resources and is seen as key to maintaining production 10 years from now after it already dropped by 12 percent since a 2004 peak.

"For the first time in a long while, there's increasing political risk," Holte said.

The outgoing government has pushed hard to stimulate exploration in the Arctic, overseeing a record search for oil in the Barents Sea, including Norway's northernmost well, and offering the most blocks ever in that region in a licensing round. On Sept. 6, the Petroleum Ministry said it received a record amount of applications in a round focusing on mature blocks after Barents acreage had been boosted.

Rasmus Hansson, the only Green lawmaker for now, said the top priority is to end exploration for new oil. That's a moral obligation because of climate change and a financial imperative because spending on exploration could be throwing money into the sea if the resources are never used as the world moves beyond fossil fuels, he said.

"It's particularly naïve to believe that the oil industry will be profitable for a long time to come," he said in an interview last week. "An increasing number of Norwegians are saying in polls that they see a future after oil."

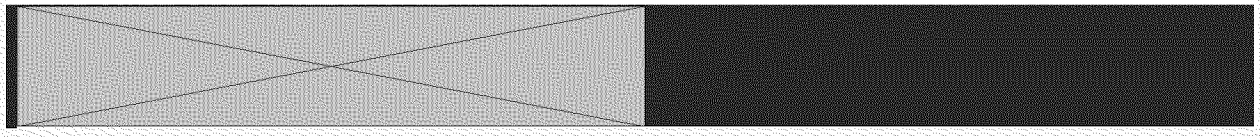
One survey showed last month that 44 percent of Norwegians would be willing to leave some oil in the ground if it helped cut emissions.

At Statoil ASA, Norway's biggest oil company, outward appearances are cool for now.

"I'm registering that there's a greater diversity and a bigger stretch in the views on the Norwegian oil and gas industry," Eldar Saetre, the company's CEO, said in a phone interview this week.

Saetre said he wasn't worried about a change in the fundamental framework conditions for oil companies. The powerful Norwegian Oil and Gas Association and the country's biggest oil union, Industry Energy, also said they trusted the big parties to safeguard the industry because of its importance for jobs, value creation and government income.

But the industry could be overplaying its hand and Solberg has vowed to help the country wean itself off oil. Its dominance is slowly fading, and production now comprises about 12 percent of the economy, down from more than 20 percent pre-oil crisis. To be sure, that doesn't factor in how oil cash seeps through other sectors of the economy.



"I understand that people in the oil industry are worried," said Frode Alfheim, who represents thousands oil workers as head of the union. "I'm pretty certain that once one or the other constellation starts running the country after the election, the broad lines will remain firm."

Subject: Federal Insider: Interior's 'unusual' transfer of senior executives spurs official probe

Interior's 'unusual' transfer of senior executives spurs official probe

By Joe Davidson

Interior Secretary Ryan Zinke testifies during a Senate Energy and Natural Resources Committee hearing in June. (Michael Reynolds/EPA)

It doesn't smell right, so maybe an official probe will tell if it's rotten.

The Interior Department's Office of Inspector General (OIG) is examining the extraordinary and politically suspect reassignment of dozens of Senior Executive Service (SES) members.

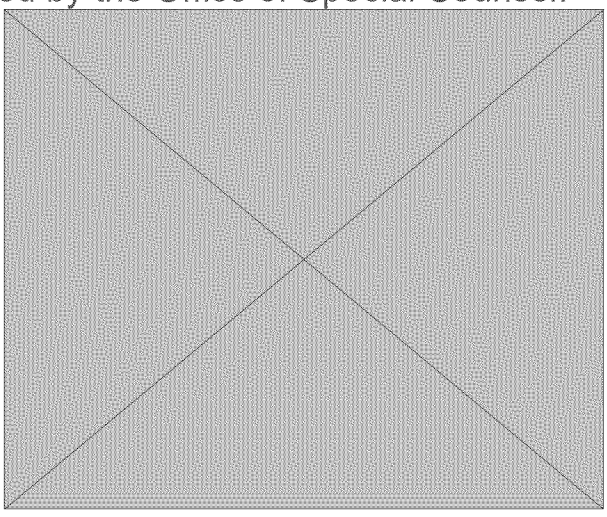
The OIG's review is in response to a request from eight Democrats on the Senate Energy and Natural Resources Committee. They asked for the probe after one Interior senior executive, Joel Clement, wrote a Washington Post article that said he was reassigned and "retaliated against for speaking out publicly about the dangers that climate change poses to Alaska Native communities."

Nancy K. DiPaolo, an OIG spokesperson, said the assessment could take a few months and that "you can expect the review to list out what facts are found."

In a letter led by Sen. Maria Cantwell (Wash.), the Democrats requested the IG action because of "troubling newspaper reports of the arbitrary reassignment of as many as 50 Senior Executive Service employees of the Department of the Interior. … Any suggestion that the Department is reassigning SES employees to force them to resign, to silence their voices, or to punish them for the conscientious performance of their public duties is extremely troubling and calls for the closest examination."

On Monday, Cantwell welcomed the review, saying "there are serious

ADVERTISEMENT



questions that need to be answered about the treatment of public servants who have dedicated their careers to the Department of the Interior."

While reassignments of individual senior executives are encouraged to provide broad experience, mass transfers of this magnitude are unheard of. And given the scarcity of confirmed political appointees at the department, Interior Secretary Ryan Zinke's reassignment of more than 20 percent of the senior executive corps could be particularly disruptive. Out of 18 presidentially appointed slots requiring Senate confirmation at Interior, only three are filled, per data from The Washington Post/Partnership for Public Service tracker. Of six assistant secretary offices, which work directly with senior executives, none is filled.

A statement from Zinke's press office said "senior executives are the highest paid employees in the federal government and signed up for the SES knowing that they could be called upon to work in different positions at any time. Congress meant for the SES to be a mobile force that are capable of taking on different assignments to meet the needs of the agency. Personnel moves among the Senior Executive Service are being conducted to better serve the taxpayer and the Department's operations."

Clement said he hopes the OIG's review looks "closely at the motivations behind the reassignments, the cost to taxpayers, and the impact on Interior's mission and American health and safety. A thorough investigation and report could help restore the plummeting morale at an agency whose mission is under attack by its own political leaders."

Clement has a separate whistleblower retaliation complaint that is being investigated by the Office of Special Counsel.

In a message to his members, Bill Valdez, president of the Senior Executives Association, notes the great concern about the reassignments and their potentially corrosive effect on morale and career leadership effectiveness at affected agencies. Even if a reassignment is legal, that doesn't necessarily make it a net benefit to the agency if it causes career SES to question the motives of their political leadership.

Feds' charitable giving reflects worry: reciting oath on

Federal workers have ways of making their feelings known,

Blunter was Shelby Hallmark, a former chair of the association's Board of Directors. An article, headlined "A Dangerous Moment for Career Senior Executives" that he wrote for Government Executive, called the transfers "a preemptive strike." Hallmark said the transfers "seemed designed to disrupt the functioning of the agencies involved, and likely to drive as many executives as possible into retirement or quiescence. Zinke could not possibly have assessed the strengths and weaknesses of all these executives."

Max Stier, president and chief executive of the Partnership for Public Service, a good-government organization that studies federal workplace and management issues, agreed that "mass transfers within the SES certainly is unusual" and posed "three big questions":

- How well was the process managed?
- Does Interior have an organizational vision that is furthered by the transfers and have officials communicated that to their senior

- Does Interior have the capacity to do this correctly?

"The fact that they are missing so many political appointees," he added, "makes it harder to do this right."

It's not right, contend 15 law and public policy professors supporting Clement. "The reassignment of over one-fifth of all Senior Executives within an agency is more akin to the spoils system that our country abandoned over a century ago," argued their letter, led by Joshua A. Geltzer and Robert Friedman, both with the Institute for Constitutional Advocacy and Protection at the Georgetown University Law Center.

The letter continued: "One can fairly anticipate that, if allowed to stand, these initial reassignments will denigrate both and, at the same time, embolden the current administration to continue to push the boundaries of acceptable personnel practices."

Q&A for federal workers: Proposal for bigger buyouts

Driving the Day

BULLETIN -- AP: "President: Mexico hit by biggest quake in century, 5 killed," by Christopher Sherman and E. Eduardo Castillo in Mexico City: "A major earthquake off Mexico's southern coast killed at least five people, with the president saying Friday it was the biggest in a century to hit the country. Houses toppled and the quake produced tsunami waves and sent people running into the streets in panic.

"The U.S. Geological Survey reported the earthquake's magnitude as 8.1, but President Enrique Pena Nieto says it was 8.2, making it the largest in Mexico in 100 years. He also said it was bigger than the 8.1 quake in 1985, which killed thousands and devastated large sections of Mexico City. ... The death toll could rise as authorities assess the damage. The president said that 62 aftershocks followed the quake and it's possible that one as strong as 7.2 could strike in the next 24 hours. Pena Nieto also said that serious damage had been caused and that 1 million customers initially had been without power following the quake, but that electricity had been restored to 800,000 of them." http://bit.ly/2wNB4nM

-- IN JUST THE LAST FEW WEEKS there have been widespread fires in Montana, Los Angeles and Oregon. Two historic hurricanes have barreled toward the United States and the Caribbean, leaving mass devastation in their wake. And the worst earthquake in a century just hit Mexico, bringing with it tsunami-like waves.

Happy Friday. THE REPUBLICAN HOUSE is expected to clear President Donald Trump's debt-ceiling, government-funding and Harvey-aid deal by noon today. **EMAIL FROM THE WHIP'S OFFICE:** "In order to ensure Members from the Southeast can travel home safely ahead of Hurricane Irma, Members are advised that last votes for the week will now be called at approximately 12:00 PM [Friday] on the Senate Amendment

to H.R. 601 (Harvey disaster relief package)."

-- THIS is truly Donald Trump's first legislative deal. And it was done with House Minority Leader Nancy Pelosi and Senate Minority Leader Chuck Schumer. It is expected to pass the House with mostly Democratic votes. **WHAT REPUBLICAN LEADERSHIP THINKS:** They are annoyed, not angry. They see it as a self-inflicted wound for a president with big legislative plans that only Republicans can execute. If he wants to govern with Democrats, good luck, one senior GOP aide told us. Most Republicans and Democrats say they think this is a short-term phenomenon, though.

GREAT JOHN MCCAIN QUOTE in the Washington Post: "'Haven't seen anything like it before,' said Sen. John McCain (R-Ariz.), who has served in the Senate for three decades. Of Trump, McCain said: 'I have no way of divining his motives. I'm a pretty intelligent guy, but I don't understand this.'" http://wapo.st/2eLdmy2

THERE ARE ROUGHLY 40 LEGISLATIVE DAYS until this deal expires, and Congress has to renew government funding and pass another increase of the debt limit. **THERE ARE ROUGHLY 45** legislative days until the end of 2017, when Republicans say tax reform will be passed. We have not seen a bill. It's being written behind closed doors.

SNEAK PEEK -- THE WHITE HOUSE is hosting principals from conservative groups today to talk about the administration's plans for tax reform. Kellyanne Conway, Tony Sayegh and Sarah Huckabee Sanders also met with staffers from conservative outside groups Thursday to discuss tax reform messaging. "They were mainly pushing top-line messaging -- fairness, simplicity and 'un-rigging' the system. No policy details at all," said one attendee at Thursday's meeting.

-- MEANWHILE -- @jimmykimmel: "Dear @seanspicer - if I promise to look AT the camera this time, will you come to my show next week?" http://bit.ly/2xgsizi ... **@seanspicer**: "It's a deal, does next Wednesday work?" ... **@jimmykimmel:** "Perfect! I have no further comment."

TRUMP THE BACKSLAPPER -- "Trump, jovial after debt deal, turns meeting into a freewheeling affair," by Josh Dawsey: "In an Oval Office meeting with the New York and New Jersey congressional delegations, he repeatedly shook Schumer's hand and kept him after for a private session, his third chat with the Democrat in 30 hours. He praised Gov. Andrew Cuomo - who also attended the meeting and who has often torched Trump but without mentioning his name - for his work on the Tappan Zee Bridge and other New York projects. 'My governor!' he said to Cuomo, according to Rep. Peter King, a New York Republican.

"He told the room that New Jersey Gov. Chris Christie coached him in the 2016 presidential debates against Hillary Clinton, and that 'Hillary was easy' after dealing with 'Chris.' He wished Christie, whose birthday was Wednesday, a happy one. 'You should give him a tunnel for his birthday,' Schumer said, drawing laughs from the room, referring to the Gateway rail-expansion project. ...The president, though, had one gripe,

after his visit from the emir of Kuwait on Thursday afternoon. He was very impressed by the emir's plane but noted that it was longer than his - maybe even by 100 feet." http://politi.co/2xaScDJ

-- "Trump gets cozy with Democrats, and Republicans say 'I told you so,'" by Eliana Johnson, Burgess Everett and Heather Caygle: "Just like that, he went from 'Cryin' Chuck' to the president's pal 'Chuck,' and she went from an 'incompetent' shepherd of House Democrats who has 'done a terrible job' to just 'Nancy.' ... Trump tends to govern more by sentiment than by substance, and he likes Schumer and Pelosi more than House Speaker Paul Ryan and Senate Majority Leader Mitch McConnell, who have stomached him but never done a good job disguising the fact that he makes them nauseous." http://politi.co/2wNQXYV

WAPO's BOB COSTA and **ASHLEY PARKER -- "Gingrich or Santorum as speaker? House conservatives plot mischief for the fall":** "Several influential House conservatives are privately plotting ways to use the legislative calendar this fall to push their hard-line agenda - including quiet discussions about possibly mounting a leadership challenge to House Speaker Paul D. Ryan.

"The group has gone so far as to float the idea of recruiting former House speaker Newt Gingrich or former Pennsylvania senator Rick Santorum as potential replacements for Ryan (R-Wis.) should there be a rebellion. The Constitution does not require that an elected member of the House serve as speaker. While the chances that a non-House member could mount a credible threat to Ryan are exceedingly slim, the fact that the group has even toyed with the idea underscores their desire to create trouble for GOP leaders if they believe their demands are not being addressed." http://wapo.st/2vS7eif

-- IF YOU'RE PAUL RYAN, you feel pretty good about this.

WHAT GARY COHN IS READING -- "White House Considering at Least Six for Fed Chair," by Bloomberg's Craig Torres and Jen Jacobs: "The breadth of the search goes against the narrative that has taken hold in Washington and on Wall Street that the Fed chair nomination is a two-horse race between National Economic Council Director Gary Cohn and current Fed Chair Janet Yellen, whose term expires in February. Some of the other possible contenders include former Fed Governor Kevin Warsh, Columbia University economist Glenn Hubbard and Stanford University professor John Taylor, one of the people familiar said. Lawrence Lindsey, a former economic adviser to President George W. Bush, has been discussed. Former US Bancorp CEO Richard Davis and John Allison, the former CEO of BB&T Corp., have also been considered." https://bloom.bg/2wMfqAm

-- "McCaul emerges as a leading candidate for DHS secretary," by Eliana Johnson and Anna Palmer: http://politi.co/2xTyVER

JOHN KELLY is continuing to put his stamp on the White House. Quinn Jones started Tuesday as executive assistant in the office of the White House chief of staff. Jones

previously served as special assistant in the office of the secretary of DHS.

THE LATEST ON HURRICANE IRMA -- "Hurricane Irma slams Turks and Caicos on path to Florida," by AP's Evens Sanon and Danica Coto in Port-Au-Prince, Haiti: "Hurricane Irma battered the Turks and Caicos Islands early Friday as the fearsome Category 5 storm continued a rampage through the Caribbean that has killed at least 11 people, with Florida in its sights. Waves as high as 20 feet were expected in the Turks and Caicos. Communications went down as the storm slammed into the islands, and the extent of the devastation was unclear. The first hurricane warnings were issued for parts of southern Florida as the state braced for what could be a catastrophic hit over the weekend. Following in Irma's wake was Hurricane Jose, with some of the islands hit hardest by Irma in its expected path." http://bit.ly/2eKRKBV

-- "'It's like someone with a lawn mower from the sky has gone over the island,'" by WaPo's Anthony Faiola, Lindsey Bever and Andrew deGrandpre: http://wapo.st/2wO3yeM

-- "Former presidents band together in call for Harvey, Irma relief aid," by Cristiano Lima: "The online campaign, called the 'One America Appeal,' brought together former Presidents Barack Obama, George W. Bush, Bill Clinton and George H.W. Bush and Jimmy Carter in a singular plea for donations to ongoing recovery efforts in Texas and likely future efforts in Florida and U.S. territories in the Caribbean in the wake of Irma." http://politi.co/2vQWMHY ... ***The campaign*** http://bit.ly/2wN8XnO

WHAT BEN RAY LUJAN IS READING -- "Rep. Dent won't seek re-election in 2018, according to source," by Alex Isenstadt and Kyle Cheney: "Pennsylvania Rep. Charlie Dent, a Republican who occupies a swing district, will not seek reelection in 2018, a source close to him confirmed. Dent's retirement comes the day after another swing district Republican, Washington Rep. Dave Reichert, announced he was calling it quits. Florida Rep. Ileana Ros-Lehtinen, another moderate, is also retiring. Democrats are certain to target all three seats in next year's midterms. Dent's announced departure comes one day after state Rep. Justin Simmons said he would challenge him in a primary." http://politi.co/2xh7XtL

THE TROUBLE WITH BERNIE... -- "Bernie backers' attacks on Democrats infuriate the party," by Gabe Debenedetti: "Prominent Democrats are increasingly riled by attacks from Bernie Sanders' supporters, whose demands for ideological purity are hurting the party ahead of the 2018 midterms and 2020 presidential election, they say. But it's not just the outside agitators that Democratic lawmakers, operatives, and activists are annoyed with: They're tired of what they see as the senator's hesitance to confront his own backers, either in public or through back channels.

"Tensions boiled over recently when a handful of Sanders loyalists bashed freshman Sen. Kamala Harris - a rising star in the party and potential 2020 hopeful - as an establishment tool. Democrats were also rankled that other prominent Sanders allies said support for single-payer health care should be a litmus test for candidates. In response, Democratic senators and outside groups have begun telling Sanders and friendly intermediaries that if he wants to be a leading figure for Democrats ahead of 2020's presidential election, he needs to get his supporters in line - or at least publicly disavow their more incendiary statements." http://politi.co/2xaQVg8

--SANDERS on **COLBERT** last night -- ***"What Bernie Sanders Wants Hillary To Do Next"*** *-- 9-min. video* http://bit.ly/2xbkBd3 ... ***"Bernie Sanders Tries To Say Something Nice About Trump"*** *-- 4-min. video* http://bit.ly/2wPg1Pu

THE AMERICANS -- "The Fake Americans Russia Created to Influence the Election," by NYT's Scott Shane: "Sometimes an international offensive begins with a few shots that draw little notice. So it was last year when Melvin Redick of Harrisburg, Pa., a friendly-looking american with a backward baseball cap and a young daughter, posted on Facebook a link to a brand-new website. 'These guys show hidden truth about Hillary Clinton, George Soros and other leaders of the US,' he wrote on June 8, 2016. 'Visit #dcleaks website. It's really interesting!' Mr. Redick turned out to be a remarkably elusive character. No Melvin Redick appears in Pennsylvania records, and his photos seem to be borrowed from an unsuspecting Brazilian. But this fictional concoction has earned a small spot in history: the Redick posts that morning were among the first public signs of an unprecedented foreign intervention in American democracy. ...

"On Twitter, as on Facebook, Russian fingerprints are on hundreds or thousands of fake accounts that regularly posted anti-Clinton messages. Many were automated Twitter accounts, called bots, that sometimes fired off identical messages seconds apart - and in the exact alphabetical order of their made-up names, according to the Fireeye researchers. On Election Day, for instance, they found that one group of twitter bots sent out the hashtag #waragainstdemocrats more than 1,700 times." http://nyti.ms/2jaJoZ5

RUSSIA UPDATE -- "Mueller seeks interviews with WH staff over Trump Tower meeting statement," by CNN's Pamela Brown, Gloria Borger and Jeremy Diamond: "Special Counsel Robert Mueller's team has approached the White House about interviewing staffers who were aboard Air Force One when the initial misleading statement about Donald Trump Jr.'s meeting with a Russian lawyer at Trump Tower was crafted ... The special counsel's discussions with the White House are the latest indication that Mueller's investigators are interested in the response to the Trump Tower meeting. Mueller wants to know how the statement aboard Air Force One was put together, whether information was intentionally left out and who was involved." http://cnn.it/2vKje1m

-- BETTER LATE THAN NEVER -- "The DNC Begins Cybersecurity Effort To Try To

Make Sure 2016 Doesn't Happen Again," by BuzzFeed's Ruby Cramer: "On his second day at [the DNC], sitting in a meeting at the party's headquarters south of Capitol Hill, Raffi Krikorian looked around the room and realized he was the only technology staffer at the table. ... It's about a 'culture change inside the building' - to 'get everyone's guard up' and create an instinctive, daily cybersecurity reflex. ... Krikorian, 39, said he felt his 'continuous poking and prodding' was starting to work when the chair of the DNC, Tom Perez, walked into the CTO's office one day and announced that he had downloaded the encrypted messaging app, Signal. ... Later, Perez stood up at an all-staff meeting and told aides, "'If you guys talk to me, you're going to use Signal,' Krikorian recalled." http://bzfd.it/2wNfu31

COMING ATTRACTIONS? -- CNN's Jeremy Herb: "On Thursday, [Sen. Mark] Warner suggested that congress could play a role by passing legislation to put disclosure requirements on social media advertising similar to those for television commercials. 'An American can still figure out what content is being used on TV advertising ... but in social media there's no such requirement,' Warner said. 'There may be a reform process here. I actually think the social media companies would not oppose, because I think Americans, particularly when it comes to elections, ought to be able to know if there is foreign-sponsored content coming into their electoral process.'" http://cnn.it/2gMNaUp

WHAT CHRIS LICHT IS SMILING ABOUT -- "Hillary Clinton to Discuss Campaign and New Book on Colbert's 'Late Show'," by NYT's Matt Stevens: "The appearance will come one week after the book hits shelves. And the network promises that Mrs. Clinton will sit down with Mr. Colbert to discuss her writing, as well as 'her run for the White House in 2016' and 'her thoughts on the current administration.'" http://nyti.ms/2xTHqzX

THE JUICE ...

-- FIRST IN PLAYBOOK: MATT VISER has joined CNN as a political analyst. He's remaining at the Boston Globe as deputy Washington bureau chief. **MOLLY BALL** of The Atlantic and **MARGARET TALEV** of Bloomberg have also been named as CNN political analysts.

Playbook Reads

PHOTO DU JOUR: A Sept. 7 photo provided by the Dutch Defense Ministry shows storm damage in the aftermath of Hurricane Irma in St. Martin. | Gerben Van Es/Dutch Defense Ministry via AP

THIS IS A BIG DEAL -- "Sara Netanyahu Expected to Be Indicted for Fraud in Pocketing $110,000 in Goods," by Haaretz's Gidi Weitz: "Sara Netanyahu is expected to be indicted, pending a hearing, on charges of fraudulently receiving items worth

400,000 shekels ($111,851), Haaretz has learned. Attorney General Avichai Mendelblit is expected to inform Netanyahu, wife of Prime Minister Benjamin Netanyahu, of the charges against her in a few weeks.

"Sara Netanyahu is suspected of ordering chef's meals at the prime minister's official residence, which is against regulations, and concealing the fact that she did so. She and her husband have accused the former chief caretaker of the official residence, Meni Naftali, who is currently leading protests against the prime minister, of inflating the residence's expenses." http://bit.ly/2gP5FLt

-- ANSHEL PFEFFER (**@AnshelPfeffer**), Haaretz writer and Economist correspondent: "Took 3 years to indict Sara N on defrauding state of 400k worth of gourmet food. Investigation-indictment-trail of Bibi will take longer ... Even assuming Bibi is guilty, it will take the courts until 2020's to force him out of office. The Israeli public will judge him first. ... 2 ways Netanyahu is forced out of office before election: 1 His coalition partners (Kahlon, Bennett) say like Barak in '08 he has to go. ... 2. Netanyahu realizes he could be facing jail and signs plea bargain, resigns, gets reduced sentence. Both possible but for now unlikely."

THIS GUY -- "Prosecutors Seek to Revoke Martin Shkreli's Bail for Hillary Clinton 'Threats': Convicted former drug executive urged followers to 'grab a hair' from Clinton," by WSJ's Rebecca Davis O'Brien: "Federal prosecutors in Brooklyn have asked a judge to revoke bail for Martin Shkreli, the former pharmaceutical executive convicted last month on securities-fraud charges, citing Mr. Shkreli's 'escalating pattern of threats and harassment,' including an apparent threat to former Secretary of State Hillary Clinton.

"In a court filing late Thursday night, prosecutors asked U.S. District Judge Kiyo A. Matsumoto to have Mr. Shkreli detained until his sentencing. The filing came several days after Mr. Shkreli posted a message on his Facebook page in which he urged his followers to "grab a hair" from Mrs. Clinton while she is on her coming book tour. In the post, he offered $5,000 per strand of hair.

"'[T]he defendant's threats create a risk of danger to the community ,' prosecutors wrote, adding that his 'egregious public behavior shows that he has no respect for the law and will not abide by any conditions or combination of conditions for release.'" http://on.wsj.com/2xaYjbk

BUSINESS BURST -- "Equifax hack hits credit histories of up to 143 million Americans," by WaPo's Craig Timberg, Elizabeth Dwoskin and Brian Fung: "The credit reporting agency Equifax said Thursday that hackers gained access to sensitive personal data - Social Security numbers, birth dates and home addresses - for up to 143 million Americans, a major cybersecurity breach at a firm that serves as one of the three major clearinghouses for Americans' credit histories." http://wapo.st/2xglxwn

-- WOW: "Three Equifax Managers Sold Stock Before Cyber Hack Revealed," by Bloomberg's Anders Melin: "Three Equifax Inc. senior executives sold shares worth

almost $1.8 million in the days after the company discovered a security breach that may have compromised information on about 143 million U.S. consumers. The trio had not yet been informed of the incident, the company said.

"The credit-reporting service said late Thursday in a statement that it discovered the intrusion on July 29. Regulatory filings show that three days later, Chief Financial Officer John Gamble sold shares worth $946,374 and Joseph Loughran, president of U.S. information solutions, exercised options to dispose of stock worth $584,099. Rodolfo Ploder, president of workforce solutions, sold $250,458 of stock on Aug. 2. None of the filings lists the transactions as being part of 10b5-1 scheduled trading plans." https://bloom.bg/2eS9H53

OOPS -- "Trump lawyer Ty Cobb, fooled by 'email prankster,' asks for 'drone' in private emails slamming reporter," by Business Insider's Natasha Bertrand: "White House special counsel Ty Cobb engaged in a lengthy email exchange with a prankster posing as White House social media director Dan Scavino, during which Cobb asked whether there was 'any drone time left' when discussing a Business Insider reporter he described as 'insane.' ... A half hour later, the prankster reached out again -- this time to ask about 'the whole Russia situation.' ... 'I have great confidence there is nothing there implicating the President or the White House,' Cobb wrote. 'Manafort and Flynn have issues separate and apart from the WH that will cause the investigation to linger but am hoping we get a clean bill of health soon. Best, Ty.'" http://read.bi/2vKgils

DAVID IGNATIUS -- "Tillerson is working with China and Russia -- very, very quietly": "Secretary of State Rex Tillerson has often been the silent man in the Trump foreign policy team. But out of the spotlight, he appears to be crafting a broad strategy aimed at working with China to resolve the North Korea crisis and with Russia to stabilize Syria and Ukraine. The Tillerson approach focuses on personal diplomacy, in direct contacts with Chinese and Russian leaders, and through private channels to North Korea. His core strategic assumption is that if the United States can subtly manage its relations with Chinese President Xi Jinping and Russian President Vladimir Putin - and allow those leaders to take credit for successes - complex regional problems can be solved effectively. Tillerson appears unfazed by criticism that he has been a poor communicator and by recent talk of discord with President Trump." http://wapo.st/2wdJGju

IF YOU READ ONE THING - EVAN OSNOS in The New Yorker, **"The Risk of Nuclear War with North Korea:** On the ground in Pyongyang: Could Kim Jong Un and Donald

Trump goad each other into a devastating confrontation?": "A few days after the July 4th missile test, [North Korean diplomat Pak Song Il] told me that I could book a flight to Pyongyang. I submitted a list of people I wanted to interview, including diplomats and Kim Jong Un himself. About the latter, Pak only laughed. (Kim has never given an interview.) After Pak stopped laughing, he said I could talk to other officials. ... James Clapper, the former director of National Intelligence, who visited Pyongyang in 2014, told me, 'The North Koreans are not going to give up their nuclear weapons. It's a non-starter.' The American national-security community is now nearly unanimous on this point, but the government cannot say so openly, because that would cede leverage in a future negotiation, and raise the risk that other countries will try to follow North Korea's example. ...

"In an e-mail, [H.R.] McMaster told me, 'Their provocations seem likely to increase-not decrease-over time. The North Koreans have also proliferated just about every capability they've ever produced, including chemical weapons and a nuclear reactor. Then there's the matter of what other countries do-in the region and beyond-when they see that a rogue regime developed nukes and got away with it.' ... "On the way to lunch one afternoon in Pyongyang, I noticed that the latest American threats had already been inscribed on the cityscape. A full-color billboard depicted a barrage of missiles descending on a bombed-out shell of the U.S. Capitol." http://bit.ly/2wNmE7r

WEST COAST WATCH -- "New primary challenger to Feinstein emerges," by California Playbooker Carla Marinucci: "Add another name to the list of progressive Democrats seriously considering a primary challenge to California's senior Senator Dianne Feinstein: wealthy financial entrepreneur Joseph N. Sanberg. Sanberg, 38 - co-founder of Aspiration.com, a socially-conscious investment firm, and a founding investor in Blue Apron ... Raised in Orange County by a single mom before he earned a fortune on Wall Street, Sanberg had been mulling a governor's run, sources familiar with his planning told POLITICO, and he delivered a speech to the last state Democratic convention that appeared to lay out a rationale for that race." http://politi.co/2wNdC9G

MEDIAWATCH -- MICHAEL CROWLEY'S NEW JOB -- Carrie Budoff Brown emails the POLITICO staff this morning at 4:25 a.m.: "We're thrilled to announce that Michael Crowley will take on the role of national security editor. Michael has established himself as one of the preeminent foreign policy thinkers in Washington in his nearly three years as Politico's senior foreign affairs correspondent and at Time Magazine before that. ... During the 2016 campaign, Michael was among the first reporters to explore the connections between Trump and Russia and his stories on the subject repeatedly broke fresh ground later revisited by others. ... Michael will continue to write in his new role and retain the title of senior foreign affairs correspondent."

-- DEBORAH SOLOMON has been hired as economics editor in the Washington bureau of the New York Times. She is currently a director at Brunswick Group and earlier spent 15 years at the WSJ.

LEWANDOWSKI TALKS TO PRESTON -- Corey Lewandowski sits down with CNN

senior political analyst Mark Preston on his SiriusXM show, "Full Stop with Mark Preston." Lewandowski talks about his relationship with Trump, the Russia investigation and the president's recent dealmaking with Democrats. The show airs Saturday at noon and Sunday at 5 p.m. on Sirius XM channel 124. ***Listen to him talk about the Russia investigation*** http://bit.ly/2xQT5OX ... ***And dealmaking with Democrats*** http://bit.ly/2gPoJZO

JAVELIN UPDATE -- "The Upstart D.C. Agents Making Waves in New York," by Rachel Deahl in Publishers Weekly: Keith "Urbahn and [Matt] Latimer are no longer the new kids on the block. They have an 11-person-agency called Javelin in Arlington, Va., that has been behind some of the biggest nonfiction deals of the summer, including rumored seven-figure agreements for James Comey ... and Tucker Carlson ... And, although they both worked for Republicans in D.C., Latimer and Urbahn stressed that they are eager to work with liberals and conservatives. The deal they struck this summer for former DNC strategist Donna Brazile, selling her forthcoming book 'Hacks' to Hachette, may go a long way in proving this to potential Democratic clients." http://bit.ly/2wOpeY6

HAPPENING TONIGHT - JAKE TAPPER will be given the John F. Hogan Distinguished Service Award at the Radio Television Digital News Association's annual Excellence in Journalism conference in Anaheim. http://bit.ly/2xRYwxS

THE GLOBAL POLICY LAB: POLITICO Europe is launching Global Policy Lab, a first-of-its kind experiment in collaborative journalism that is expected to produce new policy solutions and inform the public debate on key issues. POLITICO readers are among the most engaged and educated in the world, and the Global Policy Lab will tap into their experience and knowledge to develop solutions to pressing challenges. POLITICO is partnering with GE on the first installment, titled Engineering Growth, to look at the rise of digital manufacturing in Germany, Europe's largest economy, and explore ways to improve the economies of France and the United Kingdom. ***Sign up for the weekly newsletter*** http://politi.co/2xaxcwS

Playbookers

SPOTTED: Sean Spicer last night at Wolf Trap rocking out to Sting. He was with OMB's Jessica Anderson and Jim Herz and Brandt Anderson of Rep. Jim Banks' (R-Ind.) office. Spicer took numerous selfies with fellow patrons ... Shaun Donovan yesterday at Penn Station ... Star Wars/Indiana Jones actor Harrison Ford having lunch at il Canale in Georgetown, on Thursday. ***Pic with hostess Alona Nedorezova and Alessandro Farruggio (the son of il Canale's owner)*** http://bit.ly/2eR9hfd ... Air Pollution

Texas Coal Plants May Not Be Saved by Scaled Back Visibility Rules

The EPA is giving Texas a chance to rework a proposed multibillion-dollar air pollution regulation for utilities, but that likely won't be enough to save some coal-fired power plants from shutting down, energy analysts told Bloomberg BNA.

Energy

New Biofuel Exemption Prospects Spur Oil Giant Concern

An era of relaxed biofuel blending requirements may be dawning for small oil refineries nationwide following a watershed court decision and new congressional direction for regulators.

General Policy

Week Ahead: 'Garbage Juice,' Snow Leopards, EPA Modeling Debated

"Garbage juice" in North Carolina, the snow leopard's role in addressing climate change, and an EPA panel's scrutiny of regulation models are among the topics at energy and environment events during the week of Aug. 28.

News

Coal Mining

Coal Study Halted But Other Science Projects Go On

The Interior Department halted a National Academy of Sciences study of coal mining and health links in what the agency said was a broader stoppage of certain grant projects, but at least three other studies with the same funding criteria remain ongoing, a spokeswoman for the scientific advisory group told Bloomberg BNA.

Duty to Indemnify

Taos Ski Resort Can't Recoup Cleanup Costs From Insurer

A Taos, N.M., ski resort that operates on land leased from the federal government can't recover from its insurer for cleaning up contamination on the property, the Tenth Circuit ruled (Taos Ski Valley, Inc. v. Nova Cas. Co., 10th Cir., No. 16-cv-2118, 8/25/17).

Duke Asks to Cancel Planned South Carolina Nuclear Reactors

Duke Energy Corp. asked to cancel its planned nuclear plant in South Carolina, citing the bankruptcy of reactor manufacturer Westinghouse Electric Co.

Mining

Canada Making Progress on Central Arctic's First Deep-Water Port

Canada's Nunavut territory is taking early steps toward building the first deep-water port in the Central Arctic, located at the mid-point of the Northwest Passage.

Oil & Gas

Oil and Gas Industry Would Welcome Interior Agencies to Colorado

The oil and gas industry in Colorado would welcome the relocation of three Interior Department agencies into the state, an industry representative told Bloomberg BNA.

Renewable Energy

Shell Joins Solar Push in Coal Country of World's Top Exporter

Royal Dutch Shell Plc is investigating a solar power project in an Australian region better known for its fossil fuels, particularly coal.

Sustainability

Paper Waste Spurs Testing of Low-Cost Carbon Fiber for Products

When you think about the materials that go into making cars, you don't generally consider the plants growing in your backyard. But that's the direction industry is headed.

WTO Week Ahead

U.S. Takes on Chinese Farm Quotas; New Life for Green Goods Pact?

Summer vacation is nearly over, and officials at the World Trade Organization's dispute panel will be back in the saddle by the end of the week.

Water Pollution

After 40 Years, Shared Water Pollution Permits Still Puzzle States

Several states want to issue water pollution permits that for decades have been controlled by the federal government, but a recent report highlights how they're being hindered by confusion over costs and even which waters are eligible for state oversight.

Water Pollution

Los Angeles Sewage Sludge Fight Ends in Settlement

Los Angeles can continue shipping its treated sewage sludge to a farm it owns in Kern County, following the settlement of a long-running legal battle over the land application of biosolids.

Water Pollution

New Zealand Moves Up Microbeads Ban, Expands Scope

New Zealand plans to ban plastic microbeads in a broader range of products and tighten the deadline so the ban will go into effect in May 2018.

Water Pollution

Water Pollution Testing Rule Increases State Compliance Options

The EPA issued new testing guidelines for testing effluent levels in water, which will provide states with more options for complying with federal pollution regulations.

Subject: TSCA rule lawsuits to head to different courts

By Alex Guillén

09/01/2017 03:51 PM EDT

Lawsuits over two key EPA rules for implementing the revised Toxic Substances Control Act will play out in two separate courts.

Various challenges were filed last month over EPA's prioritization rule, which determines how the agency chooses which substances it will focus on immediately, and its evaluation rule, which describes how EPA will review substances. Public health and environmental groups argued that both rules skewed in favor of industry interests.

Lawsuits over the rules were filed in the 2nd, 4th and 9th Circuits. EPA had asked for all the lawsuits to land in the same court, but each rule's challenges will proceed in a different court. The lawsuits over the prioritization rule will move forward in the 9th Circuit, while the 4th Circuit will handle challenges to the evaluation rule.

The decisions were made randomly by the Judicial Panel on Multidistrict Litigation, a group of seven judges who consolidate similar lawsuits that are filed in disparate courts.

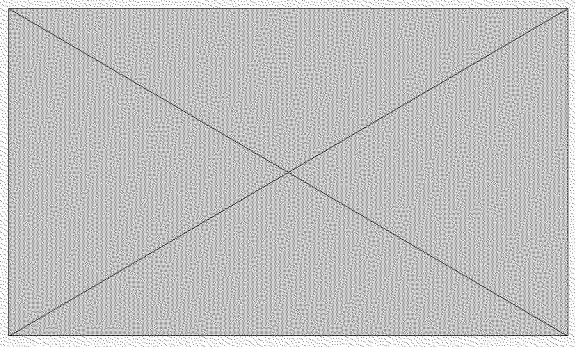
Subject: AEI Today: In the wake of Harvey, Americans come together

Politics and ideology are, or should be, downstream from all of the most important things in life, at least in America.

AEI's daily publication of independent research, insightful analysis, and scholarly debate



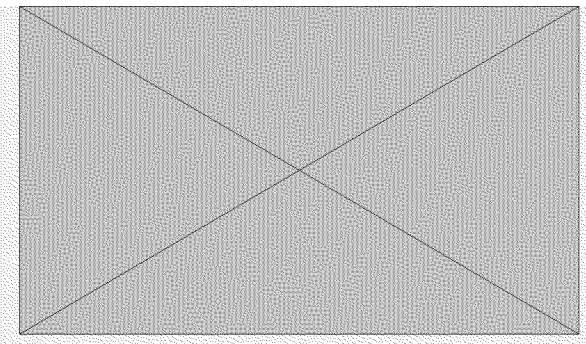
Reuters

In the wake of Harvey, Americans come together

Jonah Goldberg | National Review Online

We live in an ugly, tribal moment in American history. Politics is becoming a substitute for identity, even religion, for millions of Americans. How you vote and what team you root for on the cable shout shows is becoming a signifier of who you are. But politics and ideology should be downstream from all of the most important things in life. This becomes apparent only in

dire circumstances, such as when floodwaters wash away the nonsense and reveal the decency of the American people.

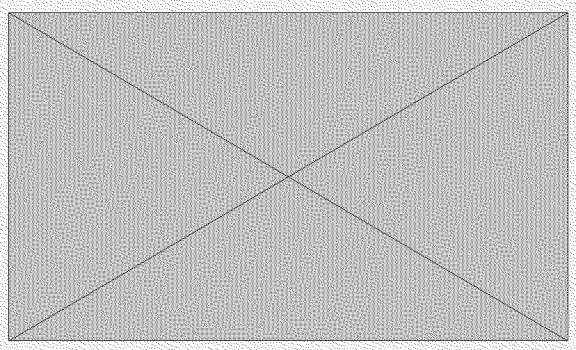


Reuters

Why Democrats should negotiate on health care

James C. Capretta | Real Clear Health

Congressional Democrats may be tempted to think they shouldn't negotiate with Republicans on health care because, so far, the GOP has shown itself incapable of fulfilling its commitment to repeal and replace the Affordable Care Act. "Why rescue Republicans from their failure?" the current thinking goes. This is a short-sighted perspective. Yes, the GOP effort has stalled, but it is still possible that Republicans will succeed in pushing through substantial changes on their own.



Reuters

The key to stopping North Korea: Bolstering alliances

Michael Mazza | The Wall Street Journal

North Korea's launch of an intermediate-range ballistic missile over Japan once again highlights the threat that Pyongyang poses to the US and its Northeast Asian allies. The Kim family has a variety of reasons for pursuing a nuclear-weapons capability, but one of its goals — one that happens to align with Chinese interests — is to unsettle and ultimately delink the US alliances with South Korea and Japan.

Reuters

There's a difficult road ahead for GOP tax cuts

Ramesh Ponnuru | Bloomberg View

While Republicans have not yet drawn the outline of their coming tax-reform proposal, it appears that they are scaling back its ambition. That's a consequence of the one major decision they have made: to scrap a proposed border adjusted tax. For much of the year Republicans debated that idea, which would have changed business taxes so that imports were taxed and exports were not. Without it, they face tighter constraints.

Subject: First Move: Ocean Summit in Canada • Pruitt Off to Iowa • More Clean Power Hearings?

What you need to know to start your day.

Ocean Summit in Canada • Pruitt Off to Iowa • More Clean Power Hearings?

By Chuck McCutcheon

Depleted fish stocks, plastic pollution, melting glaciers, and rising sea levels are just a few of the issues confronting Earth's oceans. And, depending on one's point of view, the solutions range from solvable to daunting.

The World Ocean Council's Sustainable Ocean Summit is taking place this week in Halifax, Nova Scotia, to discuss some of the potential solutions. Adam Allington is reporting from the conference, which follows up on the United Nations' first-ever Ocean Conference earlier this year.

Ocean waves break off Sunset Beach, Calif.
Photographer: David McNew/Getty Images

The council functions as sort of an international chamber for ocean commerce. It seeks to bring together such industries as shipping, oil and gas, fisheries, aquaculture, tourism, and renewable energy, along with maritime legal, financial, and insurance companies.

One of the summit's panels will focus on climate change and ocean acidification and look at how businesses can ensure that ports and coastal infrastructure can be made more resilient against extreme weather. Another session on marine pollution will explore how industries collaborate to halt the introduction of invasive species.

The EPA today is scheduled to finalize 2018 ethanol volumes under the Renewable Fuel Standard. The RFS is the 2005 law that requires U.S. oil refineries to blend increasing amounts of ethanol and biodiesel into the nation's fuel supply.

Corn-state lawmakers have pushed EPA Administrator Scott Pruitt to jettison plans to revamp the standard mandating the use of ethanol and other biofuels. Their concerns help to explain why Pruitt plans to visit the city of Nevada, Iowa, on Friday to meet with farmers and biofuel groups.

That meeting signals that Pruitt plans to stick to his October pledge to the

lawmakers and issue a requirement for 15 billion gallons of conventional biofuel—mostly corn-based ethanol.

Now that the official hearings on repealing the Clean Power Plan are over, proponents of the Obama-era initiative are demanding more sessions.

Abby Smith, who reported from the public hearings in Charleston, W.Va., explains that New York already is planning to host a forum in mid-December—with or without the EPA's participation.

"If EPA will not bring these important hearings to our residents, we will bring the hearings to them," Mike Myers, an assistant attorney general for New York state, testified at the Charleston hearing.

A hearing in New York—or in another large city—would almost certainly draw larger numbers of low-income people and minorities who back the Clean Power Plan. Some of them testified in Charleston that controlling climate and air pollution from coal-fired plants, as the Obama administration sought to do in its plan, is critical to environmental justice.

Other Stories We're Covering

- The Senate has begun voting to start debate of the Republican-backed tax overhaul, which includes provisions to open drilling in Alaska's Arctic National Wildlife Refuge.
- Pennsylvania's environment department is hosting a webinar today on final regulations for methane emissions from oil and gas wells. The final regulations—the first of their kind in the nation, the department says—are an update to draft regulations announced in January 2016 that seek to target methane leaks. Leslie A. Pappas is following.
- A House Natural Resources panel is holding a hearing on a bill that would streamline the Bureau of Reclamation's process for approving water projects. David Schultz is covering.
- Donald Blankenship, former Massey Energy chief executive who went to prison in the wake of a 2010 mine explosion that killed 29, plans to run for the U.S. Senate from West Virginia.

Quote of the Day

"This is not a standard vaccine. It's proving to be an elusive little genie to get out of the bottle."
—Peter Janssen, principal research scientist for a New Zealand program trying to develop a vaccine to make cows burp less, thus reducing their contribution to climate change.

Around the Web

- Grants funded by the National Science Foundation have seen a steady drop this year in the use of the phrase "climate change."
- Yale University has released a map breaking down opinions on climate change at the state and congressional district levels and sorted by political party; it finds 62 percent of New York Republicans believe global warming is happening, while only 48 percent of Republicans in Nebraska and Kansas concur.
- General Motors Co. will demonstrate its battery-powered, computer-operated Chevrolet Bolt prototype today in San Francisco, hoping to establish itself as a leader in the race to bring driverless cars to market.

Today's Events

- **9:30 a.m. • Interior** • Deputy Secretary David Bernhardt will testify before a House Appropriations panel.
- **12:30 p.m. • FERC** • Chairman Neil Chatterjee will speak at the Natural Gas Roundtable luncheon.
- **12:45 p.m. • Energy Security** • Resources for the Future hosts webcasted event on energy security with speakers including MIT's Howard Gruenspecht, who recently stepped down as the Energy Information Administration's acting administrator.
- **All Day • Energy and Climate** • Texas Public Policy Foundation and the Heritage Foundation host the At the Crossroads IV: Energy and Climate Policy Summit. Speakers include Republican Sens. Jim Inhofe of Oklahoma and Mike Lee of Utah.

Election 2017: Offshore Drilling Opponent Wins Virginia Governor Race
Opponents of offshore oil and gas drilling scored a victory with the election Nov. 7 of Democrat Ralph Northam to be Virginia's next governor.

Energy
High-Voltage Transmission Lines Coming, Mexico's Energy Ministry Says
A much-awaited bidding process for Mexico's first private auction on a $1.2 billion high-voltage line will take place in the first quarter of 2018, after a year of delays, according to a senior energy minister.

Energy
House Passes Bill to Boost Energy Regulator Role in Hydro Reviews
The Federal Energy Regulatory Commission would take the lead role in coordinating the interagency licensing process for hydropower projects in a bill passed by the House Nov. 8.

News

Air Pollution

Beijing Beaten as Pollution in Indian Capital Goes Off the Chart

Thick toxic smog enveloped New Delhi for a second straight day on Nov, 8, forcing schools to shut down, halting traffic on highways, and sending residents scurrying to buy air purifiers and filtration masks.

Biofuels

Icahn Subpoenaed by U.S. Over Biofuel Policy While Trump Adviser

Federal investigators have issued subpoenas for information on Carl Icahn's efforts to change biofuel policy while serving as an informal adviser to President Donald Trump, according to regulatory filings.

Biotechnology

Russia Seeks Technology as Condition for Bayer-Monsanto Deal

Russia delayed the approval of Bayer AG's takeover of Monsanto Co. until the merged company agrees to share technology and data with the country, the first time authorities have demanded corporate secrets in exchange for access to the local market.

Chemicals

Chlorine's Deadly Hazards Fuel Stock Rally as Supply Tightens

Armies used chlorine as a weapon in World War I. Thousands of lives are put at risk every time a railroad tank car rolls through a city carrying the chemical. It's among the biggest fears of safety regulators.

Climate Policy

EU Climate Chief Calls for Carbon-Market Reform Deal This Week

The European Union should reach an agreement on an overhaul of the world's biggest carbon market this week to prove leadership in combating emissions at the United Nations climate talks, according to EU Climate and Energy Commissioner Miguel Arias Canete.

Climate Policy

Trump Nominee Drops Paganism Claim, Says Climate Change Is Real

An environmental nominee of President Donald Trump who had dismissed the threat of climate change and labeled carbon dioxide plant food, abandoned those positions Nov. 8 under questioning from Senate Democrats.

Climate Regulation

As Trump Steps Back from UN Climate Talks, Coke and HP Move In

On the fringes of the ongoing global climate summit in Bonn, U.S. leaders will once again demonstrate their commitment to the issue, with a packed agenda of film screenings, panel discussions and cocktail parties where they will highlight the country's carbon dioxide cuts.

Coal Mining

How Coal Giant Peabody's Ideas Ended Up in Trump's Coal Study

Days after Energy Secretary Rick Perry requested a study on how to help coal-fired power plants, a lobbyist for the largest U.S. coal producer contacted the department to offer his advice. Many of those ideas became part of the department's efforts to help companies who provide the fuel source.

Energy

A Year After Trump's Election, Coal's Still Losing to Renewables

It's been a year since President Donald Trump's election and his pledges to transform the

energy markets haven't exactly come to pass.

Energy
France Says Cutting Nuclear Reliance Could Take Extra 10 Years
France may delay its goal of reducing nuclear power to half of electricity output by five to 10 years because it needs more time to develop renewable energy, Ecology Minister Nicolas Hulot said.

Energy
Microgrid Industry Seeks Regulations in Order to Grow
The business of building microgrids is ready to grow but is being held back by a lack of state rules and guidance about how utilities should relate to microgrids, business sources said.

Energy
No Sales Growth? No Problem! Utilities See Money in Grid Repairs
Faced with stagnant sales, big power companies say they can still grow in the U.S. by investing billions in upgrading their grids to accommodate renewables and protect against extreme weather events.

Lead Paint
Lead Paint Nuisance Ruling Could Have Big Impact
Sherwin-Williams Co., NL Industries Inc. and ConAgra Grocery Products Co. are expected to learn before Thanksgiving whether a California trial court validly ordered the manufacturers to pay $1.15 billion to remove or abate lead paint hazards from hundreds of thousands of California homes.

Mining
Wisconsin's 'Prove it First' Mining Ban Headed for Repeal
Highland Copper Co. Inc., Komatsu Mining Corp. and other global mining equipment and development firms could benefit from the Wisconsin Legislature's approval of a bill repealing a 20-year mining moratorium.

Motor Vehicles
EU Seeks to Cut Cars' Carbon Dioxide Emissions 30 Percent By 2030
BMW Group, Daimler, and other carmakers in the European Union would be required to improve the fuel economy of their vehicles or increase the proportion of electric cars they produce to meet 2030 carbon dioxide reduction targets proposed by the European Commission Nov. 8. The commission, the EU's executive arm, said the average private car or light van sold in the EU in 2030 should emit 30 percent less carbon dioxide than a car or van sold in 2021—a level that European automakers ...

Motor Vehicles
Ford Seals Big Deal for Chinese Electric Cars in Time for Trump
Ford Motor Co. is going all-in on electric cars in China, the world's largest market for battery-powered vehicles, and it wants President Donald Trump to know about it.

Natural Resources
California to Tackle Shrinking Salton Sea With $383M Plan
California has signed off on a $383 million plan to build wetlands and control dust along the Salton Sea's shrinking shoreline over the next 10 years.

Oil & Gas
Bill to Boost Federal Oil and Gas Production Advances

A bill that would promote wider offshore oil and gas drilling and a greater state role in onshore oil and gas permitting advanced out of the House Natural Resources Committee Nov. 8 on a mostly party-line vote of 19-14.

PFOA

Pollution Claims Against Rug Makers Batted to State Court

Water pollution claims against many of the nation's carpet manufacturers belong in Alabama state court, a federal court in Alabama ruled Nov. 7.

Pesticides

California Limits Farmers' Pesticide Use Near Schools

California farmers can't spray pesticides near schools and daycare centers during weekdays under new restrictions the state adopted Nov. 7.

Pesticides

In-Season Dicamba Ban Gets Arkansas Plant Board Approval

The Arkansas State Plant Board voted Nov. 8 to institute a seasonal ban on dicamba, an herbicide linked to nearly 1,000 complaints of crop damage in the state.

Proxy Voting

Passive Investing Giants Get More Active on Climate, Diversity

State Street Corp., Vanguard Group, and other big passive investment managers' increasingly vocal stance on issues such as climate change and diversity shows in the way they vote.

Vehicle Fuels

Copper Consumption to Get Boost as World Wagers on Electric Cars

Demand for copper globally is set to jump 22 percent in as soon as five years on increasing usage of the metal in electric vehicles, solar and wind power sectors, according to Indian billionaire Kumar Mangalam Birla's Hindalco Industries Ltd.

Subject: Playbook Power Briefing, presented by Chevron: TRUMP attacks Flake by name -- COMEY takes lecture post at Howard U -- U.S. has more troops in Afghanistan than previously disclosed -- Excerpts from HILLARY'S book

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Chevron

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Wednesday afternoon. THE DUAL-HEADED SHUTDOWN MONSTER -- ONE THEORY BOUNCING AROUND ... Many in the Capitol believe that September will be the first of two government-shutdown fights. The theory goes like this: Congress will pass a clean debt ceiling and a short-term government funding bill that extends funding only until December, setting up a Christmas-season dustup. There simply isn't time to solve everything in September. Of course, Trump clearly wants a fight on border wall funding, so it's completely feasible that he stands firm next month. But many on the Hill think there will be a second legislative fight, as well. **LIKELY SCENARIO:** They screw up both September and December for Washington. Womp womp.

-- OF COURSE, a prolonged government-shutdown fight would adversely affect the prospects of tax reform.

TEXT FROM A HILL REPUBLICAN: "Remember when the [White House] was going to do a big push for tax reform?"

THE PRESIDENT used Twitter this morning to repeat much of what he said last night. **@realDonaldTrump** at 9:20 a.m.: "Phoenix crowd last night was amazing - a packed house. I love the Great State of Arizona. Not a fan of Jeff Flake, weak on crime & border!" ... **at 9:40 a.m.:** "Last night in Phoenix I read the things from my statements on Charlottesville that the Fake News Media didn't cover fairly. People got it!" ... **at 9:50 a.m.:** "If Republican Senate doesn't get rid of the Filibuster Rule & go to a simple majority, which the Dems would do, they are just wasting time!"

FOR THE PRESIDENT -- @jmartNYT: "This came up during reporting w @alexburnsNYT: Sen Rs especially resent the Flake attacks bc Flake is unfailingly decent to colleagues."

-- FACT CHECK: True.

-- ALSO: Senate Republicans have been having trouble getting to a simple majority on

legislative priorities. The whole get-rid-of-the-filibuster-and-all-of-Trump's-problems-with-Congress-will evaporate theory doesn't jive with reality.

BIRTHERISM'S STILL KICKING -- "GOP Senate candidate Roy Moore has said he doesn't believe Obama is a natural-born citizen," by CNN's Andrew Kaczynski and Paul LeBlanc: "Former Alabama Chief Justice Roy Moore, a Republican candidate for US Senate, has cast doubt on former President Barack Obama's citizenship repeatedly and as recently as December 2016, fueling the debunked 'birther' movement that sought to delegitimize Obama's presidency. Moore, who started questioning the legitimacy of Obama's citizenship back in 2008, last year told a meeting of the Constitution Party that he personally did not believe Obama was a natural-born citizen.

"'My opinion is, there is a big question about that,' Moore said when asked how he defines natural-born citizen as it relates to qualifications for president. CNN's KFile reviewed video from the event. 'My personal belief is that he wasn't, but that's probably over and done in a few days, unless we get something else to come along,' he added. ... Moore's campaign declined to make him available for interview and did not respond to follow-up emails about the details of this story." http://cnn.it/2vnVcZ6

OOPS -- "Why Ben Carson's appearance in Phoenix was likely a violation of federal law," by WaPo's Philip Bump: "Right before Ben Carson took the stage at President Trump's rally in Phoenix on Tuesday night, the announcer introduced him. 'The secretary of the U.S. Department of Housing and Urban Development, Dr. Ben Carson,' the voice intoned, prompting cheers from the audience. And, as simply as that, a law was likely broken. ...

"Among the prohibitions included in the Hatch Act is one prohibiting Cabinet secretaries from leveraging their positions for a political cause. That means that the head of, say, the Department of Housing and Urban Development can't appear at a campaign rally in a way that implies he's doing so in an official capacity. Say, by being introduced with his official title." http://wapo.st/2voA2Kt

-- RESIGNED: @dan_kammen: "Mr. President, I am resigning as Science Envoy. Your response to Charlottesville enables racism, sexism, & harms our country and planet." ***His letter to Trump. The first letters of each paragraph spell "IMPEACH"*** http://bit.ly/2w44yv4 (He was appointed before Trump took office.)

****** **A message from Chevron**: Advanced technology is helping us find safer ways to deliver energy. We're piloting a program that uses drones to monitor tanks and pipelines. Watch the video: http://politi.co/2vLsVyX ******

ON RUSSIA -- "How Alan Dershowitz Went From Hillary Donor to Trump's Attack Dog on Russia," by The Daily Beast's Betsy Woodruff: "Alan Dershowitz -- a liberal Harvard law professor and ardent backer of Hillary Clinton -- has emerged as one of the Russia probe's most vocal critics. He's likened the investigation to a KGB hunt, and special counsel Bob Mueller to a notoriously obsessed sailor. It's made him a Fox News

fixture, and that has left some of his counterparts in the legal world baffled and skeptical. But those close to Dershowitz say his vociferous criticism of Mueller's investigation is the opposite of surprising -- and that Mueller and Dershowitz have a history. ...

"Some suspect Dershowitz's advocacy goes beyond his television appearances. A person familiar with the president's legal affairs said there are concerns Dershowitz has talked about legal affairs with Trump. Dershowitz told The Daily Beast this isn't true. He said he and the president have spoken, but never privately. He said the two men spoke at Mar-a-Lago once when Dershowitz dined there with Newsmax CEO Chris Ruddy, a mutual friend of the two. Trump came over to their table and chatted with them about the travel ban." http://thebea.st/2voKth3

SLOWED TO A CRAWL -- "Regulatory activity dips to new lows in Trump administration," by Bloomberg Government's Cheryl Bolen: "The Office of Information and Regulatory Affairs, which reviews all significant federal regulations, processed 67 regulatory actions in the first six months of this administration, including notices, proposals, and final rules, compared with 216 actions by the same point in the Obama administration, according to government data. The question now is whether this pace will continue, or inch back up as agencies complete their assessments of existing rules that can be rolled back and new regulations that are required." http://bit.ly/2vo3OPq

WAR REPORT -- "U.S. Has More Troops in Afghanistan Than Publicly Disclosed," by WSJ's Gordon Lubold and Nancy Youssef: "The Pentagon maintains more than 12,000 U.S. troops in Afghanistan, defense officials said, currently about 3,500 more than it publicly acknowledges, a critical factor as military planners weigh how many additional forces to deploy under a new strategy.

"The actual number of troops, which hasn't been previously disclosed, reflects the true U.S. force level on the ground in Afghanistan. The Pentagon for many years has kept the actual number of forces deployed to a war zone hidden, choosing to publicly disclose only those deployed for longer periods while not counting those who slip in and out of a war zone on temporary status. In recent years, when tens of thousands of troops were deployed to places like Afghanistan and Iraq, the difference between the public and the true numbers was largely inconsequential. But in recent years, overall troop numbers began to dwindle and the hidden number became more significant, analysts and military officials acknowledge." http://on.wsj.com/2vouNKJ

NEW GIG -- "Comey takes lecture post at Howard University," by Negassi Tesfamichael: "The university said Wednesday that Comey, who was fired earlier this year by President Donald Trump, would speak at the opening convocation ceremony slated for Sept. 22, which is designed to welcome students to the historically black university. Comey will also hold a one-year position at Howard, delivering a series of five lectures related to public policy, the university said." http://politi.co/2iqTMMh

FOR YOUR RADAR -- "U.S. Ambassador to Israel David Friedman Says Trump's

Charlottesville Response 'Was Not Fine'" -- Haaretz: "Asked by a Channel 10 TV reporter about if Trump's response to events following a white supremacist rally was 'fine,' Friedman said, 'I think that it was not fine,' and added he would rather not comment any further on the matter. Friedman also said Trump 'is being treated unfairly by the media. I think he'll do a great job for America.'" http://bit.ly/2xsVYp2

TOP TALKER -- MORNING JOE had exclusive excerpts from **HILLARY CLINTON'S** new book. Some nuggets: "I don't have all the answers, and this isn't a comprehensive account of the 2016 race. That's not for me to write. I have too little distance and too great a stake in it. Instead, this is my story. I want to pull back the curtain on an experience it was exhilarating, joyful, humbling, infuriating and just plain baffling. Writing this wasn't easy. Every day that I was a candidate for president I knew that millions of people were counting on me and I couldn't bear the idea of letting them down. But I did. I couldn't get the job done. And I'll have to live with that for the rest of my life."

Clinton on the second presidential debate, when Trump hovered directly behind her: "This is not OK, I thought. It was the second presidential debate, and Donald Trump was looming behind me. Two days before, the world heard him brag about groping women. Now we were on a small stage and no matter where I walked, he followed me closely, staring at me, making faces. It was incredibly uncomfortable he was literally breathing down my neck. My skin crawled. ...

"It was one of those moments where you wish you could hit pause and ask everyone watching 'well, what would you do?' Do you stay calm, keep smiling and carry-on as if he weren't repeatedly invading your space? Or do you turn, look him in the eye, and say loudly and clearly 'back up you creep, get away from me! I know you love to intimidate women, but you can't intimidate me, so back up.'

"I chose option A. I kept my cool, aided by a lifetime of dealing with difficult men trying to throw me off. I did, however, grip the microphone extra hard. I wondered though, whether I should've chosen option B. It certainly would've been better TV. Maybe I have overlearned the lesson of staying calm, biting my tongue, digging my fingernails into a clenched fist, smiling all the while determined to present a composed face to the world." ***3-min. video from Morning Joe, with Clinton reading the excerpts*** http://on.msnbc.com/2voj3aP

NEW EXCUSE FOR DODGING THE PRESS -- @JimmyVielkind: "Cuomo did not take press questions - aides said cuddling the puppies threw them off schedule. He left reporters waiting beneath the gondola."

FIRST IN PLAYBOOK -- BINYAMIN APPELBAUM , a Washington correspondent who covers economics for the New York Times, has signed a deal with publisher Little Brown to write "The Economists' Hour" with a goal to publish in the fall of 2019. He told us it's a history of how free market economics went from the classroom to being used in the halls of power around the world and will also look at the people and ideas who have affected the role of government in citizens' lives and the recent populist backlash.

WEEKEND WEDDING - Henry Ross, a recent graduate of Columbia Law School, incoming associate at Sullivan & Cromwell and a DOJ alum, married **Charlotte Dillon,** an associate on the tech investing team at New Enterprise Associates and a Goldman Sachs alum, on Saturday in front of family and friends at St. Mary's Church in Lakeville. The bride and groom met at Hotchkiss and became a couple during a school trip to Antarctica in December 2008 (h/t maid of honor, Natalie Boyse). ***Pic*** http://politi.co/2g1OMN9

****** **A message from Chevron**: Advanced technology is helping us find better and safer ways to deliver energy to America. We're piloting a program that uses drones, HD imaging, and thermal mapping capabilities to monitor Chevron wells, tanks, and miles of pipeline. Watch the video http://politi.co/2vLsVyX ******

Subject: POLITICO's Morning Transportation, presented by the Embassy of the United Arab Emirates: Build America Bureau chief signs off — Trump to talk GOP agenda with senators — DHS faces more complex aviation threats

By Brianna Gurciullo | 10/20/2017 10:00 AM EDT

With help from Stephanie Beasley and Tanya Snyder

SIGNING OFF: The Build America Bureau's first executive director has stepped down. Marty Klepper was named to the job less than a month before the Obama administration ended. As Tanya reports , the DOT unit "had been created less than six months earlier as a 'one-stop shop' for credit and grant opportunities," bringing together the TIFIA and RRIF programs. No word yet on why Klepper left. The bureau focused on public-private partnerships, but President Donald Trump has been less than enthused about those agreements lately - despite the fact that his officials have said for months that P3s will be a major part of his infrastructure proposal.

TO BE A FLY ON THE WALL: Trump will speak to Senate Republicans during their weekly policy lunch on Tuesday - his first trip to the Hill to talk to senators since entering office, POLITICO's Burgess Everett reports. Sen. John Barrasso (R-Wyo.), the chairman of the Environment and Public Works Committee as well as the Republican Policy Committee, invited Trump. In a statement, Barrasso said the president is coming "to press our common agenda and speed a great American recovery." Will infrastructure be a part of the conversation? Stay tuned.

YAY FRIDAY: Thanks for tuning in to POLITICO's Morning Transportation - your daily tipsheet on all things trains, planes, automobiles and ports - where your host is looking forward to a lazy weekend. Send along tips, feedback and lyrics to bgurciullo@politico.com or @brigurciullo.

"Mustang Sally, guess you better slow your Mustang down / Oh Lord, what I say now / Mustang Sally, now baby / Oh Lord, guess you better slow your Mustang down."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

DHS FACES MORE COMPLEX AVIATION THREATS: DHS spokesman David Lapan made a few clarifications about the nature of terrorist threats against the U.S. aviation system at a pen and pad Thursday. Acting Homeland Security Secretary Elaine Duke reportedly told U.K. officials Wednesday that groups like ISIS and Al Qaeda continue to hatch plots to down aircraft on the scale of the Sept. 11, 2001, attacks. "What she is communicating is that the nature of the threat environment today is much more complex and diverse than it was before 9/11," he said, noting the emergence of new technology and communication tools. Steph has more for Pros here.

ICYMI: Lapan isn't staying at DHS for much longer. He's heading to the Bipartisan Policy Center later this month, as CNN first reported.

MORE REAL ID EXTENSIONS POSSIBLE: DHS spokeswoman Justine Whelan also told reporters at Thursday's pen and pad that the department continues to review states' applications for REAL ID extensions. DHS has granted one-year extensions to 17 states so far, but half a dozen others, including Missouri and New York, remain under review. "There are many packages still at DHS," she said. "Currently there is a grace period in effect." Whelan said states whose requests are still pending will be exempt from enforcement action until Jan. 22, 2018, which is when the department is slated to start rejecting ID cards that don't meet federal standards at airports and other federal facilities. States that received the extensions now have until Oct. 10, 2018, to comply.

NO-FILTER DEFAZIO: Rep. Peter DeFazio (D-Ore.) wrote to Transportation Secretary Elaine Chao on Thursday slamming her for giving PHMSA the status of lead U.S. agency on ICAO's dangerous goods committee instead of the FAA. "I find your decision inexplicable, and I strongly believe it has the potential to put the lives of airline passengers and crews at serious risk," the top Transportation Committee Democrat wrote, adding that he plans to introduce a bill to permanently assign the top role to the FAA.

What mission? "FAA's mission is, in fact, to provide the safest, most efficient aerospace system in the world," DeFazio wrote. "I have no idea what PHMSA's mission is, or whether its leaders do, because the agency is so dysfunctional that it cannot even finalize crucial safety rulemakings that Congress mandated more than five years ago." DeFazio also accused PHMSA of showing "coziness" toward "industry representatives that strongly oppose the regulation of lithium cells and batteries and other dangerous goods." DOT didn't return a request for comment on the letter.

** **A message from the Embassy of the United Arab Emirates**: It was the largest commercial aviation order in history - UAE airlines bought $120 billion in US-made Boeing aircraft. That's hundreds of thousands of jobs for Americans. The UAE-US commercial aviation relationship is a win-win deal. http://politi.co/2yFCemS **

SENATE OK's BUDGET: The Senate passed a budget resolution Thursday that'll open the way for a Republican tax overhaul. The vote was 51-49, with only Kentucky Sen. Rand Paul defecting. The House passed its budget earlier this month. "Key House and Senate lawmakers privately hammered out a compromise Thursday that would likely eliminate the need for a conference committee - buying Republicans at least a week to do more tax work," POLITICO's Sarah Ferris and Seung Min Kim report.

I'M OUT: JetBlue Airways is ditching a dozen online travel websites as it looks to slash $20 million in spending on ticket sales, Bloomberg reports . The airline will, however, keep its flights on Priceline and Expedia sites. One expert told Bloomberg that when a person books a flight on an online travel website, it costs an airline five times more than when someone books on the carrier's website. "Distributing really low fares through these channels is very, very expensive for us," a JetBlue executive told Bloomberg, explaining that "distribution costs" stay constant regardless of the price of a ticket. (Airlines pay fees for so-called global distribution systems to give schedule and airfare data to online travel websites.)

300 MPH TORRENTIAL OUTPOUR BLUES: About 70 percent of a maglev line between Washington, D.C., and Baltimore would need to be underground so it wouldn't affect the homes along the route, according to private company Baltimore-Washington Rapid Rail, which has teamed up with the state of Maryland. But that kind of construction would push the cost past the $10 billion originally projected. As WAMU's Martin Di Caro reports , three potential routes are being evaluated, and each one will probably change as an environmental impact study moves forward. And since we know you're wondering: A stop at Union Station isn't an option because the turns would be too narrow and Amtrak already expects to construct a facility under the station in the future.

MT MAILBAG: Rep. Lloyd Doggett (D-Texas) sent a letter Thursday to FAA Administrator Michael Huerta pushing the agency to mandate that commercial hot air balloon pilots receive medical certification, as NTSB recommended earlier this week. The board concluded that the current exemption for balloon pilots contributed to a 2016 crash in Doggett's district and also recommended that the FAA review its oversight policies for balloon operations. "Continued rejection of NTSB's recommendations risks condemning more unsuspecting families to death," Doggett's letter reads.

MT INFLUENCE: K&L Gates is lobbying for the American Bus Association on appropriations for DHS, according to a disclosure form. The lobbyists are Sean McGlynn, previously a staffer for former Sen. Barbara Mikulski (D-Md.), and Dennis Potter, previously a staffer for former Sen. Phil Gramm (R-Texas).

Plus, a fly-in: Nonprofit PeopleForBikes had a fly-in this week with women who serve as leaders at companies like REI and Trek Bicycle Corporation. They met with lawmakers to promote TIGER and other programs.

SHIFTING GEARS: Michael McLaughlin is now the chief of rail transportation for the Virginia Department of Rail and Public Transportation. McLaughlin most recently worked at the Chicago Transit Authority and previously worked for Rep. Dan Lipinski (D-Ill.) and Sen. Dick Durbin (D-Ill.).

THE AUTOBAHN:

- "Mayor will fight 'vigorously' against Cuomo-approved autonomous vehicle tests." POLITICO New York.

- "Alphabet unit leads $1 billion investment in Lyft." Bloomberg.

- "U.S.: Laptops in checked bags pose fire, explosion risk." The Associated Press.

- "Elon Musk's East Coast Hyperloop will launch digging in Maryland, state and company say." The Washington Post.

- "Where will Blackstone spend its infrastructure billions?" Bloomberg.

- "Australian car making to end soon with GM plant closing." The Associated Press.

- "To survive the streets, robocars must learn to think like humans." Wired.

- "Federal loan secured for I-66 public-private partnership project." The Washington Post.

- "Oroville Dam repair costs will top $500 million." The Associated Press.

THE COUNTDOWN: DOT appropriations run out in 50 days. The FAA reauthorization expires in 163 days. Highway and transit policy is up for renewal in 1,077 days.

** **A message from the Embassy of the United Arab Emirates**: UAE international airlines Emirates Airline and Etihad Airways are major Boeing customers. Emirates is the world's largest operator of Boeing 777s. And Etihad is responsible for nearly 20 percent of all Boeing 787-10s that are currently on order. Emirates and Etihad now serve 11 US gateway cities from Dubai and Abu Dhabi respectively with more than 260 weekly flights.

The growth of the UAE's aviation industry is the most visible sign of the UAE's overall economic success - a model of stability, growth and diversity in the Middle East. No country has benefitted more from this success than the US. Since 2009, the UAE has been the US's largest export market in the Middle East and North Africa. In 2016, the US had a $19 billion trade surplus with the UAE, America's third largest trade surplus globally. http://politi.co/2yFCemS **

Subject: BREAKING NEWS: White House launches probe of private email accounts

The White House has launched an internal probe of private email use, pulling batches of emails on the White House server to and from private accounts of senior aides, according to four officials familiar with the matter.

The effort began this week after POLITICO reported that both Jared Kushner and a number of other senior White House officials used private email accounts throughout the year to conduct government business.

Of particular interest is Kushner and Ivanka Trump's private email domain, because they still work in the White House, two officials said. Accounts of other White House officials are also being reviewed.

The probe could take several weeks or even months to complete, according to one of these people, as officials are searching for all emails sent or received about government business. The White House counsel's office is reviewing the accounts to determine if the messages are germane to any investigations such as the ongoing Russia probes by Congress and special counsel Robert Mueller, one of these people said.

News about the private email accounts caught many White House lawyers by surprise, one of these people said, and infuriated a number of White House officials.

Josh Raffel, who often speaks for Kushner and Ivanka Trump, referred inquiries to the White House press office.

A White House spokesperson declined to comment on the review, but said "the White House instructs staff to fully comply with the Presidential Records Act and briefs staff on the need to preserve records."

This article was reported in coordination with the Project On Government Oversight, a nonprofit investigative watchdog organization.

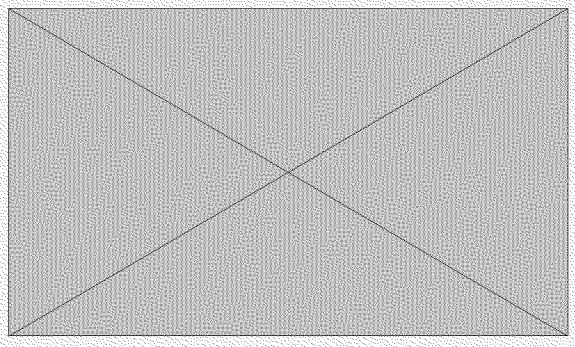
Subject: AEI Today: How the GOP can make good on tax reform

Conservatism believes public policy should build ladders of opportunity for low-income Americans, offering them a hand up out of poverty and into the workforce.

AEI's daily publication of independent research, insightful analysis, and scholarly debate



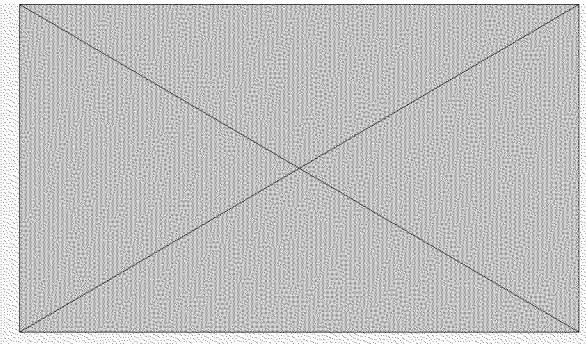
Reuters

How the GOP can make good on tax reform

Michael R. Strain | Bloomberg View

As the GOP turns its attention to tax reform after a summer filled with controversy, Republicans can finally legislate better public policy. But conservatives can also seize this chance to advance and illustrate their principles and priorities. Conservatism believes public policy should build ladders of opportunity for low-income Americans, offering them a hand up out of poverty and

into the workforce. One of the most successful programs to advance this goal operates through the tax code.

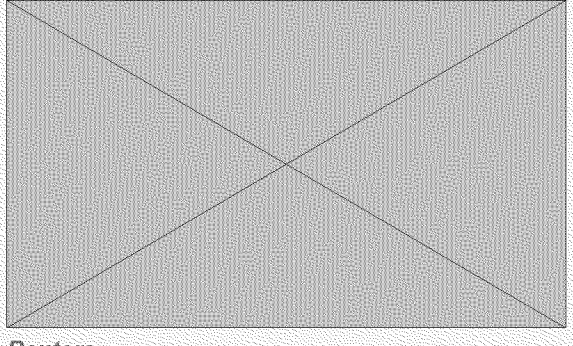


Reuters

America's deadliest war hides in plain sight

Mackenzie Eaglen | Real Clear Defense

With hurricane relief and the debt ceiling grabbing the headlines, it will be easy to overlook today's congressional hearing on recent ship collisions in the Pacific Ocean. But policymakers should not. Troops are now more likely to die in "peacetime" incidents than active hostilities or combat. We should all be worried about that trend. Recent US Navy ship collisions in the Pacific and several aircraft crashes have highlighted the tangible and tragic consequences of how "degraded military readiness" manifests.



AEI

How the Google memo fits into the current culture war

Christina Hoff Sommers | AEI video

At Google, men hold 80 percent of the tech jobs and 75 percent of leadership positions. But the disparity isn't unique to Google. At US colleges last year, men earned 82 percent of computer science degrees. Why are there so few women in technology? Well, in his now notorious memo, James Damore tried to answer that question. And for doing so, he was fired by Google. Christina Hoff Sommers, the Factual Feminist, offers her take on the situation.

Reuters

Why America is the scariest emerging market economy

Desmond Lachman | The Hill

According to an old Wall Street joke, the longest river in the emerging market countries is “De Nile.” However, looking at the United States economy today, one has to wonder whether it is perhaps not we in America who are in denial about the underlying state of our country’s economy. There is much danger in choosing to turn a blind eye to the fact that the US is increasingly coming to resemble those major emerging market economies.

Subject: BREAKING NEWS: Trump signs transgender military ban

President Donald Trump signed a directive to the Pentagon on Friday that bans transgender people from serving in the military but gives the secretary of defense latitude in how to carry it out. The directive follows through on Trump's previously announced intention to implement the ban.

Subject: Court rejects EPA bid to delay Delaware ozone deadline plan

By Alex Guillén

09/01/2017 03:30 PM EDT

A federal judge has rejected an EPA request to push back a deadline to act on ozone pollution in Delaware.

Under a consent decree approved in January, the agency is supposed to make a decision about a state plan to curb emissions of nitrogen oxides and volatile organic compounds by Sept. 29. EPA recently asked for an extension while it reviews a separate but related Obama-era rule requiring states to modify their air plans to drop a "shield" for lawsuits against power plants or other sources that violate emissions limits during startup, shutdown or malfunction, a regulation known as the "SSM SIP call."

But Judge Phyllis Hamilton of the U.S. District Court for Northern California on Thursday said EPA can't have any more time.

"Whether EPA's 'policy review' will have any impact on EPA's decision is entirely speculative at this juncture," Hamilton wrote. "Even if EPA ultimately decided to change policy, EPA could later revise its decision on the Delaware SIP, if necessary."

She also criticized the agency for seeking an indefinite delay of the Delaware deadline while it reviews the SSM SIP call regulation, saying "an open-ended extension ... would defeat the core purpose of the Consent Decree by perpetuating a statutory violation."

WHAT'S NEXT: EPA has until Sept. 29 to decide on the Delaware plan.

Subject: POLITICO's Morning Score: What to watch in Alabama's special election — And Utah's special election! — More Charlottesville fallout

By Kevin Robillard | 08/15/2017 10:00 AM EDT

With Daniel Strauss and Zach Montellaro

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

ROLL TIDE - "Five things to watch in Alabama's special election," by Seung Min Kim and Daniel Strauss: "The brutal fight on the Republican side is all but assured to go to a September runoff, with no one expected to reach the 50 percent threshold to win the nomination outright. ... [Sen. Luther] Strange isn't a lock to secure a spot in the runoff. Polls show ex-state Supreme Court Justice Roy Moore consistently leading, while Strange and [Rep. Mo] Brooks are battling for the runner-up position. ...[S]hould Strange somehow not make the runoff - he's consistently placed second in polls, though the margin between him and Brooks is narrow - it would be a huge embarrassment for McConnell and establishment Republicans who have invested millions to help Strange secure the nomination. ... How much Trump's imprimatur matters is unclear, but Strange isn't hesitating to remind voters of it at every turn. To a crowd of Republicans in Homewood, Alabama last week, Strange recounted the phone call with Trump when he informed the senator of the endorsement, when the president told him: 'I've never done this in a contested primary before, I'm sure I'm going to be criticized, but it's important to get my agenda passed and I appreciate what you're going through to get it done.' ... Republican officials expect turnout to be low, which would likely hurt the rest of the field but potentially boost Moore, given his enthusiastic base. At the same time, Moore's campaign is floating the idea that he could exceed expectations and win somewhere above 35 percent but probably below the 50 percent needed to clinch the nomination outright."

- And don't forget about the Democratic primary: "A Democrat hasn't held a U.S. Senate seat in Alabama since 1997 but the party feels it might have an outside shot if the chips all fall their way. Seven candidates are running for the Democratic nomination, but two candidates are really in play: former U.S. attorney Doug Jones and Robert Kennedy Jr., a Navy veteran and business executive who's unrelated to the Kennedy family." **Full story.**

-If Strange doesn't make the runoff, "he will become just the second appointed senator since the 1970s to come up short in such a bid," per Smart Politics. "Since 1980, appointees nearly have an unblemished mark with 21 of 22 U.S. Senators receiving their party's nomination, including each of the last 12 aspiring to keep their seat since 1999." **Full story.**

- PHONING IT IN - "Trump sends robocall for Strange in Alabama," by Daniel Strauss: "President Donald Trump praises Sen. Luther Strange in a new robocall released by Strange's

campaign Monday, a day before Alabama voters head to the polls for special Senate primaries. ... 'Hi, this is President Donald Trump, and I love the people of Alabama and I hope you go out and vote for Luther Strange for Senate,' Trump says in the call. 'It's so important that you do.'" **Full story.**

-Polls close in most parts of Alabama at 8 p.m Eastern, with some counties closing at 7:30 p.m.

BEEHIVE BUZZ - "Tight Race for Chaffetz's Utah Seat Due to Outside Spending," by Roll Call's Bridget Bowman: "It's the Beehive State's first special election for a House seat in nearly 90 years, and the winner could hang onto the 3rd District seat for a while. The three Republican contenders battling it out are Provo Mayor John Curtis, former state Rep. Chris Herrod, and businessman Tanner Ainge. ... A Utah Policy poll from July showed Curtis leading Herrod by nearly 20 points, with half of those surveyed undecided. But a poll from the same outfit released Thursday showed Curtis' lead over Herrod had narrowed to 8 points, 31 percent to 23 percent, with Ainge in third at 15 percent, and roughly a quarter of respondents still undecided. So why are outside groups spending so much money on one House race? 'Whoever we elect - unless he does something dumb personally or misappropriates funds - is going to be there for a decade or more,' GOP strategist Chuck Warren said." **Full story.**

-THROWBACK TUESDAY: "Trump invisible in race to replace Chaffetz," by Campaign Pro's Elena Schneider. Full story.

-Polls close in Utah at 10 p.m. Eastern.

Days until the 2017 election: 84.

Days until the 2018 election: 448.

CHARLOTTESVILLE FALLOUT CONTINUES - Nevada Sen. Dean Heller praised Trump's revised statement on Charlottesville: "It was much stronger, it was much stronger. And I think he needed to do it." **When asked if Trump waited too long:** "I don't want to answer that question. I'm just glad he did it."

- Some Democrats pounced on the fallout. Jason Crow, who is running against Colorado GOP Rep. Mike Coffman, said Coffman needs to pressure Trump to fire presidential strategist Steve Bannon and Seb Gorka, whom he called "alt-right sympathizers." Former NAACP President Ben Jealous, who is running against GOP Gov. Larry Hogan in Maryland, said the state should remove statues of Chief Justice Roger Taney, who wrote the Dred Scott decision, in Baltimore

and replace it with a statue of Frederick Douglass.

- Some Republicans say statues of Confederate generals should stay. Rep. Evan Jenkins, who is running against Democratic Sen. Joe Manchin in West Virginia, said on a local radio show on Monday removing a statue of Stonewall Jackson from the West Virginia capitol grounds would be "scrub[bing] our history," but said it would ultimately be up to the state legislature and governor. South Carolina Gov. Henry McMaster, who is running for reelection in a GOP primary, said he didn't think Confederate statues in South Carolina would come down soon. "We have been over these issues over the years," McMaster told the Charleston Post and Courier. "I think our people are different."

PRIMARY CONCERNS - "Nine months after 2016 election, Heller finally says he voted for Trump," by the Nevada Independent's Riley Snyder: "In a short statement released to The Nevada Independent, Heller - who is up for reelection in 2018 and is being challenged in a primary by businessman Danny Tarkanian - confirmed that he indeed voted for the Republican nominee during the 2016 election after more than a year of vocal criticism toward the party's nominee. 'Yes, I voted for Donald Trump,' he said in a statement texted to a reporter." **Full story.**

- NEW THIS A.M.: Club for Growth PAC endorses Nicholson in primary: The Club for Growth PAC is endorsing Kevin Nicholson in Wisconsin's GOP Senate primary. "Kevin is not just a political outsider, he's a strong economic conservative, who understands that free markets and limited government are the engines of economic growth," said Club president David McIntosh. "Kevin will be a great Senator for the Badger State because, unlike out-of-touch liberal Tammy Baldwin, Kevin understands the needs of everyday Wisconsinites." Nicholson is the only declared candidate in the field, but state Rep. Leah Vukmir and businessman Eric Hovde are still considering the race.

HOUSE CANDIDATE WATCH - Paul Davis launches KS-02 campaign: The former state House Democratic leader and 2014 gubernatorial nominee is making his campaign for retiring GOP Rep. Lynn Jenkins' seat official today. Davis took 46 percent of the vote in the 2014 governor's race against Republican incumbent Sam Brownback and carried the 2nd District, which President Donald Trump also won by a 56-37 margin in 2016.

WEB WARS - NRSC attacks Nelson over Venezuela, Cuba, in Spanish-language ads: The National Republican Senatorial Committee is out with a Spanish-language radio ad attacking Florida Sen. Bill Nelson, arguing he is soft on Cuba and Venezuela. "What has our Senator Bill Nelson done? In the past, he has aligned himself with communists and dictators," a narrator says in the ad. "If Bill Nelson supports murderers, I can't support Bill Nelson." **Listen to the ad here.**

- Nelson spokesman Ryan Brown responds: "These ads are untrue. Sen. Nelson is one of the strongest opponents of the Maduro and Castro regimes. In fact, the Miami Herald has called Nelson one of Chavez's fiercest critics. And earlier this month Nelson called on President Trump to ban at least some imports of Venezuelan oil until constitutional order has been restored in Venezuela. These attacks against Nelson's anti-Castro, anti-Maduro record are false and nothing more than a thinly-veiled attempt to try to distract people from Rick Scott's decision to flip-flop on doing business with Goldman Sachs, which is currently doing business with an arm of the

Maduro regime."

- NEW THIS A.M.: American Action Network to spend $500,000 pushing tax reform with mobile ads: American Action Network, a nonprofit with ties to House Republican leadership, is out with new member-specific mobile ads pushing tax reform. The ads, including display spots and 15-second videos, will run in 31 congressional districts. The group, which has already spent $3.5 million on ads advocating tax reform, is spending another $500,000 on this effort. **Watch the video here. See the list of districts here.**

- NEW THIS A.M.: American Bridge attacks Rauner: Democratic super PAC American Bridge is out with a new web ad attacking Illinois Gov. Bruce Rauner as a "bully" for vetoing a school funding package just before the 2017-2018 school year begins. **Watch the ad here.**

A COMPLEX FOR EVERY INDUSTRY - Democratic elections attorney Marc Elias discussed the "'explosion' in election law" in a 15-minute interview with the National Law Journal. **Listen here.**

STAFFING UP - Jordan Russell, communications director for Strategic Partners & Media, is leaving the Republican consulting firm to join Sen. Marco Rubio's leadership PAC. Russell is also an alum of Sen. Thad Cochran's reelection campaign.

CODA - QUOTE OF THE DAY: "Peter, you will have to shovel our bodies into the oven, too. Please son, renounce the hate, accept and love all." - The father of Charlottesville protester Peter Tefft, in a letter to the Fargo Forum.

Subject: BREAKING NEWS: Judge blocks Texas push to ban sanctuary cities

A San Antonio-based federal judge has temporarily blocked Texas from enforcing a state ban on "sanctuary cities."

On behalf of the Trump administration, Attorney General Jeff Sessions had filed a brief in support of the effort, but Judge Orlando Garcia's ruling prevents the law from taking effect.

The measure, known as S.B. 4, was backed by Texas' GOP-dominated Legislature and signed into law by Gov. Greg Abbott. It has been heavily criticized by pro-immigration groups and led to displays of anger in the Texas legislature between opponents and supporters.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

November 30, 2017

Latest News

Brownfields Bill Backers Plan Push To Fund Program At New Spending Level

As the House prepares to vote on bipartisan brownfields legislation later this week, supporters of the bill say they plan to urge appropriators to fully fund any revised EPA program at the increased funding levels the new bill authorizes in order to gain the full benefits of the legislation and ensure the agency can fund more projects than it currently is.

Former EPA Official Blasts Senate Spending Bill As Threat To Enforcement

EPA's former enforcement chief is blasting draft Senate spending legislation as a major threat to the agency's ability to bring new enforcement actions, citing significant proposed cuts in several spending categories that would translate into even larger reductions in the agency's ability to bring actions than broad spending figures suggest.

CBD Sues To Glean Scope Of Industry Influence In Pruitt 'Sue-Settle' Order

The Center for Biological Diversity (CBD) is suing EPA under the Freedom of Information Act (FOIA) to gather information on Administrator Scott Pruitt's recent directive that seeks to curb so-called "sue-and-settle" agreements the agency reaches, often with environmental groups, to set a deadline to take a mandatory action.

House Republicans Hold 'Nascent' Talks On Bill To Limit CWA Jurisdiction

The top Republican on the House science panel's environment subcommittee says there are "bubbling, nascent discussions" on potential legislation to limit the reach of the Clean Water Act (CWA), but any such bill could be far off despite subcommittee members voicing support for restricting the law's scope during a Nov. 29 hearing.

Barrasso Backs Rule Fix To End Democrats' Holds On Trump's EPA Picks

Senate environment committee chairman John Barrasso (R-WY) is publicly supporting GOP efforts to limit debate on executive branch nominees in an effort to

end continuing Democratic delays on a suite of Trump administration nominees for EPA and other top environmental policy slots.

Key Trump Picks At Odds Over EPA's Power To Weigh Costs In Air Standards

Key Trump administration environment nominees are at odds over whether EPA has sufficient legal authority to consider compliance costs when setting national ambient air quality standards (NAAQS), even though a unanimous Supreme Court opinion found that the agency lacks such power under the Clean Air Act (CAA).

Daily Feed

EPA says methane ICR withdrawal shows 'deregulatory' success

EPA is meeting its targets for "deregulatory actions" required by executive orders from President Donald Trump, a top agency official says.

Research ties PFOA phase-out with drop in low birth weights

The study's authors are praising EPA for its voluntary phase out agreement it struck with the chemical's manufacturers in 2006.

Ewire: Pruitt says hurricanes may be 'enhanced' by climate change

The EPA chief says scientific studies "don't talk about cause and effect" when it comes to climate change and hurricanes, but they could show that storms are "enhanced in some way."

Survey finds many lawmakers muted on CPP repeal

A group supporting federal climate change policy finds the reaction is "substantially more muted" than lawmaker responses to President Donald Trump's June announcement that he intends to leave the Paris climate agreement.

NACEPT plans second 'citizen science' report for EPA

A second report due in April from an EPA advisory committee will recommend ways the agency can strengthen its use of non-governmental "citizen science."

Stakeholders spar over scope of future CWA jurisdiction rule

Industry, environmental groups, states and other stakeholders' comments on a possible new Clean Water Act jurisdiction rule likely preview future litigation arguments.

Subject: Suniva, SolarWorld modify remedy proposal in trade case

By Eric Wolff

09/28/2017 07:20 PM EDT

Suniva and SolarWorld USA are pressing a U.S. trade panel to recommend that President Donald Trump institute either a floor price for imported solar equipment or tariffs plus a quota that caps the amount of solar panels and cells that can enter the country.

The two solar panel manufacturers filed a joint brief to the U.S. International Trade Commission, and each recommended different remedies, though they said that either option could be selected.

Suniva recommends a price floor for all solar modules that starts at 74 cents per watt and declines over the four years of the tariff, as well as tariffs for both modules and the solar cells. SolarWorld said it was seeking a a quota of 220 MW on imported cells and 5,700 MW on imported modules.

"Both co-petitioners agree that an effective remedy must include either the co-petitioners' requested tariff plus Suniva's requested module floor price or the co-petitioners' requested tariff plus SolarWorld's requested quota," the companies said in a joint statement.

Briefs were due on Wednesday to the ITC, and the companies publicly released their proposals to today, excluding proprietary company information.

The ITC voted unanimously last week that low-cost imports had harmed the domestic solar manufacturing industry. Under the "safeguard" provisions of the Trade Act, Trump will have the final say in what tariffs to impose.

WHAT'S NEXT: The commission will have a hearing on remedies on Oct. 3.

Subject: Playbook Power Briefing, presented by Hewlett Packard Enterprise: TRUMP agrees to Dem plan to lift debt ceiling, fund gov't for three months -- HARVEY RELIEF passes House -- MERCEDES SCHLAPP expected to join WH comms -- 60 MINUTES lands Bannon interview

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Hewlett Packard Enterprise

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Happy Wednesday afternoon and happy hump day on this short week.

NEWS -- PRESIDENT DONALD TRUMP sided with House and Senate Democrats, accepting their offer to lift the debt ceiling and fund government for three months, setting up another wild December in Washington. **SPEAKER PAUL RYAN, SENATE MAJORITY LEADER MITCH MCCONNELL** and **HOUSE MAJORITY WHIP KEVIN MCCARTHY** -- the top GOP leaders, who were all at the White House with House Minority Leader Nancy Pelosi and Senate Minority Leader Chuck Schumer -- all wanted a debt-limit increase through the end of 2018, and believe they would've been able to extract it from Democrats, according to aides. Now they will be forced into an awkward spot: the GOP president is asking them to push a legislative package they disagree with.

-- THERE IS NO AMBIGUITY HERE: Trump defied Ryan and McConnell, who were working in tandem to clear the debt ceiling through the end of the midterm elections. Trump sided with Pelosi and Schumer just a few hours after they made their position clear. **REPUBLICANS WANTED A LONG-TERM DEBT CEILING INCREASE** because Hill leaders always work to minimize the number of times lawmakers have to vote to raise the borrowing limit. It's a horrible vote politically. Now Congress will have to vote to lift the debt ceiling at least twice.

NO ONE QUOTE SUFFICES -- Every Republican leadership aide we've spoken to disagrees with this strategy, and thinks the president got rolled.

ACCORDING TO AN AIDE BRIEFED ON THE MEETING -- "Republican leaders pushed for 18 month debt limit hike, then floated 6 months. Pelosi and Schumer dismissed 6 month hike. Trump then agreed to the 3 month hike that Democrats put on the table."

NEWS: Republicans are already telling us they'll push for a long-term debt-limit package before December. They don't want a debt-limit crisis in December.

-- OH YEAH: Democrats are already whispering that they might use the must-pass bills in December for the reinstatement of DACA.

HOW THIS ALL WENT DOWN. Earlier this morning, Pelosi and Schumer said Democrats would only vote for a Harvey aid package if the debt limit was lifted for three months. They had leverage, because they had the votes.

-- RYAN told us this morning at his news conference that this was a "ridiculous idea" and Democrats were playing politics with hurricane relief and the debt limit. Ryan seemed pretty perturbed at the gambit.

-- SCHUMER and **PELOSI'S VICTORY LAP:** "In the meeting, the President and Congressional leadership agreed to pass aid for Harvey, an extension of the debt limit, and a continuing resolution both to December 15, all together. Both sides have every intention of avoiding default in December and look forward to working together on the many issues before us. As Democratic leaders, we also made it clear that we strongly believe the DREAM Act must come to the floor and pass as soon as possible and we will not rest until we get this done."

TRUMP'S VIEW, from a gaggle on Air Force One: "We had a very good meeting with Nancy Pelosi and Chuck Schumer. We agreed to a three-month extension on debt ceiling, which they consider to be sacred -- very important -- always we'll agree on debt ceiling automatically because of the importance of it.

"Also on the CRs and also on Harvey, which now we're going to be adding something because of what's going on in Florida -- but we had a very good meeting. We essentially came to a deal, and I think the deal will be very good. We had a very, very cordial and professional meeting.

"So we have an extension, which will go out to December 15th. That will include the debt ceiling, that will include the CRs, and it will include Harvey -- the amount of money to be determined, but it will include -- because everyone is in favor obviously of taking care of that situation. So we all very much agree."

-- NOTE: Trump says "always we'll agree on debt ceiling automatically because of the importance of it." That's significant, given the GOP's posture on the debt limit in the past. Also, note how he doesn't mention McConnell, Ryan or McCarthy.

-- COULD THIS "DEAL" FALL APART? Probably not. But who knows.

GOP LEADERSHIP has said they will stay in town as long as it takes to pass the final aid package. It passed the House 419-3 a little after 12:30 p.m. The House-passed version did not include the debt-limit piece or the government-funding element, which will be added in the Senate. The three nos where Reps. Thomas Massie (R-Ky.), Justin Amash (R-Mich.) and Andy Biggs (R-Ariz.).

DEMOCRATS are also trying to hold Republicans feet to the fire on DACA. Schumer said that "If a clean DREAM Act does not come to the floor in September, we're prepared to attach it to other items this fall until it passes," at the joint press conference with Pelosi.

HEATHER CAYGLE and **ELANA SCHOR:** "But Schumer, as well as Senate Minority Whip Dick Durbin (D-Ill.), stopped short of committing to withholding Democratic votes for government funding legislation or other must-pass bills that Congress is expected to consider this fall. Yet some House Democrats believe that now, when the issue has captured the public's attention, is the best time to force Republicans to act and want to take a tougher stand.

"Rep. Luis Gutiérrez (D-Ill.) stood up during House Democrats' weekly caucus meeting Wednesday to give a rousing speech about how now is the time for Democrats to take a stand on DACA, saying lawmakers need to lay out a clear line in the sand for Republicans.

House Minority Whip Steny Hoyer (D-Md.) then suggested Democrats withhold their votes for a short-term funding bill later this month if there isn't a clear path forward to addressing DACA. Both Gutiérrez and Hoyer received standing ovations, according to multiple sources in the room.

"But the idea of blocking a budget deal and threatening a government shutdown is not the official caucus position -- at least not yet. And it's unclear whether Democrats would vote as a bloc against a short-term funding deal. Either way, the threat could force House Republican leaders to round up additional votes on their side to ensure the government stays open beyond Sept. 30." http://politi.co/2wI7xto

TO BE SURE -- THIS IS DEMOCRATS giving Republicans a taste of their own medicine. They long played hardball on must-pass items when Democrats controlled the White House. Now Democrats are saying they will do the same.

****** **A message from Hewlett Packard Enterprise**: How are Hewlett Packard Enterprise's supercomputers helping create the future in science, medicine and national security? Learn more: hpe.com/supercomputing ******

ON WAR WITH NORTH KOREA -- TRUMP said "certainly, that's not our first choice, but we will see what happens." Trump said this as he boarded Marine One for North Dakota, per the Tampa Bay Times' Alex Leary.

DETENTE -- "Trump, McConnell meet after monthlong standoff," by John Bresnahan and Burgess Everett: "President Donald Trump and Senate Majority Leader Mitch McConnell met privately on Tuesday in a bid to repair their badly frayed relationship, according to sources familiar with the meeting.

"Trump and McConnell huddled privately for roughly 20 minutes ahead of a larger gathering of Republican leaders and officials working on tax reform. The meeting was an apparent attempt to clear the air after a contentious August recess between the two, mostly fueled by the Senate's failure to repeal Obamacare." http://politi.co/2wGSXSF

THE LATEST ON THE STORM , from POLITICO's weather guru Steven Shepard: "As of 11 a.m., Irma remains an extremely powerful, Category-5 hurricane with maximum sustained winds of 185 mph. After passing through the Leeward Islands last night and this morning, Irma is bearing down on the Virgin Islands and Puerto Rico, which will see damaging winds, flooding rains that could lead to mudslides and deadly storm surge. After that, Irma is forecast to track close to Hispaniola and Cuba, bringing the same dangerous conditions.

"The forecast then turns the storm north toward Florida. Irma is expected to be over or near the Florida peninsula on Sunday or Monday. It is still too early to determine whether the center of Irma will make landfall in Florida or remain offshore, and small changes in the forecast may make large differences in impact. But Florida needs to prepare for dangerous weather beginning on Saturday and potentially lasting several days. Other areas of the East Coast should also monitor Irma's track over the next few days."

BANNON ON '60 MINUTES' -- THE HOLLYWOOD REPORTER: " Steve Bannon, the ousted White House strategist, sat for an interview with CBS News' Charlie Rose on Wednesday afternoon in New York, sources tell The Hollywood Reporter. The full interview will air Sunday on 60 Minutes with portions of it set to run Thursday afternoon on CBS This Morning. It will be the first in-depth TV interview Bannon has given since he left the White House last month amid intense criticism over President Trump's "both sides" equivocating on the deadly violence in Charlottesville, Va. in August." http://bit.ly/2eG7Xlj

TRUMP INC. -- "Trump gets millions from golf members. CEOs and lobbyists get access to president," by USA Today's Brad Heath, Fredreka Schouten, Steve Reilly, Nick Penzenstadler and Aamer Madhani: "Dozens of lobbyists, contractors and others who make their living influencing the government pay President Trump's companies for membership in his private golf clubs, a status that can put them in close contact with the president, a USA TODAY investigation found. Members of the clubs Trump has visited most often as president -- in Florida, New Jersey and Virginia -- include at least 50 executives whose companies hold federal contracts and 21 lobbyists and trade group officials. Two-thirds played on one of the 58 days the president was there, according to scores they posted online. ...

"Among Trump club members are top executives of defense contractors, a lobbyist for the South Korean government, a lawyer helping Saudi Arabia fight claims over the Sept. 11 terrorist attacks and the leader of a pesticide trade group that sought successfully to persuade the Trump administration not to ban an insecticide government scientists linked to health risks. ...

"Trump marked his 100th day in office by visiting a factory owned by a company run by a member of his New Jersey golf club. Standing behind Trump as he signed two executive orders was Robert Mehmel, president of the company that owns the Harrisburg, Pa., factory and another company that sells radars and electronics to the military, including about $54 million worth of contracts last year." https://usat.ly/2xam18p

THE LATEST ON RUSSIA -- "Donald Trump Jr. to face Thursday grilling before Senate Judiciary panel," by Darren Samuelsohn: "Donald Trump Jr. is scheduled to meet in private Thursday with the Senate Judiciary Committee for a long-awaited interview to discuss a 2016 meeting he arranged with a Kremlin-linked lawyer who promised damaging information about Hillary Clinton during the height of last year's presidential campaign, according to Trump Jr.s' attorney.

"The closed-door session involving aides and senators has long been in the works, though the exact details of when the meeting would occur have remained under wraps until now. Trump Jr. was called to publicly testify before the Senate committee in July but the president's oldest son instead offered to conduct both a private interview and hand over documents for committee investigators." http://politi.co/2wIjFdN

BRING IN THE REINFORCEMENTS -- "Chief of staff Kelly builds out his West Wing team," by Nolan McCaskill: "President Donald Trump announced on Wednesday a handful of White House appointments, including a deputy and an assistant for his latest chief of staff John Kelly. Kirstjen Nielsen, who worked under Kelly at the Department of Homeland Security as his chief of staff, will be his deputy in the White House and an assistant to the president. Zachary Fuentes, a former military assistant to Kelly at DHS, will serve as a special assistant to the president and assistant to the chief of staff." http://politi.co/2wHUjwQ

-- "Fox pundit Mercedes Schlapp expected to join White House communications," by Tara Palmeri: "Fox News pundit Mercedes Schlapp, wife of American Conservative Union chairman Matthew Schlapp, is expected to join the White House in a senior role in the communications department, according to three White House officials with knowledge of the situation. The role for Mercedes Schlapp, who served in the George W. Bush administration as a spokesperson for Spanish-language media outlets, has yet to be defined." http://politi.co/2wHwWTW

WASHINGTON STATE REP. DAVE REICHERT is retiring. **STATEMENT FROM HIS OFFICE:** "After spending time during the August work period with family and friends, reflecting on the past, discussing the future, and celebrating another birthday, I have decided this will be my last term and I will not run for reelection in November, 2018. It was not an easy decision but I believe it was the right one for my family and me. I have spent my entire career and devoted my life to service. I see this not just as a job, but as a calling - a calling I will not walk away from.

MORE POLITICO/MORNING CONSULT POLL DATA -- An interesting nugget from

today's POLITICO/Morning Consult poll is softness in Sen. Mitch McConnell's support among GOP voters. When Republican voters were asked if they'd be more or less likely to vote for their member of Congress if they supported keeping Mitch McConnell as Senate majority leader, 30% said they'd be less likely, while 28% said they'd be more. When asked about their support for their member of Congress if they backed Paul Ryan as speaker, 40% said they'd be more likely and 28% said they'd be less likely. ***More on Democrats' support of Chuck Schumer and Nancy Pelosi*** http://politi.co/2wI0iS3

TOP TALKER -- "Defiant Clinton looks to explain loss in new memoir," by CNN's Dan Merica and Kevin Liptak: "A raw and aggrieved Hillary Clinton takes ownership -- to a degree -- for her stunning 2016 loss to Donald Trump in her upcoming book, which offers a revealing look at the campaign through the eyes of the contest's loser. CNN purchased the book -- 'What Happened' (Simon & Schuster, 494 pages) -- from a Jacksonville, Florida, bookstore a week before its widespread release. ...

"In a voice that swings from defiant to conciliatory to -- at rare moments -- deeply vulnerable, Clinton does assume ownership where the fault lines are obvious. And in overarching terms, she admits she badly misjudged the environment in which she was running and the candidate she was running against. But Clinton still finds ample blame to go around. She writes bluntly that sexism hampered her ability to reach voters effectively. She offers unvarnished assessments of those who have cast doubts on her campaign, including Vice President Joe Biden and Sen. Bernie Sanders, her former rival. And she singles out James Comey -- a 'rash FBI director' -- for direct and lashing criticism. The book also oozes with contempt for Trump, the campaign he ran and the President he has become." http://cnn.it/2wI70aU

-- @AlexWeprin: "Just in: Hillary Clinton gives first TV interview about new book to CBS News' Jane Pauley. Airs this weekend on 'CBS Sunday Morning.'"

FED OPENING -- "Fischer resigns as Fed vice chair, in new opening for Trump," by Victoria Guida http://politi.co/2wI3UDz

MEDIAWATCH -- "Washington Post's Scott Wilson is out as national editor," by WaPo's Erik Wemple: "Washington Post National Editor Scott Wilson has left his position after disputes with his superiors over newsroom resources for his coverage areas, according to informed sources at the newspaper. The move comes after Wilson, a veteran Postie who has covered the White House and served as a foreign correspondent, reportedly yelled at a fellow editor in a conversation about the duties of digital editors." http://wapo.st/2wIRNpU

PLAYBOOK METRO SECTION -- "Washington National Cathedral to remove stained glass windows honoring Robert E. Lee, Stonewall Jackson," by WaPo's Michelle Boorstein http://wapo.st/2wIofbX

PLAYBOOK AT UNGA -- Join us Sept. 18 and 19 in New York for the 2017 Concordia Annual Summit. POLITICO is the official media partner of the event, a nonpartisan

forum that brings together more than 2,000 influencers. Top speakers for the summit include IMF Managing Director Christine Lagarde, former British Prime Minister Tony Blair, retired Gen. David Petraeus, Forest Whitaker and cellist Yo-Yo Ma. Anna will moderate a session with David Axelrod and Tim Phillips on political strategy in the age of information load on Sept. 18 starting at 12:55 p.m. ***Registration*** http://bit.ly/2gMR6YY

-- BONUS EVENT: Anna will be joined by Jack Blanchard, the author of the new London Playbook, for a Global Playbook Briefing Sept. 19 at 9 a.m. The briefing, moderated by POLITICO Europe's Matt Kaminski, will shed the light on some of the most pressing issues driving the day in Washington and in Europe as we navigate the Trump administration and Brexit negotiations. ***Registration*** http://bit.ly/2wI0uAM

NOTHING TO SEE HERE -- "'Shut up,' judge tells Menendez lawyer," by POLITICO New Jersey's Matt Friedman and Ryan Hutchins: "U.S. District Court Judge William H. Walls told a lawyer for Sen. Robert Menendez to 'shut up for a moment; as the two engaged in a heated argument during the first moments of the New Jersey Democrat's corruption trial. Shortly after court proceedings began, defense attorney Raymond Brown criticized Judge William H. Walls for a line in his opinion on Friday that rejected Menendez's request that the trial be recessed on days where the Senate is taking 'critical' votes, so that the senator can be in Washington. ...

"Brown said that Walls was 'speculative as to our motives.' Brown and Walls then began talking over each other. 'Shut up for a moment if you don't mind,' Walls said. 'I said what I said' to 'underscore what I considered the lack of merits in this motion,' Walls added." ***More highlights, including Sen. Cory Booker arriving*** http://politi.co/2wHTcgn

CAMPAIGN STOP -- Americans for Prosperity rolled out a seven-figure ad buy in the Virginia gubernatorial race. The ad slams Democrat Ralph Northam's tenure as a board member of the Virginia Economic Development Partnership http://bit.ly/2wIAyFo

CLICKER -- Vanity Fair's 2017 International Best Dressed List was released today, featuring former President Barack and First Lady Michelle Obama, Canadian Prime Minister Justin Trudeau, French President Emmanuel and Brigitte Macron, Jack Schlossberg and more. http://bit.ly/2wIo9kC

SPOTTED: John Kerry watching last night's Venus Williams vs. Petra Kvitova and Kevin Anderson vs. Sam Querrey matches at the U.S. Open in New York (h/t Josh Goldstein) ... Jon Huntsman, Trump's nominee for ambassador to Russia, making the rounds in Dirksen today

WELCOME TO THE WORLD - OBAMA ALUMNI -- Ayame Dinkler, former chief of staff for the assistant HHS secretary in the Obama administration and now COS at LCMC Health in New Orleans, and **Carling Dinkler IV,** VP at Enhanced Capital Partners, recently welcomed Ansley Yoshiye Dinkler. ***Pic*** http://politi.co/2j2wKeP

Subject: POLITICO's Morning Score: Trump turns out to be Teflon, Dems worry — Ryan transfers $2M more to NRCC — Schuette announces gov. bid

By Kevin Robillard | 09/13/2017 10:00 AM EDT

With Daniel Strauss

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

THE NARRATIVE - "Teflon Trump," by Edward-Isaac Dovere: "Data from a range of focus groups and internal polls in swing states paint a grim picture for the Democratic Party heading into the 2018 midterms and 2020 presidential election. It suggests that Democrats are naïve if they believe Trump's historically low approval numbers mean a landslide is coming. The party is defending 10 Senate seats in states that Trump won and needs to flip 17 House seats to take control of that chamber. The research, conducted by private firms and for Democratic campaign arms, is rarely made public but was described to POLITICO in interviews with a dozen top operatives who've been analyzing the results coming in. ... Pollsters are shocked by how many voters describe themselves as "exhausted" by the constant chaos surrounding Trump, and find that there's strong support for a Congress that provides a check on him instead of voting for his agenda most of the time. But he is still viewed as an outsider shaking up the system, which people in the various surveys say they like, and which Democrats don't stack up well against. 'People do think he's bringing about change, so it's hard to say he hasn't kept his promises," said Celinda Lake, a Democratic pollster. ... More than that, no single Democratic attack on the president is sticking - not on his temperament, his lack of accomplishments or the deals he's touted that have turned out to be less than advertised, like the Carrier plant in Indiana. Voters are also generally unimpressed by claims that Trump exaggerates or lies, and they don't see the ongoing Russia investigation adding up to much."

- Moving away from free college: "The call for free college tuition fosters both resentment at ivory tower elitism and regret from people who have degrees but are now buried under debt. Many voters see 'free' as a lie - either they'll end up paying for tuition some other way, or worse, they'll be paying for someone else's tuition who'll be getting it free off of their sweat. Greenberg Quinlan Rosner Research and Gerstein Bocian Agne Strategies conducted online polling of 1,000 Democrats and 1,000 swing voters across 52 swing districts for the Democratic Congressional Campaign Committee. Their advice to candidates afterward: drop the talk of free college. Instead, the firms urged Democrats to emphasize making college more affordable and reducing debt, as well as job skills training, according to an internal DCCC memo."

- So what's the solution? "More and more, Democratic operatives are gravitating toward pushing for an argument that Trump is just out to make his rich friends richer, at the expense of everyone else. They believe they could include all sorts of attacks on his decisions under that

umbrella, from stripping regulations on credit cards to trying to end Obamacare to pushing for corporate tax breaks. DCCC polling showed that on the question of who 'fights for people like me,' Trump and Democrats were split at 50 percent each in February, but that Democrats are now ahead by 17 points." **Full story.**

MONEY RACE - "Ryan transferred $2M to NRCC in August," by Campaign Pro's Elena Schneider: "Ryan's fundraising accounted for more than half of what the NRCC raised in August, just before a round of GOP retirements put more battleground districts at risk ahead of a potentially difficult - and expensive - 2018 election for House Republicans. In the last week, Michigan's Dave Trott, Pennsylvania's Charlie Dent and Washington's Dave Reichert announced their plans to not run for reelection, vacating competitive seats that will prove more expensive without an incumbent congressman on the ballot. ... But the NRCC's fast fundraising pace, with nearly $34.7 million banked for the 2018 campaign by the end of July, has emerged as a strength for House Republicans facing a growing battleground map. The DCCC had $22.8 million on hand at the end of July. ... 'Each retirement costs a couple million dollars of campaign money, and Republicans have over performed in recent years, so we have some vulnerabilities,' said former NRCC Chairman Tom Davis. '[But] any criticism Ryan gets, he's a fundraising champ. It's hard to think of anyone who has the persona that can raise money the way he's done.' **Full story.**

- "ActBlue passes $300M raised in 2017," by Campaign Pro's Maggie Severns: "The Democratic online fundraising platform ActBlue raised more than $32.2 million in August for campaigns and other groups, which is more than double the amount it raised in August of 2015. In a blog post, ActBlue said that this year it has raised more than $300 million overall, far ahead of its pace at this time in the 2014 and 2016 election cycles. ... Additionally, ActBlue was used by a 4,021 different candidates, organizations and committees in August, which was an all-time high in ActBlue's history." **Full story.**

PRIMARY PROBLEMS - "GOP Senate candidate's wife lobbied against Obamacare repeal," by Campaign Pro's Kevin Robillard: "West Virginia Attorney General Patrick Morrisey's wife lobbied against the repeal of Obamacare this spring, according to federal filings, and her work is likely to become a major issue in Morrisey's contentious Republican Senate primary with Rep. Evan Jenkins . Federal lobbying records show Denise Morrisey, a partner and co-owner of Capitol Counsel, lobbied for both the American College of Cardiology and American Academy of Dermatology during the first two quarters of 2017, when both groups were publicly opposed to repealing the Affordable Care Act. She also lobbied for the Coalition to Protect Access to Care, which focused on preserving Medicaid funding. Those three groups combined to pay Capitol Counsel about $230,000." **Full story.**

REDISTRICTING WATCH - "Supreme Court blocks ruling against Texas redistricting," by Josh Gerstein: "A sharply divided Supreme Court has blocked a lower court ruling that a congressional district map Texas adopted in 2013 violates the Constitution and is the product of intentional racial discrimination. The high court announced Tuesday night that the justices voted, 5-4, along partisan lines to block a three-judge panel's ruling that Texas needed to redraw the maps or face having them redrawn by the court. The stay will remain in place until the Supreme Court receives and acts on an appeal expected to be filed by the State of Texas." **Full story.**

SCHUETTE ANNOUNCES - "Michigan's Schuette running for governor" by Campaign Pro's Daniel Strauss: "Michigan Attorney General Bill Schuette is running for governor, according to published remarks briefly posted on the Republican's website this afternoon. Schuette, who has long been expected to run for the state's top office, is scheduled to make the announcement during a BBQ event at the Midland County Fairgrounds this evening. "Tonight in Midland, my home town, I announced that I am running for governor of the State of Michigan!" said the remarks, which were later taken down. "In case you could not be with us or see the FacebookLive stream, I wanted to post this copy of my remarks here for your review. Thank you for everything you do and for your support!" **Full story**.

- Schuette is working with FP1 Strategies and John Sellek is managing the campaign.

Days until the 2017 election: 55.

Days until the 2018 election: 419.

DAILY WAR EAGLE - "Group linked to Bannon runs tough ad against Sen. Strange before Alabama runoff," by Alex Isenstadt: "The spot, from the pro-Trump organization Great America Alliance, describes Strange as a 'big time lobbyist' who was 'appointed by the swamp' and is 'in the pocket of Mitch McConnell.' ... The ad also features a clip of former Alabama Gov. Robert Bentley saying that he consulted with McConnell before appointing Strange to the Senate seat, which was vacated when Jeff Sessions became attorney general." **Full story. Watch the ad here.**

STAFFING UP - FIRST IN SCORE - DGA hires Miller as press secretary: The Democratic Governors' Association has hired Melissa Miller as press secretary. Miller was previously communications director for New Jersey Rep. Josh Gottheimer and press secretary for the New Hampshire Democratic Party.

- Newsom hires Demissie as campaign manager: Addisu Demissie, formerly the campaign manager for Sen. Cory Booker's election and a top official on Barack Obama's and Hillary Clinton's presidential campaigns, will run California Lt. Gov. Gavin Newsom's gubernatorial campaign.

- Wisconsin GOP promotes Zimmerman: The Wisconsin Republican Party has promoted Alec Zimmerman from press secretary to communications director.

- RNC hires state directors: The Republican National Committee announced the hiring of state

directors in 17 states across the electoral map. The full list of states and hires is here.

SINGLE-PAYER TRACK MIND - "Sanders' single-payer push splits Democrats," by Elana Schor: "Senate Minority Leader Chuck Schumer (D-N.Y.) told reporters that he would be 'looking at all of' the party's 'many good' proposals to expand health care access, but declined to back Sanders. House Minority Leader Nancy Pelosi (D-Calif.) declared that her priority is shielding Obamacare from a GOP repeal push that's not yet dead for good. ... Wisconsin Sen. Tammy Baldwin on Tuesday became the single-payer bill's first supporter from the class of Senate Democrats up for reelection next year in states Donald Trump carried. But other politically imperiled incumbent Democrats said "no" to Sanders. ... Single-payer on a national level would have 'a lot of problems,' [Claire] McCaskill added, although she came out in support of allowing individuals as young as 55 to buy into Medicare. That idea is also backed by Baldwin and two other red-state Senate Democrats up for reelection next year who are declining to endorse Sanders' bill: Sherrod Brown of Ohio and Debbie Stabenow of Michigan. Stabenow, also a member of Democratic leadership, said Tuesday that she would keep working on her Medicare-at-55 plan 'because I think there is some bipartisan interest in that.'" **Full story.**

THE DAILY MENENDEZ - "Former Melgen girlfriend fumes at prosecutors during Menendez trial," by Matt Friedman: "'I've been better,' Svitlana Buchyk, a model and actress who was in her early 20s when prosecutors say Menendez allegedly helped her secure a visa to visit the United States, told [Salomon] Melgen attorney Kirk Ogrosky when he asked how she was doing. Buchyk, who was born in the Ukraine and grew up in Spain, was one of four women - three of them 20-something girlfriends to the 63-year-old married Melgen - for whom Menendez, a Democrat, allegedly pressured officials to get visas in exchange for vacations, private jet flights and political donations. Another former girlfriend, Rosiell Polanco Suero, also testified Tuesday about Menendez's help securing her a visa." **Full story.**

FRONTIERS OF CAMPAIGN ISSUES - Donnelly won't return Feinstein, Durbin cash after criticism of judge: Indiana GOP Rep. Luke Messer attacked Democratic Sen. Joe Donnelly on Monday for not standing up for a Notre Dame law professor who was controversially questioned about her Catholic faith during her confirmation hearing for a federal judgeship. Messer demanded Donnelly return money he received from Sens. Dianne Feinstein and Dick Durbin , who participated in the questioning. Donnelly's campaign indicated he doesn't plan to return the cash, but does support the nomination of Amy Barrett. "I'm a Catholic - my faith has always been an important part of my life - and I believe someone can be a person of faith and at the same time uphold the law and our Constitution on the federal bench," Donnelly said in a statement. "Had I been on the Judiciary Committee, I would have steered clear of lines of questioning that seemed to focus on Professor Barrett's faith. When I interviewed her in July, we spoke at length about the 7th Circuit position, her qualifications, and understanding of the law."

D.C. FUNDRAISING CIRCUIT - Maine Democratic gubernatorial candidate Adam Cote will headline a fundraiser for his campaign in October at the Glover Park Group. Headliners, according to an invitation for the event, include Pete Rouse, Joe Lockhart, Mark Paustenbach, Ambassador Robert Gelbard and Colin Rogero among others. See the invitation **here**.

QUOTE OF THE DAY: "It was a staffing issue and it was inadvertent." - Texas Sen. Ted Cruz, explaining how his Twitter account "liked" a pornographic video on Monday night.

Subject: Morning Energy, presented by Chevron: House muddles through EPA-Interior amendments — Wehrum picked as EPA air chief — Florida hopes to avoid fuel shortages as Irma looms

By Anthony Adragna | 09/08/2017 05:48 AM EDT

With help from Eric Wolff, Alex Guillén, Esther Whieldon and Eric Geller

GLIMPSES INTO DECEMBER DEBATE: House lawmakers churned through about 70 of the 80 amendments related to EPA and Interior during a debate on a spending package H.R. 3354 (115) Thursday evening. Final votes on the overall measure will now occur next week, but the results so far offer some glimpse into what may happen during the forthcoming December government funding debate, so here are some highlights:

1. There's love for addressing park maintenance (a priority for Interior Secretary Ryan Zinke)! In a voice vote, lawmakers backed an amendment adding $9.7 million to address the backlog.

2. An effort to restore funding to EPA's environmental justice program by cutting from the Interior secretary's budget fell short by a vote of 190 to 218.

3. Rep. John Katko's amendment to restore $250 million in Clean Water State Revolving Funds, an infrastructure program that typically enjoys broad bipartisan support, passed by voice vote.

4. Republican Frank LoBiondo and Democrat Don Beyer's bipartisan push to block offshore drilling in a host of Atlantic sites came up short on a voice vote.

5. An amendment giving EPA $6 million to implement a long-term monitoring program for water quality of the waters affected by the Gold King Mine spill passed the House 220 to 191.

6. Rep. Scott Perry's amendment to block EPA from issuing any regulations under Section 115 of the Clean Air Act, an obscure section of the statute some fear could be used to force carbon rules, passed by voice vote.

Rather extraordinary: Rep. Don Young had to apologize after calling Democratic Rep. Pramila Jayapal a "young lady" who "doesn't know a damn thing what she's talking about" concerning his amendment blocking regulations on sport hunting and trapping in national preserves in Alaska. He apologized later, though his amendment passed 215 to 196. Video here.

Reminder: This bill won't become law in anything approaching its current form and likely won't resemble the Senate's version, so take its contents with a grain of salt. That said, a bunch of amendments will get votes next week.

TGIF EVERYONE! I'm your host Anthony Adragna, and New York was home to the first ATM in the U.S. way back in 1969. For today: How many states have had a lawmaker serve as president pro tempore of the Senate? Send your tips, energy gossip and comments to

aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

CONGRATS! ME's warmest wishes go out to our own Annie Snider and her husband, Joel, as they welcomed Henry Terhune Kirkland into the world in the wee hours of Tuesday morning. "He is passing all his tests with flying colors and we are quite certain he is the most incredible little guy ever!" Annie writes.

Pro subscribers: Are you getting all the content you want? Make sure your keywords are up to date and customized via your settings page at http://politico.pro/1iDALk9.

GOTTA GET RIGHT BACK TO WHERE WE WEHRUM: Pros learned it was coming in July, but Bill Wehrum, a George W. Bush-era EPA official who has represented a variety of energy industry interests at law firm Hunton & Williams, received President Donald Trump's formal nod Thursday to run EPA's powerful air office, Pro's Alex Guillén reports . He's been critical of EPA's authority to regulate greenhouse gases, even after the Supreme Court's 2007 ruling saying the agency did have such authority. Democrats blocked his nomination from proceeding in the Senate during the Bush administration, though the threshold has since been lowered to just a majority level to clear the chamber.

FLORIDA PREPS FOR IRMA: EPA Administrator Scott Pruitt, seeking to ensure there's enough fuel for Florida as Hurricane Irma bears down on it, on Thursday extended a fuel waiver for summer reformulated fuel requirements for 38 states through Sept. 30, Pro's Ben Lefebvre and Bruce Ritchie report . "It was important to send a message I think to the citizens of Florida but also those producing gasoline they would have certainty to the end of September with respect to these issues," Pruitt said in an interview. "And we'll do it beyond that obviously if necessary. We have the authority to do that." That comes as Florida Gov. Rick Scott told reporters the state was working to mitigate any potential fuel shortages. "While we are making progress, you will see lines and outages, unfortunately," he added. "I know this is frustrating. We are laser-focused on how we get as much fuel as possible to our ports while they remain open."

Getting Superfund sites ready: Perhaps learning a lesson from Hurricane Harvey, EPA said Thursday evening it's assessing 80 Superfund sites from Miami to North Carolina for potential vulnerabilities to the impending storm. The agency also said it has 43 Region 2 personnel and 34 from Region 4 responding to the storm.

Pruitt: 'Not now': Pruitt also told CNN Thursday now is not the time to discuss whether climate change has exacerbated these hurricanes. "To have any kind of focus on the cause and effect of the storm; versus helping people, or actually facing the effect of the storm, is misplaced," he said. Instead, the focus should be on ensuring access to clean water and protecting Superfund sites, among other issues, he said. His comments echo those made by Energy Secretary Rick Perry last week.

Cornyn won't go there either: Texas' John Cornyn, the Senate's No. 2 Republican, told ME he wasn't sure if climate change exacerbated the storm that slammed his state last week. "Beats the heck out of me," he said. "I've never read anything on [that] point." Asked if it people should be

debating the link right now, he said: "It's a free country."

** **A message from Chevron:** When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat—buckwheat. Watch the video: http://politi.co/2xaoDCa **

IF I WAS A RICH MAN, YEAH I'D HAVE ALL THE ARPA-E: Microsoft co-founder Bill Gates lauded DOE's ARPA-E program and urged strong congressional support for what he called the potential "key" to major energy breakthroughs. "Private companies depend on public research," he wrote on his personal blog. "ARPA-E is bringing private investors to the table, and it is delivering results." Gates' strong endorsement comes as a bipartisan group of House lawmakers, including top Science ranking member Eddie Bernice Johnson , introduced legislation H.R. 3681 (115) authorizing reasonable growth in funding for ARPA-E through 2022.

A WARNING ON GRID HACKS: Senior cybersecurity officials warned Thursday that hackers are growing more audacious in exploiting dangerous links between critical infrastructure systems and the business networks of their operators. "We have control systems that are connected to business systems," said John Felker, the director of the Department of Homeland Security's cyber watch center, during a panel at the Intelligence and National Security Summit. "The biggest thing we see is that vulnerability of that connection." Some sectors, he said, "have done a good job of segregating that, but others have not." His comments came one day after Symantec said that suspected Russian hackers may have begun a new phase of power company hacking. Scott Smith, head of the FBI's Cyber Division, said, "This is an area that there's no easy solutions to."

STEPPING UP FOR HARVEY RELIEF: Texas oil and gas companies have contributed $27.3 million toward Hurricane Harvey relief efforts, according to the Texas Oil and Gas Association. Contributions include: $1 million from Anadarko; $1 million from Chevron; $5 million from ConocoPhillips; up to $10.3 million from Exxon Mobil; $1 million from Koch; $1 million from Shell and $1 million from Valero. The funding will go to various charities and other relief organizations.

HOEVEN PRAISES TRUMP'S REFINERY SPEECH: Count Sen. John Hoeven among the fans of Trump's Wednesday speech at a North Dakota refinery. "I thought it was a good message and it's helpful for what we're trying to do," Hoeven told ME, adding he wasn't disappointed by the lack of energy-specific chatter. But the North Dakota Republican didn't take ME's bait on how he felt about Trump calling his Democratic colleague Heidi Heitkamp a "good woman" during the speech.

SENATE SAVES SOME CLIMATE FUNDING: The Senate Appropriations Committee added $10 million for the Intergovernmental Panel on Climate Change and U.N. Framework Convention on Climate Change after Republican Sens. Lamar Alexander and Susan Collins bucked their party to support an amendment to the panel's State and Foreign Operations bill Thursday. But the committee did not restore any funds to the Green Climate Fund, which aims to help developing countries adapt to the effects of climate change.

CLEAN POWER PLAN REPEAL EXPECTED THIS FALL: Pruitt expects to sign a proposed repeal of the Obama administration's Clean Power Plan "in the fall of 2017," Pro's Alex Guillén reports, citing a new court filing. The agency offered no additional details on its repeal effort, which has been under review by OMB since June 8.

WYOMING TRESPASS LAW VIOLATED FIRST AMENDMENT, COURT RULES: Collecting environmental information on public lands is a protected form of First Amendment speech, the 10th Circuit Court of Appeals ruled Thursday. A three-judge panel struck down a Wyoming law setting strong punishments for anyone who crossed private lands in order to get to public lands to collect information, which includes taking water or soil samples, making observational notes or snapping photos. "Although trespassing does not enjoy First Amendment protection, the statutes at issue target the 'creation' of speech by imposing heightened penalties on those who collect resource data," the court ruled. Trespassers on private land can still be prosecuted under the state's weaker general trespassing law, but a special law targeting trespassers who gather environmental information is unconstitutional, the court noted.

STICKING AROUND: Legal challenges to the delay of an Obama-era BLM methane rule will stay in California rather than moving to Wyoming, as Interior requested, Pro's Alex Guillén reports. Litigation over the original underlying regulation, known as the venting and flaring rule, are still playing out in Wyoming but Magistrate Judge Elizabeth Laporte of the U.S. District Court for Northern California said the two issues are rather different and likely would not be combined anyway.

Speaking of methane, eight Senate Democrats led by Sheldon Whitehouse sent a letter to Pruitt asking for information on his reported plans to enforce EPA's separate methane emissions standards for new oil and gas wells on a "case by case" basis.

INDUSTRY PONDERING BREAKING 15B GALLON ETHANOL BARRIER: Pruitt has set off an ethanol industry debate about lifting the volume requirement beyond the 15 billion gallon conventional biofuel limit established under the Renewable Fuel Standard. "We're all just starting to talk about it as a broad industry," Growth Energy's Emily Skor tell ME. "You've got the head of the EPA saying well you could consider a reset beyond 15 billion gallons." Pruitt told Radio Iowa last month that he would consider going beyond the limit set by Congress if biofuel volumes are reset in two years' time. Skor said it was the second time the administrator made a such a remark. "The first time you don't know, did he mean to say that?" she said. "The second time well, he did mean to say that."

It's all about demand: EPA told ME in a statement, "Administrator Pruitt believes that RFS volume obligations should be reflective of actual demand. As Administrator Pruitt told Radio Iowa, if demand exceeds current statutory limits, then the reset volumes will be reflective of that fact. However, much work remains to be done before we can come to this type of conclusion."

ETHANOL WANTS FEDS TO RESPOND TO BRAZIL ETHANOL DUTIES : Growth Energy, the Renewable Fuels Association and the U.S. Grains Council are collaborating on letters to U.S. Trade Representative Robert Lighthizer and Agriculture Secretary Sonny Perdue asking them to respond to ethanol quotas imposed by Brazil last month. The groups have not

released the letters to the media, but Skor told ME, "What we're saying to the government is, here's the impact and we need your help." Brazil set a 20 percent tariff on ethanol imported beyond 600 billion liters (158 million gallons), and the groups would like to see the tariff removed or the quota raised. The U.S. exported 277 million gallons of ethanol to Brazil in 2016, a sharp rise from the previous year, according to EIA. Skor said they make no specific ask of the administration, saying, "We don't want to be prescriptive right now with the U.S. government."

REPORT ROUNDUP! CLEAN ENERGY BOOMING OUT WEST: The Clean Energy Trust and Environmental Entrepreneurs released an analysis Thursday finding nearly 600,000 people are employed in clean energy jobs throughout the Midwest, up five percent since 2015 alone. That's more than double the number of computer programmers in the region, according to the groups.

FIXING INFRASTRUCTURE YIELDS BIG ENVIRONMENTAL BENEFITS: Investing in significant infrastructure improvements over the next decade could fuel huge environmental benefits, according a report from the BlueGreen Alliance. Among them: 4.4 billion gallons of saved fuel; reducing leaked drinking water by 6 billion gallons and reducing overall carbon dioxide emissions by 12 percent. More here.

INTERIOR RELEASES RECREATION SURVEY: The Interior Department released a preliminary report Thursday that shows 40 percent of the U.S. population ages 16 and older partook in at least one wildlife recreation activity last year. While there were more wildlife watchers and anglers than in the last survey the Census Bureau conducted for the agency in 2011, hunting was down by 16 percent. The data from these reports is often used by agencies and companies to gauge business opportunities and for wildlife management decisions. Interior's Fish and Wildlife Service expects to issue the full data in early 2018.

DAINES PUSHES WILDFIRE REFORMS: Montana Republican Sen. Steve Daines urged new U.S. Forest Service Chief Tony Tooke to pursue immediate wildfire policy reforms as his state deals with ongoing devastating fires. "Fire season always reminds us that either we manage our forests, or our forests manage us," he wrote in a Thursday letter. "We need to focus our time and energy on pursuing reforms that better equip the U.S. Forest Service with the tools and resources needed to accomplish its goals."

GOT YOUR BACK! Kansas Sen. Pat Roberts ran interference to save Senate Energy Chairman Lisa Murkowski from a pack of energy reporters. Asked by the self-proclaimed newest Dodge City Globe reporter what she'd done for Kansas, the affable Alaskan replied: "I grew a sunflower this summer."

Trump expected to pick Bush EPA official turned industry lawyer for agency's air office
Back

By Alex Guillén | 07/24/2017 10:03 AM EDT

President Donald Trump is expected to nominate Bill Wehrum, a former George W. Bush-era EPA official, to run the agency's powerful air office, according to two sources outside the administration familiar with the plans.

While Wehrum would bring critical knowledge of EPA's workings and environmental law, he also represents several high-profile industry groups in lawsuits challenging numerous Obama-era EPA regulations, meaning he may face recusal and conflict issues similar to EPA Administrator Scott Pruitt.

Wehrum served as acting assistant administrator for the Office of Air and Radiation from 2005 to 2007. Bush pulled Wehrum's formal nomination to that post after Democrats blocked him as too industry-friendly, though the new simple majority threshold on nominees likely will prevent

that from happening again. Wehrum spent 2001-2005 as counsel to Jeff Holmstead, Bush's first air administrator. Holmstead emerged last month as a possible Trump pick to be EPA deputy administrator, though coal lobbyist Andrew Wheeler remains the frontrunner for that job.

In a 2013 interview with Law360, Wehrum said that despite the Supreme Court's 2007 ruling that said EPA has the authority to regulate greenhouse gases, he believes "Congress never intended the EPA to address an issue such as climate change under the Clean Air Act."

He also called for lengthening the review cycle for National Ambient Air Quality Standards beyond five years — House Republicans recently passed a bill that would stretch that to ten years — and said the Obama administration tried to shift power away from the states and toward EPA, comments since echoed by Pruitt.

And in a 2015 Wall Street Journal editorial, Wehrum said the EPA-caused Gold King mine spill highlighted how the agency "often criminalizes actions that are nothing more than accidents, many far less damaging to the environment than the Animas River disaster." That spill fouled Colorado's Animas River and downstream areas for several weeks before water quality returned to normal and the river was reopened to recreational activities.

Wehrum pointed to the 2014 chemical spill that fouled drinking water for hundreds of thousands of West Virginia residents, which led to an EPA investigation and the company's bankruptcy, as an example of "unjust" treatment.

For the last decade Wehrum has been a partner at the high-powered D.C. law firm Hunton & Williams, where he currently represents high-profile clients, including two leading oil and gas industry lobbying groups, in a number of ongoing lawsuits against EPA.

Wehrum represents the American Petroleum Institute in a challenge to EPA's methane rule for new oil and gas wells, as well as the separate legal battle over EPA Administrator Scott Pruitt's decision to stay that rule while under review, where API has defended Pruitt's stay.

He also represents either API or American Fuel & Petrochemical Manufacturers, a refinery sector group, in lawsuits over a 2015 rule limiting pollution from oil refineries; a "regional consistency" rule that governs how court rulings apply to nationwide EPA regulations; and permitting rules for Indian lands.

He represents the Utility Air Regulatory Group, a coalition that challenges EPA air regulations, in a legal challenge over an Obama-era rule meant to decrease explosions at chemical plants and other facilities. Pruitt has put that rule on hold while it is under review.

Wehrum helped the Gas Processors Association challenge two greenhouse gas reporting rules. He took an EPA boiler regulation to court on behalf of a coalition of industry groups, including the American Chemistry Council, the National Association of Manufacturers and the American Forest & Paper Association. He is challenging an EPA emissions rule for brick manufacturers on behalf of an industry group. And he represented construction interests in various lawsuits against the Labor Department, including an ongoing challenge to the Occupational Safety and Health

Administration's 2016 silica exposure rule.

Wehrum did not immediately reply to a request for comment on Monday. EPA and White House spokespeople did not immediately respond to a request for comment.

Trump picks Bush-era EPA official for air chief Back

By Alex Guillén | 09/07/2017 07:16 PM EDT

Pesident Donald Trump has nominated Bill Wehrum, a George W. Bush-era EPA official who since has represented a variety of energy industry interests, to run EPA's powerful air office.

POLITICO reported in July that Wehrum was expected to receive the nod.

As head of EPA's Office of Air and Radiation, Wehrum will play a key role in undoing many of the Obama-era regulations most opposed by Republicans, including the Clean Power Plan, the 2015 ozone standard and forthcoming vehicle emissions rules. Wehrum has been critical of EPA's authority to regulate greenhouse gases, even after the Supreme Court's 2007 ruling saying EPA did have such authority.

He served as a counsel to Jeff Holmstead, Bush's first-term air chief, before replacing Holmstead in an acting capacity from 2005 to 2007. Bush nominated Wehrum to the job permanently, but Democrats blocked his nomination from proceeding in the Senate.

Wehrum spent the past decade as a partner at the Washington, D.C., law firm Hunton & Williams. His clients have included the American Petroleum Industry, American Fuel & Petrochemical Manufacturers, the Utility Air Regulatory Group, the American Chemistry Council, the National Association of Manufacturers and the American Forest & Paper Association.

WHAT'S NEXT: The Senate Environment and Public Works Committee will review Wehrum's nomination in what is certain to be a contentious process.

EPA extends fuel waivers to help Florida prep for Irma Back

By Ben Lefebvre and Bruce Ritchie | 09/07/2017 07:09 PM EDT

Florida is racing to stock up on gasoline before Hurricane Irma slams into its ports this weekend.

EPA on Thursday extended a fuel waiver for summer reformulated fuel requirements for 38 states through Sept. 30 to ensure gasoline is available in Florida in advance of Hurricane Irma. The move extends by 15 days a waiver EPA issued Aug. 31 in response to Hurricane Harvey, which badly damaged pipelines and refineries when it struck Texas.

EPA Administrator Scott Pruitt told POLITICO he was responding to requests from Florida Gov. Rick Scott and the oil industry because of shortages in Florida.

"It was important to send a message I think to the citizens of Florida but also those producing gasoline they would have certainty to the end of September with respect to these issues," Pruitt said in an interview Thursday. "And we'll do it beyond that obviously if necessary. We have the authority to do that."

A day earlier, EPA approved the Florida Department of Environmental Protection's request for a fuel dye waiver. That allows off-road diesel fuel to be used in on-road vehicles.

Florida Petroleum Council Executive Director David Mica applauded both moves.

"I think that [Administrator] Pruitt was deliberative and expeditious in historic fashion," Mica said. "They really jumped on it doing all they can to assist out there on several waiver requests."

Irma is currently expected to hit southeastern Florida early Sunday.

The storm will be a one-two punch for the region, coming mere weeks after Hurricane Harvey slammed into Texas and forced many of the refineries dotting the Gulf Coast to shut down. At one point last week, Harvey had forced 4 million barrels a day of Gulf Coast refining capacity offline.

"We know fuel is very important," Scott said earlier Thursday as he addressed Florida residents on the dangers of the storm. "We are devoting every state resource to address this.

"While we are making progress, you will see lines and outages, unfortunately," he added. "I know this is frustrating. We are laser-focused on how we get as much fuel as possible to our ports while they remain open."

Refinery outages and damaged pipelines in Harvey's wake forced fuel sellers to dip into inventories to meet demand. Between Aug. 25, the day Harvey made landfall in Texas, and Sept. 1, gasoline inventories on the East Coast fell 3.5 percent to 60.5 million barrels, according to the latest EIA data.

State-by-state figures are only available up to June, at which point Florida had about 34 million gallons of gasoline stored. At the time, wholesale gasoline consumption averaged 15.5 million gallons per day, according to EIA.

Emergency contractors for Florida secured 1.5 million gallons of fuel for immediate delivery and identified additional supply for the future, Scott's office said in a press release.

Florida is also searching for other fuel barges that can be diverted to Florida ports. Scott told the state's emergency response team to provide a military escort for a ship delivering fuel from a refinery in Mississippi to the Port of Tampa, the governor's office said. The governor said he also asked state police to escort gasoline trucks through traffic so they could quickly shuttle between fuel terminals and gas stations.

A gallon of regular gasoline now costs an average of $2.72 in Florida, 5 cents higher than the national average and 30 cents above where it was a week ago, according to AAA.

"Supplies are tight. Everyone is looking for fuel," said Ned Bowman, executive director for the Florida Petroleum Marketers and Convenience Stores Association, which represents gas stations in the Sunshine State. "Everyone is putting five gallons into their tanks, so that's stretching things."

But now that the Texas refineries are coming back up, Irma is threatening the more than two-dozen ports that receive the fuel they deliver across the Gulf. Florida's main fuel barge receiving centers are in Miami, Fort Lauderdale, Tampa and Jacksonville, according to EIA. The former two sites are on the southeastern tip of the peninsula, smack dab where Irma is forecast to make landfall.

"When you have back-to-back storms, it exacerbates logistics for distribution," said Mica, of the Florida Petroleum Council. "As [refineries] come up, that will help supply, but as the storm approaches, it does not allow vessel traffic, it does not allow fuel in."

EPA projects fall proposal to repeal Clean Power Plan Back

By Alex Guillén | 09/07/2017 02:59 PM EDT

EPA Administrator Scott Pruitt expects to sign the proposal to repeal the Clean Power Plan "in the fall of 2017," the agency said in a court filing today.

The filing offered no other details on the Trump administration's plan to repeal the rule, which has been under review at the White House Office of Management and Budget since June 8.

EPA added that the CPP repeal's classification as a "long term action" in the July update to the Unified Agenda was inadvertent. Environmental groups had seized on that classification, which indicates rules will not progress within the following 12 months, to argue that the D.C. Circuit

Court of Appeals should issue its ruling on the Clean Power Plan rather than keep the lawsuit suspended indefinitely.

EPA said it will correct the classification error in the next edition of the Unified Agenda.

WHAT'S NEXT: The repeal proposal will most likely be released within the next few months.

Judge keeps methane waste rule delay lawsuit in California federal court Back

By Alex Guillén | 09/07/2017 04:35 PM EDT

A federal judge said today that legal challenges to the Interior Department's delay of an Obama-era methane waste rule will remain in a California court rather than be moved to Wyoming.

Interior had asked for the lawsuits to be transferred to a federal court in Wyoming where cases over the original regulation, also known as the venting and flaring rule, are still playing out.

But Magistrate Judge Elizabeth Laporte of the U.S. District Court for Northern California said she's keeping the case on her docket because, legally speaking, the two matters are rather distinct. Interior's delay relied on Section 705 of the Administrative Procedure Act, but the underlying rule does not, meaning the two cases likely would not be combined anyway, she concluded.

In addition, the lead challenger in the suit over the delay is the state of California, adding weight to the arguments to keep it in a California court.

Laporte noted she is "already familiar with the legal issues in this lawsuit" because it is very similar to the challenge to Interior's delay of its royalty valuation rule — which Laporte last week said violated Section 705 of the APA by not seeking public input first.

However, she stopped short of issuing a ruling in the methane case today.

Subject: POLITICO's Morning Energy: High-stake solar trade fight gets public spotlight — Trump to sign environmental permitting EO today — Court tells PHMSA to revisit Exxon fine

By Anthony Adragna | 08/15/2017 10:00 AM EDT

With help from Darius Dixon and Annie Snider

SOLAR FLARE UPS? Witnesses step before the International Trade Commission this morning for a public hearing to offer their perspectives on whether President Donald Trump should slap tariffs on solar imports in a case with massive implications for the thriving U.S. industry. Two troubled solar manufacturers - Suniva Inc. and SolarWorld Americas - want the commission to declare imports of cheap foreign parts from Asia have caused "serious injury" to their domestic business. The companies want the U.S. to impose duties on imported equipment in order to revive domestic manufacturing facilities - moves they claim would create thousands of jobs across the industry. "Despite herculean efforts to compete against this onslaught, the imports, which are directly competitive with domestic product, have ground the domestic industry down to a mere shell of its former self," Suniva argued in its pre-hearing brief. And Matt Card, an executive vice president for commercial operations with the company, plans to say the U.S. will "have no control of its own destiny when it comes to power generation from the sun" without tariffs put in place.

Opponents of the petitions argue the two companies' woes stem from bad business calls and that increasing the price of imports would be bad for the industry as a whole, a move that risks destroying jobs at companies that install solar panels on rooftops or develop utility-scale projects, for example. "This is not a case in which the facts support the findings necessary to justify imposition of any relief," the Solar Energy Industry Association and SunPower Corp. wrote in their own brief. Other opponents of the petitions include utilities, union officials, bipartisan groups of senators and House members, venture capital groups and conservative organizations like ALEC and the Heritage Foundation, among others. State elected officials from Minnesota, North Carolina, Georgia, Maryland and Virginia, as well as trade officials from South Carolina, Indonesia, the European Union, Brazil Mexico, Canada and Taiwan are all expected to testify as well.

If you go: The public hearing kicks off today at 9:30 a.m. at the ITC's main hearing room at 500 E Street SW. A full list of scheduled witnesses is available here.

What happens afterward? If the four-member commission ties or votes in favor of the petition, it will hold another public hearing on what to do about the injury to U.S. companies. The final call about what to do would then be left to Trump where it's not clear how the ever-unpredictable White House might handle the matter given the administration's highly-publicized efforts to protect U.S. manufacturing jobs. A vote against the petition by the ITC would kill the effort.

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and DOE's Diane Meck was first up to identify "The Mousetrap" as the play with the longest initial run. (It's awesome, too,

says this Agatha Christie fan.) For today: What entire country did rapper Snoop Dogg try to rent out in 2010 to film a music video? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

ANOTHER EXECUTIVE ORDER COMING: Trump will sign an executive order today at 3 p.m. at Trump Tower "establishing discipline and accountability in the environmental review and permitting process for infrastructure projects," according to the White House. A spokesperson told ME it would set a two-year goal for the federal government to complete the permitting process for infrastructure projects. The president has repeatedly bemoaned what he describes as lengthy delays to new projects due to various federal regulatory requirements and signed an executive order expediting environmental reviews back in January. That one directed the Council on Environmental Quality chairman to identify high priority identify high-priority infrastructure projects and work with other agencies to expedite their approvals. Back in June, Trump announced a new office within CEQ that he said would "root out inefficiency, clarify lines of authority and streamline federal and state [and] local procedures so that communities can modernize their aging infrastructure without fear of outdated federal rules getting in their way." Despite those earlier announcements, Trump has still not yet nominated anyone to lead CEQ. More here.

COURT SAYS PHMSA WAS TOO TOUGH ON EXXON: The Obama administration over-penalized Exxon Mobil for its 2013 pipeline spill in Mayflower, Ark., a federal court ruled Monday. The U.S. Court of Appeals for the Fifth Circuit threw out a number of safety violations against Exxon, saying the company met its legal obligations to consider all risk factors associated with the Pegasus Pipeline. The Pipeline and Hazardous Materials Safety Administration's interpretation of its pipeline integrity regulations would leave entities unable to escape legal liability whenever a pipeline spill occurred, the court ruled. "The unfortunate fact of the matter is that, despite adherence to safety guidelines and regulations, oil spills still do occur," Judge Jennifer Walker Elrod, a George W. Bush appointee, wrote for the court. The decision gives the Trump administration (which lacks a permanent PHMSA chief or nominee to fill that slot) an opportunity to lower the $2.6 million fine levied against Exxon.

EYES AND EARS ON GEORGIA: So long as the Vogtle nuclear project remains on the financial and political rocks, regulators on the Georgia Public Service Commission are going to be getting a lot of attention. Commissioners are scheduled to meet this morning for what was probably going to be a routine "administrative session" where they may take up a motion related to the troubled two-reactor project. Last week, Georgia PSC Chairman Stan Wise introduced a 14-point motion he's hoping will be seen as something of a "test vote" on whether the agency is even open to continuing the project - a fairly low, but important, bar at the moment since Southern Co. hasn't given its latest cost estimates for completing (or partially completing) the project. Southern is expected to deliver a recommendation on the future of Vogtle later this month. The PSC meeting starts at 10 a.m. in Atlanta.

ZINKE HIT ON THE HOMEFRONT: The Western Values Project is out this morning with a $500,000 ad buy in Montana hitting Zinke for his ongoing review of several dozen national monuments and calling for him to protect public lands. It's part of a broader $2 million effort

from conservation and sportsman groups to hit the former Montana congressman as he prepares to issue his recommendations on the national monuments to Trump. "Secretary Zinke went to Washington, D.C., and left his Montana values at the door," Chris Saeger, executive director of the Western Values Project, said in a statement.

Side note: Can anyone remember a Cabinet official facing an ad campaign in their home state for their ongoing administration-specific work?

LAST CALL! Just 10 days are left before Zinke's much-anticipated monument recommendations are due to Trump, but today is the last opportunity for the public to comment on a separate - but related - examination of the status of 11 marine national monuments and sanctuaries. The Commerce Department has until late October to issue its own report on everything from the potential for offshore drilling in those areas, to the costs of managing the monuments and sanctuaries and the extent to which state, tribes and other agencies were consulted before those designations were made.

COLORADO RIVER PROGNOSIS COMING TODAY: The Bureau of Reclamation is due this morning to release a key study that will determine whether a water shortage will be declared in the lower basin next year. A year ago, water levels at Lake Mead, the massive reservoir supplying Nevada, southern California and Arizona, looked more likely than not to dip low enough to trigger the first round of mandatory water delivery cuts in 2018. But a wet winter and major water conservation efforts appear to have spared the basin this time. Still, the eyes of the West will be on just how much wiggle room is left above that trigger point, and how likely Reclamation thinks it is that a shortage declaration could come in 2019.

U.S.-Mexico deal moving forward: Meanwhile, a water-sharing agreement between the U.S. and its southern neighbor is making progress, with a number of state water agencies and major users preparing to give their formal sign-off to the deal in the coming weeks. The agreement, an amendment to the treaty governing cross-border water sharing, would replace a deal set to expire at the end of 2017 governing how shortages are shared between the two countries.

SETTLEMENT OFFERED IN DAKOTA ACCESS CASE: Energy Transfer Partners, the company behind the Dakota Access pipeline, would pay $15,000 to settle claims it failed to notify regulators about Native American cultural artifacts discovered the construction process under a settlement proposed Monday by the North Dakota Public Service Commission, the Bismarck Tribune reports. The company now has 10 days to consider the offer.

PENCE 'ABSOLUTELY DETERMINED' ON VENEZUELA: Vice President Mike Pence reiterated during a stop in Cartagena, Colombia, the U.S. was not seriously considering military action against Venezuela but said the "failed state" threatened regional stability. "We are absolutely determined to bring the full measure of American economic and diplomatic power to bear until we see democracy restored," he said, without further elaboration.

COMPLAINT FILED OVER DOE LEAK CRACKDOWN: The Project On Government Oversight has filed a complaint with the Office of Special Counsel over posters at DOE targeting leaks. The groups says those posters do not include legally required language to ensure that

employees are aware of their legally protected right to report wrongdoing. "DOE's management communications are likely to erroneously create the impression that government employees and contractors at DOE, and other agencies, have no legal avenue to blow the whistle on government waste, fraud, and abuse," Danielle Brian, the group's executive director, wrote. "This needs to be remedied, fast." Among the recommendations is a call for senior management at DOE to state whistleblowers disclosing non-classified material would be protected and the immediate removal of the posters in question.

FARMER'S WETLAND CASE HEADS TO PENALTY PHASE: John Duarte, the California nursery owner whose wetlands lawsuit has been held up by agricultural and property rights advocates as a prime example of government overreach, heads back to court this morning for the penalty phase of his case after being found guilty of violating the Clean Water Act by a federal judge in Sacramento. Duarte faces potentially millions of dollars in fines, but has asked the court to assess only a symbolic $1 fee.

At issue is Duarte's use of a plowing method, which the Army Corps of Engineers argues was "deep ripping" that can be damaging to a rare, ecologically important type of wetland called vernal pools. While the Clean Water Act exempts normal farming practices, including plowing, from permitting requirements, it does not exempt deep ripping. A motion to dismiss the case is also pending, with Duarte's legal team arguing that the Army Corps didn't have the authority to bring the lawsuit - only the EPA, which has ultimate authority over Clean Water Act wetlands issues.

PREVIEW OF FALL ACTION: Rep. John Shimkus, Energy and Commerce Environment Subcommittee chairman, told a local Illinois newspaper Monday nuclear waste and drinking water legislation that cleared the full committee could be part of a still-theoretical infrastructure package this fall. "They can be passed on their own, or they could be included in a bigger infrastructure package along with other transportation, energy and water infrastructure programs," he told the River Bender.

DISMISSED: A federal judge ruled Monday an EPA enforcement action against Putnam County Commissioner Ron Foster and two of his companies was not motivated because he made a political donation to Rep. David McKinley, the Charleston Gazette-Mail reports . "Plaintiffs have been unable to demonstrate any other retaliatory conduct by the EPA that is causally linked to the political research document or any other evidence related to political animus on the part of the EPA," U.S. District Judge John T. Copenhaver Jr. wrote in an 83-page opinion.

LIGHTER SIDE OF PRUITT: An Iowa television interview offered a glimpse at the softer side of EPA Administrator Scott Pruitt through a series of rapid-fire questions. The politician he admires most? Former Oklahoma Sen. Don Nickles. How he passes long hours traveling? "We always have a good time as far as good food and fellowship." How baseball can get even better? "I think we need to do more to export the product internationally." A bold prediction? The Chicago Cubs will win the World Series again within five years, noting the Ricketts family that owns the team "are good friends of mine."

THAT'S SOME 24K MAGIC: Singer Bruno Mars will donate $1 million from a concert in

Auburn Hills, Mich. to benefit those affected by the Flint water crisis, the Associated Press reports. Mars and tour promoter Live Nation will give the money to the Community Foundation of Greater Flint. "Ongoing challenges remain years later for Flint residents, and it's important that we don't forget our brothers and sisters affected by this disaster," the singer said in a statement.

Massachusetts Moves to Curb Power Plant Carbon, Methane

Posted August 11, 2017, 11:52 A.M. ET

By Adrianne Appel

Massachusetts power generators and gas companies will be required to lower their carbon dioxide, methane, and sulfur emissions by 2020 under new rules released today.

The six new rules are designed to curb the state's contribution to climate change and require the industries to reduce their greenhouse gas emissions 25 percent from 1990 levels by 2020.

The Massachusetts Department of Environmental Protection issued the rules to bring the state into compliance with a 2008 climate change law. An environmental organization, the Conservation Law Foundation, successfully sued the state in 2016 for falling behind in meeting the emissions targets required in the law. The environmental group backs the rules, it said in a joint statement with the governor.

"These rules re-establish the Commonwealth as a national leader in developing sensible, enforceable standards to transition our economy to a low-carbon future," Conservation Law Foundation President Brad Campbell said in the statement.

Troubled Georgia Nuclear Project Is Said to Seek Aid from Trump

Posted August 11, 2017, 7:33 A.M. ET

By Ari Natter and Mark Chediak

President Donald Trump has vowed to revive America's dying nuclear industry. Backers of a troubled Georgia nuclear project want him to prove it.

They have asked the administration to come to the aid of a project to build two reactors to the Southern Co.'s Vogtle power plant, according to people familiar with the talks. That could include

increasing or speeding up disbursements of $8.3 billion in loan guarantees to the companies behind the nuclear plant, the people said. They asked not to be identified discussing ongoing negotiations.

A Georgia public service regulator was in Washington to make a case for the project, the last nuclear plant under construction in the U.S., and Southern has hosted congressional staff members at the construction site.

“We have asked anybody that would help us achieve the best commercial outcome possible,” Southern chief executive officer Tom Fanning said in an interview Aug. 2.

With Southern set to tell regulators in Georgia by the end of this month whether it plans to continue with construction plans for the plant, federal support could be crucial. Last week, Southern said it estimated its portion of the cost to complete the reactors was at least $11.5 billion, excluding $1.7 billion in guaranteed payments from Toshiba. Given Southern’s 46 percent stake in the project, that would put the total cost estimate at $25 billion.

After Energy Secretary Rick Perry turned down a request for $3 billion in aid for Scana Corp.’s nuclear plant in South Carolina, it’s not clear how much the federal government will help. Scana abandoned its V.C. Summer nuclear projects last month after it concluded the two reactors would end up costing it more than $20 billion to build.

“This thing is in our national security interest,” Fanning said. “That’s why we’ve preserved the option to go forward. That’s why government has been helpful.“

In general, the Trump administration has said it’s studying the nuclear issue.

“A complete review of U.S. nuclear energy policy will help us find new ways to revitalize this crucial energy resource,” Trump said during a visit to the Energy Department earlier this summer.

The Energy Department is close to issuing a study on how to help baseload power, which is primarily coal and nuclear power. Plants using those fuels are struggling as cheap natural gas and renewable energy has kept wholesale power prices largely flat.

The request for help could be in addition to, or part of, the $8.3 billion loan guarantee provided by the Energy Department under the Obama administration. As of June 30, Southern has borrowed $2.6 billion through the loan guarantee pact, but disbursements from that financing agreement were put on hold until it decides if construction will continue, according to a company filing.

Both the Summer and Vogtle projects hit additional delays and cost overruns after Westinghouse Electric Co., the U.S. unit of Toshiba Corp., went bankrupt in March. Westinghouse was building both plants.

Instead of giving Scana a grant, Perry suggested the company apply for a loan guarantee, according to an Energy Department official. Kevin Marsh, Scana’s CEO, told state regulators he got “no response” on the company’s grant request.

“When Scana showed up on Perry’s doorstep dragging the carcass of Westinghouse behind it, it’s understandable the administration blanched and turned away,” Peter Bradford, a former member of the Nuclear Regulatory Commission, said in an interview.

An Energy Department spokeswoman didn’t respond to a request for comment. Southern continues

to talk with the administration and Congress and has found support from Washington to be "critical to the project," spokesman Schuyler Baehman said in an emailed statement.

"On Vogtle and nukes in general the Trump administration is what the Texans call 'Big Hat and No Cattle,'" said James Lucier, an energy analyst and managing director at Capital Alpha Partners. "They don't have any ammo in the gun."

Good Game

"You hear them talking such a good game about nuclear power and base load power, but the reality is there isn't a lot they can do," he added. Beyond rejiggering or expanding the loan guarantee, direct aid for Southern would literally require an act of Congress, and getting that done is uncertain.

Tim Echols, the vice chairman of the Georgia Public Service Commission, was in Washington this week to brief lawmakers about the project. If Westinghouse comes through with the payment of $3.68 billion it has promised toward the project, it should be in good shape, he predicted.

"We are not going to throw in the towel like South Carolina," he said in an interview.

Week Ahead: Integrating Energy, Water Use to Be Explored at Forum

Posted August 11, 2017, 03:25 P.M. ET

By Chuck McCutcheon

A hydropower and tidal power executive will outline the importance of assessing water and energy issues in an integrated fashion at a Tuesday forum, one of several energy and environment events—including numerous webinars—the week of Aug. 14.

Trey Taylor, president of Verdant Power International Inc. of New York, will speak at the U.S. Energy Association about the company's research and development efforts at its Roosevelt Island Tidal Energy (RITE) Project in New York City's East River. USEA is a group of public and private energy-related organizations, corporations, and government agencies.

The Federal Energy Regulatory Commission (FERC) in 2012 issued a pilot commercial license for the Roosevelt Island project, in which a system of underwater turbines, similar to those used for wind power, continuously make use of tidal power to generate electricity.

A 2014 Department of Energy report said several trends underscore the need to address the water and energy in an integrated and proactive way. Those trends include climate change; increasing population growth and regional migration that each complicate managing energy and water systems; and new technologies in energy and water that shift demands in those areas.

"Because energy and water are interdependent, the availability and predictability of water resources can directly affect energy systems," then-Energy Secretary Ernest Moniz said in the report. "We cannot assume the future is like the past in terms of climate, technology, and the evolving decision landscape. These issues present important challenges to address." David Schultz will cover the

event.

In Other News

Mercury convention: A long-awaited United Nations treaty to phase out and limit mercury use becomes legally binding on Wednesday. The European Union and seven of its member countries in May ratified the Minamata Convention on Mercury, signed in 2013, taking the pact beyond a 50-country threshold for entry into force. The Minamata Convention is intended to prevent environmental contamination by highly hazardous mercury by requiring the phaseout of mercury extraction; limiting its use in products and processes; and implementing measures to reduce mercury emissions into air, soil or water. It is the first international environmental convention adopted in about a decade. Bloomberg BNA staff will monitor.

Inorganic Byproducts: The Environmental Protection Agency will hold its second meeting on Wednesday and Thursday to negotiate strategies to ease the chemical reporting burden faced by electronic equipment, metal, petroleum, power plant, and other companies when they produce inorganic chemicals—mostly metals—as byproducts of their regular manufacturing. A committee of EPA, company, state and environmental organization officials will discuss simplifying reporting requirements, expanding reporting exemptions, improving data collected and other strategies. Pat Rizzuto will cover.

Gasoline additives: EPA science advisers will meet Tuesday through Thursday to evaluate agency risk reviews for two gasoline additives. Sylvia Carignan will track.

Pipeline project: Minnesota's Commerce Department is scheduled Thursday to release its final environmental impact statement regarding a fuel pipeline replacement project proposed by Enbridge Inc. The project is expected to ship light, medium and crude oil from northern Canada to Wisconsin, transiting through Minnesota. Stephen Joyce will follow.

Webinars Offered

Lead rule: EPA's Office of Water on Thursday will host its final webinar series on its rule regarding lead in drinking water. The agency is updating its set of lead standards, known as the Lead and Copper Rule, with a goal of releasing a draft version of the update later this year.

Water emergency preparedness: The Water Research Foundation will hold a Thursday webinar discussing the findings of its recent report on preparedness and response practices. Participants will learn about practices in other sectors that could be used in the water sector.

Climate and agriculture: Agriculture is responsible for one-third of global greenhouse gas emissions. The Environmental Defense Fund's Jenny Ahlen will lead a Wednesday webinar on best practices for agriculture in reducing greenhouse gas emissions. The Food and Agriculture Organization of the United Nations will hold a separate Thursday webinar on how climate information services—the packaging and dissemination of climate information to specific users—can help with planning for climate adaptation in agriculture.

Renewable fuels: The Renewable Fuels Foundation and Pinnacle Engineering Inc. will hold the first in a series of webinars on Wednesday to educate the renewable fuels industry about oil release planning, prevention, and impact mitigation.

Wildlife-Killing Cyanide 'Bombs' Ban Sought by Environmentalists

Posted August 11, 2017, 03:54 P.M. ET

By Tiffany Stecker

A coalition of environmental groups wants the EPA to ban chemicals that kill coyotes, wolves and other predators in farming and ranching communities, as part of a growing effort to ban devices that accidentally kill hundreds of wild and domestic animals annually.

Eighteen groups have filed a petition to cancel the registrations of sodium cyanide capsules, following up on a similar petition in January to stop allowing the use of sodium fluoroacetate, known as Compound 1080. The Environmental Protection Agency approval allows the Agriculture Department's Wildlife Services office to use the chemicals in M-44 ejector devices, traps that detonate when an animal or person touches it.

More than 300 animals were accidentally killed by the devices last year, according to Wildlife Services. In March, a teenage boy walking his dog set off a device, spewing cyanide dust on him and killing his dog. In the same month, two dogs near Casper, Wyo., died from the traps.

The petition to the EPA is part of a multi-pronged approach across several agencies and Congress to end the use of the devices, Collette Adkins, an attorney with the Center for Biological Diversity, told Bloomberg BNA. The center and three other groups sued the Fish and Wildlife Service in April for failing to protect species listed under the Endangered Species Act from the devices. Rep. Peter DeFazio (D-Ore.) also introduced in March a bill (H.R. 1817) to ban the cyanide "bombs."

"All of this is coming from this groundswell of public outrage over these devices," Adkins said.

Registering Since 1970s

The EPA started registering cyanide capsules in the 1970s for the Agriculture Department and state agriculture offices. At least two facilities in Brighton, Colo., and Pocatello, Idaho, manufacture the ejector devices for USDA's use.

USDA's Wildlife Services said June 15 it would review the standards proper use of the M-44 ejector devices, and requiring that program staff place signs within 15 feet of each device, rather than the 25 feet established by the EPA.

Wildlife Services spokesman Andre Bell told Bloomberg BNA in a statement that the agency understands the concern regarding the use of the devices, and works to ensure the safe and responsible use of M-44s.

"Wildlife Services has a long track record of safe and effective use of M-44s. Reviews by the [EPA] and USDA Office of the Inspector General affirm that [Wildlife Services] uses these devices, along with other predator management tools, safely and responsibly," he said.

EPA will review the petition, an agency spokeswoman said.

London Solar Auctions Aim to Make City Greenest on Earth

Posted August 11, 2017, 01:42 P.M. ET

By Jessica Shankleman

London Mayor Sadiq Khan said he wanted to try city-wide auctions as part of an environment strategy proposed to more than double the capital's solar energy generation capacity by 2030.

The reverse auctions would be similar to the Solarize NYC model already used in New York, where multiple buyers pool together and panel sellers compete for one single contract, according to a draft solar action plan.

The plan includes a new interactive map of the city to show potential hotspots for sun power as well as a change in planning guidance to favor photovoltaics on new developments. It also envisions a grant program for community solar and pilot programs to test how batteries can be delivered alongside photovoltaics. Those steps could help double London's capacity for the technology to about 200 megawatts over the next 13 years, the mayor's office said in the strategy document.

"I've set out my plans to improve London's environment by fighting pollution, tackling waste and promoting cleaner energy so we can make London a healthier city that adapts to the impacts of climate change," Khan said in a statement.

The mayor's forecast "seems pretty trivial to achieve and may well happen anyway as a result of businesses and homeowners installing solar panels to save on electricity bills," said Jenny Chase, head of solar analysis at Bloomberg New Energy Finance. Similar reverse auctions in the Netherlands have successfully brought down costs, she said.

Khan also urged the national government to develop a solar strategy applying to the whole country, saying the step could help increase capacity to 2 gigawatts by 2050. A gigawatt is about as much as a new nuclear reactor produces.

The solar proposals were announced as part of an Environment Strategy Consultation, which includes a new 9 million-pound ($11.66 million) Greener City Fund to boost tree planting and green infrastructure. The mayor's office said the changes could make London "one of the greenest cities on Earth."

Khan said he wanted London to become the first "National Park City" in 2019, which would protect and increase the amount of green space in the capital. Those include using planning regulations to protect undeveloped land and encouraging the installation of so-called "green roofs" that are covered with plants.

The plan could help reduce London's air pollution, which is some of the worst in Europe and causes almost 10,000 premature deaths a year, according to research by the Environmental Research Group at King's College London.

Threat of Venezuelan Oil Ban Pits Oil Boss Against Refiners

Posted August 11, 2017, 02:40 P.M. ET

By Jennifer A. Dlouhy, Bill Allison and Meenal Vamburkar

The prospect of a U.S. blockade of crude oil imports from Venezuela has ignited fierce lobbying in Washington pitting domestic energy producers such as oil tycoon Harold Hamm, who favor a get-

tough approach, against refiners that depend on those supplies.

Hamm said hitting Venezuelan President Nicolas Maduro where it counts would deter the socialist leader's moves to undermine democracy and consolidate power. In an interview, the Continental Resources, Inc. chief executive officer urged President Donald Trump to block the oil, a vital source of revenue for Venezuela.

"If the president wants to make an immediate impact on Venezuela to stop these human rights abuses and restore the situation, he's got the ability to," said Hamm, speaking as head of the Domestic Energy Producers Alliance, whose members include producers, oilfield service companies, and independent oil and gas associations.

Opposing the ban are refiners such as Chevron Corp., Phillips 66, and Valero Energy Corp., which have warned that choking off shipments of Venezuelan crude would starve refineries designed to process the country's heavy oil, leaving them searching for alternative supplies and driving up gasoline prices.

The stakes are high for both countries. Venezuela is the third-biggest supplier of oil imports to the U.S.—more than 270 million barrels worth about $10 billion last year—and that trade is a major source of revenue for the South American country.

Hamm was a vocal supporter of Trump's presidential bid, eventually agreeing to advise him on energy policy. Trump, in turn, repeatedly lavished praise on Hamm, during campaign stops in front of industry-heavy audiences in North Dakota and Pennsylvania.

When it is unified, the oil industry is a lobbying powerhouse in Washington, leaning on allies in the top ranks of the Trump administration as well as on Capitol Hill to advance its policy priorities. Oil and gas interests rank fourth among industry lobbying, with $64 million spent through the first six months of 2017, according to the not-for-profit Center for Responsive Politics, which analyzes lobbying and campaign finance data.

U.S. Pressures Maduro

Refiners have been pressing their case with the Trump administration since June, as the White House considers ways to pressure Maduro and discourage a rewrite of Venezuela's constitution. On Aug. 9, the Trump administration froze the assets of eight Venezuelans, building on previous sanctions against 13 people associated with the Maduro regime.

White House officials have prepared a menu of possible additional sanctions against Venezuela but are divided over whether—and when—to take actions that could exacerbate the country's deteriorating humanitarian and economic situation. The progressive approach envisioned by administration officials includes blocking exports of U.S. oil to Venezuela followed by limits on oilfield service firms doing business in the country and, finally, restricting imports of Venezuelan crude to the U.S. Those restrictions could be phased in gradually.

The prospect has inspired frantic appeals by companies that spent billions optimizing at least 20 different refineries to process heavy crude from the country. The leading refining trade group, the American Fuel and Petrochemical Manufacturers, sent two letters to Trump last month warning that a blockade would destabilize crude markets, causing an increase in oil prices as refiners scramble to replace Venezuelan supplies with ill-fitting, higher-cost substitutes and leading to bigger gasoline bills for consumers.

Sanctions may not even work as intended, as Venezuela finds other outlets for its crude beyond the U.S., said AFPM President Chet Thompson.

"We think that the United States could take this action, and it won't have the desired effect, but it will have the unintended consequences of hurting consumers and refiners," Thompson said in an interview. "This is more than just a passing concern."

"Folks have spent many billions of dollars over the last several years to really optimize around Venezuelan crude, so any disruption of it could be a really big deal," Thompson said.

Refiners Fear Ban

Besides Venezuelan-owned Citgo Petroleum Corp., the refiners most dependent on Venezuelan crude are Valero, Phillips 66, Chevron and PBF Energy Inc. They are also the most active in lobbying against a crude import ban, according to accounts by four people familiar with the activity.

Last year, Valero took in roughly 54 million barrels from Venezuela while Phillips 66 and Chevron imported 46 million barrels and 33 million barrels, respectively. And while companies are already working to pare their dependence on Venezuelan crude, that is a heavier lift at some refineries. For instance, Venezuelan oil accounted for 43 percent of Chevron's Pascagoula refinery's capacity last month, according to U.S. Customs data compiled by Bloomberg. It represented 62 percent at Valero's St. Charles facility.

Refiners have made direct appeals to administration officials and are courting Gulf Coast lawmakers, asking them to amplify their concerns with the White House. Those efforts paid off Aug. 10 when the U.S. senators from Texas and Louisiana sent a letter to Trump arguing crude sanctions would be self defeating.

Sanctions targeting the oil sector would increase the likelihood of a disorderly default, hastening Russian consolidation of Venezuelan and Citgo oil assets, while diverting Venezuelan crude to China, harming the global competitiveness of U.S. businesses and raising costs for consumers, they said.

Asked about Chevron's lobbying on the issue, a spokesman said the company "engages with the administration and Congress to provide our perspectives on complex energy issues to help shape an effective and responsible U.S. energy policy."

Phillips 66 declined to comment. Representatives of PBF and Valero didn't respond to requests for comment.

Oilfield service providers also have been discouraging the Trump administration from imposing sanctions that limit their business in the country, including contracts with the state-owned oil company Petroleos de Venezuela SA, or PDVSA. That option had been presented by some refiners as an alternative to throttling down Venezuelan crude imports.

Ban Won't Further Democracy

Excluding U.S. companies from working in Venezuela doesn't help further democracy there, the oilfield service firms argue; instead, it blocks their ability to recoup debt and gives competitors a chance to gain a foothold in the market.

The world's four biggest oil service providers—Schlumberger Ltd.; GE's Baker Hughes; Halliburton Co., and Weatherford International Plc—have kept a presence in Venezuela in order to work for some large, integrated oil companies, James West, an analyst at Evercore-ISI, said in an email. None of the companies give specifics for how many wells they are drilling or the size of their crews there.

Hamm is advocating that the Trump administration also cut off Venezuela's access to light sweet, U.S. oil—like the kind flowing from Texas and North Dakota, where his Continental Resources is pulling crude from the Bakken formation. Venezuela blends U.S. light oil with its heavy crude before shipping the mixture to foreign refiners.

Hamm said his recommendation has been conveyed to the White House, though he did not elaborate on how.

Sector-Based Sanctions a Concern

Oil companies are still reeling from their last lobbying fight—a battle to weaken possible sanctions in legislation targeting Russia. The industry scored a partial win, when lawmakers agreed to set a threshold for Russian involvement high enough to remove the threat to some U.S. oil company projects around the world.

The threat of more sector-based regional sanctions is a disturbing trend, lobbyists said.

Citgo has made overtures to the Trump administration. It contributed $500,000 in December to the incoming president's inaugural committee, according to Federal Election Commission records. The company didn't contribute to inaugurations in 2005, 2009 or 2013.

Citgo has hired three lobbying shops, including Avenue Strategiescq, the firm co-founded by former Trump campaign manager Corey Lewandowski, paying it $80,000 from April to June. Lewandowski, who was not a registered lobbyist for Citgo, left Avenue Strategies in May. Two other veterans of the Trump campaign, senior adviser Barry Bennett and Arkansas state chairman Bud Cummins, represent the company.

They list the potential impact of "energy and foreign policy restrictions" on its client as a specific issue, and are lobbying the Treasury Department and the White House. Neither Bennett nor Cummins returned phone calls seeking comment.

Subject: Today on Climate Beat

September 14, 2017

Today on Climate Beat . . .

. . . we took shelter, noting that President Donald Trump told reporters that the catastrophic flooding and other damage in Houston and other parts of the Southeast from two major hurricanes over the past month hasn't changed his views about climate change.

In Congress, Senate Democrats are pressing EPA officials to explain their efforts to reorganize the agency and implement staff buyouts, including whether they conducted "any analysis" of how ongoing staff reductions would affect agency activities and public health before implementing the staff cuts.

Staying in the Senate, two Democrats are blocking the Senate from voting on the nomination of Susan Bodine, the Trump administration's nominee to lead EPA's enforcement office, because of concerns over the special counsel role she is serving at the agency prior to her confirmation.

And speaking of nominees, our daily news roundup noted that the Senate environment committee is poised to hold nomination hearings to consider Trump administration picks to lead the air, water, toxics and general counsel's offices.

AIR
Light-Duty Vehicle Greenhouse Gas Emission Standards
AIR

Notice of the EPA announces a hearing on the reconsideration of the EPA's final determination that the light-duty vehicle greenhouse gas emission standards for model years (MYs) 2022-2025 are appropriate and should not be amended, announced in a March 22, 2017, notice (82 FR 14671). The EPA is required to conduct a midterm evaluation and determine by April 1, 2018, whether the MY 2022-2025 standards are appropriate under an Oct. 15, 2012, final rule (77 FR 62623). An Aug. 21, 2017, notice (82 FR 39551) requested comments, data, and information relevant to the reconsideration. Comments were requested on whether standards established for MY 2021 remain appropriate, on the use of alternative methodologies and modeling systems, and on harmonization of the greenhouse gas and the Corporate Average Fuel Economy standards programs. The hearing is scheduled for Sept. 6, 2017, in Washington, D.C. Contact: Christopher Lieske; EPA, Office of Transportation and Air Quality; 734-214-4584; lieske.christopher@epa.gov. California/Northern Spotted Owl and California Spotted Owl Incidental Take Permit

GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the U.S. Fish and Wildlife Service to prepare an environmental impact statement concerning a habitat conservation plan and proposed incidental take permit requested by Sierra Pacific Industries, of Anderson, Calif. The permit would provide for incidental take of the threatened Northern spotted owl and the California spotted owl, the later of which was

recently petitioned for listing under the Endangered Species Act. Covered activities would include timber harvest and management activities on 1.6 million acres in the Cascade, Klamath, and Sierra Nevada mountains in northern California. Meetings are scheduled for Sept. 13 and 14, 2017, in Redding and Sacramento, respectively, and Sept. 14, 2017, via webinar. Comments are due Sept. 22, 2017. FDA Approved Information Collection Requests
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces OMB approval of 10 information collection requests. The collections address medical device premarket notifications, recordkeeping requirements for institutional review boards, and patent term restoration standards on due diligence petitions for regulatory review period revision. The collections also address the Adverse Event Program for Medical Devices; eligibility determinations for donors of human cells, tissues, and cellular and tissue-based products; and citizen petitions and petitions for stay of agency action subject to Section 505(q) of the Food, Drug, and Cosmetic Act. In addition, the collections address a guidance for industry concerning the use of seriological tests to reduce the risk of transmission of Trypanosoma cruzi infection in whole blood and blood components for transfusion and a guidance for industry on providing information about pediatric uses of medical devices. Finally, the collections address the certification of identity for Freedom of Information Act and Privacy Act requests and the nominations process for FDA advisory committees. Subject: BREAKING NEWS: Price took military jets to Europe, Asia for over $500K

The White House approved the use of military aircraft for multi-national trips by Health and Human Services Secretary Tom Price to Africa and Europe this spring, and to Asia in the summer, at a cost of more than $500,000 to taxpayers.

The overseas trips bring the total cost to taxpayers of Price's travels to more than $1 million since May, according to a POLITICO review.

Price pledged on Thursday to reimburse the government for the cost of his own seat on his domestic trips using private aircraft - reportedly around $52,000 -- but that would not include the cost of the military flights.

Price's wife, Betty, accompanied him on the military flights, while other members of the secretary's delegation flew commercially to Europe.

Subject: BREAKING NEWS: Trump called Roy Moore to endorse him, White House says

President Donald Trump on Monday called and endorsed Alabama candidate Roy Moore, the Republican Senate hopeful who is facing accusations of sexual misconduct, the White House said.

"The President had a positive call with Judge Roy Moore during which they discussed the state of the Alabama Senate race and the President endorsed Judge Moore's campaign," principal deputy press secretary Raj Shah said in a statement.

Moore has been accused by multiple women of seeking inappropriate relationships with them decades ago when they were teenagers and he was in his 30s. One woman said he assaulted her when she was 14 years old. Moore has denied engaging in any misconduct.

Subject: POLITICO's Morning Score: Obama alumni pour into House races — Brownback ambassadorship upends Kansas governor's race — Kelly out in Pennsylvania Senate race

By Daniel Strauss | 08/02/2017 10:00 AM EDT

With Zach Montellaro, Elena Schneider and Kevin Robillard

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

ALUMNI NETWORK - "Obama alumni dive into battle for the House," by Campaign Pro's Elena Schneider: "About a dozen Obama administration alumni have found a new calling in the early days of the Trump era: running for Congress. Shaken by President Donald Trump's surprising victory last November and motivated by his actions to undo parts of former President Barack Obama's legacy, former White House and agency staffers have moved home and jumped into crowded suburban House primaries, leaning on advice, endorsements and donations from former bosses and colleagues in Obama's campaigns and two terms in the White House." **Full story.**

THE AMBASSADOR - "Brownback appointment could upend Kobach's gubernatorial run," by Campaign Pro's Daniel Strauss: "President Donald Trump's decision to nominate Kansas Gov. Sam Brownback for an ambassadorship has triggered a domino effect in the race to replace Brownback, one that could set back the ambitions of one of Trump's key allies on immigration ... Kobach's campaign has not put out a definitive statement about whether he intends to stay in the race, though it did send out an email Monday asking supporters to volunteer for the campaign. The White House is also staying mum on the possibility of Kobach becoming DHS secretary. "I'm not aware of any movements for him, but as always, when we have a personnel announcement, I'll be happy to share it with you," White House press secretary Sarah Huckabee Sanders said Tuesday ... Kobach's gubernatorial prospects hinge on whether he can expand his pool of support beyond his established conservative base. He may be the best-known (and most infamous) secretary of state in the country, known for speaking about voter fraud and, more recently, for serving as the vice-chair of Trump's voter integrity commission." **Full story.**

FIRST IN SCORE - Planned Parenthood of Virginia to endorse Ralph Northam. Per Planned Parenthood Federation of America: "On Thursday, Planned Parenthood Advocates of Virginia will endorse Dr. Ralph Northam for governor of Virginia and Planned Parenthood Virginia PAC will be announcing it's $3M campaign that reach hundreds of thousands of voters at their doors, online, on the phones, and through the mail."

NOT RUNNING - "Rep. Mike Kelly nixes run for Senate," by the Sharon Herald's T.L. Miller: "U.S. Rep. Mike Kelly has decided not to challenge U.S. Sen. Bob Casey in 2018. Kelly,

of Butler, R-3rd District, issued a press release Tuesday announcing his plans to seek a fifth term in the House of Representatives, but he 'will not be pursuing a run for the Senate next year.'" **Full story.**

Days until the 2017 election: 97.

Days until the 2018 election: 461.

DAILY ROLL TIDE - "Brooks ad calls Strange the real 'never Trumper,'" by Campaign Pro's Daniel Strauss: "Rep. Mo Brooks accuses Sen. Luther Strange of being the real "never Trumper" in a new campaign ad released today, two weeks before Alabama's special Senate primaries. In the ad, Brooks claims that he did support President Donald Trump during the 2016 presidential campaign and donated to support Trump's campaign ... Strange, throughout the Republican primary for Attorney General Jeff Sessions' former Senate seat, has made a point of closely tying himself to Trump. He's also enjoyed the support of super PACs allied with Senate Majority Leader Mitch McConnell. The ad is set to air statewide on cable and regular broadcast TV. Watch the new ad here ." **Full story**.

HEALTH CARE HAVOC - Democrats try to keep focus on issue as GOP pivots to taxes: Health care is the top issue for 2018 midterm voters in public polling, and Democrats plan to do their best to keep it that way. The DSCC plans to send out press releases today noting every GOP candidate in Pennsylvania, Michigan, Montana, Indiana, West Virginia, Ohio, Missouri and Wisconsin either voted for or is on record supporting the GOP plan to repeal and replace Obamacare. "Every potential GOP candidate backs a toxic health care agenda that will spike premiums by 20 percent, impose an age tax on older Americans and strip away coverage for pre-existing conditions - all to give more tax breaks to big insurance companies and the wealthiest few," DSCC spokesman David Bergstein wrote. "As this race develops we're sure to hear exactly what these Republicans don't like about each other - but they all agree on an expensive, unpopular health care agenda that will force working families to pay more for less care."

- PPP survey finds Heller and GOP health care plan deeply unpopular in Nevada: A new survey from Democratic firm Public Policy Polling, paid for by Save My Care, finds GOP Sen. Dean Heller's approval rating at 22 percent, with 55 percent disapproval and 23 percent unsure. The GOP health care bill's approval rating is 35 percent, with 54 percent disapproval. **Full poll here.** (Reminder: A recent poll for Democratic Rep. Dina Titus showed Heller at 47 percent approval and running close in a matchup with her.)

CANDIDATE WATCH - Millionaire Democrat jumps into CA-39: Another Democrat has jumped into GOP Rep. Ed Royce's district, a new battleground after swinging to Hillary Clinton

in the 2016 election. Andy Thorburn, whose campaign announcement touted him as a businessman, nonprofit founder and former classroom teacher, loaned his campaign $2 million for his launch. Democrats Sam Jammal, a former Obama administration official, Mai-Khanh Tran, a physician, Phil Janowicz, a businessman, and Gil Cisneros, a veteran and lottery winner, are already in the race.

- Curbelo draws first major challenger in FL-26: Democrat Debbie Mucarsel-Powell, "who ran a stronger-than-expected state Senate campaign in 2016, will run for Congress. She plans to hold a news conference announcing her candidacy Wednesday," the Miami Herald reported. " ... She claimed Curbelo 'has voted more than 86 percent of the time with Trump,' but also insisted: 'I don't want to focus my entire energy on what's happening with the president.' The bilingual Mucarsel-Powell, 46, was born in Ecuador, where she lived until she was 14. ... Last month, Mucarsel-Powell discussed her likely candidacy in private Washington meetings with Emily's List, which promotes progressive women candidates; the Democratic Congressional Campaign Committee, and Democratic members of Congress, including Florida Reps. Ted Deutch, Lois Frankel and Stephanie Murphy." **Full story.**

- IN THE SENATE - "Republican Indiana lawmaker launching bid for Senate," via the Associated Press: "Indiana state Rep. Mike Braun plans to join the increasingly crowded Republican primary for U.S. Senate. The Jasper lawmaker said Tuesday that he intends to 'move forward' with a bid, which he will formally announce soon. Braun was elected to the Legislature in 2014 and also owns an auto parts distribution company. He says his business background and experience grappling with federal regulations make him an ideal candidate. U.S. Rep. Luke Messer is already running. Fellow Republican U.S. Rep. Todd Rokita is also preparing a bid and hiring campaign staff." Full story.

- IN THE STATES - "Donna Lynne: I'm (mostly) in for governor's race," by the Denver Post's Mark K. Matthews: "Lt. Gov. Donna Lynne took a big step this week toward running for governor, telling The Denver Post that she would file the necessary paperwork Tuesday to campaign and raise money even though she still hasn't committed 100 percent toward pursuing Colorado's top job. It's an unusual maneuver - and one that could complicate her plans to succeed her boss, Democratic Gov. John Hickenlooper. ... Lynne said she's taking this route for two principal reasons: to be upfront about her intentions as she continues her job as lieutenant governor and to ensure she can consolidate the necessary support to mount a competitive campaign." Full story.

NEW THIS A.M. - NARAL endorses Ryan challenger: NARAL Pro-Choice America is endorsing Randy Bryce, the ironworker challenging House Speaker Paul Ryan in Wisconsin's 1st District. "As Paul Ryan and Donald Trump have carried out endless cruel and careless attempts to torpedo healthcare, women and families have been the ones who have suffered," NARAL President Ilyse Hogue said in a statement. "But Randy has a plan to counter the GOP's out-of-touch fringe agenda. The momentum Randy is building with his progressive and pro-choice message is proof that people are ready for new leadership." School board member Cathy Myers is also running for the Democratic nomination.

- NARAL also endorsed Democratic Rep. Jacky Rosen for Senate in Nevada, calling her "a

true champion for Nevada families."

- Rosen attacks Heller with 60-second digital ad: Rosen is out with a digital ad attacking Republican Sen. Dean Heller for supporting the Senate GOP's "skinny repeal" plan to replace Obamacare. "Senator Dean Heller promised to vote no on the Republican health care plan," the ad says. "Then he betrayed us." **Watch the ad here.**

2020 FORESIGHT - "Cuomo Is Not Running for President, but a PAC Is Already Campaigning Against Him," by The New York Times' Shane Goldmacher: "A national Republican group that specializes in opposition research targeting prominent Democratic candidates is starting a new initiative on Wednesday to undercut Gov. Andrew M. Cuomo of New York ahead of his 2018 re-election bid - and sully his image should he run for president in 2020. Mr. Cuomo is the second possible Democratic presidential contender that the Republican group America Rising PAC has singled out for scrutiny. The other is Senator Elizabeth Warren of Massachusetts, who is also up for re-election next year and considered a possible 2020 contender ... For now, America Rising is mostly building up its research file on the governor and has filed more than 50 requests of public records so far this year. The group plans to eventually deploy a so-called campaign tracker to film Mr. Cuomo at all his public events, capturing any flubs he makes for future political ads. "That's to come," Ms. Smith said." **Full story.**

CODA - QUOTE OF THE DAY: "You know, I won the state by nine or 10 or something, by nine or 10 points, without any governor support, OK?" - President Donald Trump discussing winning Ohio in the 2016 presidential race during an interview with The Wall Street Journal.

Subject: POLITICO's Morning Energy: EPA plans carbon rule replacement — Clinton's big energy idea that wasn't — Carper won't back Trump's EPA air pick

By Anthony Adragna | 09/13/2017 10:00 AM EDT

With help from Eric Wolff, Alex Guillén, Esther Whieldon and Darius Dixon

EPA PLANS FOR CLEAN POWER PLAN REPLACEMENT: EPA plans to take the first step toward replacing the Clean Power Plan by the first week of October as it publishes its plan to rescind the Obama administration's carbon limits for power plants, Pro's Emily Holden reports.

EPA Administrator Scott Pruitt had been averse to replacing the rule, and sources tell Emily that when OMB first began reviewing the Clean Power Plan withdrawal in June the agency did not have plans to replace it. The decision to signal the agency will write a replacement comes after months of lobbying from electric company executives and suggests Pruitt may not challenge the legal finding that EPA must regulate greenhouse gases. One likely approach to a new emissions regulation would focus on improving coal-plant efficiency, so generators make more power while burning less coal.

The repeal-and-replace proposals come as patience was wearing thin at the D.C. Circuit, which has avoided issuing an opinion on the Clean Power Plan itself while EPA reconsidered the rule. In an August warning shot to EPA, judges said failing to propose a replacement meant the agency was avoiding a "statutory duty" to regulate carbon emissions, though it agreed to keep the case on ice through Oct. 7. EPA spokeswoman Liz Bowman said she "would not comment on proposals going through interagency review."

TRUMP OFFICIAL TO HOST CLIMATE MEETING: National Economic Council Director Gary Cohn will host a breakfast meeting to discuss "international energy and climate issues" the day before the opening of the U.N. General Assembly next week, POLITICO's Andrew Restuccia reports. The invitation obtained by POLITICO says the huddle is an "opportunity for key ministers with responsibility for these issues to engage in an informal exchange of views and discuss how we can move forward most productively." But an administration official stressed the meeting will not focus solely on climate change.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and the Analysis Group's Sue Tierney was first up to identify Massachusetts as the home of eight previous House speakers. For today: Two speakers have gone on to serve as vice president. Name them. Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

New! Legislative Compass: A powerful, easy-to-use tool that simplifies federal and state legislative tracking. Learn More.

HILLARY'S CAMPAIGN IDEA THAT ALMOST WAS BUT THEN WASN'T: Among other revelations contained in her new book, Hillary Clinton said she was intrigued by Peter Barnes' proposal to create a sort of Alaska Permanent Fund for the whole country. The idea, dubbed by her campaign "Alaska for America," would have taken royalties from oil and gas production - plus receipts from a carbon tax, financial transactions taxes, fees on airwaves used by cell phones and broadcasters, and other resources - and used them to give Americans a guaranteed minimum income. But, alas, as she and Bill worked the calculator, they found the math didn't work.

"We decided it was exciting but not realistic, and left it on the shelf. That was the responsible decision," she wrote in "What Happened." "I wonder whether we should have thrown caution to the wind and embraced 'Alaska for America' as a long-term goal and figured out the details later."

About that carbon tax: Clinton says her campaign also looked more specifically at the idea of a carbon tax dividend, but once again could not get math to work out without new costs for the middle class, which she had vowed against. "Still," she added, "it's tantalizing."

Canary was the coal mine: Clinton argues the Obama team's slow efforts to counter the emerging Republican narrative that his administration began a "war on coal" hurt Democrats in 2016, Pro's Alex Guillén reports. "The Obama administration was slow to take on this false narrative," she wrote. Clinton encouraged Obama to roll out the Clean Power Plan in 2015 in coal country, and pair it with a major initiative to bring new investments and jobs to the region as a way of softening the blow.

Interior Secretary Ryan Zinke also makes a cameo: Clinton recounts an awkward encounter at the inauguration when she said she was surprised Zinke came over to greet her because in 2014 he had called her the "Antichrist." "Maybe he'd forgotten, because he didn't come equipped with any garlic or wooden stakes, or whatever one uses to ward off the Antichrist. But I hadn't forgotten," Clinton writes, adding that she absolutely reminded Zinke of his remark. "He was taken aback and mumbled something about not having meant it. One thing I've learned over the years is how easy it is for some people to say horrible things about me when I'm not around, but how hard it is for them to look me in the eye and say it to my face." (Zinke's wife, Lola, disputed the story.)

CARPER WON'T BACK WEHRUM: Top EPW Democrat Tom Carper told reporters Tuesday he won't back Trump's nominee to run the EPA's air office, Bill Wehrum. "This nominee is troubling," he said. "I don't say that about all of this administration's nominees, but this one is troubling." Chairman John Barrasso told reporters the committee would have "four or five" confirmation hearings next week, though he wouldn't specify which nominees that includes. He separately said EPW was "working on a time" for EPA Administrator Scott Pruitt to come testify before it.

NELSON: GOP 'DENYING REALITY' ON CLIMATE CHANGE: Even as he said he didn't want to play partisan politics in the aftermath of Hurricane Irma, Florida Sen. Bill Nelson knocked Republicans - including his likely 2018 opponent Gov. Rick Scott - for opposing action

to address manmade climate change, POLITICO's Michael Grunwald reports . "It's denying reality," Nelson said. "You can call it politics or whatever, but the Earth is getting hotter. This storm is another reminder of what we're going to have to deal with in the future." He added it would be a crucial issue during his reelection contest.

EPA-INTERIOR VOTES EXPECTED: You'd be forgiven for forgetting the House is still working through its mega-spending package H.R. 3354 (115), but five outstanding EPA and Interior-related amendments should get votes today. The amendments would bar EPA from enforcing its methane rule, block the social cost of carbon from future rule makings, prohibit the closure of EPA regional offices and slash the agency's budget by an additional $1.87 billion, among others. Full list of all pending amendments to the bill here.

CCS WEEK KICKS OFF IN EARNEST: Senate EPW today holds a hearing on how to accelerate deployment of carbon capture and sequestration technologies around the country. Look for lots of discussion of the FUTURE Act, S. 1535 (115), one of the few pieces of legislation ME can remember that boasts the support of both Barrasso and Sheldon Whitehouse . Witnesses include Matthew Fry, a policy adviser to Wyoming Gov. Matt Mead and former DOE senior official Julio Friedmann.

HELPING OUT THE LITTLE GUYS? The House Energy and Commerce Committee's environment panel will hold a hearing today on a quartet of bills aimed at postponing or loosening various emissions regulations. H.R. 1917 (115) would delay the brick MACT until legal challenges have played out (coincidentally, the D.C. Circuit revealed Tuesday that oral arguments over that rule will take place Nov. 9). H.R. 1119 (115) would expand Cross-State Air Pollution Rule compliance options for 19 plants, mostly in Pennsylvania, that burn coal waste for electricity. H.R. 453 (115) would extend some deadlines for a residential wood heater emissions rule. And H.R. 350 (115) aims to clarify that anti-tampering provisions in vehicle emissions rules do not apply to vehicles used only for racing, an issue that flared up last year under EPA's Phase 2 heavy-duty truck rule. Some of these bills passed the House in previous years, but failed to gain traction in the Senate. If you go: The hearing kicks off at 10 a.m. in Rayburn 2123.

ENDANGERED SPECIES MEASURES GETTING MARKED UP: A litany of controversial measures get marked up today at the House Natural Resources Committee, including H.R. 3668 (115) a sportsmen's package that Democrats have condemned as enabling the deregulation of gun silencers and five bills taking bites at the Endangered Species Act. They are: H.R. 424 (115), which would redo Interior rules delisting the gray wolf; H.R. 2603 (115), which would bar non-native species from being listed as endangered or threatened under the statute; H.R. 3131 (115), which would lower attorney fees that could be awarded in ESA litigation; H.R. 717 (115), which would allow federal agencies to factor cost into listing decisions and prioritize listing petitions rather than decide them in the order they're received; and H.R. 1274 (115), which would require the availability of all data used in listing decisions to impacted states. The fun kicks off at 10 a.m. in Longworth 1334.

BLAST FROM THE PAST: ME got to briefly chat with former EPA Administrator Gina McCarthy after she met with Senate climate caucus members to "catch up" on various environmental issues. She declined to weigh in on Pruitt's comment that it's "insensitive" to

discuss climate change in the aftermath of hurricanes Harvey and Irma, but said, "I think we all know that storms like that get as intense as those storms were because of an impact on climate. If you want safe and healthy communities, you're going to have to address the issue of climate change. Period."

ICAHN'T BELIEVE EPA: Sen. Sheldon Whitehouse cast a jaundiced eye over Pruitt's letter denying email communication with billionaire Carl Icahn. "On its face, this letter suggests Mr. Icahn had far less control over RFS policymaking than he had suggested publicly," Whitehouse spokesman Rich Davidson told ME. "On the other hand, Pruitt has a long-established skill in obscuring his contacts with the industry that pulls his strings." Pruitt said the agency searched the inboxes of 39 agency officials and came up empty on Icahn emails.

RESHUFFLED ELECTRICITY BOARD REVS UP TODAY: DOE's newly configured Electricity Advisory Committee assembles this afternoon to kick off a meeting with a half dozen fresh faces and a two-day agenda that will cover the agency's much-discussed electric grid study, include a two-hour panel on cybersecurity and a rundown of a National Academies report on grid resiliency. Perry let the membership of 14 EAC members lapse recently and installed six new members, effectively shrinking the board's overall size. But the person Perry tapped as the new EAC chairman, Michael Heyeck of American Electric Power, isn't apparently able to attend, according to the agenda, which describes ERCOT engineer John Adams as acting chairman this week. Most of the cybersecurity talk - including panel discussion and a presentation on a draft DOE multiyear energy sector cybersecurity plan - is slated for Thursday morning. The meeting starts at 1:30 p.m. at the offices of the National Rural Electric Cooperative Association in Arlington, Va.

GAO TO PROBE PERRY'S HEALTHCARE TWEETS: GAO has agreed to a request from Rep. Frank Pallone, top Energy and Commerce Democrat, to issue a legal opinion on whether DOE's use of its Twitter account to promote an op-ed by Secretary Rick Perry on health care violated the Antideficiency Act, the Anti-Lobbying Act and the Consolidated Appropriations Act of 2017. Pallone first made the request in late July.

ZINKE TELL STAFF TO UP GAME ON FIRE PREVENTION: Zinke directed staff on Tuesday to be much more proactive on fire prevention, including by hiring contractors if necessary to clear dead trees, removing vegetation away from roads and buildings that could prove quick fire fodder and to include fire prevention in resource management planning. The move comes as wildfires rage in the West. "It makes little sense to be thinning to protect structures when we see flames on the ridge and smoke in the air-fuel management is more effective when undertaken before fires break out," Zinke said in the memorandum.

ITC VOTE ON SOLAR TRADE CASE COMING NEXT WEEK: The U.S. International Trade Commission will vote Sept. 22 on whether the U.S. solar industry has been injured by low-cost imports, according to an ITC website announcement. The case has the solar industry on tenterhooks, as domestic companies that install cheap foreign-made panels believe raising equipment costs will harm business. A Trump administration official has already signaled the administration would likely impose tariffs if the ITC determines there has been injury.

MAIL CALL! HOUSE SCIENCE PROBES OBAMA APPOINTEE: After DOE's inspector general found the government spent $138,000 on an employee's graduate degree unrelated to his job, House Science Chairman Lamar Smith sent a letter requesting documents on what the agency is doing to prevent something similar from happening again. "The Committee is concerned this could be an indication of a more widespread occurrence of inappropriate training authorizations and expenditures within DOE," Smith wrote.

McCOLLUM HITS PRUITT OVER ATTACK ON JOURNALIST: Rep. Betty McCollum, who oversees the Appropriations Interior and EPA Subcommittee, sent a letter to Pruitt Tuesday condemning the agency's personal attacks on an AP reporter as an "inappropriate use of taxpayer resources" and urging the agency to "act in a more professional manner and refrain from such unacceptable personal attacks."

WEIGHING IN ON TAX REFORM: Citizens For Responsible Energy Solutions Forum sent letters to House and Senate tax writers outlining their priorities as tax reform efforts get off the ground in earnest. Atop their wish-list? Maintaining existing energy investment and production tax credits, sunsetting tax credits for mature energy industries and reducing the corporate tax rate to at least 25 percent.

PRIORITIES OUTLINED FOR STATE ENVIRONMENTAL REGULATORS: Wyoming's Todd Parfitt became president of the Environmental Council of the States on Tuesday and said in a welcome note a key priority would be "reorienting the state-U.S. Environmental Protection Agency relationship." He's also a rumored candidate for regional EPA administrator.

MOVER, SHAKER: Sam Hirsch, former principal deputy at DOJ's Environment and Natural Resources Division, has rejoined Jenner & Block as a partner in its Washington office.

FREE FOOD ALERT! Stop by 406 First Street SE today between 11 a.m. and 1 p.m. for some Old Bay, Parmesan garlic and sea salt french fries courtesy of the National Biodiesel Board and some of the city's best food trucks. You'll also learn how the oil used to cook the fries can be turned into clean-burning biodiesel.

Subject: Morning Media, presented by Service Year Alliance: End of an era at Vanity Fair -- Spicer to late night -- Local media teams up for Irma

By Alex Weprin | 09/08/2017 05:40 AM EDT

With Cristiano Lima

END OF AN ERA: Graydon Carter, the longtime editor of *Vanity Fair* , and longtime nemesis of President Donald Trump, is retiring at the end of the year. Carter, who has led the Condé Nast magazine for 25 years, said in an official announcement that he intends to pursue a "third act." He'll stick around long enough to oversee the magazine's 2018 Hollywood issue. His influence on popular culture is hard to overstate. Between revealing the identity of "Deep Throat," and iconic covers featuring Demi Moore and Caitlyn Jenner, among many other accomplishments Carter's journalistic legacy is secure. Carter also understood the value of hospitality. His New York restaurants The Waverly Inn and The Monkey Bar remain hotspots, and *Vanity Fair* 's Oscars party and White House Correspondents' Association Dinner afterparty have long been the hottest tickets in Los Angeles and D.C.

-The New York Times has an interview with Carter, including more on this "third act." "He has 'the rough architecture' of a future project in mind, perhaps involving new forms of storytelling, but he demurred on the details. 'I'm not a big announcer,' Mr. Carter said, tortoiseshell glasses in hand. 'Best to fail quietly at the beginning of something rather than make grand pronouncements.'"

-So who could replace him? There are a few names that have long been mentioned, most notably Janice Min, who is currently co-president of The Hollywood Reporter-Billboard Media Group, and who previously led *US Weekly*. *New York* magazine's Adam Moss and former *Cosmopolitan* editor-in-chief Joanna Coles have also been mentioned.

-Then there is President Donald Trump. Carter has antagonized Trump since the 1980s, when, at *Spy* magazine, he referred to the then-real estate developer as a "short-fingered vulgarian." That line remained a sore spot for Trump, who made Carter a regular target of his tweets over the years. *Spy* also memorably pranked Trump by sending checks with smaller and smaller donations to New York's wealthiest, to see who would bother cashing them. Trump cashed a check for 13 cents. After his election, Trump traveled to One World Trade Center, where he held court with Condé Nast executives, including Carter, who did not sound thrilled to be there.

-Carter and *Vanity Fair* even squeezed in one final joke, at Trump's expense. In the press release announcing his retirement, his biography included this line: "In 1986, he founded, with Kurt Andersen and Tom Phillips, Spy magazine, the satirical monthly whose voice, style, and design remain influential to this day, and whose articles played a large hand in fingering the era's villains and their shortcomings."

**** A message from Service Year Alliance:** Hundreds of dinosaurs rallied at the Capitol to tell

Congress to stop national service extinction. President Trump's budget proposes the elimination of national service programs like AmeriCorps. These dinosaurs have a clear message for Congress: Stop National Service Extinction and Let Us Serve. Learn more at LetUsServe.org. **

Good morning and welcome back to Morning Media. I always want to improve Morning Media and make it more useful to you, so please send me tips, ideas and feedback! I'm on Twitter **@alexweprin** and on email at **alexweprin@gmail.com**. Morning Media is produced with help from **Cristiano Lima (clima@politico.com / @ludacristiano)**. **Archives**. **Subscribe.**

INTERVIEW SEASON: Keep your eyes glued to your TV sets, as a number of high-profile interviews will be happening over the next few weeks.

-Sean Spicer is hitting his first late night couch since departing the White House. Spicer will appear on ABC's "Jimmy Kimmel Live" next Wednesday, the show announced Thursday. (Related: Fox News says it won't be offering Spicer a contributor contract, meaning that he won't be striking a deal with them or CNN).

-President Trump appears to be willing to grant an interview to a cable news journalist, rather than a pundit on a program like "Fox & Friends." Fox News anchor Bret Baier told The Hollywood Reporter's Jeremy Barr the White House is "trying to find a date that works, and we're obviously amicable to whatever they come up with... So hopefully it's going to come together here in the next couple of weeks."

-The Hillary Clinton book tour continues. After "CBS Sunday Morning" this weekend, and ABC's "The View" next Wednesday, Clinton will appear on CBS' "Late Show with Stephen Colbert" Sept. 19.

-The first excerpts from Steve Bannon's "60 Minutes" interview are online. Bannon accused the Catholic church of being pro-immigration for purely economic reasons, and declares the he is going to war with the Republican establishment.

THE NEXT DAY FACEBOOK-RUSSIA BACKLASH: After self-reporting that Russian-tied accounts spent some $150,000 on more than 5,200 political ads last year on their network, Facebook is facing increased scrutiny for its handling of misleading and targeted information online. "I think we may just be seeing the tip of the iceberg," said Mark Warner, the vice chairman of the Senate Intelligence Committee, of their disclosure.

-As the Washington Post's Matea Gold points out, the matter is quickly raising questions of whether increased regulation may be needed to monitor how the private social media giants handle such political advertising money, and whether Facebook's actions in selling the ads may have breached elections laws. And as new POLITICO media reporter Jason Schwartz highlights, the controversy is doing little to quell concerns over their internal efforts to combat fake news.

MUST READS:

-On a happy note, this touching profile of Harvey and Irma Schluter, a couple married 75 years

who happen to share names with two massive hurricanes.

-On an unsettling note, this dispatch from Pyongyang, North Korea, filed ny The New Yorker's Evan Osnos.

LOCAL MEDIA TEAMS UP TO TACKLE IRMA. As Hurricane Irma approaches Florida, local media outlets are stepping up to the challenge to cover the historic storm. In South Florida, public radio affiliate WLRN and news site The New Tropic are pooling resources to provide readers information on where to find shelter, and how to assess damage after Irma's landfall, in a timely merger of new media and legacy media. Meanwhile, venerable print publications like The Miami Herald, The Orlando Sentinel and others are lowering their paywalls to provide its readers with temporary access to all its coverage of the storm, following in the footsteps of national outlets like The New York Times, The Washington Post and the Wall Street Journal during their Hurricane Harvey coverage.

STUDY: INTERNET CLOSING IN ON TV AS MAIN NEWS SOURCE: A new Pew study suggests that TV's long stranglehold on news consumers continues to deteriorate, as online news sources take up more and more of the consumer's time. "As of August, 43% of Americans report often getting news online, just 7 percentage points lower than the 50% who often get news on television, according to a Pew Research Center survey conducted in August. This gap between the two news platforms was 19 points in early 2016, more than twice as large."

REVOLVING DOOR:

-Morning Media has learned that Brian Flood, most recently a media reporter for The Wrap, will be joining Foxnews.com to cover the media beat as part of the site's digital expansion. He'll start next week.

-USA Today has named Wendy Benjaminson managing editor for government and politics. Benjaminson was most recently national editor at the AP. She succeeds Lee Horwich who becomes managing editor for national enterprise.

-The New York Times has named Deborah Solomon economics editor in its D.C. bureau. Solomon previously worked at The Wall Street Journal, where she oversaw the financial regulatory and law enforcement teams.

-The Atlantic's Molly Ball is now a CNN political analyst. Bloomberg White House correspondent Margaret Talev is also now a CNN political analyst.

THE GLOBAL POLICY LAB: POLITICO Europe is launching Global Policy Lab, a first-of-its kind experiment in collaborative journalism that is expected to produce new policy solutions and inform the public debate on key issues. POLITICO readers are among the most engaged and educated in the world, and the Global Policy Lab will tap into their experience and knowledge to develop solutions to pressing challenges. POLITICO is partnering with GE on the first installment, titled Engineering Growth, to look at the rise of digital manufacturing in Germany, Europe's largest economy, and explore ways to improve the economies of France and the United

Kingdom. **GET INVOLVED:** *Sign up to the weekly newsletter HERE.*

SOUNDBITE: "There's a connection, people, between those polls about trust in the media reaching new lows and online disinformation campaigns succeeding." -NYU journalism professor Jay Rosen.

EXTRAS:

-The first promo for Megyn Kelly's new morning show debuted on NBC's "Thursday Night Football."

-AT&T executive John Stankey reiterated on Thursday that the company does not plan to sell CNN once it closes its acquisition of Time Warner. "They've got wonderful content that's time and place specific, that's time-of-day specific, that can engage audiences in real time," he said.

-Charles Harder, the lawyer who sued Gawker into bankruptcy, is now targeting Gawker's former sister site Jezebel.

-Movie studios blame the website Rotten Tomatoes for the poor performance of this summer's box office.

-U.S. media stocks, including Disney, collapsed as concerns over digital disruption spread.

-Rich Lowry's message to President Trump: please turn off the TV.

-The student government association at Duquesne University tried to block the school paper from reporting budget information.

** **A message from Service Year Alliance:** 80,000 young people serve every year with AmeriCorps, the Peace Corps, and YouthBuild. They're fighting the opioid epidemic, supporting our veterans, teaching in underperforming schools, and responding to natural disasters. In fact, hundreds of AmeriCorps members are already on the ground in Texas helping respond after Hurricane Harvey. If President Trump's budget becomes reality, national service programs like AmeriCorps will go extinct. Service Year Alliance and hundreds of national service supporters dressed as dinosaurs rallied at the Capitol to stop national service extinction and tell Congress to Let Us Serve. Learn more at LetUsServe.org. **

Subject: POLITICO's Morning Transportation: Sleep apnea's long road? — Trump talks infrastructure (again) — TSA on the come up

By Stephanie Beasley | 08/15/2017 10:00 AM EDT

DAYSLEEPER: Both current and former federal safety officials say they were disappointed when President Donald Trump last week halted an early-stage rulemaking dealing with sleep apnea among transportation workers, our Lauren Gardner writes. The NTSB is among the critics, noting that its investigators have found clear and repeated links between obstructive sleep apnea and fatal highway and rail accidents.

There's the rub: In withdrawing the notice, the administration argued that the issue could be appropriately handled through existing programs and a pending rule from the Federal Railroad Administration. And there will certainly be some labor unions and industry groups that won't object to its withdrawal. Many have for years opposed the idea of federal requirements for sleep apnea testing and treatment, citing cost concerns and the possibility of missed work hours. A DOT spokeswoman said that FRA and the Federal Motor Carrier Safety Administration simply did not have sufficient data to support future rulemaking at this time.

Worth noting: Whether and how to deal with sleep apnea among transportation workers isn't a new issue, and though the Obama administration issued an advanced notice of proposed rulemaking, which is the farthest any administration has gotten to addressing the issue, these kinds of early-stage rulemakings can drag on for years with no real progress.

HAPPY TUESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Don't forget to send tips, feedback, and lyrics to sbeasley@politico.com or @Steph_Beasley and bgurciullo@politico.com or @brigurciullo.

"Out on the road today I saw a Deadhead sticker on a Cadillac. / A little voice inside my head said: "Don't look back, you can never look back." / I thought I knew what love was. / What did I know?" (h/t to Kara Macek at Governors Highway Safety Association)

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

TODAY'S THE DAY: President Donald Trump will host a meeting to discuss his plans for developing an infrastructure package that he wants added to the congressional agenda this fall. And, MT readers, we're just as curious as you are to hear more details. Rumor is it will include another executive order related to environmental reviews and permitting. Stay tuned!

WHILE WE'RE ON THE SUBJECT: A Boeing spokesman said CEO Dennis Muilenburg will remain on the White House's manufacturing advisory council, quashing speculation that he could be among the growing numbers of executives to resign from boards over Trump's politics.

Merck CEO Kenneth Frazier announced Monday that he'd resigned from the manufacturing council because he felt the president failed to reject "hatred, bigotry and group supremacy" in response to violence in Charlottesville, Virginia last Saturday. Intel CEO Brian Krzanich followed suit later in the evening. And AFL-CIO President Richard Trumka hinted that he might resign over the issue, POLITICO's Ian Kullgren reports. Tesla CEO Elon Musk also very publicly departed the manufacturing council in June after Trump backed out of the Paris Climate agreement.

ON THE COME UP: TSA said it screened more than 70 million people in July, breaking its previous record high of 69.9 million passengers set in June. At least 2 million of those passengers were screened at Ronald Reagan Washington National Airport and Washington Dulles International Airport, TSA said. The agency's record-breaking summer is a marked contrast from this time last year when airports nationwide were beset by long security screening lines. The tide change also comes as TSA continues to add steps to its screening procedures to thwart emerging threats domestically and internationally. The agency announced last month that it would require passengers on domestic flights to remove any electronic larger than a cell phone from carry-on bags and place them in separate bins.

BUT THERE'S MORE: While TSA seems to be getting a good handle on aviation security, the agency is also keeping an eye on terrorist threats to the surface transportation system, particularly railways. As MT reported on Monday, the latest version of Al Qaeda's Inspire Magazine is essentially a "how-to" guide for terrorists seeking to attack passenger and freight trains in the United States. A TSA spokeswoman told your MT host that the agency warned rail operators last Friday about the then upcoming Aug. 13 release of Al Qaeda's propaganda magazine as well as that of a related instructional video. TSA is not aware of any current, credible threats but continues to work closely with law enforcement and intelligence agencies to review the magazine and monitor terrorist groups that could be plotting such attacks, she said.

NTSB UPDATE ON CHARLOTTESVILLE CRASH: The NTSB expects to publish a preliminary factual report on the Virginia State Police helicopter that crashed near Charlottesville, Virginia on Saturday within the next two to three weeks. But the agency believes it will take a year to 18 months to complete the investigation, NTSB spokesman Peter Knudson said. Two policeman died in the crash. NTSB said that a fire occurred after the helicopter went down in a wooded area, but there was no distress call.

I'LL BE WATCHING YOU: NTSB launched a new blog series highlighting its general aviation investigative process. The posts will be written by NTSA staff and "will explore how medical, mechanical, and general safety issues are examined," the agency said. NTSB member Earl Weener wrote the first post published Monday.

TRUCKING STUDENTS LEFT HOLDING THE BAG: Some people are going to trucking schools with "blue-collar dreams" but leaving with a load of debt and poor job prospects, Bloomberg reports. The outlet said it interviewed dozens of truck drivers, instructors and industry insiders that say some companies are offering accredited truck driver training but are instead taking advantage of enrollees with promises that they could make as much as $500 per week, when their chances of getting a steady job in the industry are actually slim.

What's going on?: Don Lefeve, president of the Commercial Vehicle Training Association, told Bloomberg that the organization is trying to make sure that its members are educating people "early and often" about the costs associated with training programs. The problem is perplexing given the American Trucking Associations has noted that there is currently a shortage of drivers. The industry was short 48,000 drivers in 2015, according to an ATA report.

DON'T HOLD MY BEER: Ryanair is trying to pull the plug on pre-flight alcohol sales at airports in the United Kingdom. The Dublin-based airline on Monday urged airports to ban alcohol sales at bars and restaurants before 10 a.m. and to also limit sales otherwise in an effort to reduce drunken shenanigans on flights. The airline said the announcement was spurred by a U.K. Civil Aviation Authority report that found a sevenfold increase in drunken, disruptive passenger incidents between 2012 and 2016. Other airlines operating in the U.K. have also called for alcohol limits. (h/t POLITICO Europe).

SHIFTING GEARS: Cynthia Earhart becomes executive vice president and chief financial officer for Norfolk Southern today. She previously served as the company's executive vice president and chief information officer. Jason Levine is the new executive director of the Center for Auto Safety. Levine is a consumer protection attorney and formerly chief of staff at the Consumer Product Safety Commission and director of the Office of Congressional, Legislative, and Intergovernmental Affairs at the Office of Personnel Management.

THE AUTOBAHN:

- "Suited for danger: what it's like to be high behind the wheel." NBC Boston.

- "SpaceX lands another one of its Falcon 9 rockets on solid ground." The Verge.

- "NJ transit delays mount after agency stalls projects to pay bills." Bloomberg.

- "The plan to put a 3-D printer with robot arms into orbit." Wired.

- "Uber service is being suspended in yet another country." Fortune.

- "Target is buying a company that facilitates quick local deliveries." Los Angeles Times.

THE COUNTDOWN: DOT appropriations run out in 46 days. The FAA reauthorization expires in 46 days. Highway and transit policy is up for renewal in 1,142 days.

Enbridge Pipeline Coating Damage Needs Fix, Michigan Says
Enbridge's Line 5 gas and oil pipeline needs immediate repairs after the company reported that several sections had damaged coating, Michigan state officials said.

Energy
Xcel Proposes Closing Coal-Fired Units at Colorado Power Plant
Xcel Energy Inc. is proposing an early retirement for two of its three coal-burning units at the Comanche Generation Station in Pueblo, Colo., and replacing them with new, cleaner energy sources as part of an agreement with a coalition of companies and energy, labor, and consumer groups.

Oil & Gas
Interior Delay of Oil and Gas Royalty Rule Rebuked by Court
The Trump administration failed to abide by administrative procedures when it delayed an Obama-era regulation for calculating royalties on energy resources extracted from federal lands, a federal judge ruled Aug. 30 (Becerra v. Interior, N.D. Cal., No. 3:17-cv-2376, 8/30/17).

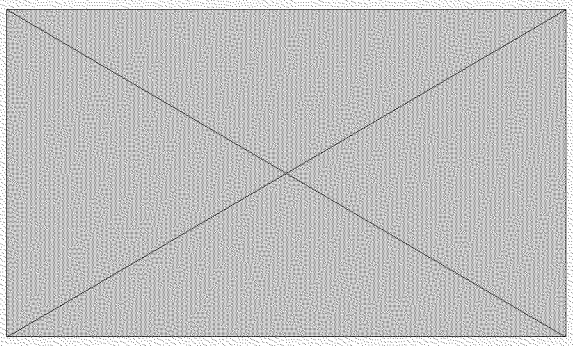
Subject: AEI Today: How to improve the bleak long-run outlook for US fiscal policy

The US is headed toward a federal debt crisis certain to inflict serious economic hardship on future generations.

AEI's daily publication of independent research, insightful analysis, and scholarly debate



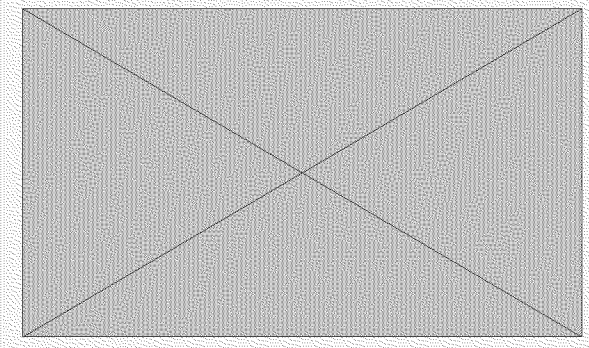
Reuters

How to improve the long-run outlook for US fiscal policy

Alex Brill | Macdonald-Laurier Institute

The US is headed toward a federal debt crisis certain to inflict serious economic hardship on future generations. Over the next 30 years, the US economy is expected to grow 76 percent, but the debt burden will increase by more than 240 percent. Returning to a sustainable fiscal outlook will require hard choices and a clear understanding of both what led us to this

point and the economic consequences of inaction.

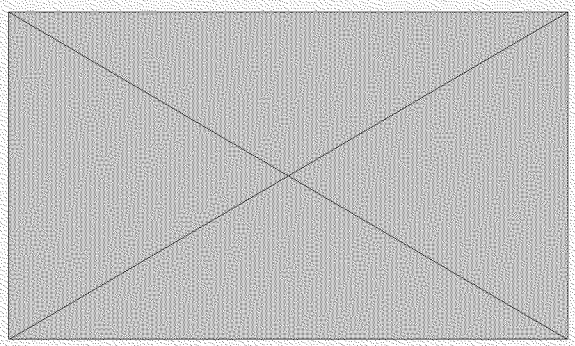


Reuters

The Equals Act would improve the federal workforce

Andrew G. Biggs | Forbes

According to the Government Accountability Office, in 2013 the federal government dismissed 3,489 employees for poor performance, a dismissal rate of 0.18 percent. The Equals Act would provide the federal government with greater time and flexibility to examine the performance of newly hired federal employees before those employees receive job protections that effectively entitle them to a "job for life."



Reuters

Digital trade rules in NAFTA should follow proposed rules in TPP

Claude Barfield | AEIdeas

Early in 2018, NAFTA negotiations among the US, Canada, and Mexico will enter a final make-or-break phase. If the negotiations proceed to a successful conclusion, it is imperative for the US to achieve a precedent-setting baseline set of rules governing digital trade. Here's why the US should seek an agreement on digital trade that closely matches the proposals found in the Trans-Pacific Partnership's e-commerce chapter.

AEI/Aaron Clamage

'In Venezuela, to have an opinion is a crime, not a right'

Roger F. Noriega | AEI event video

Thirty million Venezuelans are struggling to survive in a nation looted and crushed by President Nicolás Maduro's regime. Many opposition leaders have been co-opted, jailed, or forced into exile. For the first time since recently escaping house arrest in Venezuela, Antonio Ledezma, the democratically elected mayor of Caracas, sheds new light on a society in collapse and suggests new recipes for action.

EPA TO RECONSIDER CERTAIN COAL ASH RULE PROVISIONS

WASHINGTON (September 14, 2017) The United States Environmental Protection Agency (EPA) has granted two petitions to reconsider substantive provisions of the final rule regulating coal combustion residuals (CCR) as nonhazardous waste under subtitle D of the Resource Conservation and Recovery Act (RCRA).

"In light of EPA's new statutory authority, it is important that we give the existing rule a hard look and consider improvements that may help states tailor their permit programs to the needs of their states, in a way that provides greater regulatory certainty, while also ensuring that human health and the environment remain protected," said **EPA Administrator Scott Pruitt**.

In granting the petitions, EPA determined that it was appropriate, and in the public's interest to reconsider specific provisions of the final CCR rule based in part on the authority provided through the Water Infrastructure for Improvements to the Nation (WIIN) Act. EPA is not committing to changing any part of the rule, or agreeing with the merits of the petition – the Agency is simply granting petitions to reconsider specific provisions. Should EPA decide to revise specific provisions of the final CCR rule, it will go through notice and comment period.

The petition from the Utility Solid Waste Activities Group (USWAG) was submitted May 12, 2017, and seeks reconsideration of 11 specific provisions of the final CCR rule, including provisions prohibiting the use of alternative points of compliance for ground water contamination, regulating inactive surface impoundments, and defining what activities constitute beneficial use of CCR. The petition from AES Puerto Rico LLP was submitted May 31, 2017, and seeks reconsideration of certain on-site storage practices.

The current rule went into effect on October 19, 2015 and regulates how CCR generated from electric utilities and independent power producers is managed and disposed of in surface impoundments and landfills. The rule also defines what constitutes beneficial use of CCR; and, therefore, is excluded from the rule's requirements.

In December 2016, the WIIN Act was enacted into law. Section 2301 of the WIIN Act provides authority for states to operate permit programs under subtitle D of RCRA, as long as the EPA determines that the state's requirements are as protective as the standards in the 2015 final rule or successor regulations. Should EPA decide to revise specific provisions of the final CCR rule, it will go through a notice and comment process.

Subject: Wehrum clears cloture hurdle

By Anthony Adragna

11/08/2017 05:30 PM EDT

The Senate invoked cloture on William Wehrum's nomination to run EPA's air office, leaving just one final vote until Administrator Scott Pruitt lands his first lieutenant.

The vote was 49-46 along party lines.

It's been an arduous process for Wehrum, a veteran of the George W. Bush Office of Air and Radiation in EPA. A vote in the Senate Environment and Public Works Committee was briefly delayed due to Republican concerns over the agency's plans for the Renewable Fuel Standard.

Democrats and environmental groups oppose his selection. During his confirmation hearing, Wehrum said the degree that human activity drives climate change remains an "open question," contradicting mainstream science.

What's next: A final vote on the nomination is likely sometime on Thursday.

California Regions

AIR
Emissions Standard for Lead
California Regions AIR

Proposed rule of the South Coast Air Quality Management District amends regulations under Rule 1420 regarding lead emissions from stationary sources. The rule includes an initial ambient lead air concentration limit of 0.150 micrograms per cubic meter (µg/m3) that will be lowered to 0.100 µg/m3 averaged over 30 consecutive days. The rule also establishes provisions concerning lead point source emission control requirements, total enclosures where lead processing occurs, periodic source testing, air pollution control device monitoring, recordkeeping requirements, and conditional ambient air monitoring. A workshop is scheduled for Sept. 7, 2017, in Diamond Bar. Comments are due Sept. 19, 2017. Contact: Kennard Ellis; South Coast AQMD; 909-396-2457; kellis@aqmd.gov

Regulatory Update

AIR
Organic Liquid Loading
California Regions AIR

Notice of the Antelope Valley Air Quality Management District announces changes to and an additional hearing on a July 7, 2017, proposed rule to amend regulations under Rule 462 regarding the control of emissions of volatile organic compounds from facilities that load organic liquids with a vapor pressure of 1.5 pounds per square inch absolute or greater under actual loading conditions into tank trucks, trailers, or railroad tank cars. The rule adds a backpressure requirement for vapor recovery and disposal systems to satisfy the reasonably available control technology requirement for sources that are subject to control technique guidelines. The rule also updates definitions for "exempt compounds," "facility vapor leak," "submerged fill loading," and "transport vessel vapor leak"; requires a request for certification be submitted to California Air Resources Board within 30 days after construction or modification of vapor recovery and

disposal systems; and removes compliance dates that are no longer applicable. The changes add annual inspection using EPA Method 21 for leak detection. If adopted, the rule will be submitted to CARB and the U.S. EPA for inclusion in the state implementation plan. The hearing is scheduled for Sept. 19, 2017, in Lancaster. A comment due date is not specified. Contact: Bret Banks; Antelope Valley AQMD; 661-723-8070; bbanks@avaqmd.ca.gov

HAZARDOUS WASTE MANAGEMENT
Secondary Hazardous Materials
Louisiana HAZARDOUS WASTE MANAGEMENT

Notice of the Department of Environmental Quality, Office of the Secretary, announces corrections to a June 20, 2017, final rule that amended regulations under 33 LAC V.105, .109, and .322 regarding secondary hazardous materials, defined as materials that are recycled or re-used in industrial processes. The rule required secondary hazardous materials to be managed as if they were already hazardous wastes that have been discarded. The rule also required that the uses of secondary hazardous materials as ingredients and the products created with the materials be evaluated for legitimacy. In addition, the rule required facilities that use hazardous secondary materials to conduct evaluations of their industrial uses and practices for managing such materials. The corrections revise citation errors. Contact: Deidra Johnson; DEQ, Legal Division; 225-219-3985; deidra.johnson@la.gov

Subject: BREAKING NEWS: Trump disbands business advisory councils after CEOs quit

President Donald Trump said on Wednesday he was disbanding two business advisory councils after a flood of criticism led some chief executives to quit over the president's response to violence in Charlottesville, Va., over the weekend.

The heads of manufacturers 3M and Campbell's Soup both announced Wednesday they were quitting the manufacturing council, and the other group, led by Blackstone Chief Executive Steven Schwarzman, was said to be on the verge of disbanding.

"Rather than putting pressure on the businesspeople of the Manufacturing Council & Strategy & Policy Forum, I am ending both. Thank you all!" Trump wrote on Twitter.

Subject: Pruitt won't cover costs for private flights

By Emily Holden

09/28/2017 06:48 PM EDT

EPA Administrator Scott Pruitt doesn't plan to pay out of pocket for the $58,000 worth of non-commercial flights he and his staff have taken on four occasions, according to an agency spokeswoman.

Pruitt has taken three private government flights and one chartered plane. EPA has said those flights represented the only travel options for reaching scheduled events in time, including taking an Air Force plane to New York at a cost of $36,068.50 to travel to events ahead of an international energy ministers' meeting in Italy. The agency received ethics approvals from EPA's acting general counsel for three of the four trips.

"If a reimbursement was necessary, we would have been told during the approval process and acted accordingly," agency spokeswoman Liz Bowman said.

HHS Secretary Tom Price today said he would write a personal check to the federal government to cover the cost of his seat on private jet flights that cost more than $400,000 since May.

Subject: POLITICO's Morning Energy: Pruitt cleared by scientific integrity panel — New front in RFS battle — What will Southern have to say about Vogtle today?

By Annie Snider | 08/02/2017 10:00 AM EDT

With help from Esther Whieldon, Alex Guillén and Darius Dixon.

PRUITT'S CLIMATE COMMENTS CLEARED BY SCIENTIFIC INTEGRITY PANEL: A panel of EPA employees has concluded that Administrator Scott Pruitt's controversial assertion that carbon dioxide is not the primary driver of climate change during a television interview in March did not violate the agency's scientific integrity policy. That policy "specifically encourages employees to express their opinion should the employee disagree with scientific data, scientific interpretations, or scientific conclusions," the panel of high-ranking EPA officials wrote, noting that Pruitt "did not suppress or alter Agency scientific findings."

Lost in the mail? The panel's conclusion was included in a letter from Thomas Sinks, director of EPA's Office of the Science Advisor, addressed to the Sierra Club, which had formally complained about Pruitt's climate comments. But the green group said Monday evening that it had not received that letter, which first appeared in conservative media outlets. For its part, EPA's press office circulated an article from the Washington Free Beacon to publicize the letter.

Elena Saxonhouse, a senior attorney with Sierra Club, said in a statement that her group was told by EPA staff that the proper process is for the complaining party to be informed first. Moreover, she added: "Pruitt's 'opinions' can have especially weighty consequences for the many scientists working below him, yet the letter treats him like any other employee."

HAPPY WEDNESDAY. I'm your guest host, Annie Snider, and I've got you for the rest of the week. The NRDC's Joan Matthews is the competition to beat, being the first to send in the correct trivia answer for a second day in a row. Benjamin Harrison, Herbert Hoover, Lyndon B. Johnson, Bill Clinton and Barack Obama were the five presidents born in August, and Warren G. Harding was the one to die this month. NUCLEAR EYES TURN TO GEORGIA: Now that the V.C. Summer nuclear project in South Carolina appears to be on its last legs after the two owners announced plans to ditch the effort, the nuclear policy universe turns its attention to Southern Co., which holds its quarterly earnings call today. Southern, through its Georgia Power unit, is the lead owner of the two-reactor Vogtle plant expansion facing a lot of the same struggles Summer did: cheap natural gas,

cost overruns, anxious investors, and the bankruptcy of their primary contractor, Westinghouse. Taxpayers also have a stake in Vogtle. The Energy Department has provided loan guarantees for $3.4 billion to Georgia Power, $3.1 billion to Oglethorpe Power Co., and $1.8 billion to the Municipal Electric Authority of Georgia. More than $5.3 billion of that money has been advanced to the firms since Feb. 2014, according to Treasury Department records. SCANA, the majority owner of the Summer project, saw its stock rise 5 percent each day since announcing plans to abandon the reactors.

But many came to Vogtle's pre-defense since Monday, including two top members of Georgia's utility regulator (its vice chairman, Tim Echols, has tweeted on the subject more than a dozen times). It goes something like this: Georgia Power has more than three times as many customers (making the cost impacts of the project lower), Vogtle is getting a $3.7 billion payout from Westinghouse parent company Toshiba ($1.5 billion more than Summer is getting), and the Georgia project has been seen as being better managed. Still, every month of indecision costs the Vogtle co-owners about $100 million. Rather than steal Southern's thunder, an Oglethorpe spokesman told ME the Vogtle co-owners are still working "to develop a detailed schedule and cost-to-complete for the project." Southern CEO Tom Fanning will hold court with investors starting at 1 p.m.

Meanwhile, in the Sunshine state nuclear critics see the South Carolina shut down as a signal that the supposed "nuclear renaissance is over, Politico Florida's Bruce Ritchie reports. Florida Power & Light Co. told the state's Public Service Commission regulators in May planning to continue its "pause" of two new nuclear units at its Turkey Point power plant south of Miami while it seeks to learn from efforts further north.

FAREWELL, DREAMS OF SUMMER RECESS: August got a whole lot sweatier when John Cornyn told reporters Tuesday that the upper chamber will, indeed, stay in session through next week, cutting its precious August recess time in half.

Minibus idling in the driveway: Majority Leader Mitch McConnell started the process to fast-track the House-passed appropriations measure funding the Defense and Energy Departments, as well as the Army Corps of Engineers, Veterans Administration and Legislative branch. But don't get your hopes up yet - leaders use the "Rule 14" process, which allows a measure to bypass committees and head straight to the floor, for dozens of bills each month that go exactly nowhere. Moreover, both McConnell spokesman Don Stewart and a Senate appropriations aide warned not to read too much into the majority leader's gesture (h/t Budget & Appropriations Brief).

But what about the noms? Odds aren't looking good for most (any?) of the energy nominees awaiting confirmation moving during that extra time either. ME caught up with Sen. Dean Heller about his hold on deputy Energy secretary nominee Dan Brouillette and the Nevada Republican said there's no deal, "just conversations and discussions." The two Republican FERC nominees also don't look like they'll be gaining any momentum before recess, in part because the White House still hasn't coughed up the Democratic nominee Trump announced in June.

When asked about the two GOP picks for the Nuclear Regulatory Commission, EPW Chairman

John Barrasso said he generally wants "every one" of the Senate's pending nominees confirmed. But Barrasso also said he hasn't talked to his ranking member, Sen. Tom Carper - which is a big red flag. Carper has been saying for months that he wants NRC Commissioner Jeff Baran, a Democrat, to get reconfirmed alongside the new commissioners, both of whom he supports. Without Carper's blessing, it's hard to see how they get into a big package that needs unanimous support.

BUT SOMEONE IS CONFIRMED: The Senate approved Lucian Niemeyer to be an Assistant Secretary of Defense for Energy, Installations and Environment Tuesday. Niemeyer, a retired Air Force lieutenant colonel, previously oversaw military installations and federal energy and environmental programs as a staffer on the Senate Armed Services Committee.

OLD PROBLEM, NEW HEADACHES: Another battle in the long-running war over the Renewable Fuel Standard may be ready to break out in the wake of last week's D.C. Circuit Court of Appeals decision voiding EPA's use of a waiver to lower the amount of ethanol that refiners had to blend into the gasoline supply in 2016, as compared with targets set by Congress more than a decade earlier.

The issue, Eric Wolff reports, is that the court offered little guidance on how to correct that problem for a year that is already in the history books, leaving EPA to decide whether to force refiners to spend up to a half a billion dollars on additional compliance credits for fuel that they've already sold, or find a way to let refiners off the hook.

The obvious solution - requiring additional Renewable Identification Numbers - has drawn protests from refiners. Instead, they argue the agency could simply rewrite the rule to reflect the actual amount of biofuels used in 2016, just as it did in previous years. But ethanol producers argue the agency should not be able to simply paper over its mistake. Here's Eric with more.

DEEPWATER, TESLA TEAM UP ON OFFSHORE WIND PROJECT: Tesla and Deepwater Wind are proposing an offshore wind project that would be paired with battery storage. The 144-megawatt "Revolution Wind" project Deepwater wants to build offshore Massachusetts would be paired with a 40 megawatt-hour battery storage system from Tesla. The companies were among dozens of wind, solar, hydropower and even high-voltage transmission line developers that last week bid for 15-year to 20-year "clean energy" contracts with utilities in Massachusetts. The commonwealth posted the bids online Tuesday. Deepwater Wind in December brought the nation's first offshore wind project online offshore of Rhode Island.

WEDNESDAY IS FOR WATER: Get ready for some Senate Energy and Natural Resources water wonkery this morning, when Arizona Republican Jeff Flake 's Water and Power subcommittee will look at how infrastructure, management and innovation can improve water security in the arid West. The hearing will set the stage for the inclusion of Western water issues in the infrastructure package some lawmakers are still holding out hope for. With Arizona's top water official testifying, the hearing could also shed light on an emerging deal between the U.S. and Mexico to share in shortage along the over-allocated Colorado River.

If you go: The hearing is at 10 a.m. in 366 Dirksen.

DEMS QUESTION ZINKE'S REVENUE GOALS: Senate Energy and Natural Resources Committee ranking Democrat Maria Cantwell and House Natural Resources Committee top Democrat Raul Grijalva in a Tuesday letter to Interior Secretary Zinke questioned whether he is keeping his pledge to ensure the American people receive their fair share when companies use public land to extract oil, gas and coal resources. The agency's "actions so far this year have served to do the exact opposite, reducing the return that taxpayers receive instead of increasing it," they wrote. Cantwell and Grijalva asked Zinke to answer a number of questions, including how his reinstated and expanded royalty policy committee would address these fiscal issues.

EPA APPROVES FLINT LOAN FORGIVENESS: The city of Flint is off the hook for $21 million in federal drinking water loans, EPA said Tuesday. The move, requested by GOP Michigan Gov. Rick Snyder, frees up more money for the city's efforts to replace lead service lines and upgrade its infrastructure in the wake of a major lead contamination crisis. "Rebuilding our nation's infrastructure is one of the President's top priorities, and EPA is especially focused on those communities, like Flint, that need it the most," EPA Administrator Scott Pruitt said in a statement.

LEGAL FILING OF THE DAY: The American Civil Liberties Union's West Virginia chapter wants to defend TV comedian John Oliver in the lawsuit over his recent segment on coal magnate Bob Murray. The ACLU's "friend of the court" brief filed on Tuesday argues that Oliver had various constitutional rights to air the segment, which among other things referred to Murray as a "geriatric Dr. Evil." Murray's suit is an attempt "to chill protected speech and silence the marketplace of ideas," the ACLU told a federal court in a brief which includes sections titled "Anyone Can Legally Say 'Eat S---, Bob!'" and "You Can't Sue People for Being Mean to You, Bob."

The group notes that while its brief "pokes fun at the absurdity of this case, the legal issues raised by it are anything but comical." (Still, the ACLU included a photo comparison between Murray and the fictional Dr. Evil on page 14.) Murray and his company are currently trying to get the case sent to a state court and secure an order stopping HBO from sharing the segment further.

GREENS CALL FOR SCRUTINY OF ENHANCED OIL RECOVERY: In a report out this morning, Clean Water Action is calling for increased environmental protections around the common practice that uses fluids or gasses to push oil to the surface. Enhanced oil recovery is regulated under a Safe Drinking Water Act program that hasn't seen its regulations updated in decades, requires little monitoring and data collection, and is targeted for a 30 percent cut under Trump's budget proposal, the report finds. It argues that it's difficult for state and federal agencies to push for stricter oversight without evidence of violations or proven cases of drinking water contamination, but that with meek budgets, these are almost impossible to collect.

MAINE LEGISLATURE VOTING ON VETOED SOLAR BILL: The Maine Legislature is slated to vote today on an override of Gov. Paul LePage's veto of L.D. 1504, a measure that would have utility regulators formulate new recommendations on the future of net metering in 2019. The bill does not stop the state from starting to phase out its net-metering program in the

meantime. The Legislature passed the measure in June with a veto-proof majority but it remains unclear whether lawmakers will hold their ground.

MOVER, SHAKER: Jamie Nolan leaves her post as communications director for DOE's SunShot Initiative today to launch her own communications consultancy focused on energy, clean tech, climate and transportation.

QUICK HITS

- Islamic State and climate change seen as world's greatest threats, poll says. New York Times.

- Tesla's longtime battery technology director leaves company. Bloomberg.

- 59,000 farmer suicides in India over 30 years may be linked to climate change, study says. Washington Post.

- Big Oil Bites the Low-Price Bullet, Wall Street Journal.

THAT'S ALL FOR ME!

Subject: POLITICO's Morning Transportation: Self-driving car guidelines a plus for industry — No floor time for House FAA bill this week — 'Autopilot' a piece of the probable cause puzzle

By Brianna Gurciullo | 09/13/2017 10:00 AM EDT

With help from Stephanie Beasley, Lauren Gardner, Tanya Snyder and Theodoric Meyer

NO GIFTS, PLEASE: DOT released the long-awaited revision to NHTSA's policy guidance on self-driving cars Tuesday. As Tanya reports, the new document is a big plus for industry, including significant changes to the previous guidance's voluntary 15-point safety assessment. It's been replaced by a 12-point plan that's not dissimilar, though planks on privacy, data sharing and ethics no longer exist. It also trades in the previous document's "model state policy" for a list of best practices.

Slim-fast: As before, the guidance includes all motor vehicles. And, all in all, the federal guidance on self-driving cars has shrunk from 112 pages to 27. NHTSA officials called the new guidelines "much cleaner and more streamlined," and said they were designed to clarify that the safety letter is truly voluntary.

NOT THIS WEEK: The House's FAA bill won't come to the floor this week, Rep. Bill Shuster (R-Pa.) told Lauren on Tuesday. Hurricanes "Irma and Harvey kind of blew us off schedule, so to speak," the Transportation Committee chairman said. But Shuster said he feels "pretty good" about the vote count for his bill, H.R. 2997 (115) . As for the length of an extension? "We're working through the process, trying to figure out what makes the most sense," Shuster said.

Buying time: Meanwhile, Senate Commerce Chairman John Thune (R-S.D.) is hoping that an extension will give his colleagues additional time to work out the kinks on their version of the FAA bill. He told reporters again Tuesday that he wants an extension that lasts six months "or perhaps maybe longer." As Lauren reports for Pros, the upper chamber "has run into issues of its own with the Commerce Committee-reported legislation, S. 1405 (115), which includes language to loosen constraints on pathways for pilots to gain credit for flight time."

IT'S WEDNESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Be sure to send tips, feedback and lyrics to bgurciullo@politico.com or @brigurciullo.

"But I can't see the road / If I'm looking at the signs / I'm carrying a load / And stepping out of line."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

A PIECE OF THE PROBABLE CAUSE PUZZLE: NTSB determined Tuesday that driver error and an over-reliance on automated technology were the primary facotrs that led to a deadly

crash last year of a Tesla being driven with the "Autopilot" function engaged. While the crash may not have happened if the driver of a tractor-trailer had yielded to the Tesla - and if the Tesla driver had been paying more attention to surrounding traffic - a significant contributing factor was the "operational design" of Autopilot, which allowed the driver a "prolonged disengagement" from operating the vehicle "in ways inconsistent with guidance and warnings from the manufacturer," NTSB said.

What now? The board sent seven recommendations to federal regulators and automakers, urging them to do more to improve data collection from automated vehicles involved in crashes and to promote greater safety around automated control systems being deployed in cars. NTSB implored manufacturers to do more to ensure that cars with advanced automated systems aren't being driven in conditions for which they weren't designed. (For example, ensuring software won't allow a car to be driven with automated controls engaged if it's on a local road with cross-traffic). The board also called on automakers to develop technology that better senses when a driver isn't paying attention, since the driver either didn't notice or ignored several visual and auditory warnings to put his hands back on the steering wheel before he crashed.

Theoretical dustbin: Two things NTSB staff debunked: a rumor that the driver had been watching a movie before the crash and a theory, suggested by Tesla officials, that the software couldn't detect the turning truck because of the glare of sunlight off its white trailer.

LOADING ZONE: The Senate Commerce Committee this morning is set to examine self-driving trucks and their potential impact on jobs and transportation systems - an issue that's held up the introduction of their bill. "Including trucks in the conversation about automated vehicles is important as we seek to improve safety; it also puts our economy on a level playing field as other countries around the world deploy automated freight trucks," Thune plans to say, according to excerpts of his opening statement provided by committee staff.

'Fundamentally different': One witness, Ken Hall, the general secretary-treasurer of the Teamsters, will say that "the issues facing autonomous commercial trucks are fundamentally different, and potentially more calamitous than those facing passenger cars, and warrant their own careful consideration" - both because of the workers they could displace and the safety concerns inherent to large trucks.

Hold on now: Another witness, American Trucking Associations President and CEO Chris Spear, will try to calm those fears. "Some may predict the elimination of all driving jobs, including both drivers of passenger vehicles and commercial vehicles, but that future, if it exists at all, is too far into the future to see," Spear will say. He'll look to assure drivers that there remains a role for them, even in a world of self-driving trucks.

MT MAILBAG: The Owner-Operator Independent Drivers Association argues that the Senate bill "should be limited to motor vehicles weighing less than 10,000 pounds." The group sent a letter Tuesday to Thune, Commerce Committee ranking member Bill Nelson (D-Fla.) and Sen. Gary Peters (D-Mich.).

YEAH, ABOUT THAT ... TSA may have vowed to keep a closer eye on rail and transit

security after Al Qaeda provided detailed instructions on attacking U.S. railways, but New Jersey Democrats said the agency needs to take more concrete actions. The group of lawmakers that included Sen. Cory Booker and Rep. Bonnie Watson Coleman sent a letter to TSA Administrator David Pekoske on Tuesday urging him to develop a plan to ramp up security for passenger rail and transit, Steph writes. The lawmakers also invited Pekoske to visit an Amtrak station in New Jersey, where terrorists plotted to bomb a train station last year.

DHS REAUTHORIZATION NOT FORGOTTEN: Steph also briefly caught up with Senate Homeland Security Committee Chairman Ron Johnson (R-Wis.) on Tuesday as he was on his way to Mitch McConnell's office. Johnson said the committee is working on a DHS reauthorization bill, but wouldn't give up the goods on a timeline. Johnson previously said he hoped to put out legislation similar to a House-passed DHS bill (H.R. 2825 (115)) this fall.

CHARGES DROPPED AGAINST AMTRAK ENGINEER: A judge dismissed charges Tuesday against the engineer who was behind the controls of the Amtrak train that derailed in Philadelphia in 2015, killing eight. The Associated Press reports that the judge determined it was "more likely an accident than criminal negligence."

CUOMO'S IMAGE PROBLEM: With an eye on the 2020 presidential election, New York Gov. Andrew Cuomo has attempted to "introduce himself to a national audience as a master-builder of infrastructure," our colleagues at POLITICO New York report, but the state of New York City's ailing subways is hurting his rep. Check out the story here.

FOR YOUR CALENDAR: NTSB announced Tuesday that it will hold a meeting Dec. 12 on the probable cause of the El Faro sinking. The cargo vessel was close to the eye of Hurricane Joaquin two years ago when it sank, killing the almost three dozen members of the crew.

A THUMBS UP FOR SHUSTER: The American Action Forum published a report Tuesday essentially endorsing Shuster's air traffic control plan. The nonprofit group is the "sister organization" of the American Action Network, whose executive director also heads the Congressional Leadership Fund, a super PAC tied to House Speaker Paul Ryan. American Action Forum's president is Doug Holtz-Eakin, who advised Sen. John McCain (R-Ariz.) on economic issues when he ran for president.

TWEET DU JOUR: @SenJohnMcCain: "The decision to suspend #JonesAct for #Harvey & #Irma relief shows why we must repeal. Let's make this permanent!"

SPEAKING OF HURRICANES: While Florida's seaports, airports and toll roads will face losses in the short term because of Hurricane Irma, their credit over time shouldn't change much, according to Moody's Investors Service.

SHIFTING GEARS: Diana Birkett Rakow has a new gig at Alaska Airlines as vice president of external relations after doing public affairs for Kaiser Permanente Washington, our friends at POLITICO Influence report. Caeli Mahon left the office of Rep. Jeff Denham (R-Calif.), the chairman of the House Transportation Railroads Subcommittee, where she served as press secretary, to be an associate at Targeted Victory. And Seth Coppe, formerly of the National

Governors Association, starts later this month as external affairs liaison for the American Bus Association.

An extra slice of PI: Adam Nordstrom, a former lobbyist at Chambers, Conlon & Hartwell, has set up a firm called Viking Navigation to lobby on rail and intergovernmental issues, PI reports. So far, he is registered to lobby for Anacostia Rail Holdings Company, OmniTRAX and the Kansas Department of Commerce. Nordstrom is still advising CC&H with respect to a big client, the American Short Line and Regional Railroad Association.

A NEW PREZ FOR IBTTA: The head of the E-470 Public Highway Authority in Colorado, Tim Stewart, will be the International Bridge, Tunnel and Turnpike Association's president for next year. Samuel Johnson, Transportation Corridor Agencies' chief tolling officer, will be second vice president.

THE AUTOBAHN:

- "Supreme Court lets Trump ban on most refugees stand." The Associated Press.

- "Former Melgen girlfriend fumes at prosecutors during Menendez trial." POLITICO New Jersey.

- "American Airlines marks down third quarter guidance." The Wall Street Journal.

- "Maryland Gov. Larry Hogan wants to sue the FAA over airport noise." The Washington Post.

- "Amtrak chairman doesn't rule out future 'summer of hell.'" POLITICO New York.

- "Washington lawmakers oppose plan for highway tolls in Oregon." FOX 12 Portland.

THE COUNTDOWN: DOT appropriations run out in 87 days. The FAA reauthorization expires in 18 days. Highway and transit policy is up for renewal in 1,114 days.

Energy and Climate Report

September 06, 2017 - Number 173

News

Climate Policy
EU Firm on Climate Pledges Despite U.S. Withdrawal From Pact
Full implementation of the 2015 Paris climate accord should be advocated by the European Union at the forthcoming UN climate summit despite U.S. President Donald Trump's decision to pull out of the agreement, the European Parliament's environment committee decided Sept. 7.

Climate Regulation
Clean Power Plan Repeal Proposal Coming This Fall, EPA Says
The long-awaited proposal to repeal the Clean Power Plan is coming this fall, according to the EPA.

Energy
Correction
The article "Rule Expediting Small Natural Gas Exports May Have Limited Impacts" dated Sept. 5 has been corrected to say that applicants cannot export more than 0.14 billion cubic feet per day of natural gas in order to qualify for the expedited approval process offered to small-scale natural gas exporters.

Energy
Energy Regulator Nominees Back Technology-Neutral Stance
Republican and Democratic nominees for the Federal Energy Regulatory Commission agreed that the agency should be technology neutral when it comes to regulating electric power generation, differing from a pro-coal stance of the current FERC chairman.

Energy
Trump's Trade Barrier Push Threatens U.S. Energy Profits, Critics Say
Trade expansion poses the biggest potential boon to U.S. energy companies, yet the Trump administration's rhetoric threatens that prospect, said several speakers at an event to discuss NAFTA renegotiations.

International Climate
Democrats' Last-Ditch Effort to Aid Climate Fund Falls Short
A last-ditch Democratic effort to restore U.S. spending for a United Nations climate fund was narrowly repelled by Republican Senate appropriators Sept. 7 in a major step for President Donald Trump's campaign to zero out international aid to address climate change.

Mining

Chilean Court Order on Wetlands Impacts May Shut Kinross Mine

The future of Kinross Gold's mining operations in northern Chile could depend on whether the Canadian company successfully appeals a court decision limiting the amount of water it can extract from wells near sensitive wetlands.

Motor Vehicles

Ontario to Pick Up Tab for Low-Carbon Commercial Trucks

Ontario businesses that lease or buy vehicles with low carbon dioxide emissions are eligible for rebates of up to 50 percent as part of the province's C$170 million ($140 million) incentives package.

Renewable Energy

Brazil's Rattled Wind Power Supply Chain Looks Ahead

Suppliers in Brazil are hoping the upcoming energy auctions will kick-start a jittery wind-power sector that's trying to deal with the country's worst recession in decades, officials from several companies told Bloomberg BNA.

Renewable Energy

China Eyes 707 Megawatts of Pilot Wind Farms Free of Subsidies

China, the world's biggest clean-energy investor, selected 707 megawatts of wind power pilot projects that will receive the same subsidy-free payment for electricity as coal plants.

Renewable Energy

South Korea Pours Millions Into Building Solar Panels on Landfills

Landfills are not just for garbage anymore. At least not in South Korea where the government and a landfill operator are coordinating to place solar power facilities at four disposal sites.

Trade Policy

Buoyed by WTO Ruling, Argentina Seeks U.S. Biodiesel Duties Deal

Argentina is negotiating a "price-volume" deal with the U.S. that could suspend preliminary antidumping duties, a Foreign Ministry official said Sept. 7.

Vehicle Fuels

U.S. Ethanol Industry Asks Trump to Intervene in Brazil Dispute

U.S. ethanol producers will ask the Trump administration to intervene in a trade dispute with Brazil as tensions between the industry and foreign competitors continue to escalate.

Regulatory Update

HAZARDOUS MATERIALS TRANSPORTATION
Child Safety Alert Systems
California HAZARDOUS MATERIALS TRANSPORTATION

Proposed rule of the California Highway Patrol adopts regulations under 13 CCR 1294 to establish provisions concerning specifications, installation, and use of child safety alert systems (CSAS). The rule specifies the circumstances under which all school buses, school pupil activity buses, youth buses, and child care vehicles must be equipped with a CSAS to provide the basis for the determination of compliance with 2018-19 school year implementation date requirements. The rule also specifies the circumstances under which the CSAS must be activated and prohibits any method of deactivation except as provided. In addition, the rule provides warning requirements for the CSAS, specifies interior lighting requirements and alternatives, and clarifies CSAS operational requirements. Hearing requests are due Sept. 11, 2017. Comments are due Sept. 25, 2017. Contact: Joseph Mosinski; CHP, Commercial Vehicle Section; 916-843-3400; cvsregs@chp.ca.gov

—California Regulatory Notice Register (08/11/2017)

Regulatory Update

HAZARDOUS MATERIALS TRANSPORTATION
Hazardous Materials/Explosives Routes and Stopping Places
California HAZARDOUS MATERIALS TRANSPORTATION

Final rule of the California Highway Patrol amends regulations under 13 CCR 1151 concerning commercial vehicle routes and stopping places for transportation of explosives. The rule updates explosives routes to extend 2.2 miles and remove 8.2 miles of currently designated routes in the San Francisco region. The rule is effective July 27, 2017. Regulatory Update

WATER
Classifications and Numeric Standards/South Platte, Laramie, Republican and Smoky Hill River Basins
Colorado WATER

Proposed rule of the Department of Public Health and Environment, Water Quality Control Commission, amends regulations under 5 CCR 1002-36 regarding classifications and numeric standards for the South Platte, Laramie, Republican, and Smoky Hill river basins. The rule corrects standards applied to Upper South Platte Segment 16i, including removing the water supply-based standards for cadmium, chromium III, lead, and nickel and replacing the existing agriculture-based chronic arsenic standard of 100 total recoverable micrograms per liter with the fish ingestion-based chronic standard of 7.6 total recoverable µg/L. The rule also revises the qualifier for the Upper South Platte Segment 22a to a water and fish standards qualifier. In addition, the rule revises standards applied to Clear Creek Segment 3b by removing the acute arsenic standard of 50 total recoverable µg/L and retaining the arsenic standards to protect

aquatic life and water supply uses. Finally, the rule corrects the descriptions of Clear Creek segments 6 and 21 and includes the segments as exceptions to segments 7a and 7b, respectively. A hearing is scheduled for Dec. 11, 2017, in Denver. Comments are due Nov. 29, 2017. Contact: Blake Beyea; DPHE; 303-692-3656; blake.beyea@state.co.us

Regulatory Update

Massachusetts

AIR

Air Pollution Control for Mobile Sources

Massachusetts AIR

Final rule of the Department of Environment Protection amends regulations under 310 CMR 7.71, 7.72, and 60.05 and adopts regulations under 310 CMR 7.73, 7.74, 7.75, and 60.06 regarding air pollution control for mobile sources to reduce greenhouse gas (GHG) emissions. The rule establishes standards for sulfur hexafluoride emissions from gas-insulated switchgear, methane emissions from the natural gas distribution network, GHG emissions from electricity generating units, and carbon dioxide emissions from fleet passenger vehicles. The rule also revises the GHG Reporting Program to align with changes to the retail seller GHG emission reporting requirements under the clean energy standard. The rule is effective Aug. 11, 2017. AIR

SIP Revision/Indiana Nonattainment Area

Pennsylvania AIR

Notice of the Department of Environmental Protection announces a proposed revision to the state implementation plan for the Indiana nonattainment area to demonstrate attainment and maintenance of the 2010 sulfur dioxide national ambient air quality standards. The revision consists of a base year emission inventory and a demonstration of reasonable further progress towards attainment and installation of reasonably available control measures and technology. The revision also consists of dispersion modeling that demonstrates attainment in 2018, an approved new source review program, and contingency measures. The SIP revision will be submitted to the EPA for approval. A hearing is scheduled for Sept. 13, 2017, in Pittsburgh. Comments are due Sept. 15, 2017. Administrator Pruitt Meets With Hurricane Harvey Responders and Officials in Texas

Corpus Christi, Texas (August 30, 2017)— U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt traveled to Corpus Christi today to assess EPA relief efforts and thank responders. Administrator Pruitt also met with local and state leaders to discuss continued relief measures in the aftermath of Hurricane Harvey.

"The devastation endured by Texas this week is unfathomable. As I saw firsthand today, the Lone Star State has shown commendable perseverance in helping their fellow neighbors through this crisis," **said Administrator Pruitt**. "EPA is committed to working with our federal, state, and local partners to provide relief to the affected regions."

EPA has an organized emergency response program and is positioned to support FEMA, state, local and tribal partners. EPA Headquarters' Emergency Operations Center (EOC) has been activated and Administrator Pruitt is in regular contact with EPA staff across the Agency who are part of the hurricane response effort. Helping manage response efforts and focusing on the safety of those affected are the Agency's highest priorities.

EPA supports hurricane preparedness and response in a number of ways, including:

- **Addressing Fuel Shortages:** The Clear Air Act allows EPA Administrator Pruitt, in consultation with Energy Secretary Perry, to waive certain fuel requirements to address shortages that occur as a result of the storm. If Administrator Pruitt determines that extreme and unusual fuel supply circumstances exist in a state or region as a result of the hurricane, a temporary waiver can help ensure an adequate supply of gasoline is available in the affected area, particularly for emergency vehicles. EPA has an experienced team standing by to expedite handling of fuel waiver requests by the states.

- **Monitoring Public Water Systems:** Water systems can be severely impacted during hurricanes due to storm surge, flooding, or loss of power. EPA Region 6 has developed a tracking system for us to identify systems in the storm's pathway. Over 4,000 public drinking water systems have been potentially impacted by hurricane Harvey and flooding in Texas. Both Texas Commission on Environmental Quality (TCEQ) and Louisiana Department of Hospitals have uploaded their potentially impacted systems into Response Manager, which enables planning for rapid assessments to restore water systems after the flood waters recede. EPA and TCEQ are conducting damage assessments of both drinking water and wastewater systems to identify impacts to critical assets and assist in the recovery.

- **Securing Superfund Sites:** EPA assesses conditions at the NPL Superfund sites in the storm's impact area and tasks each Superfund National Priorities List (NPL) remedial site manager to assess conditions and make on-site preparations for high winds and heavy rainfall.

Any on-site activities at sites located in the storm's path are ceased until the all clear is given and on-site equipment is secured. In addition, freeboard for lagoons or ponds is increased to accommodate forecasted rainfall if possible. Today, EPA began rapid assessments at two sites that are accessible after floodwaters have receded and this work will continue.

- **Assessing Conditions at Major Industrial Facilities:** EPA assesses conditions at the major industrial facilities in the affected area to identify potential impacts and countermeasures. Following the storm and receding floodwaters, spills and releases are reported to the National Response Center. NRC notifies U.S. Coast Guard or EPA based on preapproved jurisdiction boundaries. EPA conducts follow up inspections and damage assessments in response to reports within EPA jurisdiction.

Subject: Morning Energy: Senate close to resolving ANWR issues — EPA set to keep biofuel volumes steady — Troubled Arizona plant to stay open through 2019

By Anthony Adragna | 11/30/2017 05:42 AM EDT

With help from Darius Dixon, Eric Wolff and Ben Lefebvre

ANWR ISSUES COMPLICATE TAX FIGHT: Complications from language in the Senate's tax package related to ANWR drilling that ran afoul of budget reconciliation rules appeared on the verge of being resolved by late Wednesday. "We are finishing up the last of that and expect to have a curative amendment if you will as part of the process going forward," Senate Energy Chairman Lisa Murkowski (and major ANWR backer) told Roll Call. The changes came after an anticipated ruling from chamber's parliamentarian that language easing environmental rules for ANWR drilling would need 60 votes to be kept in. Though final text of the legislation was not yet available, multiple aides said the concerns would be easily resolved.

Murkowski backed a procedural motion on the bill (along with the rest of the Republican caucus) on Wednesday evening and seemed upbeat about getting one of her top legislative priorities included in the mammoth package. She touted the ANWR section in a statement announcing her support, though she noted: "We still have work to do on this legislation and I look forward to the debate on the Senate floor and my colleagues' ideas to further improve it."

Democrats rally against: Six Senate Democrats, including Minority Leader Chuck Schumer and top Energy Committee Democrat Maria Cantwell, are holding a press conference today at 12:30 p.m. in the Senate Swamp to rally against opening ANWR drilling as part of the tax package. That comes as a groups of religious leaders and scholars sent a letter to members of Congress also opposing the drilling push.

Another issue to watch: Money for wind and solar power projects could dry up if Congress doesn't alter language in the tax bill aimed at preventing banks from moving their profits abroad, Pro's Eric Wolff reports . That's because renewable energy companies typically sell the federal tax incentives attached to their green energy projects to banks, but provisions in the Senate tax bill would make it difficult for banks with overseas subsidiaries to buy the credits. "To me it feels like a drive-by shooting," said Mike Garland, CEO of wind developer Pattern Energy. "Clearly the provision is aimed at corporations who are sending work overseas, but the result is that the investment in U.S. activities is penalized."

IT'S THE END OF THE MONTH AS WE KNOW IT! I'm your host Anthony Adragna, and LCV's Gene Karpinski was the first to identify Sen. Richard Shelby as a member of the boll weevils. For today: Which former Interior secretary's niece is currently running for governor next year as a member of the opposite political party? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

STICKING TO THE SCRIPT: EPA plans today to set final 2018 biofuel volume requirements conforming closely to what Administrator Scott Pruitt promised Midwestern senators earlier this year, Pro's Eric Wolff reports. The final rule will require blending of 15 billion gallons of conventional biofuels — typically corn ethanol — as well as 288 million gallons of cellulosic ethanol. Advanced biofuel volumes will rise slightly from the July proposal to 4.29 billion gallons overall, and the regulation will require 2.1 billion gallons of biomass-based biodiesel for 2019. Bloomberg first reported the volumes. But look for lawsuits to follow regardless.

Iowa Sen. Chuck Grassley called the decision "disappointing" in a statement. "I'm glad that EPA backed off a later proposal, which would have represented an abandonment of President Trump's stated commitment to biofuels and the integrity of the RFS," he said. "I plan to continue working to impress upon the Administration the capability to grow domestic energy production by unlocking the full potential of biofuels."

MARKING ON UP: House Natural Resources gavels in today at 10 a.m. to mark up seven bills on various topics, but two jump out to ME. One measure H.R. 1778 (115), offered by Liz Cheney, would require specific congressional authorization for Interior to impose any moratorium on federal coal leasing. (Remember, the Trump administration overturned an Obama-era ban earlier this year.) The other, H.R. 3117 (115) from Evan Jenkins, would bar EPA, DOE or Interior from using the social cost of carbon (or similar metrics) that are used to estimate monetary damage the country faces from climate change events linked to greenhouse gas emissions.

Interior motives: Deputy Interior Secretary David Bernhardt returns today to Capitol Hill for the second time in two days at 9:30 a.m. before a House Appropriations subpanel for oversight. What'll be on the mind of Betty McCollum , top Democrat on the subcommittee, according to a spokesman? "Congresswoman McCollum will ask whether the supplemental includes sufficient funds for recovery from the recent natural disasters, including whether the department anticipates another supplemental request to address additional needs. She'll also ask about the backlog from damage caused by previous storms that has not yet been repaired, and about what the department can do to rebuild stronger and mitigate the effects of future disasters." More here.

No rush from Bishop for more nominees: Natural Resources Chairman Rob Bishop said Wednesday he's not in any particular hurry for President Donald Trump to name additional people to permanently fill Interior slots. "I have to admit some of the acting directors right now are Utahns that I know, and I'm very comfortable with them," he said, highlighting acting BLM chief Brian Steed and acting Fish and Wildlife Director Greg Sheehan.

STAYING OPEN: The Navajo Generating Station will remain open through December 2019 after receiving the necessary federal approvals, Salt River Project announced Wednesday. "We are grateful for their effort as this agreement provides meaningful benefits for all involved and creates a path forward during this challenging transition," Mike Hummel, deputy general manager of Salt River Project, the plant's operator, said. A Navajo Nation task force and Salt River Project negotiated the new lease over a period of several months, as well as related agreements.

TRIPPIN': Energy Secretary Rick Perry leaves today for a trip to Saudi Arabia, Qatar and United Arab Emirates, Axios reports, citing a department official. He's expected to speak next Wednesday at the Carbon Sequestration Leadership Forum in Abu Dhabi.

MORE HEARINGS? West Virginia GOP Senate candidate Patrick Morrisey appeared to endorse additional public hearings on the EPA's proposed repeal of the Clean Power Plan in a tweet late Wednesday. "Just as WV was harmed by not holding a public EPA hearing in our state during the Obama Administration, it would be wrong to exclude other parts of the United States from this EPA hearing process now," the state's attorney general wrote. "Certainly wouldn't oppose other hearings. As someone who believes Obama Power Plan is wrong & illegal, I think it's important to hear from multiple places." The agency completed its lone scheduled public hearing on Wednesday.

Meanwhile, former coal executive Don Blankenship, who is reportedly planning a run for Senate, promised some news today: "We will be putting out a new ad tomorrow morning on TV, Facebook, and more. It will be a shocker. Government corruption is pandemic and obvious," he wrote on Twitter. Blankenship, who was convicted of conspiracy to violate mine safety standards after the 2010 Upper Big Branch disaster that killed 29 of his workers, would face Morrisey and Rep. Evan Jenkins in a GOP primary to challenge Sen.Joe Manchin.

TEXAS HOLD 'EM: The relationship between the U.S., Venezuela and CITGO may about to get tenser. Venezuela has detained six CITGO executives from Texas, Senators John Cornyn and Ted Cruz said in a press release. The news comes after Venezuelan President Nicolas Maduro placed a loyalist general in charg e of the state-controlled oil company Petroleos de Venezuela S.A., which controls the U.S-based refining company. The Treasury Department has already been slapping sanctions right and left on Venezuela government officials, including PdVSA execs, for several months as the country's human rights violations pile up. There's no indication yet what response the Trump administration may have to the detention of the Texans — a White House spokeswoman referred questions to the State Department, which did not immediately offer comment.

TRUMP ENERGY INFLUENCERS GATHER: Bigwigs with sway in the Trump administration's energy policy realm gather for a Heritage Foundation and Texas Public Policy Foundation conference today beginning at 8 a.m. There's a "very special" guest speaking at 8:45 a.m. (ME would put money on Pruitt, Perry or Zinke). Other speakers include: former Senate EPW Chairman Jim Inhofe, outgoing House Science Chairman Lamar Smith and Sen. Mike Lee. ME also hears coal magnate Robert Murray will be in the building. Heritage is also hosting an event on Perry's grid resiliency proposal at 12 p.m. if you want to make it a longer day on Mass Ave.

BROWNFIELDS IN THE HOUSE! Lawmakers today consider legislation H.R. 3017 (115) that would extend EPA's popular Brownfields program through 2022 at current funding levels and allow the agency to award more funding grants (up to $500,000) to each site slated to be cleaned up. E&C Environment Chairman John Shimkus told ME he expected the measure would pass by a wide margin. It received bipartisan support during committee consideration.

DEJA VU ALL OVER AGAIN: Republican congressional leaders and the White House have hatched a plan that would dare Democrats to shut down the government by not including a fix for so-called DREAMers in a short-term funding measure that would keep the lights on into January, POLITICO's Rachael Bade, John Bresnahan and Sarah Ferris reports. Democratic leadership sources suggest they could be open to a one- or two-week CR, but would be unlikely to move the deadline beyond Jan. 1.

DOE REAUTHORIZATION BILL TEXT PUSHED TO 2018: Embattled Rep. Joe Barton said his efforts to pull together a DOE reauthorization bill had fallen further behind after a meeting between Energy and Commerce Republicans and Democrats failed to materialize this week. "It's been postponed, I think, 'til maybe next week," he told ME, of the effort first floated in January. "We're getting ready to really get to work." When asked about when he expected to have legislative text pulled together, Barton said he had aimed to have some draft text by the end of the year for lawmakers and their staffs. "I was hoping to use this meeting this week to get agreement on the general framework so that we could begin to have the staffs put that together on a bipartisan basis," he said, but the latest delay likely drags that milestone into early next year.

And ICYMI, Barton said he plans to remain vice chairman of the powerful House Energy and Commerce "for the time being" but acknowledged a "private conversation" with Chairman Greg Walden about the matter, Pro's Darius Dixon reports. That comes as another woman came forward to share a series of private messages, some with sexual overtones, traded with Barton in the Star-Telegram.

FOR YOUR LUNCH PLANS: FERC Chairman Neil Chatterjee, fresh off gaining a new colleague, addresses the Natural Gas Roundtable today at 12:30 (in perhaps one of his final appearances as chairman). On Wednesday, he tweeted of his new colleague Rich Glick: "I had the pleasure of working with Rich in the Senate and look forward to working with him in this new capacity," he said.

LET ME SPEAK: House Natural Resources ranking member Raúl Grijalva has asked the attorney of a former staffer to release him from confidentiality rules so he can discuss details of the workplace misconduct claim that's ensnared him this week, POLITICO's Elana Schor reports. Until the former aide's counsel agrees to the release of the agreement, he added, "I can't unilaterally do it without exposing myself to getting sued on a personal level."

THROW IT OUT: Greenpeace asked a federal district court in North Dakota to dismiss a lawsuit filed on behalf of Energy Transfer Partners alleging the green group and others committed racketeering and other crimes. "It is incumbent upon every court that faces these baseless claims to ensure a robust arena for political speech and weed out efforts to suppress critical speech masquerading as [racketeering] claims," the group wrote in its motion. "It appears clear that Greenpeace is being targeted by repeated lawsuits for the precise purpose of chilling its speech."

TAKE A GLANCE! Resources for the Future released a new issue brief Wednesday looking at the impacts of the shale revolution on the oil and gas industry. It concludes: "The shale

revolution has dramatically changed the position of the United States as an energy producer, allowing the oil and gas sectors to more easily ramp up production in response to price changes."

ANWR language complicates tax bill Back

By Seung Min Kim | 11/29/2017 04:20 PM EDT

A Republican effort to tie Arctic drilling to the tax bill hit a snag in the Senate today.

The Senate parliamentarian has told Democrats and Republicans that parts of the tax bill authorizing drilling in the Arctic National Wildlife Refuge would not be able to pass under budget reconciliation rules that prevents a filibuster, a Senate aide told POLITICO. Language easing environmental rules for ANWR drilling would need 60 votes to be kept in, which Republicans would not have.

The aide said provisions may have to be stripped from the bill before it could proceed, make drilling in the refuge virtually impossible, although multiple other sources said the issue was easily resolved.

The ANWR language had been a priority for Sen. Lisa Murkowski (R-Alaska), who is seen as a key swing vote on the bill.

Senate GOP clears key hurdle on taxes Back

By Seung Min Kim, Colin Wilhelm and Bernie Becker | 11/29/2017 09:15 AM EDT

The Senate set the stage Wednesday for possible passage of its tax bill later this week, voting to begin formal debate after a day of wheeling and dealing for enough Republican votes.

On a party line 52-48 vote, the Senate moved to formal debate on the GOP legislation, which Republicans are hoping to pass before the end of the year so they can take a key legislative victory into the 2018 elections after a year of disappointments on other major bills. The House passed its own version of tax reform earlier this month.

Senate GOP holdouts began lining up behind their party's tax overhaul earlier in the day. But Republican leaders still have a litany of issues to resolve before the bill gets across the finish line, which they hope will be by week's end. Those issues include an expected ruling from the Senate parliamentarian that could rule out a companion measure to allow drilling in the Arctic National Wildlife Refuge, one Senate aide said, although other sources downplayed how problematic that issue is.

Another factor, which would rile the White House, is a proposal to cut the corporate tax rate to 22 percent instead of 20 percent to free up money for a more generous child tax credit.

In a key concession, Senate Republicans agreed to increase the tax deduction offered to businesses that don't pay corporate taxes, called "pass-throughs," according to two GOP senators, a move meant to win over Sens. Steve Daines of Montana and Ron Johnson of Wisconsin.

Another GOP holdout, Sen. Susan Collins of Maine, voted to move the bill forward after assurances that other legislation would be passed to stabilize the health insurance market if Obamacare's individual insurance mandate is abolished in the tax bill as planned. And GOP senators said they had made progress on a "trigger" mechanism to raise taxes or cut spending that would kick in if the bill fell short of economic growth projections, a change sought by Sens. Bob Corker of Tennessee, Jeff Flake of Arizona and James Lankford of Oklahoma.

Collins also told reporters that both President Donald Trump and Senate Republican leaders support her request to include a deduction for up to $10,000 in property taxes — paralleling a House provision — although they've yet to agree on how to pay for it.

She would pay for it by setting the corporate tax rate at 21 percent and keeping the top rate for individual earners at 39.6 percent, though Collins added, "They're not crazy about my pay-fors, I will admit."

At the same time, more than a few House Republicans, especially conservatives, gave poor reviews to the trigger proposal, potentially making it more difficult for the two chambers to reach a final compromise on a tax bill.

A negative decision on ANWR could also complicate matters in the Senate. But while one Senate aide said the parliamentarian found that the bill's ANWR provisions ran afoul of strict budget rules, other aides said the issue could be worked around without much trouble.

And Sen. Lisa Murkowski (R-Alaska), a perennial swing vote who scored the language that expands drilling in the refuge, said in a statement Wednesday that she would support the overall package.

Sen. John McCain of Arizona, who has kept his views on the tax bill muted this week, also voted to push it forward.

Other balking GOP senators also fell into line, including Jerry Moran of Kansas, who also has expressed concerns about the amount of red ink caused by the bill.

GOP senators earlier Wednesday said they were still working through the trigger sought by the three Republican deficit hawks, which experts say could violate Senate budget rules. Options for a trigger now include automatic spending cuts if the tax bill didn't spur the economy as much as Republicans want, according to Sen. John Kennedy (R-La.).

Senate Republicans had also been discussing automatic tax increases as a trigger, while Sen. Ted Cruz (R-Texas) is among those pushing the idea of guaranteed tax cuts if the economy exceeds expectations in the future.

An earlier proposal that was floated would boost the corporate tax rate — currently set at 20 percent in the bill — by 1 percent to make up revenue if GDP did not grow an average of 0.4 percent during a five-year period. Another trigger proposal could prompt tax increases worth as much as $350 billion in additional revenue over a decade, starting in 2022, according to a source familiar with the negotiations.

Several GOP senators who said they didn't like a trigger also voted for the motion to proceed to ensure the tax bill's passage.

"We're not talking about a large tax increase," Lankford said. "We're talking about small things around the edges to be able to guard against future increases in deficits."

On the pass-through sticking point, the Senate bill would be changed to give the businesses a tax deduction of up to 20 percent of their income, an increase from the 17.4 percent currently in the measure.

But increasing the deduction would also give even more benefits to higher earners, feeding into Democrats' criticism of a measure that most polls find unpopular. Daines said the proposal also would cost around $60 billion over a decade - which would take up most of the breathing room Senate Republicans have for their bill, which can cut taxes by no more than $1.5 trillion over a decade.

"There has been some good progress for Main Street businesses in the tax cut bill," Daines said.

Johnson, along with Daines, wants to eliminate the ability of corporations to deduct their state and local taxes, which would free up about $140 billion in revenue, Johnson said Wednesday. That could increase the deductibility for pass-throughs as high as 27 percent, according to the senator.

Collins previously had outlined a series of objections to the bill, including that it totally eliminated the deduction for state and local taxes. The Maine Republican said she decided to vote to proceed to the tax bill after securing assurances from GOP leaders that proposals to stabilize Obamacare insurance markets and protect pre-existing conditions would be included on must-pass legislation this year.

But Keith Hall, the director of the Congressional Budget Office, told lawmakers Wednesday that

his office did not expect one of those proposals, cosponsored by Sens. Lamar Alexander (R-Tenn.) and Patty Murray, to prevent increases in health care premiums.

Meanwhile, a number of House Republicans unloaded on the trigger idea. The Republican Study Committee, a conservative group of more than 150 House Republicans, won't take an official position on the trigger until it holds a formal vote of all members.

But Rep. Mark Walker of North Carolina, the group's chairman, said: "We don't want it," adding that not a single member of the group said they'd be willing to vote for the Senate tax reform package without further changes. The House passed its own tax bill this month, and GOP leaders there have repeatedly said the two chambers will go to a conference committee to resolve the differences in their bills.

At the same time, a pair of prominent Senate Republicans are pushing to raise the corporate tax rate from its current proposed 20 percent, in exchange for a larger benefit to families with children.

Sens. Mike Lee of Utah and Marco Rubio of Florida announced Wednesday they would introduce an amendment to do just that. It would take the corporate rate to 22 percent while making the child credit partially refundable and tie the changes to inflation. Trump has called the 20 percent corporate rate a red line, and the White House said Wednesday it would oppose increasing it to pay for a more robust child credit.

"We have a chance to do better by working families in this tax bill," Lee and Rubio said in a statement, adding that "this amendment would level the playing field for families, while still kick-starting national investment and growth."

Some other senators were amenable to the idea. "I wouldn't be opposed to going up to do a number of things," said Flake.

Rachael Bade and Sarah Ferris contributed to this report.

Tax change would create havoc for renewable energy financing Back

By Eric Wolff | 11/29/2017 05:56 PM EDT

Renewable energy advocates are warning that money for wind and solar power projects could dry up if Congress doesn't alter language in the tax bill that's designed to prevent banks from moving their profits abroad.

Companies that develop wind and solar projects typically sell the federal tax incentives attached

to their green energy projects to banks, who can use them to reduce their own tax burdens. Those "tax equity" deals provide the renewable energy developers with the cash they need to build their projects.

But provisions in the Senate tax bill would make it difficult for banks with overseas subsidiaries to buy the credits, which are also accrued by low-income housing and infrastructure projects.

"To me it feels like a drive-by shooting," said Mike Garland, CEO of wind developer Pattern Energy. "Clearly the provision is aimed at corporations who are sending work overseas, but the result is that the investment in U.S. activities is penalized."

Under measures in the tax proposal aimed at reducing "base erosion," Congress would create a kind of minimum tax on profits earned in the U.S. to prevent companies from shifting that income onto the books of their subsidiaries in countries with lower taxes. But the current language would require energy project developers and their bank partners to recalculate their tax credits every year — creating uncertainty that would push many of the financial institutions out of the tax equity business.

"It takes us out of the market," said a source at one bank that does this kind of financing. "The best case scenario is it significantly reduces our involvement in the market, but it would be so difficult to plan in the near term at least, it would take us out. And we're talking about hundreds of millions of dollars of investment every year."

Renewable energy developers don't have the large profits that banks tend to generate, so they don't pay enough taxes to benefit directly from the Investment Tax Credit for solar or the Production Tax Credit for wind that Congress created.

So they have relied on the tax equity financing to drive their rapid growth. In a blog post, Keith Martin, an attorney who is co-head of U.S. projects for Norton Rose Fulbright, said nearly half the financing for a typical solar project and more than half the money for a typical wind project comes from tax equity deals — and four financial institutions have already told him they would leave the market if the law is changed.

There are nearly three dozen financial institutions doing these kinds of deals presently, but about 40 percent of the total funding comes from just three of them: JPMorgan Chase, Bank of America and US Bank.

"Without tax equity financing, most of these projects don't go forward, solar or wind," said one renewables industry source who's lobbying on the issue.

The Senate bill has renewable energy industry groups up in arms. The Solar Energy Industries Association, the American Wind Energy Association, Citizens for Responsible Energy Solutions and the American Council on Renewable Energy sent a joint letter today to every senator asking for a fix. The lobbying source said the groups are pushing hard for changes, and they have several legislative proposals they hope to get attached to the bill during the vote-a-rama amendment process expected later this week. The person declined to describe the proposals

because "things are at a delicate stage."

Financial institutions might be amenable to a provision that allowed banks to carry over unused tax credits to future years, according to the banking source. That would lower the returns on their investments, but it would keep them in the market.

Peter Kelley, vice president for public affairs for AWEA, said Sens. Rob Portman (R-Ohio), Chuck Grassley (R-Iowa), Maria Cantwell (D-Wash.) and Ron Wyden (D-Ore.) are "working to fix the problem before the bill is considered by the full Senate."

"We continue to advocate for a tax reform package that does not threaten the $85 billion in economic activity and the projected 50,000 new American jobs from wind farm development through 2020," he said in a statement.

Grassley, who is already playing defense to keep cuts to the wind tax credit included in the House bill out of the final bill, and a spokeswoman said, "Sen. Grassley is aware of the concerns raised and is looking into the issue."

Advanced biofuels set for slight bump in final RFS rule Back

By Eric Wolff | 11/29/2017 09:16 PM EDT

EPA today will provide a slight bump for advanced biofuel volumes requirements in 2018 as part of a final Renewable Fuel Standard rule set to be released Thursday, oil and ethanol sources tell POLITICO.

The rule, which is largely in line with a proposal EPA released in July, also requires blending of 15 billion gallons of conventional biofuels — typically corn ethanol — the maximum allowed by law and the same as what the Obama administration required for 2017.

It sets the overall advanced biofuels target at 4.29 billion, 10 million gallons more than were required this year and a 50 million gallon increase compared to its July proposal. The rule requires 288 million gallons of cellulosic ethanol, a reduction from the 311 million gallons required this year, but up from the 238 million gallons proposed in July.

Biodiesel producers are likely to be upset by the rule's targets. It requires 2.1 billion gallons of biomass-based biodiesel for 2019, the same as what is required in 2018, despite the industry saying it could easily produce more. The agency did not change the already final 2.1 billion gallon biodiesel requirement for 2018, as it had suggested it might in a notice released last month.

EPA Administrator Scott Pruitt had promised Midwestern senators earlier this year that he would not set levels any lower than the July proposed rule.

Bloomberg first reported the volumes earlier today.

The rule's Thursday release would mark the second year in a row EPA has released the volumes by the Nov. 30 deadline required by law, and it will fulfill Pruitt's promises to industry to produce a rule on time.

WHAT'S NEXT: EPA likely will face legal challenges to the numbers from oil interests, biofuel interests or others.

Zinke to end coal leasing moratorium, reinstate royalty advisory committee Back

By Esther Whieldon | 03/28/2017 08:15 PM EDT

Interior Secretary Ryan Zinke on Wednesday will revive an internal advisory committee on energy leasing and royalties, and he will rescind the Obama administration's coal leasing moratorium, according to sources familiar with the plans.

Zinke's move will follow President Donald Trump's executive order today directing his administration to review or eliminate a suite of Obama-era climate and energy policies, including the leasing moratorium. Former Secretary Sally Jewell put Interior's coal leasing program on hold while the agency reviewed how much it should be charging for the leases.

Zinke will also reinstate Royalty Policy Committee that the Obama administration terminated in 2014, sources say. The committee advises the secretary on managing federal and tribal mineral leases and revenues and members have typically included federal representatives as well as state, tribes, industry and public interest groups.

As a congressman Zinke sponsored a bill that would have had Interior reinstate the committee. Sen. Steve Daines, who has said he will attend the signing, sponsored a similar bill.

WHAT'S NEXT: Zinke will sign orders reinstating the royalty committee and ending the coal leasing moratorium at 10 a.m. Wednesday at Interior Department headquarters.

GOP looks to jam Democrats in shutdown fight Back

By Rachael Bade, John Bresnahan and Sarah Ferris | 11/29/2017 01:06 PM EDT

President Donald Trump and congressional GOP leaders are daring Democrats to shut down the government over immigration rather than back a plan to extend funding into January.

After Democratic leaders Rep. Nancy Pelosi and Sen. Chuck Schumer boycotted a Tuesday afternoon White House negotiating session on government funding, Speaker Paul Ryan and Senate Majority Leader Mitch McConnell began hashing out a plan to pass a short-term spending bill to fund the government into January. The measure would not include a fix for so-called Dreamers, something Democrats have demanded be part of any spending bill.

Trump was open to the idea of a short-term continuing resolution during a White House meeting with GOP leaders, according to multiple Hill and White House sources familiar with the meeting.

While the plan hasn't been finalized, the House would move first under this scenario, passing a bill with only Republican votes. The Senate would then try to follow suit, but it would need to pick off at least eight Senate Democrats to clear the chamber's higher 60-vote threshold. Republicans believe that Schumer would come under heavy pressure from his own colleagues to avoid being blamed for a shutdown, GOP aides said.

Delaying a broader debate on government funding into 2018 would cheer conservatives, who have been dreading a massive year-end spending package that includes a fix for the Obama-era Deferred Action for Childhood Arrivals program. Republicans also want to complete work on a massive $5 trillion tax bill before taking on another fight.

But it also raises the likelihood of an ugly shutdown battle just before the holiday season.

Many Democrats have vowed to withhold their votes from any spending agreement that does not include a fix for the young undocumented immigrants brought to the country as minors. Democratic leadership sources have suggested that Pelosi and Schumer could back a one- or two-week CR. But they're loath to move the deadline past Jan. 1.

Still, Democrats may come under pressure to avoid a government shutdown over DACA, which does not fully expire until March. One House Appropriations Committee Democratic source said there could be some wiggle room in the party's stance on DACA that could help avert a shutdown. The source speculated that while many Democrats are dead-set against a full-year spending package without an immigration deal, there may be fewer who would object to a CR into January.

"There are a lot of questions that would determine how Democrats vote," the source said. "DACA is one, but there's also the question of the supplemental. There's the question of a [spending] caps deal."

At the same time, Ryan and other GOP leaders have for weeks resisted the idea of a stopgap bill through January.

"This is something the speaker feels strong about," leadership ally Rep. Tom Cole (R-Okla.) told POLITICO on Monday night. "A CR and sequester for the military is not a way to begin the New Year."

But that stance is shifting as Dec. 8 — when the government runs out of money — approaches and the GOP remains laser-focused on its tax bill.

Democratic leaders' refusal to show up at the White House for spending talks Tuesday, after Trump insulted them on Twitter, has also solidified a GOP desire to consider a more hard-line strategy.

"I'm very disappointed that Democrats abandoned the field with a shutdown looming. I think that's irresponsible," said Rep. Hal Rogers (R-Ky.), a longtime spending panel member who often works with Democrats on funding matters. "If the Democrats won't even talk, they're the ones who are going to cause a shutdown."

Asked about the new strategy, Ryan's office downplayed the notion that it has settled on a new GOP-only approach, arguing that everything is still in flux.

"No plan has been decided on," said Ryan spokeswoman AshLee Strong. "Assuming Democrats are interested in talking with congressional leadership and the White House, talks will continue."

The left is far from alone in its resistance to a CR through January. GOP defense hawks such as House Armed Services Chairman Mac Thornberry of Texas abhor the idea of funding the military on a temporary basis and often complain that the lack of budget certainty cripples the nation's readiness.

However, Defense Secretary James Mattis, who also attended the White House meeting Tuesday, plans to talk to defense hawks to try to make them more comfortable with the plan. GOP leadership is also going to try to win over defense hawks by promising more spending for the military if they wait until January, perhaps even higher than the nearly $603 billion currently being considered, according to one House GOP source.

GOP leaders could also encounter resistance from moderate Republicans representing Hispanic-heavy districts. Rep. Carlos Curbelo (R-Fla.) on Tuesday said he would vote against any government funding bill past December that doesn't include a solution for Dreamers.

"I'm announcing today that I will not support any appropriations bill that funds the government beyond Dec. 31 unless we get this DACA issue resolved," Curbelo said at a panel on immigration reform in Florida held by the pro-immigrant business group IMPAC Fund and the University of Miami.

At the same time, a longer stopgap spending bill would be applauded by conservatives. Members

of the House Freedom Caucus and Republican Study Committee have been urging Ryan not to create a new deadline right before Christmas, fearful that it would cripple the GOP's leverage and lead to the right getting steamrolled on immigration.

"If we have to do a CR, we prefer January rather than Christmas," Freedom Caucus leader Mark Meadows (R-N.C.) said Wednesday morning.

The lawmakers who actually have to write spending bills would also prefer a stopgap that stretches into January, as it would give them more time to work on a bigger appropriations package to fund the government.

Eliana Johnson contributed to this report.

Barton to remain E&C vice chair Back

By Darius Dixon | 11/29/2017 03:22 PM EDT

Rep. Joe Barton said today he had discussed his role as vice chairman of the powerful House Energy and Commerce Committee with Chairman Greg Walden, but he has no plans to relinquish his spot following the embarrassing episode last week when an explicit photograph of him circulated online.

"For the time being," he told POLITICO. "I guess I can answer that."

A spokesman for the longtime Texas Republican has already said Barton had no plans to leave Congress, but he acknowledged discussing his position on the committee with Walden.

"I've had a private discussion with Chairman Walden, but it is private," Barton said. Whatever happens with his position as vice chairman would "be a mutual decision," he added.

Barton apologized over the picture last week and said that the Capitol Police are investigating the incident.

Grijalva asks to end confidentiality of workplace misconduct settlement Back

By Elana Schor | 11/29/2017 03:29 PM EDT

Rep. Raul Grijalva (D-Ariz.) said Wednesday that he has asked the attorney for a former aide he paid to resolve a workplace misconduct claim to release him from confidentiality rules so he can share the details of their settlement.

Grijalva became the second sitting House member embroiled in controversy over Congress' secretive system for settling workplace misconduct claims after the Washington Times reported Tuesday he paid more than $48,000 to a staffer over a hostile work environment claim stemming from his alcohol use. The Arizona Democrat slammed the newspaper's report but did not dispute that a settlement was reached on his behalf.

Recalling the negotiation of the settlement, Grijalva told POLITICO on Wednesday that at times he thought he "should have insisted on" handling the complaint through litigation or through Capitol Hill's Office of Compliance, which requires the leaders of the House Administration Committee to approve any settlement.

Those options "would have not handcuffed me" when it comes to discussing the terms of the settlement, Grijalva said. Until the former aide's counsel agrees to the release of the agreement, he added, "I can't unilaterally do it without exposing myself to getting sued on a personal level."

Grijalva said his office has yet to receive a reply to a verbal request that the former aide's attorney agree to release the terms of the 2015 settlement, which was paid through his committee operating budget rather than the Office of Compliance's fund for settling workplace disputes on Capitol Hill.

Rep. John Conyers (D-Mich.) is facing a political firestorm over three sexual misconduct complaints from former aides, one of whom settled a claim against him that was paid using his personal office's budget rather than the Office of Compliance's fund.

Reps. Jackie Speier (D-Calif.) and Barbara Comstock (R-Va.) have introduced bipartisan legislation that would publicly identify the offices on the receiving end of misconduct complaints and allow alleged victims to discuss their claims without being bound by confidentiality. Grijalva noted that "a plus" to that legislation is the transparency it brings to the settlement process.

"Because, otherwise, what are you hiding?" he said. "And then you leave it up to supposition, which is never good."

Today's Playbook Power Briefing presented by the Coalition for Affordable Prescription Drugs (CAPD)

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

NEW -- NYT's **DAVID GELLES, LANDON THOMAS JR.** and **KATE KELLY: "Trump's Council of C.E.O.s in Disarray Following Remarks on Protest"** : President Trump's main council of top corporate leaders appeared on the verge of disbanding on Wednesday, said people briefed on the matter, following controversial remarks from Mr. Trump on Tuesday when he equated white nationalist hate groups with the protesters opposing them.

"Late Wednesday morning, Stephen A. Schwarzman, the chief executive of the Blackstone Group and one of Mr. Trump's closest confidants in the business community, organized a conference call for members of the president's Strategic and Policy Forum.

"On the call, the chief executives of some of the largest companies in the country were debating how to proceed. One option under serious consideration was disbanding the forum altogether. If the forum does survive, several C.E.O.s were expected to resign from it....

"Inge Thulin, the chief executive of 3M, said in a statement Wednesday that he would resign from the manufacturing council, joining a wave of defections since Monday, including the C.E.O.s of Merck, Under Armour and Intel." http://nyti.ms/2waRkiW

-- @SaraElisen: "Campbell Soup CEO Denise Morrison now resigns from manufacturing Council @realDonaldTrump" http://bit.ly/2v1X0GI

Good Wednesday afternoon and happy hump day. **THE PRESIDENT** will go to Camp David this week. From pooler SV Date of the HuffPo: "POTUS will travel to Camp David Friday: The President along with the Vice President will meet with the National Security Team on Friday at Camp David to discuss the South Asia strategy."

ATTN. SENS. JOHN MCCAIN AND JEFF FLAKE -- TRUMP will rally in Phoenix next week. Two paths the president can take: Trump can be conciliatory to McCain and Flake, which would likely give the White House more of a chance of getting things done on Capitol Hill. Or continue to poke them in the eye, inflaming two key votes in the Senate.

-- ARIZONA REPUBLIC: "Trump will take the stage at the Phoenix Convention Center on Tuesday at 7 pm., according to an announcement Wednesday morning. Attendees must register to obtain tickets." http://bit.ly/2w1CI4N

JOSH DAWSEY'S LATEST, which he filed during vacation from his "beloved" South Carolina -- **"White House aides wrestle with their own futures after Trump's race comments":** "White House aides are wrestling with how to respond to President Donald Trump's defiant press conference on Tuesday in which he doubled down on his statement that 'both sides' are to blame for the Charlottesville violence and offered what some perceived to be overtures to white supremacists. No aides had yet threatened to resign as of Wednesday morning, according to White House officials and advisers, but a number of White House staffers had private conversations on Tuesday night about how terribly the day went. ...

"Trump, however, was in 'good spirits' on Tuesday night, according to a White House adviser who spoke to him, who said that the president felt the news conference went much better than his statement on Monday ... The president was not alone in his pleasure at the news conference. Chief strategist Steve Bannon, whose nationalistic views helped shape Trump's presidential campaign, was thrilled with the remarks, according to a friend of Bannon. Even though Trump on Tuesday failed to offer full-throated confidence in Bannon, saying, 'We'll see what happens with Mr. Bannon,' the controversy has brought some additional job security for the strategist, who has been on the outs with Trump and other White House aides. In an attempt to shore up support for Trump, White House senior adviser Stephen Miller was planning to hold a call with surrogates later on Wednesday." http://politi.co/2v1ITCt

-- @GlennThrush: "A reminder: For all the personnel churn, no WH staffer has yet resigned in protest of Trump's conduct, Tweets and racial/ethnic attitudes."

QUOTE OF THE DAY -- Susan Bro, the mother of Heather Heyer, the protester killed in Charlottesville: "They tried to kill my child to shut her up. Well, guess what? You just magnified her." *Video* http://bit.ly/2uIA9VL

MITCH MCCONNELL'S STATEMENT ON HATE GROUPS -- "We can have no tolerance for an ideology of racial hatred. There are no good neo-nazis, and those who espouse their views are not supporters of American ideals and freedoms. We all have a responsibility to stand against hate and violence wherever it it raises its evil head."

FROM 41 AND 43 -- Former Presidents George W. Bush and George H. W. Bush: "America must always reject racial bigotry, anti-Semitism, and hatred in all forms. As we

pray for Charlottesville, we are reminded of the fundamental truths recorded by that city's most prominent citizen in the Declaration of Independence: we are all created equal and endowed by our Creator with unalienable rights. We know these truths to be everlasting because we have seen the decency and greatness of our country."

A REPUBLICAN THAT DOES EXPLICITLY MENTION TRUMP? Sen. Lindsey Graham (R-S.C.), a longtime thorn in the president's side. Graham's statement: "Mr. President, I encourage you to try to bring us together as a nation after this horrific event in Charlottesville. Your words are diving Americans, not healing them.

"Through his statements yesterday, President Trump took a step backward by again suggesting there is a moral equivalency between the white supremacist neo-Nazis and KKK members who attended the Charlottesville rally and people like Ms. Heyer. I, along with many others, do not endorse this moral equivalency."

IN NAME AND NOW IN TITLE -- HOPE HICKS will be the interim White House communications director, via pooler S.V. Date of HuffPost. From the White House: "Hope Hicks will work with White House Press Secretary Sarah Sanders and all of the communications team and serve as the Interim White House Communications Director. We will make an announcement on a permanent communications director at the appropriate time."

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : If you know only one fact about rising drug costs, know this one: drug makers set prices for prescription drugs. To help manage nearly double-digit price increases, employers, unions and government programs use PBMs to negotiate lower net prices to help curb costs for employers and patients. Learn more at affordableprescriptiondrugs.org ******

AFTERNOON READ -- "Angry White Boys : What do the white nationalists actually want?," by National Review's Kevin Williamson: "The angry white boys do not have a serious political agenda. They don't have any straightforward demands like the Teamsters or PETA [groups Williamson uses as an example of protests he's witnessed before] do, and they do not have a well-developed ideological position like the Communists do, though it would be inaccurate to say that they lack an ideology entirely. Their agenda is their anger, an anger that is difficult to understand. Middle-class white men in the United States of America in anno Domini 2017 have their problems, to be sure. Life is full of little disappointments. But their motive is not to be found in their exterior circumstances, which are pretty good. ...

"What does an angry white boy want? The fact that they get together to play dress-up - to engage in a large and sometimes murderous game of cowboys and Indians - may give us our answer. They want to be someone other than who they are. That's the great irony of identity politics: They seek identity in the tribe because they are failed individuals. They are a chain composed exclusively of weak links. What they are engaged in isn't politics, but theater: play-acting in the hopes of achieving catharsis."

http://bit.ly/2uILRPQ

PLAYBOOK METRO SECTION -- "The Trump Administration Removed the White House's Capital Bikeshare Station: The 'secret' dock was only available to people who could get inside the White House perimeter," by Washingtonian's Benjamin Freed: "The station was removed earlier this week at the Trump Administration's request, District Department of Transportation spokesperson Terry Owens tells Washingtonian....Owens referred all other questions about the Bikeshare station's fate to the White House, which did not respond to questions about why it had the dock removed."

ALL IN THE FAMILY -- "Could There Soon Be Another Pence in Washington?," by Roll Call's Simone Pathe: "Greg Pence starred in a recent candidate announcement video, but it wasn't for his own campaign -- at least not yet.

"The older brother of Vice President Mike Pence is the finance chairman of Indiana Rep. Luke Messer's Senate campaign, and on the day Messer tweeted he was getting in the race, Greg Pence was the one who addressed the camera. The eldest of the six Pence siblings has political ambitions of his own. He's widely expected to run for Messer's seat, in Indiana's now-open 6th District, though he won't yet talk publicly about those intentions. ...

"'I am the brother of the vice president of the United States,' Greg said at Messer's annual family barbecue on Saturday, where the congressman officially launched his Senate bid. 'And no, I do not look like him, he looks like me. I'm the oldest.'" http://bit.ly/2uIHMvi

COMING DOWN -- "Confederate monuments taken down in Baltimore overnight," by The Baltimore Sun's Sean Welsh and Colin Campbell: "Confederate statues in Baltimore were removed from their bases overnight by city contractors, who used heavy machinery to load them onto flat bed trucks and haul them away -- an abrupt end to more than a year of indecision on what to do with the memorials. Mayor Catherine Pugh, who made the decision, watched in person as the four statues linked to the Confederacy were torn from their pedestals. The Baltimore City Council unanimously passed a resolution to remove them, amid a renewed national conversation following a deadly terrorist attack by a white supremacist at a rally in Charlottesville, Va. on Saturday." http://bsun.md/2uIYjiH

ELENA SCHNEIDER -- "DCCC raised $6.2M in July" : "The DCCC raised $6.2 million last month, the committee's best off-year July total, according to an announcement from the House Democratic group. The DCCC has nearly $23 million in cash on hand at the close of the month, compared to July 2015, when the committee had $16 million in the bank. Since the start of Trump's presidency, the DCCC has raised $66 million in their effort to retake the House. The committee said 40 percent of its July contributions originated online." ***For Pros*** http://politico.pro/2uIymzS

TODAY'S BEYOND THE BELTWAY -- San Diego mayor charts future of California GOP -- New Jersey Democratic gubernatorial candidate compares Trump's statements to Nazi Germany http://politi.co/2uluwqt

NEW WOMEN RULE PODCAST -- In the latest Women Rule podcast, Ambassador of Rwanda Mathilde Mukantabana and Ambassador of Kosovo Vlora Çitaku provide deeply emotional, first-hand accounts of the genocide and ethnic cleansing that tore apart their homelands during their formative years. Having overcome violence and brutal oppression, the ambassadors tell POLITICO's Luiza Savage that women played a major role in the rebuilding and rebirth of their respective nations, each of which now mandate that 30 percent of government officials be women. http://politi.co/2uIQsBK

WEEKEND WEDDING - OBAMA ALUMNI -- Amanda DeGroff, senior account executive at Melwood Global and an Obama DHS and Interior alum, married **Kristopher Munger** , a research analyst at American Crossroads. "We met in 2010 through a program called The Fund for American Studies. We met the day we moved in for the summer (he was staying across the hall from me) and we've been together ever since. Our wedding was in Connecticut at the house I grew up in - it is a 300-year-old tavern. ... We got married in the gardens (thankfully it stopped raining in time for the ceremony!)" ***Instapic*** http://bit.ly/2uO9T84 ... ***Pic*** http://politi.co/2x3trpZ

-- SPOTTED: Bridesmaids Marsha Catron and Erin Waters (former fellow Obama DHS appointees), Scott Shepard, Sharon McCoy, Leah Duran and Rebecca Matulka.

WELCOME TO THE WORLD -- Alex Marston on the House Homeland Security Committee Democratic staff and a TSA alum, and **Dana Harlan,** who teaches fourth grade at Wolftrap Elementary in Fairfax County, have welcomed Norah Rose Marston, who was born at 7:14 p.m. last Wednesday at 6 lbs. 11 oz. and 19 inches. *Pics* http://bit.ly/2vHdarb ... http://bit.ly/2vCG7pD

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : The high prices that drug makers set for prescription drugs can put financial strain on patients, employers, unions and others who provide health care coverage to more than 50 percent of Americans. Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers, unions and government programs. But, as list prices - the starting point for those negotiations -- continue their nearly double-digit increases, the effects ripple throughout the system. The key to ensuring greater access and affordability lies in fostering greater competition. Facilitating faster reviews of generics and biosimilars, identifying off-patent drugs with little or no generic competition, and ending anti-competitive practices that keep safe, effective alternatives out of the market are also key to abating rising drug costs for patients. Learn more at affordableprescriptiondrugs.org ******

Subject: Federal Insider: Mostly white male tech sector needs government help on diversity

Mostly white male tech sector needs government help on diversity

By Joe Davidson

Rep. Robert C. "Bobby" Scott (D-Va.) in 2016. (Linda Davidson/The Washington Post)

The technology sector is the vanguard of innovation, but it still looks like a good ol' boys network.

Not only is it made up overwhelmingly of white men, but the percentage of tech workers who are black decreased in recent years, while the portion of women in the industry was stagnant and the level of Hispanic workers was nearly flat.

A new report by Washington's chief watchdog says federal agencies can help change that by doing more to diversify the technology sector.

That sector, like many others, clearly needs help.

Using employment data from 2007, 2011 and 2015, a Government Accountability Office (GAO) study found that the percentage of black workers declined from 9 to 7.7 over that period

Movement of women stood still at 22 percent. Hispanic percentages were down and up, but not significantly, hovering around 7.5.

Asian workers were the only group making significant progress, moving from 11.5 percent of the technology workforce in 2007 to 15 percent eight years later. White workers, as always, maintained an overwhelming advantage with about 7 in 10 technology jobs, although decreasing from 71.2 percent to 67.7 percent during the 2007-2015 period. Compared to their portion of the general population, about 31 percent, white men are vastly overrepresented in the tech sector, with 53.5 percent of the jobs.

ADVERTISEMENT

The report released Thursday was requested two years ago after "reviewing the startling lack of racial and gender diversity and the many documented reports of the hostile racial and gender environment in the tech sector," said a statement from Rep. Robert C. "Bobby" Scott (Va.), the ranking Democrat on the House Education and the Workforce Committee. "The fact is there is bias in the recruitment, hiring and retention of Black, Hispanic and women workers in the tech sector. Decades of research show diversity is good for innovation and for the economic bottom line. Diversity and inclusion must not be treated as an aspiration; it is the law."

Both the Equal Employment Opportunity Commission (EEOC) and the Labor Department's Office of Federal Contract Compliance Programs (OFCCP) have a "mission … to combat discrimination and support equal employment opportunity for U.S. workers," GAO said.

Here's the but: "Weaknesses in their processes impact the effectiveness of their efforts."

That's government blather for they're not getting the job done.

Both agencies "have taken steps to enforce equal employment and affirmative action requirements in the technology sector, but face limitations," according to GAO. "While EEOC has identified barriers to recruitment and hiring in the technology sector as a strategic priority, when EEOC conducts investigations, it does not systematically record the type of industry" and other information "that could be used to more effectively focus its limited enforcement resources and outreach activities."

Federal contract compliance regulations allow companies to lump together people who are not white for reporting purposes. I think that's pretending everyone who is not white is just one other color, the "of color" race.

"Regulations do not require federal contractors to disaggregate data for the purpose of determining placement goals for hiring," in GAO's words. This could hinder contractor "efforts to implement effective AAPs (affirmative action programs), which are designed to assist the company in achieving a workforce that reflects the gender, racial and ethnic profile of the labor pools from which the contractor recruits and selects."

There are several reasons for the low representation of blacks, Hispanics and women in the tech sector. "These include the lower diversity of degree earners in technology-related fields, and company-based factors such as hiring practices and retention of women and underrepresented minorities," GAO said.

"Two researchers told us that women often have the academic preparation to enter into technology-related degree programs, but they may choose not to pursue such degrees because of instances of gender bias within technology

GAO's findings are "disappointing but unsurprising," said Rep. Eva Bertha Garcia Moreno (D-Texas), co-chairman of the Congressional Black Caucus Task Force. "STEM and tech companies must do more than simply issue statements to diversify and include women and people of color in their workforce. We must hold them accountable for real progress."

ADVERTISEMENT

A statement from Scott's office said the report "confirms that the glass ceiling for women and people of color has yet to be cracked within the leading technology companies. … Moreover, in the past decade, within the leading technology companies, Black workers have actually *lost ground* across the spectrum of jobs from senior management to mid-level management to professionals to technicians."

Rep. Barbara Lee (D-Calif.), co-chairman of the Congressional Black Caucus Diversity Task Force, sounded pessimistic, but determined, when she warned: "By 2020, 1.4 million new jobs will be available in the tech industry. If current trends persist, communities of color will continue to be locked out of these opportunities.

"That simply must change."

Subject: POLITICO's Morning Transportation: Thune: Senate FAA bill is 'in a holding pattern' — Senate Commerce expected to move nominations — With skies wide open

By Brianna Gurciullo and Stephanie Beasley | 08/02/2017 10:00 AM EDT

With help from Lauren Gardner

'A HOLDING PATTERN': Sen. John Thune (R-S.D.) confirmed for us Tuesday what we've pretty much already known for a while: The upper chamber won't consider its FAA bill on the floor until September, when lawmakers come back from recess. Thune saidthe Senate will either pass the legislation, which would reauthorize the agency for four years, or a shorter term extension. The latter is looking more and more likely. "It's in a holding pattern at the moment," Thune said about the bill, S. 1405 (115). "But, one way or the other, we'll get on it. We'll get it done."

The sticking point: As for that controversial provision to change up training requirements for co-pilots, Thune said there's been no resolution yet. "But there will be obviously before we get to the floor with it," he said. When asked about the issue Tuesday, Senate Minority Leader Chuck Schumer (D-N.Y.) said: "Well, we're not gonna sacrifice people's safety."

NOM NOM NOMS: Later this morning, the Senate Commerce Committee is slated to move a handful of DOT nominees (and one NTSB member) to the floor, which means there will be even more names in play for a potential nominations package senators are hoping to clear before the August recess begins next week. "I'm hoping that a number of these that we're going to report out [Wednesday] will get included in a unanimous consent package," Thune told MT on Tuesday, adding that lawmakers are "trying to get as many on the cleared list as we can."

Nom-aste: To refresh Pros' memory, Derek Kan, President Donald Trump's pick to be undersecretary for transportation policy, has been waiting in the wings for more than a month since his committee approval. On deck today in committee are Ron Batory for FRA administrator, Mark Buzby to head the Maritime Administration, Steven Bradbury to be general counsel and Robert Sumwalt to serve another term at NTSB. (The nomination of Adam Sullivan for assistant Transportation secretary for governmental affairs is privileged and therefore doesn't require the panel's sign-off before a floor vote.) We'd hazard a guess that all of those names - with the exception of Bradbury, the vote for whom is expected to break along party lines - would be ripe for consideration for a noncontroversial package.

IT'S WEDNESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Steph and Brianna are driving the MT train, so please send along tips, feedback and lyrics to sbeasley@politico.com or @Steph_Beasley and bgurciullo@politico.com or @brigurciullo.

"Yeah, that's him again, the sound that engine in is like a bird. You see fireworks and Corvette tire skrrt the boulevard."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with tunes (picked by us and readers) that are all about flying, driving, commuting and sailing?

WITH SKIES WIDE OPEN: Secretary of State Rex Tillerson met up Tuesday with air carrier and travel industry officials to chat about Open Skies. The attendees: David Bronczek, FedEx's president and COO; Robin Hayes, JetBlue's president and CEO; William Flynn, Atlas' president and CEO; Kevin Burke, Airports Council International-North America's president and CEO; and Roger Dow, the U.S. Travel Association's president and CEO.

Let's break this down: When it comes to Open Skies, FedEx, JetBlue and Atlas stand in opposition to United, American and Delta. The latter accuse Qatar and the United Arab Emirates of flying in the face of their Open Skies agreements with the United States by subsidizing their airlines. In the White House, officials have been talking about the controversy for months, as POLITICO's Andrew Restuccia and Michael Grunwald reported. But the continuing strain between Qatar and Saudi Arabia decreases the chances that the U.S. government will make a decision anytime soon.

Where it stands: A State Department official told MT in a statement that the agency "remains in contact with all U.S. industry stakeholders who have expressed their differing views on a range of issues, including on the issues of Open Skies and subsidies to the Gulf Carriers." Burke told POLITICO that Tillerson "did not give a position" during the meeting. Tillerson "said that it really is an intergovernmental process they're going through. They've made no decision. Obviously, it includes the White House, it includes the Commerce Department, the Justice Department and maybe even DOD," Burke said. "I think they're keeping things very close to the vest," he added.

THE SENATORS BEHIND THE PROPOSED PFC CAP INCREASE: Airports are closer than they've ever been to the federal government raising the cap on Passenger Facility Charges, with a provision to do just that included in the Senate's DOT spending bill for fiscal 2018 that was favorably reported out of committee last week. Burke told us that a group of senators "banded together" to put the provision in the bill, including Sens. Roy Blunt (R-Mo.), the vice chairman of the Senate Republican Conference; Patrick Leahy (D-Vt.), the ranking member of the Senate Appropriations Committee; Susan Collins (R-Maine), the chairwoman of the THUD appropriations subcommittee; and Jack Reed (D-R.I.), the subcommittee's top Democrat.

Why not the FAA bill? Burke said senators who supported increasing the cap ruled out trying to do so through the Senate Commerce Committee's FAA reauthorization bill, which became controversial when the panel adopted an amendment during its markup to change co-pilot training standards. "There were a number of senators who knew that they couldn't help us on the Commerce Committee because Sen. Thune had some concerns on flight hours and some other issues and PFCs were not going to be put in the equation," Burke said. The future of the Senate measure to raise the PFC cap is uncertain and, of course, tied to the rest of the government funding process.

Enough about MT, tell MT about you: After the Washington Post wrote about American

Association of Airport Executives President and CEO Todd Hauptli's passion for cooking, we asked Burke if he had any secret talents. "I'm a carpenter. I make cabinets and moldings and stuff like that," Burke said. "I have not had one of Todd's meals yet and I'm going to threaten to come over to his house to have a meal with him. ... I'll make him a dining room table if he supplies me some gourmet meals."

LIVE YOUR LIFE WITH NO REGRETS: Trump doesn't seem to regret his decision to tackle health care first after his inauguration. "You know, a lot of people said you should have started with taxes or you should have started with infrastructure," Trump said in an interview with The Wall Street Journal. "Well, infrastructure I'll actually have bipartisan support, and I can use infrastructure to carry other things along. So I don't want to waste it at the beginning, if that makes sense." Check out the full transcript of the interview here.

DHS DUO: Sen. Ron Johnson (R-Wis.) said he hopes to travel to the White House soon to meet with ex-DHS Secretary John Kelly and discuss the future of the department under the Trump administration. With Kelly as the face of the agency and now-Acting Secretary Elaine Duke behind the scenes overseeing management of the agency, the two created "the perfect structure," Johnson told Steph. The question now is how will the agency be managed with Duke in the driver's seat and Kelly there to assist from the White House, he said.

Step up: Kelly's position in the White House certainly seems like it would work to Duke's benefit as she continues with many of the efforts that he started, former DHS Chief of Staff Christian Marrone told MT. "Having Gen. Kelly there, who has an appreciation for the mission, and the breadth of the mission, the capability of the department, I think only enhances the department's standing, both in this administration, and I think bodes well for the future," Marrone said.

Moving along: Marrone added that we shouldn't expect to see Elaine Duke make any drastic changes to DHS' approach to overseeing security updates at all international airports with flights to the United States. Marrone, who is now senior vice president of external relations and chief of staff at CRSA, worked with Duke both at DHS and when she served as a member of the Homeland Security Advisory Council. He said Duke might have a different style from Kelly, but he believes the two were on the same page when it came to preventing terrorist attacks on airplanes. "I don't see a big drop off from any of the things that Secretary Kelly was attempting to do," Marrone said. "She's been working on the issues with him, and so I think she'll just continue to make improvements to aviation security that they think are necessary."

In the air: Trump still hasn't given any signals (or sent out any tweets) about who he plans to nominate to permanently fill the DHS vacancy. Duke, who has worked for both Republican and Democrat administrations, could be seen as a non-partisan choice. Marrone said that House Homeland Security Committee Chairman Michael McCaul (R-Texas) could also easily win confirmation since he is a "well-known entity" with deep knowledge of the department. Whomever the administration nominates, it needs to be someone who isn't surrounded by controversy, he said. "You can't have someone who is going to be a lightning rod because it won't happen. So I think that disqualifies a number of folks who you hear mentioned," Marrone said.

Don't forget about us: Just a reminder that the other potential picks for DHS chief include Thomas Homan, acting director of U.S. Immigration and Customs Enforcement, and Kansas Secretary of State Kris Kobach, who is helping to lead Trump's controversial commission on alleged voter fraud.

GOTTA HAVE FAITH: Elsewhere within DHS, Coast Guard Commandant Paul Zukunft said he would try to shield his service members from a possible ban on transgender individuals serving in the military, POLITICO's Gregory Hellman reports. The president has yet to issue a formal order that would prevent people who are transgender from serving in the military. If it is formalized, the ban could apply to the Coast Guard, which the president can transfer to the Navy during wartime. Zukunft said he has reached out to the secretaries of DHS and DOD to discuss the possible implications of a ban and has told transgender Coast Guard personnel that he "will not break faith" with them.

CAN WE TALK? Top officials from DHS and CBP met with privacy groups on Tuesday to discuss the roll out of CBP's biometric exit program to airports and other ports of entry throughout the United States. John Wagner, deputy executive assistant commissioner of CBP's field operations, used the meeting as an opportunity to "reiterate CBP's commitment to protecting traveler's privacy," the agency said in a press release.

Down to the nitty, gritty: The meeting comes less than two weeks after the Electronic Privacy Information Center asked a D.C. federal judge to order CBP to disclose how it uses biometric information collected at entry and exit points. CBP currently uses facial recognition technology at five U.S. airports, including Washington Dulles International and Hartsfield-Jackson Atlanta International. "CBP has and will continue to engage our privacy office at every step in the process to add biometric to the departure process from the United States," Wagner said.

SHIFTING GEARS: D.C. Mayor Muriel Bowser named Jeff Marootian interim director of the District Department of Transportation, effective Aug. 11. Marootian, now DDOT's deputy director, was assistant secretary for administration at DOT from 2015 to 2017. (h/t former FRA Administrator Sarah Feinberg)

THE AUTOBAHN:

- "Kelly eyes DHS spokesman for communications director, sources say." CNN Money.

- "Comments are in on Coast Guard's proposed Mar-a-Lago security zones." Palm Beach Post.

- Sen. Ron Wyden "unveils bill to lift embargo on Cuba." POLITICO Pro Trade.

- "CSX chief executive attributes service disruptions to employee push-back." Reuters.

- "Big leadership shake-up rocks Port Authority." NJ.com.

- "The same company that pushed Uber out of China is now backing its rival in Europe and

Africa." Quartz.

Subject: POLITICO's Morning Energy, presented by the U.S. Chamber's Global Energy Institute: Climate skeptics find new favorite talking point — Solar world fears gloomy 2018 amid potential tariffs — Cuomo's pipeline rejection raises eyebrows nationally

By Anthony Adragna | 09/25/2017 10:00 AM EDT

With help from Alex Guillén

NEW FUEL FOR THE CLIMATE SKEPTIC FIRES: The small group of climate change skeptics, led by the Heartland Institute, has seized upon a recent peer-reviewed study to vindicate their calls for a debate on the fundamentals of climate change, Pro's Emily Holden reports. The paper concluded the planet can tolerate more greenhouse gas emissions in the near future than previously thought, a finding its authors said does not undercut the basic consensus that human activity is causing temperatures to rise faster than normal. But Heartland Institute President Tim Huelskamp, whose group has submitted nominees for EPA Administrator Scott Pruitt's red team, blue team exercise and EPA's Science Advisory Board, says the report raises more questions. "This is exactly the type of debate discussion scientists need to be having," said Huelskamp, a former Republican congressman from Kansas. "If they were wrong 10 years ago, what makes their new modeling correct?"

Scientists bash mischaracterizations: Authors of the study said their work has been willfully misinterpreted for political purposes. While they expected their conclusions to be mischaracterized, they said they hadn't expected such an intense reaction. "We are not trained in PR.... Our job is to do solid science and communicate that. It's not really our job to guard against every possible critique, especially when they're not real critiques," said Damon Matthews, a study author and Concordia University Research Chair in Climate Science and Sustainability. "[T]here is no scientific result in our story that questions the basics of climate change and the imperatives for mitigation action."

What did the report find? The study found Earth has 20 years at the current rate of carbon dioxide emissions - 10 years more than the Intergovernmental Panel on Climate Change had estimated in its 2013 report - before average global temperatures grow 1.5 degrees Celsius. While previous research suggested countries had a "carbon budget" between 200 billion to 400 billion metric ton of carbon emissions before temperature increases exceeded 1.5 C, their paper pegged the figure above 700 billion metric tons. Some respected scientists have disagreed with the methodology the authors used to come to their conclusions.

WELCOME TO MONDAY! I'm your host Anthony Adragna, and the Glover Park Group's Hayley Moller was first to identify Tip O'Neil as the famous politician appearing in a 1983 episode of *Cheers* (clip here). For today: Which senator made a brief cameo in *Wedding Crashers*? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

FEARS OF A SOLAR SUNSET IN 2018: Experts point to the last time the U.S. slapped steep

tariffs on imported goods as a cautionary tale for President Donald Trump as he ponders whether to erect harsh trade barriers sought by Suniva and SolarWorld USA on imported solar panels, Pro's Eric Wolff reports . Back in 2002, President George W. Bush put a 30 percent tariff on several types of steel imports, but the move led directly to a supply shortfall in the U.S., causing wild fluctuations in prices, according to Tom Werner, CEO of SunPower Corp and a tariff opponent. "There's a very good chance it could end up the same way," said Tori Whiting, a research associate at the Center for International Trade and Economics at the conservative Heritage Foundation. A reminder that we're at this point due to Friday's International Trade Commission ruling that opens the door for Trump to penalize cheap Chinese solar imports through tariffs.

Suniva and SolarWorld USA have both promised to restart production at shuttered factories if they get trade protections, and they reject the notion that tariffs would cost jobs. But getting factories back into operation will take years and attracting capital may prove difficult since tariffs are limited to four years under the law.

RAISING EYEBROWS, NOT PIPELINES, IN THE EMPIRE STATE: Amid speculation he's positioning himself for a possible 2020 presidential bid, New York Gov. Andrew Cuomo has blocked three pipelines in the last 16 months, drawing national attention as his environmental policy has grown decidedly more progressive, POLITICO New York's Marie J. French reports. Cuomo most recently denied a permit for Millennium Pipeline's 7.8 mile project - including a novel legal argument involving concerns about the greenhouse gas emissions from the power plant it would serve - after previously denying two other major pipelines permits over fears of how they'd affect water quality. "I think environmentalists have no choice but to pay some respect to Gov. Cuomo's moves - banning fracking was a big step, and he's followed it up with some other courageous decisions," 350.org co-founder Bill McKibben said. "We hope very much that he'll support the call for 100% renewable energy that's becoming the basic test for politicians going forward."

** **A message from the U.S. Chamber's Global Energy Institute:** American energy is changing our economy. And now, it is changing the world. The U.S. Chamber of Commerce's Global Energy Institute is at the forefront of the policy discussions in Washington and around the nation that will help fuel the global energy revolution. Learn more at www.globalenergyinstitute.org **

GUESSING GAMES: Trump's penchant for leaving himself wiggle room on contentious policy decisions like trade, taxes, immigration, health care and climate change is inducing whiplash in many of the political insiders, business leaders and even foreign governments with a stake in the outcomes, POLITICO's Emily Holden, Andrew Restuccia, Aaron Lorenzo and Ted Hesson report . On the international climate front, diplomats have been left in the dark about what precisely the United States wants since June, when Trump announced his intention to exit the Paris agreement but "begin negotiations" to either reenter the nearly 200-nation accord or join an entirely new deal.

White House spokeswoman Kelly Love said: "President Trump was put into office precisely because he isn't beholden to lobbyists and special interests. If they're upset that they can't stroll

into the White House and drive administration policy anymore, that's a badge of honor for a president who was elected to drain the swamp."

BONN BONN BONNNNN: Trump's decision to leave the Paris climate accord have raised the stakes for international climate negotiations in Bonn, Germany for nations around the world to reiterate their commitment to the accord, Pro's Eric Wolff reports , citing an interview with the top climate negotiator for Fiji who's leading the meeting. "Our aim was changed by President Trump's announcement," Ambassador Nazhat Khan said. "Now we must deliver a visionary [conference]. Every work item for COP 23 is measured for the enhancing and restating of the overall vision."

RELIEF FINALLY BEGINS TO FLOW IN PUERTO RICO: A ship carrying 1.6 million gallons of water, 23,000 cots, dozens of generators and food arrived Sunday in Puerto Rico - the first of many expected in the coming days - as millions of Americans brace themselves for potentially months without electricity and damaged drinking water infrastructure, the Associated Press reports. Rep. Nydia Velazquez plans to request a one-year waiver from the Jones Act, a federal law requiring domestic cargo shipments to move only on U.S. vessels. "We will use all our resources," Velazquez said. "We need to make Puerto Rico whole again. These are American citizens."

Dam worries linger: There were mixed reports on the status of the Guajataca Dam in Northwest Puerto Rico. Some suggested the structure remained in danger of collapse Sunday after authorities previously evacuated 70,000 residents in that area, while others quoted local officials saying the risks were overblown.

Congress plots relief efforts: Lawmakers are beginning to plot potential relief options for the island, which may include tax breaks and more Medicaid funding, POLITICO Financial Services' Colin Wilhelm reports. "This is a natural disaster in Puerto Rico like we haven't seen ever," said Carlos Mercader, executive director of the commonwealth's Federal Affairs Administration. "Think about Katrina but even worse because this is the whole island." In an interview with Colin on Sunday, Puerto Rico Gov. Ricardo Rossello called for Congress to treat Puerto Rico like a state in any comprehensive emergency aid package. Remember Puerto Rico was already dealing with a massive government debt crisis, crumbling infrastructure and a bankrupt electric utility before the storm.

Relief not fast enough for many: Cuomo, who visited Puerto Rico on Friday, jabbed Trump for his focus on the NFL instead of the emerging humanitarian crisis over the weekend: "Instead of arguing with football players, instead of obsessing about how to take health care from the poor, why don't we put the politics aside and focus on helping Americans in desperate need?" he said, according to the Albany Times-Union. Hillary Clinton tweeted : "President Trump, Sec. Mattis, and DOD should send the Navy, including the USNS Comfort, to Puerto Rico now. These are American citizens.

Toxic waste removed in Texas: Tucked away in a Friday press release was the disclosure EPA recovered 517 containers of "unidentified, potentially hazardous material" from Superfund sites in Texas affected by Hurricane Harvey but the agency isn't providing any additional information

about the waste, the Associated Press reports. EPA won't say what sites the material came from, whether they've been identified or if there's a human health threat.

QUID PRO QUO? EPA staff directed staff to take the first toward reversing the proposed veto of Alaska's Pebble Mine in July shortly after Pruitt met with Tom Collier, CEO of Pebble Limited Partnership, CNN reports , citing interviews and government emails. "This is a process issue," Collier told CNN in an interview. "[Pruitt] is not saying he's not going to veto this project. He's just saying that the rule of law says that you do an environmental impact statement first, right? That's Mr. Pruitt's position." Collier said Pebble plans to file mining permit applications in December. Pruitt's move allows the company to submit a permit application but does not guarantee it would be approved.

NATIONAL CLEAN ENERGY WEEK KICKS OFF: A veritable who's who and VIPs of the clean energy world are in town this week to tout the benefits of clean energy technologies and try to rally support in Congress and the administration for the sector's continued growth. Interior Secretary Ryan Zinke and Energy Secretary Rick Perry launch the festivities in earnest on Tuesday at 8 a.m. A full schedule is available here.

LET'S MAKE A DEAL?: California may go along with some changes the Trump administration and automakers would like to see to vehicle emissions rules in the near future, as long as the White House and industry agree to tougher rules that would kick in later. Mary Nichols, chair of the California Air Resources Board, told Bloomberg that she has spoken with White House energy adviser Mike Catanzaro about the administration's review of EPA emissions standards through model year 2025.

If EPA weakens those rules, California would still be able to enforce its own, more stringent standards, which 13 other states also have adopted. That would create a complex regulatory patchwork - or a protracted court fight over California's authority - that all parties would prefer to avoid, if possible. "The price of getting us to the table is talking about post-2025," Nichols told Bloomberg. California would be "willing to talk about specific areas if there were legitimate concerns the companies raised" as part of a larger discussion.

MAIL CALL! REMEMBER THAT TALK WE HAD? Six senators, led by Sheldon Whitehouse, sent a letter to FERC Chairman Neil Chatterjee on Friday requesting the commission move "as quickly as possible" to complete a rule on better integrating energy storage and small renewable energy installation, which Whitehouse and Sen. Ed Markey discussed with Chatterjee prior to his confirmation. At the time of meeting, Whitehouse said he received a commitment the rule would not be "unduly delayed."

CHINA MOVES TO CUT OFF OIL FOR NORTH KOREA: Moving to implement the latest round of U.N. sanctions, China announced Saturday it would ban exports of condensates and liquefied natural gas immediately, Reuters reports. The country also said it would limit exports of refined petroleum products from Oct. 1.

GREENS APPEAL HFC DECISION: ME readers previously learned it was coming, but the Natural Resources Defense Council on Friday formally asked a federal appeals court for an en

banc rehearing of last month's decision striking down an EPA rule limiting use of hydrofluorocarbons, potent greenhouse gases, Pro's Alex Guillén reports in Energy Regulation Watch. The group feels the D.C. Circuit erred in its 2-1 decision and are likely to be joined in their appeal by Honeywell, a U.S. manufacturer.

GREENS OPPOSE FOUR EPA NOMINEES: Ten environmental organizations, including the Sierra Club, League of Conservation Voters and Waterkeeper Alliance, sent a letter to senators Friday urging them to oppose the four nominees expected to shortly come before the Environment and Public Works Committee for confirmation hearings. "Each of these individuals have demonstrated a willingness to advance the agenda of polluters and industry before health protections and safeguards for clean air and clean water," they wrote of the nominations of Matthew Leopold to be general counsel, William Wehrum to run the air office, Michael Dourson to run the Office of Chemical Safety and Pollution Prevention and David Ross to run the water office

MORE CONCERN OVER CADIZ PROJECT: California Sen. Dianne Feinstein released a letter Friday from the Metropolitan Water District questioning of safety and viability of the controversial California water project. David Bernhardt, Interior's number two, previously did legal work on behalf of the Cadiz project while in the private sector and the issue came up repeatedly during his confirmation process. Feinstein, a vocal opponent of the project, accused the Trump administration of trying to "muscle the Cadiz water project through" back in April.

Subject: Playbook Power Briefing, presented by Koch Industries: TRUMP administration rolls back birth control mandate -- FIRST IN PLAYBOOK: BRUCE GATES retiring -- Economy loses 33K jobs after hurricanes -- ARNOLD'S next act

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Koch Industries

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good FRIDAY afternoon. FIRST IN PLAYBOOK -- REPUBLICAN POWER PLAYER BRUCE GATES, SVP of external affairs at Altria, is retiring Nov. 1. Todd Walker is assuming Gates' responsibilities for the government affairs portion of his portfolio. Gates will continue as a consultant with the company. "I've enjoyed a 35-year career in the political, policy and communications arenas that I wouldn't have traded for anything," the veteran Republican operative emailed. "I've had the opportunity to do so much more than any kid of modest means in SC would have dreamed possible, and I consider myself very fortunate. I've met some extraordinary people and made some seriously good friends along the way too!"

Gates has worked in multiple capacities downtown, including founding Washington Counsel, a partner at Washington Council, Ernst & Young and as the inaugural treasurer for the two first big GOP leadership PACs -- then-Speaker John Boehner's "The Freedom Project" and then-Rep. Jim McCrery (R-La.)'s "Committee for the Preservation of Capital PAC."

Gates said he is planning to spend more time on other business interests, including two new ventures -- Pearl Street Warehouse and Catina Bambina -- on the Southwest Waterfront. He also is invested in three tech businesses and said he wants to spend time helping with Hurricanes Irma and Maria recovery.

BIG CHANGES TO HEALTH CARE -- "Trump rolls back Obamacare birth control mandate," by Brianna Ehley: "The Trump administration will allow virtually any employer to claim a religious or moral objection to Obamacare's birth control coverage mandate under a sweeping rollback announced Friday.

"The new policy, which takes effect immediately, reignites a fierce battle over one of the health care law's most controversial provisions. The requirement to provide FDA-approved contraception at no cost was long opposed by religious groups that heavily favored Trump, and has been wrapped up in legal challenges for more than five years. 'The United States has a long history of providing conscience protections in the

regulation of health care for entities and individuals with objections based on religious beliefs or moral convictions,' the administration wrote in new rules." http://politi.co/2z3dkdl

JOBS REPORT -- "Economy lost 33,000 jobs in September," by Marianne LeVine: "The economy lost jobs in September for the first time in seven years, a consequence of late-summer hurricanes. The Labor Department reported Friday morning that the economy lost 33,000 jobs, down from 169,000 jobs added in August. ... The jobs report also included some positive news. September unemployment, the report showed, was 4.2 percent, down from August's 4.4 percent, and the lowest level since February 2001." http://politi.co/2y57sm7

-- @morningmoneyben: "Seriously if you see someone tweeting about how great the 0.5% jump in hourly earnings is, just unfollow them. Or how bad the -33K is. ... Anyway, absent all the hurricane noise this would likely be a pretty status quo jobs report. Enjoy the rest of the day!"

AT JUSTICE -- "Sessions calls for broad religious freedom protections," by Josh Gerstein: "Attorney General Jeff Sessions issued government-wide legal guidance Friday that urges sweeping protection for religious freedom and could impact a series of pending policy decisions involving health care, LGBT rights and even disaster relief. Sessions billed the 25-page memo directed to all federal agencies as a response to an executive order President Donald Trump signed in May, promoting efforts to promote 'religious liberty.'

"That order triggered a major showdown within the administration as religious and social conservatives pressed for treatment that could essentially allow them to ignore anti-discrimination requirements, particularly in the area of sexual orientation, while more moderate forces warned that upending existing protections would trigger an uproar that could derail other administration priorities. The new Justice Department guidance takes a muscular view of religious freedom rights, but officials insisted that the document is a neutral description of existing law and not an effort to weigh in on particular policy issues." http://politi.co/2fYqaW2

ARNOLD'S NEXT ACT -- ISAAC DOVERE in **POLITICO MAGAZINE -- "The Strange Political Afterlife of Arnold Schwarzenegger":** "Now, six years after leaving Sacramento, he's still reinventing himself-as a kind of globetrotting do-gooder, promoting a handful of causes like fighting climate change and gerrymandering. But mostly, he's having a hell of a good time. Wherever he goes, everybody knows him. Everybody loves him. With a net worth estimated at $300 million, he zips around the world in private jets and has restaurant owners pick up his tab because they're just so honored he chose to eat there. Constant selfies. He sounds off on whatever he wants, but has no actual responsibility. His perfect day is waking up and not knowing what country he'll eat dinner in.

"All of a sudden, a guy who just turned 70 -- in Barcelona, he celebrated the 50th

anniversary of winning Mr. Universe, which began his breakthrough -- and had seen politics pass him by is ... back. But why? Schwarzenegger is barred from another run for governor and has no interest in the Senate; a certain clause in the Constitution is keeping him out of the White House. He's making movies again, though nothing huge. ... Instead, Schwarzenegger is back in the public eye because of what he calls 'a disastrous situation' -- the Trump presidency." http://politi.co/2z2kNtz

PRUITT'S NEXT MOVE -- BREITBART -- "EPA Document Proposes to Eliminate Clean Power Plan 'in Its Entirety'," by Sean Moran: "The [EPA] plans to repeal the agency's Obama-era climate change program, the Clean Power Plan (CPP), 'in its entirety,' according to a document obtained by Breitbart News. The 43-page document, titled, 'Repeal of Carbon Pollution Emission Guidelines for Existing Stations Sources: Electric Utility Generating Units' details how the EPA plans to repeal CPP through a Notice of Proposed Rulemaking (NPRM). This version of the document obtained by Breitbart News remains subject to change through inter-agency review.

"The agency contends that the EPA, under former Administrator Gina McCarthy, exceeded its authority to regulate carbon emissions as stipulated by the Clean Air Act. The document proposes to eliminate the Clean Power Plan, and then suggested that they might release an Advanced Notice of Proposed Rulemaking (ANPRM) that will reflect a more thoughtful and modest approach to regulating air pollution given the EPA's limited statutory authority." http://bit.ly/2y5tG7H

****** **A message from Koch Industries:** At Koch Industries, we believe education opens avenues to opportunity for eager young minds. So we support organizations like the United Negro College Fund and Youth Entrepreneurs to help ensure all students have access to educational options best suited to their individual talents. CAMPAIGN STOP -- "Democrats look to wreak havoc in GOP primaries," by Gabe Debenedetti: "With Republican Senate primaries from West Virginia to Montana promising to pit Trump-inspired insurgents against more mainstream candidates, Democrats are considering ways to step in and wreak some havoc. The idea: Elevate the GOP's most extreme option in each race, easing Democrats' path to victory in a range of states tilted against them.

"At its most aggressive, the tactic could be a sequel to Democratic Sen. Claire McCaskill's 2012 campaign against then-GOP Rep. Akin in Missouri. She actively intervened in the Republican primary with ads designed to boost the conservative Akin to the front of the pack. Once he became the nominee, a series of gaffes -- led by his 'legitimate rape' comment -- and hard-line positions unraveled his campaign." http://politi.co/2z42Cn4

-- "Democrats have lost nearly 1,000 state legislative seats and can't agree on how to take them back," by Mic's Will Drabold: "New groups aimed at electing Democrats to statehouses are challenging the old guard, creating friction between the

party establishment and newcomers with the same goal: take back state legislatures." http://bit.ly/2y4FXJs

-- NEW HAMPSHIRE REP. CAROL SHEA-PORTER is not running for re-election http://bit.ly/2xWUya7

UH-OH -- "U.S. Intelligence Unit Accused Of Illegally Spying On Americans' Financial Records," by BuzzFeed's Jason Leopold and Jessica Garrison: "The intelligence division at the Treasury Department has repeatedly and systematically violated domestic surveillance laws by snooping on the private financial records of US citizens and companies, according to government sources.

"Over the past year, at least a dozen employees in another branch of the Treasury Department, the Financial Crimes Enforcement Network, have warned officials and Congress that US citizens' and residents' banking and financial data has been illegally searched and stored. And the breach, some sources said, extended to other intelligence agencies, such as the National Security Agency, whose officers used the Treasury's intelligence division as an illegal back door to gain access to American citizens' financial records. The NSA did not respond to requests for comment." http://bzfd.it/2z3EdOF

COMING ATTRACTIONS -- STEVE BANNON and Alabama Republican Senate candidate **ROY MOORE** are speaking at next week's Values Voter Summit, the first time Bannon has spoken at the forum. Sebastian Gorka will also appear, as well as House Majority Whip Steve Scalise (R-La.), Reps. Mark Meadows (R-N.C.), Vicky Hartzler (R-Mo.), and Mark Walker (R-N.C.). http://bit.ly/2fOW5Vd

-- BANNON TALKS WITH THE PROSPECT, AGAIN -- "Steve Bannon, Unleashed," by The American Prospect's Robert Kuttner: "Having written up an interview with Bannon in mid-August that helped push him out of the White House, I began thinking that maybe Bannon was happier out than in. A journalist friend confirmed that hunch. So I asked Bannon for a second interview. He was pleased to oblige. I made a date to come to the Breitbart townhouse, where we spoke for an hour on Thursday afternoon. This time, Bannon was careful to put the conversation on background, but he gave me permission to convey the essence of his views.

"Bannon's first conversation with me was animated by his belief that he and I might be allies on the issue of economic nationalism. He continues to look for left-right common ground. Bannon's current obsession is to blow up Senate Majority Leader Mitch McConnell and Republican Senate incumbents whom he regards as hostile to his brand of nationalism. Bannon believes that if Republicans will just embrace populist economic nationalism, they can become a workers' party and the majority party for decades to come. He's been on the road, recruiting primary challengers to knock off Republican incumbents -- and carry that populist message." http://bit.ly/2z2Rxmi

HUH? -- "Congressman suggests Charlottesville was George Soros-backed conspiracy," by Vice News' Elspeth Reeve: "Arizona Rep. Paul Gosar suggested the

participants in the white nationalist rally in Charlottesville in August may have been organized by an 'Obama sympathizer' and funded by George Soros, whom Gosar accused of having 'turned in his own people to the Nazis.'" http://bit.ly/2y4pHrT

LUNCHTIME READ -- "Supreme Court's newest justice has an elk as an office mate," by the AP's Jessica Gresko: "When Justice Neil Gorsuch joined the Supreme Court earlier this year he got Justice Antonin Scalia's seat, his office and his elk, Leroy. ... The story starts more than a decade ago when Scalia shot the elk on a hunting trip and had its head mounted and hung in his Supreme Court office.

"Gorsuch explained at an event in Washington last week that after Scalia died in 2016 it seemed that the elk was destined 'to become homeless.' That's because the elk head, part of an animal estimated to have weighed around 900 pounds, is 'much too much for anyone's living room wall,' Gorsuch said. 'And then someone got the idea that Leroy might make, well, a sort of unusual welcome-to-the-neighborhood gift for the new guy. What a gift,' Gorsuch said." http://cbsn.ws/2y4gz6t

SPORTS BLINK -- @ChadPergram: "Scalise to throw out first pitch at tonight's playoff game between the Nationals and the Cubs in Washington".

WOMEN RULE NEWSLETTER - POLITICO's Women Rule series, produced in partnership with founding partners Google and the Tory Burch Foundation, is dedicated to exploring women's leadership in politics, policy and within their communities. The monthly Women Rule Newsletter will keep you up to speed on the community-this month's edition features a podcast with Iranian-American actress and activist Nazanin Boniadi, a Q&A with the Wilson Center's Gwen Young, who is releasing a study on women's participation in public service and job updates from Women Rule community members making strides in their careers. A special thank you to the 2017 Women Rule presenting sponsor Chevron. ***Subscribe*** http://bit.ly/2y4pjcD

VALLEY TALK -- END OF AN ERA -- "AIM will shut down after 20 years," by The Verge's Jacob Kastrenakes http://bit.ly/2y5sxNg

OUT AND ABOUT -- Spotify hosted the premiere last night of its "I'm with the banned" documentary short, which paired musicians from countries in the early Trump travel ban with American artists to make music, at E Street Cinema last night. **SPOTTED:** Michelle Ballantyne, Sarah Rojas, Rayshon Payton, Beatrice Pollard, Jena Gross, Sofia Gross, Alexandra Veitch, Jen Olson, Jay Heimbach, Madigan Jones, Matt Wise and Sarah Gilmore. ***Trailer*** http://bit.ly/2z3Utzp

WELCOME TO THE WORLD - Kevin Johnson, an account supervisor with the Edelman crisis team in D.C., and **Sheila Johnson,** VP of Lockton Companies, on Tuesday welcomed Elizabeth Jean, who was 9 lbs and 1 oz, and 23 inches long. She joins big sister Paige. "I am one lucky, outnumbered guy," Johnson emailed family and friends. ***Pic*** http://bit.ly/2yMjYEj

****** **A message from Koch Industries:** By 2020, it's estimated that the U.S. will face a shortfall of as many as 10 million skilled workers. Filling these open roles is going to be a big challenge, but we've long believed in the value and importance of skilled trades - roles held by many of our more than 70,000 U.S. employees. To help meet this projected demand, we've partnered with SKILLS USA and the mikeroweWORKS Foundation to provide Work Ethic Scholarships to students pursuing training in skilled trades. We are committed to supporting educational initiatives that help more Americans make a living while improving their quality of life. Learn more at ChallengeAccepted.com. ******

Subject: Today on Climate Beat

August 25, 2017

Today on Climate Beat . . .

. . . we got litigious, reporting that a developer of a failed carbon capture and sequestration project in Texas has launched a suit against the Department of Energy, charging that the department breached a contract with the developer when it pulled federal support for the project last summer.

Staying in court, environmentalists have filed suit trying to force a legally binding deadline for EPA to respond to their years-old petition asking the agency to issue rules to reduce greenhouse gas and conventional air emissions from concentrated animal feeding operations, after a previous similar deadline suit failed on procedural grounds.

We highlighted several must-read stories from the past week about GHG analysis for fossil infrastructure project reviews, as well as updates on methane regulation, new Northeast cap-and-trade targets and the Energy Department's grid study.

And our daily news roundup looked at an op-ed by a former Exxon-funded scientist, as well as updates on the social cost of carbon, the Clean Power Plan and Hurricane Harvey.

Summaries

AIR
Alabama SIP/Prevention of Significant Deterioration Permitting Program
AIR

Proposed rule of the EPA would approve portions of revisions to the Alabama SIP regarding the prevention of significant deterioration (PSD) permitting program. The revisions address changes to plantwide applicability limits for greenhouse gases (GHGs) and the discontinuation of the regulation of GHGs as an air pollutant for determining whether a source is a major source in PSD. The revisions also address Title V permitting requirements for sources emitting lower levels of GHG emissions. The agency will act on the transportation conformity revisions in a separate action. Comments are due Sept. 14, 2017. Contact: Andres Febres; EPA Region 4, Air Planning and Implementation Branch; 404-562-8966; febres-martinez.andres@epa.gov. Citations: 40 CFR 52

Regulatory Update

AIR
California SIP/Placer County APCD
AIR

Final rule of the EPA approves revisions to the Placer County Air Pollution Control District (APCD) portion of the California SIP. The revisions concern the district's demonstration regarding reasonably available control technology (RACT) requirements for the 1997 and 2008 eight-hour ozone NAAQS and negative declarations for the polyester resin control techniques guidelines for the 2008 eight-hour ozone standard. The rule is effective Sept. 14, 2017. Contact: Nicole Law; EPA Region 9; 415-947-4126; law.nicole@epa.gov. Citations: 40 CFR 52.220, 52.222

Regulatory Update

AIR
Georgia SIP/New Source Review, Miscellaneous Permitting
AIR

Direct final rule of the EPA approves revisions to the Georgia SIP regarding new source review and miscellaneous permitting requirements. The revisions address prevention of significant deterioration of air quality requirements and general permitting program requirements applicable to the construction and modification of any major stationary source in areas designated as attainment or unclassifiable. The revisions also address general permitting program requirements that apply to the construction and modification of any major stationary sources in nonattainment areas. The EPA is not taking action on additional SIP submittals that were previously approved or that were withdrawn by the state. The rule is effective Oct. 16, 2017, unless adverse comments are received by Sept. 14, 2017. Contact: Brad Akers; EPA Region 4, Air Planning and Implementation Branch; 404-562-9089; akers.brad@epa.gov. Citations: 40 CFR 52.570

Regulatory Update

AIR
Georgia SIP/Regional Haze Progress Report
AIR

Proposed rule of the EPA would approve a revision to the Georgia SIP regarding the state's regional haze progress report. Under the rule, the agency would approve the state's determination that the regional haze plan is adequate to meet the reasonable progress goals for the first implementation period through 2018 and does not currently require substantive revisions. Comments are due Sept. 14, 2017. Contact: Michele Notarianni; EPA Region 4, Air Planning and Implementation Branch; 404-562-9031; notarianni.michele@epa.gov. Citations: 40

Regulatory Update

AIR
Incandescent Lamps Energy Conservation Standards
AIR

Notice of the Energy Department, Office of Energy Efficiency and Renewable Energy, requests information on annual domestic sales and shipment data to consider updates to standards for general service incandescent lamps and other incandescent lamps. The department also requests information regarding the energy use and end-user cost of incandescent lamps, including the percentage of each lamp category that uses standard or more efficient halogen technology and the average wattage, efficacy, lifetime, and operating hours in each lamp category for the standard technology product and more efficient version, if one is offered. The information is requested due to a statutory requirement that the department determine via rulemaking whether to revise energy conservation standards for general service lamps. Comments are due Oct. 16, 2017. Contact: Lucy deButts; Office of Energy Efficiency and Renewable Energy; 202-287-1604; ApplianceStandardsQuestions@ee.doe.gov. Citations: 10 CFR 430

82 FR 38613 (08/15/2017)

Regulatory Update

AIR
Michigan SIP/Minor New Source Review
AIR

Proposed rule of the EPA would approve portions of revisions to the Michigan SIP regarding the permit-to-install (PTI) minor new source review program. The revisions provide a waiver from the requirement to obtain a PTI prior to the start of construction for minor construction activities and activities not considered construction or reconstruction under NESHAP standards. The revisions also add several categories of exemptions from the requirement to obtain a PTI and address required application materials and the processing of applications. Revisions to the public notice requirements will be addressed in a separate action. Comments are due Sept. 14, 2017. Contact: Rachel Rineheart, EPA Region 5, Air Programs Branch; 312-886-7017; Rineheart.rachel@epa.gov. Citations: 40 CFR 52

Regulatory Update

AIR
South Carolina SIP/Interstate Transport Prongs 1 and 2
AIR

Proposed rule of the EPA would approve a revision to the South Carolina SIP regarding the Clean Air Act interstate transport (prongs 1 and 2) infrastructure SIP requirements for the 2010 one-

hour nitrogen dioxide (NO2) NAAQS. The agency proposes to determine that the SIP contains adequate provisions to prohibit emissions within the state from contributing significantly to nonattainment or interfering with maintenance of the 2010 one-hour NO2 NAAQS in any other state and that the SIP meets the requirements of prongs 1 and 2. Comments are due Sept. 14, 2017. Contact: Andres Febres; EPA Region 4, Air Planning and Implementation Branch; 404-562-8966; febres-martinez.andres@epa.gov. Citations: 40 CFR 52

ENDANGERED SPECIES
California/Hollister Test Facility Incidental Take Permit
ENDANGERED SPECIES

Notice of the U.S. Fish and Wildlife Service announces the receipt of an application from BAE Systems Land and Armaments L.P., of Arlington, Va., for an incidental take permit for the endangered San Joaquin kit fox, threatened California red-legged frog, and the California tiger salamander, incidental to soil remediation activities at the Hollister Test Facility in San Benito County, Calif. The agency also has prepared a draft environmental action statement for its preliminary determination that the project is "low-effect" and is eligible for a categorical exclusion under the National Environmental Policy Act. Comments are due Sept. 14, 2017. Contact: Christopher Diel; USFWS; 805-644-1766

82 FR 38701 (08/15/2017)

Regulatory Update

FOOD SAFETY
Food Animal Biomass Denominator
FOOD SAFETY

Notice of the FDA announces the availability of a proposed method for applying a food animal biomass denominator to annual data on antimicrobials sold and distributed for use in food animals in the U.S. The method would provide the agency with estimates of annual antimicrobial drug sales adjusted for the size of the animal population, referred to as the animal biomass of each such species, potentially being treated with such drugs. Comments are due Nov. 13, 2017.

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Naval Air Station Oceana Fighter Squadrons Transition
GENERAL ENVIRONMENT AND SAFETY

Notice of the Navy Department announces the redesignation of a Sept. 10, 2015, notice of intent (80 FR 54556) to prepare a draft environmental impact statement for the transition of the remaining F/A-18A/C/D (Hornet) aircraft, based at Naval Air Station Oceana, to the F/A-18E/F (Super Hornet). The Navy is changing the impact statement to a draft environmental assessment because of the similarities between Hornet and Super Hornet flight training, analysis showing that the aircraft transition will only result in minor noise increases, and findings that no significant environmental impacts were identified. Meetings are scheduled for Aug. 29 and 30, 2017, in Virginia Beach and Chesapeake, Va., respectively. Comments are due Sept. 15, 2017. Contact: Navy Department, Naval Facilities Engineering Command Atlantic; 757-322-8005

82 FR 38674 (08/15/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Rhode Island/Surplus Property at Naval Station Newport
GENERAL ENVIRONMENT AND SAFETY

Notice of the Navy Department announces the availability of the record of decision for the final environmental impact statement regarding the disposal by the Navy of 158 acres of surplus property at Naval Station Newport in Rhode Island and the redevelopment of the property by local municipalities. The surplus properties to be redeveloped include a lodge, a hospital, tank farms, and a pier located in three separate municipalities on Aquidneck Island. The final EIS designates Alternative 1, which would make the property available to the island communities for economic

redevelopment, as the agency's preferred alternative. Contact: Gregory Preston; Navy Department, BRAC Program Management Office East; 215-897-4900; gregory.preston@navy.mil

82 FR 38674 (08/15/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Western Arctic Bowhead Whales Catch Limits
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the National Marine Fisheries Service to prepare an environmental impact statement for the establishment of annual catch limits for the subsistence harvest of Western Arctic bowhead whales by Alaska natives from 2019 onward. The catch limits are subject to those established by the International Whaling Commission. Subsistence hunts are managed by the Alaska Eskimo Whaling Commission (AEWC), and the catch limits are issued through annual amendments to a cooperative agreement between the AEWC and NOAA. The administration will consider the effects of proposals to grant the AEWC an annual strike limit of 67 bowhead whales and not to exceed a total take of 336 landed whales over any six-year period. Comments are due Sept. 14, 2017. Contact: Carolyn Doherty; NMFS, Office of International Affairs and Seafood Inspection; 301-427-8385; carolyn.doherty@noaa.gov. Citations: 50 CFR 230.6

Regulatory Update

SOLID WASTE
Coal Combustion Residuals State Permit Program Guidance
SOLID WASTE

Notice of the EPA announces the availability of interim final guidance for states on developing and submitting state coal combustion residuals (CCR) permit programs for agency approval, as provided by the Water Infrastructure Improvements for the Nation (WIIN) Act. The guidance includes an overview of the WINN Act provisions and describes the process and procedures the EPA plans to use in reviewing and making determinations on state CCR permit programs. The guidance also provides checklists of requirements of the current CCR rule and of items the EPA generally expects a state would submit when seeking approval of its CCR program. Comments are due Sept. 14, 2017. Contact: Mary Jackson; EPA, Office of Resource Conservation and Recovery; 703-308-8453; jackson.mary@epa.gov. Citations: 40 CFR 257, Subpart D

82 FR 38685 (08/15/2017)

Regulatory Update

WATER
Rainy and Namakan Lakes/Review of Emergency Levels
WATER

Notice of the State Department, International Joint Commission, announces hearings regarding emergency levels for Rainy and Namakan Lakes (Rule Curve) in U.S. and Canadian boundaries. The commission is considering proposed changes to its Orders of Approval for the emergency regulation of Rainy and Namakan Lakes that have been recommended by the International Rainy and Namakan Lakes Rule Curves Study. The proposed changes focus on high flood-risk years for Rainy Lake, an expanded role for the Water Levels Committee of the International Rainy-Lake of the Woods Watershed Board, adaptive management, stakeholder concerns, and engagement with indigenous communities. Hearings are scheduled for Aug. 16, 2017, in Fort Frances, Ontario; Aug. 17, 2017, in Kabetogama and International Falls, Minn.; and Aug. 18, 2017, in Rainy River, Ontario. Comments are due Sept. 1, 2017. Contact: Frank Bevacqua; Department of State, International Joint Commission; 202-736-9024; bevacqauf@washington.ijc.org

82 FR 38755 (08/15/2017)

Regulatory Update

WATER
Texas/Galveston Area Anchorage
WATER

Proposed rule of the U.S. Coast Guard would establish a new 0.19 square mile anchorage area, known as Anchorage Area Alpha (A) East, in Bolivar Roads Channel near Galveston, Texas. The rule would provide for temporary use of the new anchorage by vessels of all types during conditions such as inclement weather and for purposes including transferring personnel. The Coast Guard specifies that the new anchorage would primarily be an overflow anchorage for vessels awaiting exam or inspection. Vessel anchoring would be restricted to prevent obstruction of the passage of other vessels proceeding to and from anchorage spaces in the area. Comments are due Oct. 16, 2017. Contact: Navin Griffin; USCG, Sector Houston-Galveston; 281-464-4736; Navin.L.Griffin@uscg.mil. Citations: 33 CFR 110.197

Subject: Interior IG ends investigation of Zinke's call to Murkowski

By Ben Lefebvre

08/30/2017 05:55 PM EDT

The Interior Department's inspector general ended the investigation into whether Interior Secretary Ryan Zinke broke ethics rules in calls to Alaska Republican senators last month over their votes to repeal Obamacare, calling the initial investigation "unproductive."

The IG's efforts foundered after Sens. Lisa Murkowski and Dan Sullivan declined to answer questions from the inspector general's office, Deputy Inspector General Mary Kendall said in an Aug. 29 letter to Reps. Raul Grijalva (D-Ariz.) and Frank Pallone Jr. (D-N.J.), who had called for the inquiry.

"Both Senators Murkowski and Sullivan declined to be interviewed or to provide statements regarding the matter," Kendall wrote.

Kendall also wrote that because the episode was "extensively covered" by news outlets, her office "does not believe that it could meaningfully investigate the matter further."

Zinke called Murkowski and Sullivan in July after Murkowski had voted against repealing Obamacare legislation. During the call, Zinke said Murkowski's vote could endanger President Donald Trump's support for energy projects important to Alaska.

Interior plays a big role in Alaska, where the federal government controls 61 percent of the land. Interior is reviewing a multitude of projects tied to Alaska energy development, including a possible opening of the Arctic National Wildlife Refuge for oil and gas drilling and allowing offshore oil drilling in currently off-limits Arctic waters.

A spokesman for the Democrat staff on the House Committee on Energy and Commerce, of which Pallone is ranking member, said the IG's decision to end the probe was "unfortunate."

WHAT'S NEXT: The GAO is also investigating Zinke's calls to the Alaska senators.

From: InsideEPA/climate
Sent: Wed 11/8/2017 10:21:26 PM
Subject: Today on Climate Beat

November 8, 2017

Today on Climate Beat . . .

. . . we tallied up the votes, reporting that Democrats had a good night in many key state elections yesterday, securing governor's mansions in Virginia and New Jersey and flipping the Washington state Senate, victories that could provide a boost to cap-and-trade programs to control greenhouse gases.

Speaking of states, a coalition of governors and other state officials plan to emphasize their progress on climate policies next week at the United Nations climate conference, arguing their presence is more important than ever after the Trump administration's rejection of the Paris climate accord.

In personnel updates, veteran climate change and energy lawyers and advisers from both sides of the political aisle are joining forces to launch a new consulting firm, the Coefficient Group, which will focus on unique approaches to climate policy, regulations and politics.

Out in court, the Bureau of Land Management (BLM) is asking a federal appeals court to reject environmentalists' efforts to force it to conduct a National Environmental Policy Act (NEPA) review of the climate impacts of coal leasing on federal lands, arguing that there is nothing in existing law that requires it to update a 1970s-era NEPA review.

And speaking of coal, the Clean Air Task Force is blasting what it says are the negative health impacts that would occur if federal energy regulators adopt a Trump administration plan that would subsidize coal and nuclear electricity, warning it would keep high-emitting coal plants running longer and lead to much more air pollution.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

August 23, 2017

Latest News

D.C. Circuit Requires Downstream GHG Reviews In Gas Pipeline Cases

A split appellate court panel is requiring energy regulators to assess the downstream greenhouse gas (GHG) impacts of natural gas pipelines, bolstering environmentalists who are seeking to block the projects and undercutting Trump administration efforts to ease reviews of the projects under the National Environmental Policy Act (NEPA).

5th Circuit Grants EPA Bid To Split Utility ELG Suit Pending Review Of Rule

A federal appeals court has granted EPA's request to split litigation over the Obama-era utility effluent rule by severing out and staying power companies' challenge to various parts of the rule while the agency reconsiders them, but an environmentalist says the decision creates confusion about which aspects of the suit can still proceed.

EPA Urges 9th Circuit To Dismiss Suit Over Rejection Of Chlorpyrifos Ban

EPA is urging a federal appeals court to dismiss environmentalists' lawsuit challenging the agency's denial of a petition to ban the commonly used pesticide chlorpyrifos, arguing that considering the case now would be “premature and inappropriate” because the agency is still reviewing administrative objections to the denial.

Environmentalists Sidestep D.C. Circuit In First Suits Over EPA's TSCA Rules

Environmentalists that have brought the first legal challenges to new EPA rules issued under the recently revised Toxic Substances Control Act (TSCA) have filed separate suits that sidestep the U.S. Court of Appeals for the District of Columbia Circuit, likely due to concerns that the court, which hears most challenges to EPA rules, would be more receptive to agency arguments.

Industry Looks Beyond Stay To Urge EPA Focus On Methane NSPS Revision

Even as EPA develops proposals to delay Obama-era methane limits for new oil and gas drilling operations, industry groups are looking beyond the stay to the agency's later process to reconsider the rule's requirements, reiterating prior critiques that they

say justify not only a two-year delay but also substantial revision to or rescission of the rule.

CRA Opponents Argue 'Vague' Limits On New Rules Justify Scrapping Law

Environmentalists are amending their lawsuit challenging the Congressional Review Act (CRA) to add claims that it is unconstitutionally vague for the law to bar EPA and other agencies from crafting new rules that are "substantially the same" as those struck down through CRA disapproval resolutions.

Daily Feed

Sen. Schatz urges Pruitt to drop appointee from grant reviews

"I fail to understand the beneficial role a political appointee, without any meaningful scientific background, could have in the grant review process," the senator said in a letter to Pruitt.

Former EPA transport chief criticizes autos' call for softer GHG rules

Margo Oge attributes automakers' push for greater regulatory flexibility to "the age-old conflict between short-term and long-term profits."

EPA sends Oregon aluminum water criteria for OMB review

EPA is moving closer to proposing water quality criteria to protect aquatic life in Oregon from aluminum, as required by a consent decree with environmentalists.

D.C. Circuit agrees to continue stay of trailer GHG rule suit

The court also asked parties to file motions to govern future proceedings by Sept. 18.

Ewire: Drillers' study seeks to exempt marginal wells from methane NSPS

Energy industry launches study to exempt marginal wells from NSPS. Plus: environmentalists bolster VOC monitoring.

EPA opposes summary vacatur of landfill methane pause

EPA sidesteps the merits of environmentalists' arguments, charging instead that the petitioners lack standing and have not shown how the "fleeting" pause will harm them.

Subject: BREAKING NEWS: Senate Republicans pass budget measure, clearing route to tax overhaul

Senate Republicans on Thursday passed a budget measure that will unlock the route to a sweeping tax overhaul, giving the GOP a sorely-needed victory after other pieces of their legislative agenda collapsed earlier this year.

After a shortened vote-a-rama, the Senate passed the fiscal 2018 budget on a 51-49 vote.

Subject: Grassley talks to Trump, meeting with Pruitt being planned

By Eric Wolff

10/02/2017 02:37 PM EDT

Sen. Chuck Grassley is working to arrange a meeting with EPA Administrator Scott Pruitt at the behest of President Donald Trump to discuss the Renewable Fuel Standard, according to a Grassley spokeswoman.

The Iowa Republican spoke with Trump on Friday about the program, Grassley Spokeswoman Jill Gerber told POLITICO.

"President Trump has asked Administrator Pruitt to meet with Sen. Grassley to discuss the issue and we are working on scheduling a meeting," Gerber said in an email.

Grassley has been on the warpath over last week's EPA notice suggesting it may use waiver authority to cut the amount of biomass-based biodiesel that would be required to blend into the nation's fuel system in 2018, a year that was already finalized. The agency also asked for comment on setting biodiesel volumes as low as the legal minimum of 1 billion gallons for 2019, a steep reduction from the 2.1 billion gallons proposed in July.

Grassley issued a blistering statement and tweeted, "Trump promised 2b pro biofuels & pro rural America/Pruitt RFS proposal =anti biofuels &anti rural America / EPA not doing what @POTUS said." Biodiesel and ethanol producers also slammed the notice.

EPA spokeswoman Liz Bowman said Pruitt "has spoken with Senator Grassley about RFS at length" and that the two "will continue to work together on this issue going forward."

WHAT'S NEXT: EPA will soon publish the biomass-based biodiesel notice in the Federal Register, opening a 15-day comment period.

September 28, 2017

Today on Climate Beat . . .

. . . we focused on the courts, reporting that appellate judges have rejected environmentalists' request to quickly vacate EPA's implementation delay of its methane rule for new and existing landfills, suggesting it might dismiss the challenge entirely because the agency's delay expired last month.

Also in litigation, a coalition of 11 states led by California is supporting a bid by environmentalists and two chemical makers for the U.S. Court of Appeals for the District of Columbia Circuit to reverse a split panel ruling vacating EPA's rule to reduce hydrofluorocarbon refrigerants that act as potent greenhouse gases.

We previewed a speech by former EPA Administrator Gina McCarthy, who is slated to discuss the "present and future" of EPA at Columbia University, a speech in which she could defend Obama administration environmental steps while criticizing Trump officials' efforts to roll back climate and other rules.

And our daily news roundup looked at reports that EPA is proposing to slash payments to the Justice Department to aid in Superfund litigation, a move that could curb a range of environmental enforcement efforts.

Subject: Nov 6 PRG Energy Update: Tax Fax, ClearPath China Event, Climate Bonn-Bonn, More Energy Noms

Friends,

First off, our thoughts and prayers are with our friends in Texas as they deal with this weekend's terrible incident. It puts a damper on the earlier celebrations for our Houston/Texas colleagues' World Series Game 7 victory and parade last week for the Astros in what ended up being a thrilling World Series (that makes two-in-a-row.) And even with last week's New York terrorist's attack, the NYC Marathon went on without a hitch with Shalane Flanagan becoming the first American women to win in 40 years.

The tax bill has rolled out and is expected to see action this week. We have a bunch of good "Tax Fax" in the update below, but bottom-line, my colleague Liam Donovan has **ALL the bases** covered and will be happy to discuss "on-" or "off-the-record" as the action continues. You can reach him at 202-828-5847 or liam.donovan@bracewell.com. And, finally we have a full FERC, with final Senate approval of Rich Glick and Kevin McIntyre late Thursday and "Swearing-In" ceremonies expected this week.

The next UN climate change conference starts today (and runs through next Fri) in Bonn, Germany and there have been plenty of stories about Friday's climate report. While interesting and comprehensive, it really doesn't add much more than we've heard before, doesn't consider significant policy or political challenges and change that the US has been reducing emissions dramatically through market and technology advances. Something to remember.

As for the meeting, it is a working meeting so don't expect a big splash. The Business Council for Sustainable Energy (BCSE) industry members are sharing the progress of the rapid transformation that is occurring in the energy sector in the United States. It will also showcase how the suite of existing clean energy solutions can help take that transformation around the world, and help meet a country's nationally-determined contribution (NDC) under the Paris Agreement. The Chamber's Global Energy Institute and its climate expert Steve Eule participates in a side event on Wednesday sponsored by the international business community.

We starting the week off today with a ClearPath event focused on US-China Clean Energy issues at 11:30 a.m. in CVC Congressional Meeting Room North. Given the President's trip to China and upcoming trade issues in the news, this seems like a great time to hear some key experts, including Congressman Ryan Costello, ClearPath's Rich Powell and Christopher Guith of Chamber's Global Energy Institute. Amy Harder of Axios moderates. For those unable to attend this morning's event, there will be a livestream. Speaking of trade, check out the *WaPo* editorial today urging President Trump to reject strong solar tariffs.

Tomorrow, House Energy looks at ENERGY STAR and features AHRI Chairman Chris Drew testifying. Also, House Resources takes up broad offshore energy legislation that will attempt to define parameters for wind and oil/gas projects with a hearing tomorrow and mark up on Wednesday.

The next big nomination hearing is Wednesday for CEQ nominee Kathleen Harnett-White and EPA #2 Andy Wheeler. I don't even know what to say other than put your seatbelts on because of the expected turbulence. Dems will oppose both aggressively over views on climate while ethanol Republicans Deb Fisher and Joni Ernst are smarting over Harnett's positions on ethanol and the recent retaliatory hold on a USDA nominee they support. House Science also discusses geoengineering.

Then on Thursday at 9:30 a.m., our friends at SAFE host a forum and release their trucking industry trend report, "Heavy-Duty Innovation: Energy, automation, and technology in the trucking sector." SAFE's Jeff Gerlach, as well as a number of industry experts including the American Trucking Assn's Bill Sullivan will discuss how the trucking industry is changing, and the regulatory measures that should be taken to enable a safer and more efficient trucking future.

Finally, our friends at AGA launched the #CookingWithGas campaign recently with Chef Fitz Tallon from Eataly Flatiron in New York. AGA is traveling around the country meeting professional chefs and talking to them about why they prefer cooking with gas. Check out the video of Tallon talking about why he prefers #cookingwithgas.

Call with questions. Tomorrow is Election Day in many places including Virginia and New Jersey. Please vote…Best,

Frank Maisano

THIS WEEK'S LOBBY SHOP

The new episode of *The Lobby Shop* is live on iTunes, SoundCloud, and Google Play Music. This episode is very brief (14 minutes) and covers the House tax bill released Thursday morning. It's a great opportunity to subscribe to the podcast on whatever platform you prefer – this episode is pretty quick and not a deep dive, but we will be doing more nitty-gritty analysis in future episodes. Remember our address for listeners to reach out with topic suggestions, feedback, etc. – thelobbyshop@policyres.com.

FRANKLY SPOKEN

"Mr. Trump clearly believes that the government should restrict Americans' freedom to trade. But agreeing with the complainers in this case would obviously contradict his avowed motive — to support middle-class U.S. jobs. The risks of helping a narrow slice of the industry at the expense of the rest of it simply outweigh the benefits."

Washington Post Editorial Board on the upcoming solar tariff decision in front of President Trump.

"This proposal reneges on the tax reform deal that was already agreed to, and would impose a retroactive tax hike on an entire industry. The House proposal would pull the rug out from under 100,000 U.S. wind workers and 500 American factories, including some of the fastest growing jobs in the country. We expect members of the House and Senate to oppose any proposal that fails to honor that commitment, and we will fight hard to see that wind energy continues to work for America."

Tom Kiernan, CEO of the American Wind Energy Association (AWEA).

TAX FAX

Tax Reform Rolling – House Republicans released a tax-reform bill today that would cut the corporate tax rate to 20% from 35%. The plan also includes cuts to individual tax rates and increases the standard deduction for individuals and families. Retirement plans including 401(k)s appear to be untouched and the top tax rate for wealthy Americans would remain the same. My colleague Liam Donovan has **ALL the bases** covered and will be happy to discuss "on-" or "off-the-record." You can reach him at 202-828-5847 or liam.donovan@bracewell.com

Wind Has Concerns – The House tax bill raised the ire of the wind industry who said reneging on the previous deal would threaten American job growth and energy dominance. By derailing a bipartisan agreement to phase out the wind energy Production Tax Credit (PTC), the House proposal strips away the investment certainty Congress promised wind developers just two years ago. The proposal puts at risk over $50 billion in planned investment supporting manufacturing, rural jobs and homegrown energy growth. The wind industry worked with Congress in 2015, reaching a bipartisan agreement on tax reform that phased out the PTC over five years. Investors, taking Congress at their word, banked on stable investment policy and poured billions of dollars into the U.S. economy.

What's the PTC Controversy? – The wind energy PTC, which allows for a tax credit for each kilowatt hour (kWh) generated, was the tool Congress created for wind developers to access capital needed to grow wind power in the U.S. This successful policy has driven domestic infrastructure investment and manufacturing, delivering U.S. jobs and driving down the costs to produce electricity. Recognizing the policy was working and success was near, Congress passed a bipartisan five-year extension and phase out of the credit in 2015, which is proceeding on an 80%-60%-40% schedule, ending after 2019. The bill changes the terms of PTC qualification defining start of construction. Investors who put billions of dollars into factory orders and construction contracts cannot go back in time to meet the revised requirements. The House tax proposal would also terminate an inflation adjustment, cutting the value of the credit by half or more.

Navigant Study Says Roll Back Risks 50K Jobs – Navigant Consulting projects that maintaining stable investment policy through the five-year PTC phase out will create $85 billion in economic activity and help grow another 50,000 American jobs, including 8,000 jobs at U.S.

factories, through the end of President Trump's first term. Boosting production of U.S. wind energy helps increase American energy independence and security. The majority of the value of an American wind farm is made-in-the USA by 102,500 workers and 500 factories across all 50 states. View a map of every wind farm and factory in America.

CCS Says Include 45Q – A diverse, bipartisan group of carbon capture advocates today called on the Senate Finance Committee to include legislation to extend and reform the Section 45Q of the tax code to boost carbon capture in any tax plan considered by the committee. The letter specifically calls for inclusion of the FUTURE Act, legislation introduced in July by Senators Heidi Heitkamp, Shelley Moore Capito, Sheldon Whitehouse, John Barrasso and 21 other Senators from both parties, in the Senate Finance Committee Chairman's Mark. The letter was signed by companies, labor unions, NGOs and other advocates including Occidental, Peabody Energy, Utility Workers Union of America, IBEW, NRECA, Clean Air Task Force, C2ES, ClearPath and many others.

Orphans are Included – The "orphan" tax credits – credits left out of the 2015 wind/solar PTC deal – were also in the tax bill, mirroring language found in Rep. Tom Reed's H.R. 1090, which extends the residential and commercial tax credits until January 1, 2022 for geothermal heat pumps, fuel cells, microturbines, small wind and combined heat and power. The residential income tax credit would be retroactive back to January 1, 2017 at 30% and continue at that level until 2020 when it would drop to 26% and then at 22% for 2021 and end December 31, 2021. The 10% commercial investment tax credit would be extended until January 1, 2022 and change the language for placed in service to "property the construction of which begins before January 1, 2022." Thousands of jobs among geothermal and other "orphaned" clean energy industries are in jeopardy and GHP manufacturers alone saw a sales decline significantly this past year.

Advanced Nuclear Credit Included In Tax Reform – The tax reform plan also includes a modification to the 45J tax credit for production from advanced nuclear power facilities that is vital to the expansion of the U.S. fleet. It at least largely mirrors a bipartisan bill from Reps. Tom Rice and Earl Blumenauer lawmakers approved by voice vote in June modifying the credit to allow more time for the nation's new reactors under construction to utilize the credit and allow transferability of the credit to other partners of the utilities.

A GOOD READ on Winners, Losers – Energy Winners, Losers in House Tax Plan: **WASHINGTON EXAMINER**

IN THE NEWS

BCSE to Release Priorities Paper at COP23 – The Business Council for Sustainable Energy released a policy paper today that outlines its COP 23 priorities as the meeting launches in Bonn. The Council released the final version of the BCSE COP 23 policy position paper, Powering Ambition at COP 23. The BCSE at COP 23 website is also live: www.bcse.org/cop23. This page will include all of BCSE events, public statements, delegation information and case studies of clean energy in action.

Vistra Head on CNBC's *Mad Money* – Last Week, we mentioned the Vistra-Dynegy merger and later in the week on CNBC's *Mad Money*, Curt Morgan discussed the deal with Jim Cramer, who called the deal a "game-changer." Morgan highlighted the national focus and diverse fuel mix that the new company will have and said it will be strong in both low and high gas price environments.

Chamber Highlights Efforts to Restore Power After Hurricanes – Speaking of videos, the Chamber's Global Energy Institute released a series of videos last week looking at during and after Hurricanes Harvey and Irma, everyday Americans assumed the role of first responders as their family and friends faced sheets of rain, catastrophic flooding and destructive winds. In its new video series titled **"Energy Strong"** GEI highlights the many ways America's energy industry stepped up and responded.

GA Lawmakers Urge Nuclear Tax Credits – Georgia lawmakers are asking for an extension on tax credits for the Vogtle nuclear plant expansion project. All but two members of the state's House delegation sent a letter to the head of the House Ways and Means Committee last week.

They want the tax plan to include a measure that would lift the 2020 expiration date on a tax credit for new nuclear energy production. Two reactors at Vogtle now under construction won't be up and running until after that deadline.

Biotech Company to Protect Palm Trees, Dates – ISCA Tech and the University of California-Riverside scientists will work to develop environmentally-friendly pest controls to save California's iconic palm trees and protect the date palm industry from the invasive South American palm weevil. With a new grant from the Foundation for Food and Agriculture Research (FFAR). FFAR is a nonprofit established in the 2014 Farm Bill with bipartisan congressional support, today awarded $150,000 to fund research to combat this emerging pest. The FFAR grant is being matched by funds from UCR, ISCA, California Date Commission, and the Bard Valley Medjool Date Growers Association, for a total $300,000 investment in

addressing this pest. The South American palm weevil first spread from Mexico's Tijuana area into San Diego County in 2011, where it is now killing Canary Island date palm trees. Surveys also have detected the weevil in California's Imperial County, as well as in the Yuma, Ariz., and Alamo, Texas counties. At risk are several palm species, including commercial date trees that contribute about $89 million a year to California's and Arizona's economies. Other at-risk palms include Canary Islands date, coconut, African oil, sago and California fan palms. The national market for landscape, decorative and potted palm trees is valued at more than $280 million a year.

IAEA Head Says Speed Up Nuke Projects – The global nuclear power industry needs to accelerate growth to satisfy the world's energy demands and contribute to climate change goals, International Atomic Energy Agency Director General Yukiya Amano told the International Ministerial Conference on Nuclear Power in the 21st Century. "More use of nuclear power will be needed to provide the steady supply of baseload electricity to power modern economies if countries are to meet the goals for greenhouse gas emissions which they set for themselves in the Paris Agreement," he said

ON THE SCHEDULE THIS WEEK

Climate Change Meeting Set for Bonn – The next UN climate change conference is scheduled to be held starting today and run through November 17th in Bonn, Germany, which is home to the climate change secretariat and 18 other UN agencies that will be hosting the conference. Presided over by the government of Fiji, COP 23 is slated to be a "working COP", as negotiators continue to develop the Paris rulebook—the rules and working processes that will underpin the Paris Agreement's implementation. With respect to the rulebook, no major decisions are expected to be made before 2018. The Business Council for Sustainable Energy (BCSE) will lead a delegation of its industry members to COP 23. The Council will participate in COP 23 to share the progress of the rapid transformation that is occurring in the energy sector in the United States. It will also seek to showcase how the suite of existing clean energy solutions can help take that transformation around the world, and help meet a country's nationally-determined contribution (NDC) under the Paris Agreement. The Chamber with its Climate expert Steve Eule also participates in an event on Wednesday sponsored by

Forum to Look at Energy Trends –The German Marshall Fund of the United States hold a conference today that will examine energy trends through three different lenses. The first session will examine the recent efforts, supported by the U.S. and the EU, to reform energy sectors in Black Sea states, notably but not exclusively in Ukraine and Georgia. Second, a panel of experts will discuss the ever-shifting energy politics of the broader Eurasia region, from Central Asia to

the Black Sea and beyond. Finally, the conference will feature keynote remarks by Ambassador Mary Warlick, Acting Envoy and Coordinator for International Energy Affairs, Bureau of Energy Resources.

Women Renewable Energy Forum Set – The Women of Sustainable Energy and Renewable Industries (WRISE) Leadership Forum 2017 tomorrow and Wednesday in its inaugural year under the new brand (previously WoWE). Co-located with the AWEA Fall Symposium, this event will feature keynote speakers, professional development, networking, and expert panels on key issues in the industry.

Fuel Cell Expo Set – The Fuel Cell Seminar and Energy Expo will be held tomorrow through Thursday in Long Beach, CA. Hear from top names in industry and government, including Plug Power CEO Andy Marsh; NASEO Executive Director Dave Terry; California Energy Commissioner Janea Scott; NCSL Energy Director Glen Anderson; Division Chief, CARB Annette Hebert and more. There will be more than 180 Technical Sessions and more than 40 Posters on Wednesday and Thursday afternoons by our industry's top researchers, scientists, and speakers. Session tracks will cover a wide-range of topics including international, state, regional hydrogen infrastructure plans, technology advances, transportation deployment, hydrogen generation and energy storage

House Energy Panel to Look at ENERGY STAR – The House Energy Committee will look at ENERGY STAR and other efficiency programs tomorrow. Expects experts from enviro groups, AHRI and other sustainability groups to weigh in. AHRI Chairman Chris Drew will say there is a strong industry preference to retain both the product program and the buildings programs at EPA and that the program needs adequate funding preserved, among other items. Others testifying include ASE's Kateri Callahan, Doug Johnson of the Consumer Tech Association, AHAM's Joe McGuire and Greg Merritt of Cree.

GU Presenter to Discuss China, Wind – Georgetown's Mortara Center for International Studies will present at this Energy and Climate Policy Research Seminar tomorrow at 12:30 p.m. with Julia Kirch Kirkegaard, a postdoctoral researcher at Stanford Business School. She has studied the role of global innovation networks in China's wind turbine industry, the case of Chinese industrial upgrading within the green energy sector, the societal acceptability of wind power (in Denmark and China), and contestations over expertise and science communication. In her research at Stanford, she is investigating the role of expertise and experts in the emergence of R&D and innovation networks.

House Resources Looks OCS Drilling Draft – The House Natural Resources Energy and Mineral Resources Subcommittee holds a hearing tomorrow at 2:00 p.m. on Outer Continental Shelf Discussion Draft. The draft legislation aims to distribute revenues from oil and gas leasing on the Outer Continental Shelf to certain coastal States, to require sale of approved and scheduled offshore oil and gas leases, to establish offshore wind lease sale requirements, and to empower States to manage the development and production of oil and gas on available Federal lands. Witnesses will include Ray Brady of the Argonne National Lab, North Dakota Industrial Commission Director Lynn Helms, David Holt of the Consumer Energy Alliance and the Tulane Energy Institute's Eric Smith. Mark up will follow on tomorrow and Wednesday.

AWEA Fall Symposium Returns to New Mexico – AWEA hosts its annual Fall Wind Energy Fall Symposium tomorrow through Thursday at the Hyatt Regency Tamaya Resort**,** where key strategic decisions are made to build the future of wind energy. The event will feature new executive insights, and actionable strategic plans to power your business in the upcoming year.

NEI's Korsnick Headlines Stimson Forum – The Stimson Center hosts a forum tomorrow at 5:00 p.m. on re-energizing nuclear security. Nuclear security is out of the spotlight since the end of the Nuclear Security Summit series. This forum will look at the future of nuclear development and how can industry, civil society, and international organizations facilitate the outstanding Security Summit commitments. This event is an on-the-record discussion of trends in the nuclear industry and security and marks the official launch of a new Stimson publication: "*Re-energizing Nuclear Security: Trends and Potential Collaborations Post Security Summits.*" Panelists include NEI CEO Maria Korsnick, Canadian Nuclear Association CEO John Barrett and Frank Saunders, Vice President of Nuclear Oversight and Regulatory Affairs at Bruce Power.

Wheeler, Harnett-White Set to Go to Senate Environment – Senate Environment will hold a confirmation hearing on Wednesday for Kathleen Hartnett White's nomination to run the White House Council on Environmental Quality. It will also address the confirmation of Andy Wheeler to serve as EPA deputy administrator at the same time.

House Science Looks at GeoEngineering – The House Science Committee's Energy Subcommittee and Environment Subcommittee hold a joint hearing on geoengineering innovation, research and technology. discussion draft legislation to "Overhaul Federal Lands Energy Policy" to distribute revenues from oil and gas leasing on the Outer Continental Shelf to certain coastal States, to require sale of approved and scheduled offshore oil and gas leases, to establish offshore wind lease sale requirements, and to empower States to manage the

development and production of oil and gas on available Federal land, and for other purposes. Witnesses include Phil Rasch of the Pacific Northwest National Laboratory, Joseph Majkut of the Niskanen Center, Cornell's Douglas MacMartin, and Kelly Wanser of the University of Washington.

ITC to Look at Biodiesel Tariffs – The U.S. International Trade Commission holds a hearing Thursday at 9:30 a.m. on the final phase of countervailing duty and anti-dumping duty investigations regarding biodiesel from Argentina and Indonesia.

SAFE Forum to Highlight Release of Trucking Report – On Thursday at 9:30 a.m. at The Loft at 600 F, Securing America's Future Energy hosts a forum and releases its trucking industry trend report, "Heavy-Duty Innovation: Energy, automation, and technology in the trucking sector." The trucking sector is a backbone of the American economy. 70% of the nation's freight, representing more than $725 billion in annual revenue, are moved by the trucking industry. Freight levels are forecast to grow more than 40% by 2045, and energy and oil use are set to rise by 20% in the next 25 years. New technologies offer an opportunity to dramatically improve the safety and efficiency of the trucking sector. Connectivity and platooning, advanced driver assistance systems, and design modifications are already creating opportunities to save lives and fuel while reducing costs, but regulatory changes are necessary to enable the industry and American economy to benefit. SAFE's Jeff Gerlach, as well as a number of industry experts including the American Trucking Assn's Bill Sullivan will discuss how the trucking industry is changing, and the regulatory measures that should be taken to enable a safer and more efficient trucking future.

Chatterjee Hits Platts Presser – S&P Global Platts hosts its Energy Podium forum on Thursday at 11:00 a.m. with FERC Chairman Neil Chatterjee. Chatterjee will discuss a broad range of issues facing the Commission with Platts reporters and other press.

CSIS to Host Africa Power Panel – CSIS hosts a public panel discussion Thursday looking at the lessons that can be learned from Power Africa. The Obama Administration's Power Africa Initiative was arguably one of the more intriguing innovations in development in recent years. Described as an initiative that brings "together technical and legal experts, the private sector, and governments from around the world to work in partnership to increase the number of people with access to power", Power Africa has been an attempt to work more effectively between various government agencies. It also operated under the assumption that Africa presented both development challenges and business opportunities for American workers and companies. Following the welcome remarks from Daniel F. Runde, and the opening remarks from Jennifer G. Cooke, our expert panelists will assess Power Africa's progress and look for opportunities to

scale and replicate the initiative to other sectors and geographies.

GW to Hold Book Launches, Panels – George Washington University holds two book Launches on Thursday. At Noon, authors will discuss their findings and conclusions on energy security debates in China, India, Japan, Russia and the political economy and transit security of the region. Then at 5:00 p.m., the Brazil Initiative and the Institute for International Science and Technology Policy hold a book launch and guest lecture by Dr. Sergio Salles, with Dr. Nicholas Vonortas as discussant on bioethanol evolution, risks and uncertainties.

IN THE FUTURE

NARUC Annual Meeting to Dig Into Issues – Next week, the National Assn of Regulatory Utility Commissioners (NARUC) will hold its 129th annual meeting at the Hilton Baltimore and will feature panels on energy policy, telecommunications, and other utility topics are issues at the forefront of trade and mainstream news. The event will feature stakeholders, informed experts, representatives from industry, federal policymakers, and dedicated state regulators for robust, timely discussions. Key speakers include Montana PUC Commissioner Travis Kavulla, FERC Commissioner Robert Powelson, former Commissioners Marc Spitzer and Tony Clark, DOE's Travis Fisher and many others.

Solar Trade Breakfast at NARUC – The Solar Energy Industries Association and Cypress Creek Renewables holds a breakfast panel discussion next Monday morning on the Solar Section 201 trade petition on imported solar components. The event discussed the effect of the ITC ruling on the $23 billion U.S. solar industry, which employs 260,000 American workers in good-paying jobs including manufacturers, is unmistakable. It would decimate one of the least expensive energy sources in America by doubling the price of solar panels in the U.S., thereby crippling demand, diminishing local investment and costing up to 88,000 jobs across the country. The panel includes GA PSC Chair Lauren "Bubba" McDonald, utility representatives and exec and developers working with rural cooperatives.

Forum to Look at CAFE, High Octane Fuels – Next Monday, the Environmental and Energy Study Institute (EESI) will hold a briefing in 106 Dirksen examining how high-octane, low-carbon fuel can enable CAFE compliance. Research suggests that high-octane, low-carbon fuel is the lowest-cost compliance option for both consumers and the automotive industry. Speakers for this forum are NREL's Robert McCormick, Oak Ridge National Lab's Brian West, Dean Drake of the Defour Group and Andrew Varcoe of Boyden Gray & Associates. Higher-octane, low-carbon fuels enable greater engine efficiencies, thereby lowering GHG and toxic emissions and improving fuel economy. Automotive engineers have expressed interest in raising the octane

level of gasoline, which would enable the design and sale of these more efficient engines, but the administration must act to enable a viable pathway for these fuels to enter the marketplace.

USEA Forum to Discuss CURC Study – Next Monday at 2:00 p.m., the US Energy Association and the Carbon Utilization Research Council (CURC) hold a forum on CURC's recent CCS study analyzing options to overcome barriers to large-pilot projects for power plants equipped with CCS. The purpose of the report was to study innovative options for governments and industry to fund projects that test coal-based power generation and carbon capture, utilization and storage technologies at the large-pilot scale. The panel discussion will provide an overview of the key findings of the report and an illustration of current case study examples of international collaboration by industry stakeholders and governments. Panelists include CURC's Shannon Angielski, DOE's John Litynski, Frank Morton of the National Carbon Capture Center, Chris Romans of Mitsubishi Heavy Industries America and Don Stevenson of the Gas Technology Institute.

Forum to Look at Venezuela Oil – Next Tuesday at 9:00 a.m., the Atlantic Council's Adrienne Arsht Latin America Center and Global Energy Center holds a timely conversation on Venezuela's declining oil industry, the increasing presence of Russia and China in the country, and what lies ahead. Keynote remarks will be offered by House Energy & Commerce member Jeff Duncan.

JHU to Discuss Nuclear – The Johns Hopkins University holds a forum on Tuesday November 14th at 5:00 p.m. looking at the status and prospects for U.S. Nuclear Power. Westinghouse, a leader in the industry, entered bankruptcy and two reactors that were under construction in South Carolina have been abandoned because of cost overruns. The US still has not solved the problem of long term storage of high level nuclear waste. An interesting possibility for the future is the development of advanced nuclear reactors that would be smaller, safer and cheaper to build. These and other issues will be discussed by speaker, NEI's Matthew Crozat.

Forum to Look at Energy – On Wednesday Morning, *Roll Call* will host a forum on energy called Energy Decoded at the Newseum. Roll Call Live, in partnership with CQ News hosts a packed morning of expert analysis and bipartisan discussion to examine the many questions that energy stakeholders and policymakers will face in the new administration. Topics will include the future of climate policy, energy tax reform, coal and domestic oil production and renewable energy initiatives. Speakers will include FERC Chair Neal Chatterjee, Sen. Joe Manchin and our friend Jeanette Pablo, among others.

ITIF to Look at ARPA-E – The Information Technology and Innovation Foundation (ITIF) holds a discussion on Wednesday at 10:00 a.m. looking at ARPA-E's versatile role in clean energy innovation featuring a new study on the topic. Authors David Hart and Michael Kearney, along with an expert panel of energy innovators and thought leaders discuss.

WRI to Discuss Powering Cities – On Wednesday, November 15th at Noon, the World Resources Institute hosts Michael Westphal to present his paper on energy access - another chapter of the World Resources Report: Towards a More Equal City. Millions of residents in some of the fastest growing cities in the world don't have access to clean, reliable energy, and the challenge of reaching them is not getting easier. In 2012, only 58 percent of the urban population had access to electricity in low-income countries, and nearly 500 million urban residents worldwide used dirty and harmful cooking fuels like charcoal and wood.

Forum on European Gas Projects Set – On Wednesday afternoon November 15th, Carnegie Endowment for International Peace hosts the Jamestown conference on "Nord Stream and European Energy Security." It will provide a detailed and comprehensive analysis of the Russian objectives, European responses, and American policies related to this large project.

Forum to Discuss Brazil Oil, Gas – The Wilson Center's Brazil Institute hosts a forum on Thursday November 16th at 10:00 a.m. looking T pre-salt auctions in Brazil's oil and gas industry. The Director-General of ANP, Decio Fabrício Oddone da Costa, will discuss the objectives of Brazil's new regulatory framework for the oil & gas policy.

Webinar to Look at EVs – National Journal holds webinar on Thursday November 16th at 11:00 a.m. on the rise of electric vehicles. The webinar will examine the industry's history, development and future, and address the major players and policymakers and what policies have fostered the industry's growth so far, and which state and federal actions could help—or hinder—its development. It will also look at how the Trump administration's deregulatory drive impact the development of EVs in the US, as well as the feasibility of the ambitious goals laid out by countries like France and India.

Clark to Headline USAEE Lunch – On Friday, November 17th, the NCAC of the US Assn of Energy Economists host its November lunch with former FERC Commissioner Tony Clark at Chinatown Gardens. Clark will discuss the forces that are shaping electricity markets today, with an emphasis on the implications of the regulatory crossroads of federal jurisdiction and state

public policy choices.

USTR Comment Deadline on Solar Trade Case – November 20th

THANKSGIVING – November 26th

EPA to Hold CPP Public Hearing in WV – EPA will hold a public hearing regarding the withdrawal of the Clean Power Plan in West Virginia on Nov. 28th and 29th. EPA said it will convene two daylong sessions at the state capitol in Charleston. The agency said it "may also hold an additional hearing to be announced at a later date." EPA also extended the comment period on the proposal to Jan. 16, 2018.

CCS Report to be Released – The Global CCS Institute will release its annual *Global Status of CCS: 2017* report launch on November 28th, 2017. This year, the Institute is partnering with one of the top think tanks in the city, the Center for Strategic and International Studies, to promote and discuss the release of the Institute's signature report, the globally recognized annual guide to the current progress and prospects for carbon capture and storage.

NYT to host Climate Summit – On November 29th and 30th in San Francisco at the Metreon, *The New York Times* will hold ClimateTECH, a groundbreaking summit that brings together influential leaders from key industries to assess bold, cutting-edge technologies that could help keep global warming below the two-degree threshold. Hosted by top Times journalists, ClimateTECH's focus on innovation will also encompass the dramatic changes downstream (in finance, policy, consumer behavior, infrastructure) that are vital for these new technologies to gain adoption and succeed. The program will feature on-stage interviews with celebrated entrepreneurs and inventors along with policy makers, economists and subject-matter experts. Designed for an audience of decision-makers, ClimateTECH will also include an early-stage technology showcase of the newest innovations, along with other experiential activities. The Speaker list is long, but it includes California Gov. Jerry Brown, Statoil's Irene Rummelhoff, Chicago Mayor Rahm Emanuel, Tom Steyer and many others.

RFS RVO Deadline – November 30th

USTR Hearing on Solar Trade Tariff – December 6th

***The Last Jedi* Hits Theaters** – DECEMBER 15th

Subject: POLITICO's Morning Score: War Eagle worries for Luther Strange — Pence PAC rakes in corporate money — Democratic AGs aim to spend $15M

By Kevin Robillard | 09/25/2017 10:00 AM EDT

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

WAR EAGLE - "Strange in trouble in Alabama, White House and GOP fear," by Alex Isenstadt in Birmingham: "Top administration officials and allies of Senate Majority Leader Mitch McConnell have spent days poring over public and private polling that shows Moore consistently leading Strange, though the race has tightened, say those familiar with the numbers. On his way to Huntsville on Air Force One Friday to campaign for Strange, President Donald Trump was joined by a small team of aides that included Rick Dearborn, a veteran of Alabama politics, and Bill Stepien, the White House political director. Both aides, as well as a number of other administration officials, have privately expressed apprehension about the state of the race. Stepien brought a sheaf of the latest polling data. ... Much of the assault [on Moore] has played out on the air. During the final week of the contest, a trifecta of pro-Strange GOP groups - the Senate Leadership Fund, U.S. Chamber of Commerce, and National Rifle Association - flooded the state with about $2.5 million in TV and radio ads. ... Moore was confronting a nearly five-to-one spending deficit on the airwaves, according to media buying totals provided to POLITICO. ... The McConnell-controlled National Republican Senatorial Committee, which has spent over $1 million on the race, dispatched more than two dozen staffers to Alabama to knock on doors and make calls to voters during the final two weeks of the contest. The NRA, which has a large constituency in the Deep South state, contacted its members and urged them to turn out for Strange while describing Moore as unreliable on gun rights. The group sent out fliers telling them not to 'waste' their vote on Moore." **Full story.**

- From the New York Times' Jonathan Martin: "'I think they'll go after that seat,' [Alabama Sen. Richard] Shelby said of the Democrats' approach should Mr. Moore win on Tuesday. That is less likely if Mr. Strange captures the nomination, he said. 'If Luther wins, he's in.' The Senate Democratic campaign arm has lined up a pollster to test Mr. [Doug] Jones's strengths and Mr. Moore's vulnerabilities. And Alabama Democrats are openly rooting for the former judge." Full story.

-For your radar: Vice President Mike Pence will hold a rally for Strange tonight in Birmingham. Steve Bannon and Phil Robertson of Duck Dynasty fame will appear at a rally for Moore.

- WHAT HAPPENED FRIDAY NIGHT: A Republican source said they distributed 21,437 tickets to the rally, and a fire marshal shut down the event when they reached capacity of 7,513. The crowd in Huntsville heard a lot of campaign punditry from Trump, in addition to the

president's now-famous call for football players who kneel during the National Anthem to protest racism to lose their jobs. Here are some of Trump's thoughts on Strange and Moore: "I might have made a mistake [endorsing Strange]. I'll be honest, I might have made a mistake. ...

I told Luther, and I have to say this, if his opponent wins, I'm going to be here campaigning like hell for him. ...

Luther will definitely win. ...

Roy has a very good chance of not winning in the general election. Luther's going to win easily and Roy's going to have a hard time winning, but I will be backing him if he wins."

- "They love Donald Trump in Alabama - but they still might not vote for his Senate candidate," by the Washington Post's Jenna Johnson in Huntsville: "Many of those who showed up to the president's rally in this northern Alabama city - home to NASA's Marshall Space Flight Center - said they firmly support the president and were excited to see him. But they did not plan to follow his recommendation to vote for Strange. ... 'To attend the rally, you had to confirm that you were voting for Luther Strange. . . . I'm not voting for Luther Strange, I can tell you that right now. I'm voting for Roy Moore,' said Adina Peyton, 55, an enthusiastic supporter of the president who lives in the area and teaches college students. 'I like that [Moore] stands on his principle, even though he had to pay the price for it.' ... The crowd was dotted with red Trump campaign hats but few, if any, T-shirts, stickers or signs promoting Strange." **Full story.**

SOMETHING CORPORATE CASH **- "Pence group rakes in corporate PAC money," by Maggie Severns and Matthew Nussbaum:** "As President Donald Trump pushed away CEOs this summer, Mike Pence quietly pulled big business closer. The vice president's new political group raised money from at least three dozen corporate PACs in July and August. Some, like General Motors and Merck, gave to Pence's Great America Committee just days or weeks before their CEOs moved to dissolve Trump's business advisory councils after his controversial remarks on the violence in Charlottesville. The companies - including giants like AT&T, Boeing, FedEx and General Electric - are eager for access to the vice president and have embraced his leadership PAC as a way to win favor with the White House, according to interviews with a dozen Republican fundraisers and lobbyists with ties to the business community. ... [I]n July, when more than 50 lobbyists and corporate clients huddled in the downtown offices of the lobbying firm BGR Group with Marty Obst, one of Pence's top advisers, to discuss plans for the PAC. The meeting took place just before the unofficial launch of Great America Committee, which Pence hosted on a rooftop steps from the Capitol. BGR clients Eli Lilly and the American Beverage Association are among the corporations whose PACs have since cut $5,000 checks to Pence's group, the maximum allowed under federal campaign finance laws. ... One lobbyist with corporate clients that have given to the Pence leadership PAC said the vice president has 'done a good job meeting with people, and being that savior in the administration.'" **Full story.**

BIG MONEY - "Dems launch $15M campaign for lawyers to take on Trump," by Edward Isaac-Dovere: "Democratic attorneys general, aiming to take on the Trump administration on a growing number of fronts, are planning to spend $10 million to $15 million to elect more of their

own next year. ... The hope, according to sources familiar with the effort, is to catch up to the Republican Attorneys General Association, which ramped up its legal and political work during the Obama years, notching major successes on both counts. RAGA put $23 million into races in the past two years, helping win and hold 29 of the country's attorneys general offices. In addition to protecting incumbents, Democrats have identified top targets they want to capture - including in Ohio, Wisconsin and Nevada. And, banking on presumed Democratic-friendly trends in 2018, they're eyeing other states that will be tougher to flip." **Full story.**

Days until the 2017 election: 43. (Updated for 9/22)

Days until the 2018 election: 407.

Thanks for joining us! You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com, dstrauss@politico.com and mseverns@politico.com.

You can also follow us on Twitter: @politicoscott, @ec_schneider, @politicokevin, @danielstrauss4 and @maggieseverns.

The Doctor-Patient [and Government] Relationship - Join POLITICO for a three-panel event looking at how doctors, patients, caregivers and advocates can navigate complex decision-making - and what policy changes can help make sure that doctors and their patients can decide the best course and get access to innovative and cost-effective therapies. Speakers include **Sen. Bill Cassidy (R-La.), Sen. Jeanne Shaheen (D-N.H.), American Medical Association President David Barbe, M.D.** and more. ***Tuesday, Sept. 26 - Doors open at 8:00am - The Newseum. RSVP: HERE.***

HOT TOPIC - Morrisey one of few candidates to weigh in on athlete protests: West Virginia Attorney General Patrick Morrisey was one of few 2018 candidates to issue a statement after President Donald Trump said players who kneel during the National Anthem to protest racism should lose their jobs. Morrisey, a Republican challenging Democratic Sen. Joe Manchin , wrote: "#NFL players should be down on both knees thanking god they live in country allowing them to make millions while showing such disrespect." Alabama Sen. Luther Strange, in an interview with Fox News, agreed: "I think it was well received, I couldn't agree with the president more."

THE MONEY CHASE - "NRSC raised $2.1M, spent $2.8M in August," by Campaign Pro's Kevin Robillard: "The NRSC spent more than it raised for the second month in a row in August, according to FEC records, bringing in $2.1 million while spending $2.8 million. The group now has $15 million on hand, down from $15.8 million at the end of July and $16.2 million at the end of June. The group did make a $250,000 payment on their debt, which is now down to $10.75 million."

- "Behind New Obamacare Repeal Vote: 'Furious' G.O.P. Donors," by the New York Times' Carl Hulse: "As more than 40 subdued Republican senators lunched on Chick-fil-A at a closed-door session last week, Senator Cory Gardner of Colorado painted a dire picture for his

colleagues. Campaign fund-raising was drying up, he said, because of widespread disappointment among donors over the inability of the Republican Senate to repeal the Affordable Care Act or do much of anything else. Mr. Gardner is in charge of his party's midterm re-election push, and he warned that donors of all stripes were refusing to contribute another penny until the struggling majority produced some concrete results. 'Donors are furious,' one person knowledgeable about the private meeting quoted Mr. Gardner as saying. 'We haven't kept our promise.'" **Full story.**

-THE COST: One Republican familiar with the committee's fundraising said $5 million worth of donation pledges went up in smoke because of the committee's failure to repeal Obamacare.

BAWITWOMPWOMP - "RNC chair, Michigan Republicans doubt Kid Rock run," by the Detroit News' Jonathan Oosting: "Kid Rock continues making noise about the U.S. Senate race but has not made any serious off-stage overtures about a run, Michigan GOP officials and activists said Friday at the Mackinac Republican Leadership Conference. ... 'I have not spoken with Kid Rock, and he has not reached out to me,' said Republican National Committee Chairwoman Ronna Romney McDaniel, who ran the Michigan GOP before President Donald Trump tapped her for the national post. 'I just don't think he's running.' ... Former Ingham County GOP co-chair Norm Shinkle was among a small band of Mackinac conference attendees wearing 'Kid Rock for US Senate' T-shirts Friday but agreed that the potential for a Sen. Kid Rock is highly unlikely. 'Can you see Kid Rock sitting through a three-hour Senate committee hearing?' Shinkle said." **Full story.**

HOW TO GET THE PRESIDENT'S ENDORSEMENT - "How Bill Schuette scored an endorsement from President Donald Trump in governor's race," by MLive's Lauren Gibbons: "Schuette said the conversation started in February, when he attended a National Association of Attorneys General meeting in Washington, D.C. He said he ended up walking into the Oval Office next to the president, and the subject came up. 'I shared with him some of my plans and how I fought to make sure the election was preserved and that Jill Stein didn't steal it, and that I didn't desert or jump ship. I stuck with our Republican team,' he said." **Full story.**

OL' VIRGINNY - "IMGE Insights poll gives Northam small lead in Virginia," by Campaign Pro's Kevin Robillard: "GOP firm IMGE Insights and Pfizer are out with a new poll of the Virginia governor's race, giving Democratic Lt. Gov. Ralph Northam 45 percent of the vote to Republican Ed Gillespie's 41 percent. Libertarian Cliff Hyra was earning 4 percent of the vote, and 10 percent were undecided. Northam's favorability is stronger: 42 percent have a favorable opinion of him and 22 percent have an unfavorable one. For Gillespie, those numbers are 40 percent and 28 percent. Gillespie has an advantage in dealing with jobs and the economy, illegal immigration and government spending. Northam's advantages are on education and health care, while neither candidate has an advantage on taxes or combating crime and drugs. ... The mixed telephone and online poll of 1,000 likely voters from Sept. 12 to Sept. 18 has a margin of error of plus or minus 3 percentage points." **Full results here.**

-Quick click: A visualization from the Virginia Public Access Project shows Northam gaining an advantage in television ads in recent weeks.

EARLY POLLING DATA - Hogan approval rating at 62 percent in Maryland: A new poll from Goucher College finds Maryland GOP Gov. Larry Hogan's approval rating remains strong at 62 percent, with just 16 percent disapproval. President Donald Trump's approval rating is just 25 percent, with 71 percent disapproving. The poll also found 43 percent of Marylanders said Hogan has distanced himself "about the right amount" from the president, while 27 percent said they thought the governor hadn't distanced himself enough. Similarly, 47 percent of Marylanders think Hogan is a moderate, 31 percent call him a conservative and 7 percent think he's liberal. Overall, 51 percent of registered voters interested in the 2018 elections said they are either leaning towards or will definitely vote for Hogan, while 42 percent said they are leaning toward or would definitely vote for another candidate. Goucher surveyed 671 Maryland residents from Sept. 14 to Sept. 17 with a margin of error of plus or minus 3.8 percent.

2018 WATCH - "Dino Rossi says he's running for Congress to replace Rep. Dave Reichert," by the Seattle Times' Jim Brunner: "Republican state Sen. Dino Rossi says he'll run for Congress in the Eighth District to replace retiring U.S. Rep. Dave Reichert. Rossi, whose entry into the race had been anticipated for weeks, announced his 2018 campaign at the Washington State Republican Party's annual dinner Thursday night in Bellevue. ... As a well-known politician who has run unsuccessfully three times for statewide office, Rossi's entry into the race could cheer Republicans hoping to retain the Eighth District seat and maintain the status quo in Washington, D.C., where the GOP controls the House, Senate and White House." **Full story.**

-Minneapolis Star-Tribune's J. Patrick Coolican reports former Minnesota Gov. Tim Pawlenty is considering a run for his old office: "The most consequential: former Gov. Tim Pawlenty, who is now a Washington lobbyist. When he is asked about returning to Minnesota for a run, the two-term Republican governor gives the same answer: that he's retired from public life. But GOP sources say we're beyond idle speculation, that all the buzz is real, and he's considering it, watching to see if the current field is locking down financial and political support." **Full story.**

2020 WATCH - "Biden rips Trump over race in South Carolina return," by Gabriel Debenedetti in Charleston, S.C.: "Former Vice President Joe Biden on Saturday evening urged Americans to stand up to hate groups - and took direct aim at President Donald Trump, who he said 'has publicly proclaimed the moral equivalency of Neo-Nazis, Klansmen and those who oppose their hate.' Speaking at the centennial fundraising dinner for the Charleston branch of the NAACP, Biden said, 'This is a moment for this nation to declare what this president can't with any clarity, consistency or vision: There is no place in America for hate groups.' The speech at the Gaillard Center - across the street from the Mother Emanuel AME church, at which nine African-American churchgoers were murdered in 2015 by a white supremacist hoping to incite a race war - was one of Biden's first since the fatal violence last month at a neo-Nazi march in Charlottesville, Virginia." **Full story.**

QUOTE OF THE DAY: "Walker! Welcome to the #cogov race. Please clap." - Colorado Republican George Brauchler, a district attorney running for governor, "welcoming" state Treasurer Walker Stapleton (a second cousin of Jeb Bush) into the GOP primary to be Colorado's next governor.

Subject: House delays minibus votes until next week

By Sarah Ferris

09/07/2017 09:53 PM EDT

House Majority Leader Kevin McCarthy announced the postponement tonight of the GOP's eight-bill spending bundle, citing the impending landfall of Hurricane Irma.

Prolonging the spending debate into a second week, the House's only task Friday will be a 12:30 p.m. vote on the Senate-passed fiscal deal, H.R. 601 (115), which includes more than $15 billion in disaster aid. It would also raise the nation's borrowing limit and keep the government open through Dec. 8.

McCarthy said the House would halt work on its so-called "minibus," H.R. 3354 (115), until next week to accommodate lawmakers whose districts are in the path of Hurricane Irma. Lawmakers have roughly 200 amendments remaining to debate on four separate spending titles.

"As we continue to track Hurricane Irma, I know many of our members in the southeastern United States are anxious to get home to get their families and constituents," the majority leader said, adding that he wants to ensure members "can get home safely."

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

August 15, 2017

Latest News

Court's Vacatur Of HFC Rule Complicates U.S. Adoption Of Global Limits

The recent ruling vacating Obama EPA limits on hydrofluorocarbons (HFCs) could further hamper the United States' ability to implement an international deal struck last year to phase down the potent greenhouse gas refrigerants, a blow to environmentalist and industry supporters who already face a high bar convincing the Trump administration and the GOP Congress to back the deal.

EPA Critics Fight Agency's Request To Dismiss Ozone NAAQS Delay Suit

Public health and environmental groups are fighting EPA's request for a federal appeals court to dismiss the groups' legal challenge to the agency's now-withdrawn plan to delay by one year designations for which areas are meeting the 2015 ozone standard, with the groups saying dismissal risks EPA putting the plan “back into place.”

States Say EPA's Court Loss Proves Methane NSPS Delay Proposals Unlawful

A coalition of state attorneys general (AG) is charging EPA's proposed two-year delay of Obama-era methane limits for new oil and gas drilling operations is “blatantly unlawful” because it suffers from the same “fatal defect” as the agency's 90-day administrative stay of the standards recently vacated by a federal appellate court.

In Pending Suit, EPA, Environmentalists Spar Over Lead Dust Rule's Status

Environmental, community and health groups are citing EPA's recent move to reclassify a rulemaking to update lead dust hazard standards as "inactive" to bolster their legal argument that a federal appellate court should compel EPA to move forward on updating the standards -- but EPA says the change is “semantic” and does not affect the lawsuit.

District Court Urged To Keep Lawsuit Seeking Stricter Stormwater Permits

Environmentalists are urging a federal district court in Maryland to allow their suit seeking broader Clean Water Act (CWA) permit mandates for stormwater to move

forward, countering EPA's argument that only appellate judges can review the issue -- paralleling a Supreme Court fight on the correct venue for suits over EPA's CWA jurisdiction rule.

Environmentalists File First Suits Over TSCA Prioritization, Review Rules

Several environmental groups have filed multiple suits over two of EPA's initial rules for implementing the revised Toxic Substances Control Act (TSCA), pursuing challenges in several federal appellate courts claiming that the regulations violate the provisions of the updated toxics law and the Administrative Procedure Act.

Daily Feed

Washington's Monsanto PCB case remanded to state court

The federal court rejected all three of Monsanto's arguments for asserting jurisdiction.

D.C. Circuit sets argument in ozone NAAQS designation suit

The D.C. Circuit will hear oral argument Oct. 5 in a suit testing EPA's power to extend the time that states have to meet federal air standards.

EPA agrees to CSAPR suit delay but opposes status reports

The agency says it should not have to file status reports with a federal appeals court on its process for reviewing the Cross-State Air Pollution Rule update.

Ewire: Pruitt's secrecy draws criticism -- even from his friends

In today's Ewire: EPA Administrator Scott Pruitt appears to be doing much of his work under a cloak of secrecy. Plus: California Republicans take heat for backing cap-and-trade extension.

Lawsuits pose test for CWA 'declaratory' challenges

Competing Clean Water Act cases will again test the situations when the power industry can bring environmental groups to court over claims of illegal discharging.

Monster Storms Change Coastlines, Not Minds on Climate Change

Posted September 14, 2017, 8:49 A.M. ET

By Jennifer A. Dlouhy

Back-to-back hurricanes fueled by warm Atlantic waters may have altered the coasts of Texas and Florida, but there's no indication they are shifting the politics of climate change.

"We cannot ignore that carbon emissions are causing our ocean temperatures to get warmer, which is fueling more powerful hurricanes," said Sen. Kirsten Gillibrand (D-N.Y.) at a lightly attended hearing on carbon-capture technology.

Yet that is exactly what many are doing on an issue that increasingly breaks down along partisan lines. Republicans in charge of the House and Senate haven't scheduled hearings to examine the phenomenon. President Donald Trump has ignored shouted questions on the topic and administration officials have brushed the whole issue aside as a distraction.

Scott Pruitt, the head of the Environmental Protection Agency, told CNN it is "very, very insensitive" to storm victims to "have any kind of focus on the cause and effect of the storm versus helping people."

Research shows monster storms may only harden people's position, underscoring already entrenched beliefs about the role humans play in warming the planet.

"The climate movement can't depend on the weather to make its political case," said Robert Brulle, a sociologist at Drexel University who studies environmental activism. "We have a window of opportunity to draw attention to the issue—and then three weeks from now we'll be talking about something else."

Environmental disasters, including an oil spill off the California coast, toxic pollution emanating from New York's Love Canal and Ohio's Cuyahoga River bursting into flames, helped catalyze the modern-day ecological movement, shifting public views. But unlike climate change, the causes were clearer; there was no need for scientists to interpret data or model scenarios.

It's much harder to attack the science of an oil spill, Brulle said. "You can't have a tactic of denying the science when you can see it right there with your very eyes."

Some environmental activists say Hurricanes Harvey and Irma should be a wake-up call, vividly illustrating the potential consequences of extreme weather events made worse by climate change. Scientists haven't linked either hurricane directly to climate change—and they may never be able to—though they stress global warming is leading to more intense, more frequent storms.

Decades into the debate over climate change, people's views on the subject are tied up with their political ideology. And it takes more than 185-mile-per-hour winds to change their beliefs.

People in areas that have experienced extreme weather are only marginally more likely to support climate adaption policies such as elevation requirements and restrictions on coastal development, according to research published in the September issue of "Global Environmental Change." Instead, political party identification is a much bigger factor in how people viewed the issue, according to the study that examined public opinion data coupled with geographic information about extreme weather events.

And any changes in thinking after extreme weather are likely to be temporary.

"There was no discernible difference after a month between people who experienced more extreme weather and those who did not," Llewelyn Hughes, a professor at Australian National University, and David Konisky, a professor at Indiana University, said in a Washington Post essay describing their research. "Even though events like Hurricane Irma are tragic, it may very well be that people tend to forget about them quite quickly and get on with the rest of their lives."

Researchers also have found that living through a disaster changes the way people think—effectively making them more skeptical of leaders and less open-minded. A 2011 study of Honduran villages hit by Hurricane Mitch in 1998 found that severe damage reduces people's willingness to work together.

There are also parallels to the gun control debate, which didn't dramatically shift after shootings of schoolchildren in Connecticut and a congressman in Virginia.

In both cases, "there is a very powerful special interest influence group" that has effectively squelched debate, Sen. Sheldon Whitehouse (D-R.I.) said in an interview.

President Barack Obama made fighting climate change a signature policy of his administration. Trump and Republicans in Congress have sought to roll back those efforts.

Some environmental advocates may be wary of being seen as exploiting a natural disaster for long-term policy changes when homeowners are still ripping sodden carpet from their floors and utilities are still working to restore electricity. Whitehouse says there is plenty of time to talk about the issue as lawmakers debate hurricane-spending relief packages and storm-ravaged cities rebuild.

"We should be talking about this issue on a regular basis; I don't think there is a key moment in which we have to say it or we lose the opportunity," Whitehouse said. "Now is a good time to talk about it; later is a good time to talk about it; there will be plenty of opportunities to talk about it."

Congressional Debates

Climate change concerns could spill into congressional debates over how to rebuild cities battered by the storms.

"It's impossible to not discuss the incredible amount of money which the federal government is going to spend to clean up after supercharged hurricanes and to not then discuss what can we put in place now for ten cents on the dollar that will avoid the most catastrophic results," Sen. Ed Markey (D-Mass.)said in an interview.

Extreme weather events could provide an opening to GOP lawmakers—particularly those in affected states—to justify or explain a shift in how they approach the issue, said Joseph Majkut, director of climate science at the Niskanen Center, a libertarian think tank.

Instead of 180-degree pivots on the link between carbon dioxide and climate change, that may come in the form of supporting a resilient infrastructure or backing changes in the national flood insurance program to better incorporate what is known about rising sea levels and storm risks.

"I don't expect any one storm is going to change the debate on climate, which is now sort of sophisticated and entrenched," Majkut said. "I do think it can make a difference at the margins, so one thing to watch for will be individual members, individual districts and how much of a role it might play in 2018."

Federal Energy Regulatory Chairman Changes Tune on Coal

Posted September 14, 2017, 01:45 P.M. ET

By Rebecca Kern

Federal Energy Regulatory Commission Chairman Neil Chatterjee seemed to back away from previous pro-coal comments today in his first public testimony since taking office in August.

Chatterjee, during an August podcast interview, made comments that were in line with the Trump administration's efforts to help prop up coal plants. However, Chatterjee's responses during a Sept. 14 House Energy and Commerce Committee hearing reflected a change in tone to align with views expressed by other FERC nominees that the commission doesn't favor any fuel sources.

"The commission is fuel-neutral, and we will look to ensure that as our grid undergoes this transformation, that we ensure that we evaluate the attributes of fuel sources to see what values they provide," Chatterjee said during a response to a question from Rep. Kevin Cramer (R-N.D.) about what FERC could do make sure coal plants were compensated enough to keep them running.

"We will see if there's a demonstrated need for reliability, whether or not those things can be compensated," he added.

Chatterjee, a former energy staffer for Senate Majority Leader Mitch McConnell (R-Ky.), expressed a different view on coal during an Aug. 14 appearance on a FERC podcast.

"I believe baseload power should be recognized as an essential part of the fuel mix. I believe that generation, including our existing coal and nuclear fleet, need to be properly compensated to recognize the value they provide to the system," Chatterjee said on the podcast.

In his Sept. 14 testimony, Chatterjee echoed comments made by Richard Glick, nominated to be a Democratic commissioner. Chatterjee said that while there are no current reliability threats to the grid with the early retirement of baseload resources, such as coal and nuclear, FERC needs to closely monitor whether retirements could lead to reliability vulnerabilities later.

Glick and Kevin McIntyre, nominated to the Republican chairman of FERC if confirmed by the Senate, both stressed in their confirmation hearing that FERC was fuel-neutral. They are awaiting a Senate committee vote, which was postponed from Sept. 14 to Sept. 19.

New York City Targets Buildings for Greenhouse Gas Cuts

Posted September 14, 2017, 12:35 P.M. ET

By John Herzfeld

Buildings in New York City face sharp reductions in greenhouse gas emissions under a plan from Mayor Bill de Blasio (D) to target the city's top source of heat trapping emissions.

The proposed legislation, announced today, would require owners of all buildings in the city larger than 25,000 square feet to make improvements to boilers, heat distribution systems, hot water heaters, roofs, and windows. Deeper changes would be required during replacement or refinancing cycles over the next 12 to 17 years.

De Blasio said that the plan would make New York the first city to mandate cuts in emissions from fossil fuels burned for heat and hot water in buildings, which constitute the top source of greenhouse gases in the city, or 42 percent of the total. He cast it as part of a broader response by cities to inaction on climate issues at the federal level.

The new plan expands on previously announced city goals to cut carbon emissions by 80 percent from 2005 levels by 2050, as well as a long string of city code changes, programs, and voluntary agreements on building energy efficiency. In June, de Blasio issued an executive order backing climate change targets in the wake of President Donald Trump's withdrawal from the Paris climate change agreement.

Germany's Energy Transition Creates Costly Problems With Grid

Posted September 14, 2017, 6:15 A.M. ET

By Jabeen Bhatti

Bolstering Germany's renewable output and expanding its electricity grid will be among Chancellor Angela Merkel's priorities if she prevails in upcoming federal elections.

As Germany forges ahead with its green energy transition, grid operators are being forced to dramatically increase operating costs to stabilize a centralized grid that has become unsuited for fragmented renewable production.

"In the next legislative period, we will need a great deal of effort to overhaul our transmission networks," Merkel said at her Christian Democrats' Energy Policy Dialogue event in April.

A “speedier” legislative process will be a priority as will establishing a “community of responsibility” with those of Germany’s federal states that have lower transmission costs than others, she added.

Germans head to the polls Sept. 24 to decide whether Merkel, who has led Germany since 2005, will remain in power.

Even if so, to make Merkel’s vision a reality, “there’s a lot of investments that they have to make and this contributes to increased grid fees,” Matthias Lang, a partner at the Bird & Bird law firm in Düsseldorf, told Bloomberg BNA. “But even if tomorrow we have a beautiful idea for the grid, it will still need to be built. And we’ll be paying for it for the next 40 or 50 years.”

The energy transition, in full swing for more than a decade, has drawn attention across Europe and from other countries also looking to rely more on renewable energy.

Germany already has some of Europe’s highest energy costs, so analysts wonder whether more increases will curtail public support: Some 95 percent of Germans support continued investment and expansion of renewables, according to a representative survey by German research agency Kantar Emnid.

Transmission Snafu

Germany decided to cut ties with nuclear power in an ambitious energy transition known as the Energiewende. The move completely upended its energy production and transmission procedures. Since beginning the phaseout of nuclear energy in 2010, renewable energy output has doubled to 33 percent of total production in 2016, while fossil fuel and nuclear energy production significantly decreased, according to the Federal Ministry of Energy and the Economy. As of March, wind made up almost 12 percent of all electricity generation, while solar was almost 6 percent. Despite having succeeded in rapidly overhauling energy production, Germany’s electricity grid, originally optimized for a centralized approach to energy consumption and transmission of non-renewables, is still struggling to efficiently accommodate the flood of electricity from renewables, analysts said. Strategically placed power plants used to funnel energy in a harmonized system based on need, price of production, high-consumption areas, and energy availability. As such, grid infrastructure developed along centralized transmission routes. The Energiewende’s quick rollout changed that practice. As opposed to strategically erecting power plants in line with transmission networks, renewable energy centers began popping up wherever wind or solar was available. That created a distributed operation using mixed energy sources that has put increased strain on the existing grid, analysts said. “The factor is really commercial where you get the cheapest place to put your wind farms” and solar, said Lang. “It has nothing to do with where the power is consumed. So you have increased the amount of transportation that you need, because there’s a total disconnect between where generation and consumption takes place.”

New Infrastructure ’Urgent’

The German power grid is sectioned into transmission quadrants overseen by four operators: TenneT, Amprion Inc., 50Hertz Transmission GmbH, and EnBW Transportnetze AG. Hundreds of local and regional energy producers pay these operators to transmit electricity to consumers across Germany. Costs on producers then are passed on to the consumers themselves. Analysts and grid operators said the transmission costs largely stem from efforts to stabilize electricity flow on the grid, known as re-dispatch costs, during periods of particularly high renewable output. This involves turning on or shutting off traditional power plants either to stanch or ramp up output in line with need. As renewables have become more popular, increased output has clogged transmission on a grid that was optimized for fossil fuels. This January and February, instances of re-dispatch on the

grid increased by some 63 percent in comparison to the previous year, a spokeswoman from Germany's Federal Association of Energy and Water Management told Bloomberg BNA.

Meanwhile, in 2015, re-dispatch efforts cost operators some 412 million euros ($490 million), three times the cost from the previous year, according to the latest Monitoring Report from Germany's Federal Network Agency. The agency has warned that costs could jump to 1 billion euros ($1.2 billion) by 2020 as renewable output increases. As a result, TenneT, Germany's largest grid operator, whose transmission zone spans the entire middle passage of the country from north to south, was forced to raise operating fees in its zone by 80 percent in 2017, a company spokeswoman told Bloomberg BNA. That translates to a 27 euro ($32) increase a year in energy costs for a three-person household. Grid prices on average accounted for some 25.7 percent of energy costs for German households as of February, according to statistics from the the federal energy and water management association. "New infrastructure is becoming more and more urgent. Curtailment costs of renewables are increasing and we can't build the infrastructure so that the networks are faster," Andreas Jahn, a senior associate with the Regulatory Assistance Project, an energy think tank in Berlin, told Bloomberg BNA.

Infrastructure Needs

Grid operators must now rapidly build infrastructure from the ground up in areas lacking proper access, such as along Germany's coast with the North Sea, a major center of wind production. "They have an obligation to connect a particular wind farm to the grid," said Lang. "But if the grid behind the wind farm was never built to take on that type of power, they have to reinforce the grid. And this drives up grid costs."

This is particularly the case in rural areas in East Germany, where a lack of grid infrastructure has left consumers there footing the bill for updates to newly constructed renewable systems, in addition to transmission costs and stabilization measures. "The costs simply stay with this limited number of customers," said Jahn. "We need a common agreement on the cost: Urban customers should have to pay a part of the costs in rural areas as well." While updated transmission routes are supposed to be finished by 2022, when the last of Germany's nuclear plants are to go offline, the Federal Network Agency confirmed to Bloomberg BNA that new, high-traffic grid connections likely won't be finished until 2025.

Disputed Solutions

Numerous actions have been suggested to stymie rising costs—from efforts to rapidly increase grid expansion to legislation to equalize costs among consumers across the board, regardless of geographic location. A bill addressing the latter was completed in the Parliament in July and will clear the way for a harmonization of long-distance transmission costs across all regions by 2023. "There's differing positions from the states simply because many profit enormously from the current system: They have lower grid costs while others' bills are higher," Tobias Austrup, an adviser on energy policy with Greenpeace Germany, told Bloomberg BNA. "But it really comes down to a question of fairness," he added. Another proposal has been to decouple Germany's transmission network from Austria and Luxembourg to combat electricity bottlenecks at the border that contribute to skyrocketing redispatch costs. But analysts dispute whether decoupling would be financially and politically beneficial. While creating a domestic internal bidding zone for electricity could indeed drive down prices in the short term, it doesn't match the political objectives of the European Union and could increase congestion at national borders. And that could serve to exacerbate re-dispatch costs. "Electrons don't know national borders. They know copper," the Regulatory Assistance Project's Jahn said. "In the end, it will be more expensive if we have 27 energy transitions instead of a joint project."

'Antiquated Power Stations'

Greenpeace's Austrup views the grid in its current form—with its mix of traditional and renewable power plants—as the root of the problem. With an all-or-nothing approach replacing all traditional power stations with renewables immediately, instead of gradually, Germany could significantly reduce grid fees and energy costs, he said. "It's a myth that the problem is that there's too much renewable energy that can't be transported," Austrup told Bloomberg BNA. "The problem is these antiquated power stations that no longer belong in this world." Still, building up renewables to the point of energy independence is a waiting game, said attorney Lang. Technology and legislation have to reach the point where such a feat would be possible. "If we finish the buildup of renewables, then at some stage, the grid will have caught up," said Lang. "But I'm hesitant to say when exactly this is going to be, because we don't know what technology we will be able to use going forward." That means that high energy costs for consumers in Germany—already higher than most of its European counterparts—won't show any sign of stopping, he added. "It's costing money and costs are going to increase. It will get more expensive," he said. "If we want a higher percentage of renewables, then we have to upgrade the grid to do so. And that will cost what it costs."

Fastenal Canada Fined $218K for Import, Sale of Ozone Depleters

Posted September 14, 2017, 8:26 A.M. ET

By Peter Menyasz

Major industrial supply firm Fastenal Canada Ltd. will pay C$265,000 ($217,000) in fines for importing and selling in Canada aerosol products containing ozone-depleting substances.

The Ontario Court of Justice levied the fine Sept. 7 after the company pleaded guilty to two counts of violating the ozone-depleting substances regulations under the Canadian Environmental Protection Act, Environment and Climate Change Canada said Sept. 13.

Enforcement officers found that Fastenal imported and sold aerosol products containing hydrochlorofluorocarbons (HCFCs), a regulated ozone-depleting substance, between November 2012 and January 2015, the department said in a statement.

The company, based in Winona, Minn., didn't respond to Bloomberg BNA's request for comment.

The fine will go to the Environmental Damages Fund, which is used to support projects that benefit the environment, and the company's name will be added to Canada's Environmental Offenders Registry, the government said.

HCFCs are primarily used in foam blowing agents, refrigeration and air conditioning coolants, solvents, aerosols, and fire extinguishers.

Fastenal has 2,503 retail outlets and 401 on-site locations in the U.S., Canada, Mexico, and Europe, with net sales totaling $4.0 billion in 2016.

Subject: Democratic bid to block ANWR drilling in budget falls short

By Anthony Adragna

10/19/2017 09:12 PM EDT

The Senate narrowly shot down a bid today from Sens. Ed Markey, Michael Bennet and Maria Cantwell to remove language from the budget that could open the Arctic National Wildlife Refuge to oil drilling.

The amendment failed by a vote of 48 to 52, with Democrat Joe Manchin and Republican Susan Collins breaking with their parties.

Though the budget doesn't explicitly mention ANWR, it calls for the Senate Energy and Natural Resources Committee to identify ways of raising an additional $1 billion in revenue. Chairwoman Lisa Murkowski has long sought to open the area to drilling, and including the language in the budget reconciliation would allow Republicans to circumvent a filibuster.

Alaska Sen. Dan Sullivan slammed the Democratic amendment ahead of the vote. "To me, we've reached kind of a low point in politics if there's not bipartisan support for more energy," he told POLITICO.

Democrats and environmental groups have long opposed opening the pristine wilderness area to energy exploration, with Markey describing the budget language as "a Big Oil polar payout." More than 300 groups sent a letter to senators today opposing any ANWR language in the budget.

Senators also shot down two amendments from Utah Sen. Mike Lee. One to bar regulating species that exist in only one state under the Endangered Species Act failed 49-51. The other, which failed 50-50 with Vice President Mike Pence absent, would have made the federal government compensate local governments for the full value of the property taxes they are losing when much of their jurisdiction is covered by federal land.

Driving the Day

THE STEP BACK -- TRUMP'S FUNHOUSE MIRROR VIEW OF WASHINGTON -- He's publicly blasting away at critical Senate Republican votes. He's at war with the powerful Senate majority leader of his own party. And he is taking a staunch -- and some would say irreversible -- position on keeping the government open, threatening what top Republicans believe would be a politically perilous shutdown one month before funding runs dry.

Welcome to President Donald Trump's funhouse mirror view of Washington.

Trump has certainly changed the contours of the presidency: He doesn't conform to political norms, he brushes off drama in his ranks, and he rankles players on the world stage.

But in Washington, Trump seems to have a contorted view of a few key fundamental political realities that are out of his control. He is operating with an extraordinarily thin majority in the Senate and seems intent on poking key senators like Jeff Flake and John McCain of Arizona, Dean Heller of Nevada, Shelley Moore Capito of West Virginia and Susan Collins of Maine in the eyes. He is in a prolonged battle with Senate Majority Leader Mitch McConnell, whom he can't get rid of and whose support he needs to get anything done. He's threatening a government shutdown over a border wall he will likely not be able to build. He continues to push changes to the Senate rules -- he says he wants to get rid of the filibuster -- despite opposition by Senate Republicans and Democrats. He's been unrelenting in his criticism of Democrats and seems disinterested in doing anything to bring them into the fold.

Anyone who spent more than a minute observing or participating in our legislative

politics would describe Trump's moves as some combination of self-defeating, illogical and misguided. Behind the scenes, the White House is working despite the president's bluster: Top Trump aides are in touch with Hill leadership aides to ensure the government doesn't jump off the rails. And there still remains a glimmer of hope for some kind of tax reform effort to get off the ground. But the president's unconventional view of what it takes to govern is not helping, according to multiple aides and lawmakers involved in legislative strategy.

Good Wednesday morning and happy hump day. **ALEX ISENSTADT** in Phoenix: **"Trump sticks it to GOP in thundering Phoenix speech":** "President Donald Trump put the Republican Party on notice on Tuesday evening -- implicitly attacking two Republican senators on their home turf, threatening a government shutdown over his border wall, and demanding that senators kill the filibuster because it's impeding his agenda.

"In an often-angry speech here that stretched on for well over an hour, the president returned to many of the same targets he went after on the campaign trail. He spent more than a half-hour lambasting the media, which he accused of misrepresenting his comments after the Charlottesville violence. Yet he also turned his weaponry on fellow Republicans, going after Arizona's two GOP senators who've been a thorn in his side.

"Trump did not name Sen. John McCain or Sen. Jeff Flake by name in his remarks -- he joked that his aides pleaded with him not to mention the senators explicitly -- but it was unmistakable who he was talking about. Over and over, Trump noted that Senate Republicans were 'one vote away' from passing a bill to repeal Obamacare. The crowd at the Phoenix Convention Center immediately began jeering McCain, a longtime Trump critic who delivered the tie-breaking vote that sank the overhaul bill. ...

"Trump's anti-Flake offensive was a rebuke of McConnell, who's promised to protect the incumbent at all costs, and came as tensions between Trump and the congressional wing of the GOP are on the rise. When it comes to Flake or several big-ticket issues on Congress' to-do list this fall, the president made clear in his speech that he's in no mood to make nice.

"In a return to his top campaign theme, the president thrilled his conservative supporters with another full-throated promise to build a wall along the southern border. With a budget battle looming in September, Trump hinted that he'd be willing to veto any government funding bill that doesn't include funding for a wall, triggering a federal shutdown. 'If we have to close down our government, we're building that wall,' he said. 'We're going to have our wall. The American people voted for immigration control. We're going to get that wall.'" http://politi.co/2wmEr4Z

ABOUT THAT WALL ... JOSH DAWSEY: "Trump has told senior White House officials and advisers he would be willing to go to whatever means necessary to get money for the wall, a contentious claim even among his advisers. He hasn't given specific amounts of money that he wants, but 'enough to really start building it,' said one person who

spoke to him this weekend. 'He is animated about the wall,' the person said. 'He cares about that more than many other things. He knows his base cares and chants about it.'" http://politi.co/2vny2IG

-- THE KEY PART OF TRUMP THE QUOTE about the wall: "Now the obstructionist Democrats would like us not to do it, but believe me, if we have to close down our government we're building that wall. ... Let me be very clear to Democrats in Congress who oppose a border wall and stand in the way of border security. You are putting all of America's safety at risk." **BUT**, Democrats are a minor part of this equation. Trump's party has majorities in both chambers.

-- THAT BEING SAID ... There are ways for Congress to shuffle some more money to the border to appease Trump.

AND ... -- "Trump didn't pardon Joe Arpaio in Phoenix - but hints that he will," by the Arizona Republic's Megan Cassidy: "President Donald Trump did not pardon former Maricopa County Sheriff Joe Arpaio while Trump was in Phoenix, but he indicated support for the idea in his speech Tuesday night.

"The 85-year-old lawman is scheduled to be sentenced on Oct. 5 for a federal criminal-contempt conviction stemming from a racial-profiling case. Arpaio could face up to six months in jail. 'Was Sheriff Joe convicted for doing his job?' Trump asked the crowd inside the Phoenix Convention Center. He should have had a jury trial instead of having a verdict rendered by a federal judge, Trump said. 'But I'll make a prediction: I think he's going to be just fine.' Trump's comments suggested a pardon could be granted later. 'I won't do it tonight, because I don't want to cause any controversy. But Sheriff Joe can feel good,' he said." http://bit.ly/2vdT8n6

****** **A message from Chevron**: Advanced technology is helping us find safer ways to deliver energy. We're piloting a program that uses drones to monitor tanks and pipelines. Watch the video: http://politi.co/2vLsVyX ******

THIS IS A PROBLEM -- NYT A1, "McConnell, in Private, Doubts if Trump Can Save Presidency," by Alex Burns and Jonathan Martin: "The relationship between President Trump and Senator Mitch McConnell, the majority leader, has disintegrated to the point that they have not spoken to each other in weeks, and Mr. McConnell has privately expressed uncertainty that Mr. Trump will be able to salvage his administration after a series of summer crises.

"What was once an uneasy governing alliance has curdled into a feud of mutual resentment and sometimes outright hostility, complicated by the position of Mr. McConnell's wife, Elaine L. Chao, in Mr. Trump's cabinet, according to more than a dozen people briefed on their imperiled partnership. Angry phone calls and private badmouthing have devolved into open conflict, with the president threatening to oppose Republican senators who cross him, and Mr. McConnell mobilizing to their defense.

"The rupture between Mr. Trump and Mr. McConnell comes at a highly perilous moment for Republicans, who face a number of urgent deadlines when they return to Washington next month. Congress must approve new spending measures and raise the statutory limit on government borrowing within weeks of reconvening, and Republicans are hoping to push through an elaborate rewrite of the federal tax code. There is scant room for legislative error on any front.

"A protracted government shutdown or a default on sovereign debt could be disastrous - for the economy and for the party that controls the White House and both chambers of Congress. Yet Mr. Trump and Mr. McConnell are locked in a political cold war. Neither man would comment for this article. Don Stewart, a spokesman for Mr. McConnell, noted that the senator and the president had 'shared goals,' and pointed to 'tax reform, infrastructure, funding the government, not defaulting on the debt, passing the defense authorization bill.'" http://nyti.ms/2xql5J2

-- A GREAT DETAIL FROM JMART AND BURNS: "When Mr. Trump addressed a Boy Scouts jamboree last month in West Virginia, White House aides told Senator Shelley Moore Capito, a Republican from the state whose support was in doubt, that she could only accompany him on Air Force One if she committed to voting for the health care bill. She declined the invitation, noting that she could not commit to voting for a measure she had not seen, according to a Republican briefed on the conversation."

-- CNN: "Trump, McConnell haven't spoken since angry phone call, sources say," by Many Raju and Jeremy Diamond: "President Donald Trump and Senate Majority Leader Mitch McConnell have not spoken in nearly two weeks, since a phone call between the two men went awry and left the two men screaming at each other. Sources with knowledge of the August 9 call said the exchange quickly devolved into a shouting match as an irate Trump expressed his frustrations about the congressional investigation into Russian interference with the U.S. election last year and fumed about a Russia sanctions bill Congress passed that would tie Trump's hands on the matter." http://cnn.it/2wxilaR

NEW POLITICO/MORNING CONSULT POLL: "Poll: Trump hits new low after Charlottesville," by Steve Shepard: "President Donald Trump's approval rating has hit a new low following a week in which a majority of voters believe he did more to divide the country than unite it, a new POLITICO/Morning Consult poll shows. Only 39 percent of voters approve of the job Trump is doing in this week's poll - conducted entirely following the president's various scripted and impromptu reactions to the violence in Charlottesville, Virginia - down from 44 percent just a week ago. Fifty-six percent of voters disapprove in the new poll, up from 52 percent last week.

"Much of the decline in Trump's approval rating appears to have come from self-identified Republican voters - 73 percent, down from 81 percent last week. By contrast, the president's approval rating slid just a single point among Democrats and independents. Trump's previous overall low - a 40 percent rating - was two weeks ago. The poll was conducted last Thursday through Saturday, all following Trump's

comments on the violence that claimed the life of a woman protesting against white supremacists and neo-Nazis, but before his address Monday night outlining his strategy for the war in Afghanistan." http://politi.co/2iqnPUc

WHEN WILL TRUMP GO TO AFGHANISTAN? -- Barack Obama went to Baghdad on April 7, 2009 -- just a touch more than two months into his presidency. When will Trump go visit troops in what's now America's longest war?

WORTH THE CLICK - "16 Years of War in Afghanistan, in Pictures," by NYT's Rod Nordland -- ***20 pix on one page*** http://nyti.ms/2xrJr5l

TRUMP'S INNER CIRCLE -- "Military leaders consolidate power in Trump administration," by WaPo's Bob Costa and Phil Rucker: "High-ranking military officials have become an increasingly ubiquitous presence in American political life during Donald Trump's presidency, repeatedly winning arguments inside the West Wing, publicly contradicting the president and even balking at implementing one of his most controversial policies. Connected by their faith in order and global norms, these military leaders are rapidly consolidating power throughout the executive branch as they counsel a volatile president. Some establishment figures in both political parties view them as safeguards for the nation in a time of turbulence.

"Trump's elevation of a cadre of current and retired generals marks a striking departure for a country that for generations has positioned civilian leaders above and apart from the military. ... Inside the White House, meanwhile, generals manage Trump's hour-by-hour interactions and whisper in his ear - and those whispers, as with the decision this week to expand U.S. military operations in Afghanistan, often become policy. ... Critics of the president welcome their ascendancy, seeing them as a calming force amid the daily chaos of the White House." http://wapo.st/2v4DvT5

JARED UPDATE -- "CAIRO (AP) - Egypt: Trump adviser Kushner's meeting with Egyptian president still on; only meeting with foreign minister cancelled."

--"McMaster adds muscle to Kushner's Middle East peace effort, " by Annie Karni: "Jared Kushner has spent eight months as his father-in-law's point person in the Middle East, relying primarily on one envoy, former Trump Organization lawyer Jason Greenblatt, to do the diplomatic heavy lifting in the region. But just over a month ago, National Security Adviser H.R. McMaster held a meeting in his West Wing office with Greenblatt to discuss some changes to how the administration would conduct its Israel strategy going forward - including more input from the National Security Council.

"In the meeting - also attended by National Security Council officials Ricky Waddell, Michael Anton and Victoria Coates - the group discussed moving Coates, a former policy adviser to Sen. Ted Cruz, to work full-time under Greenblatt. ... Coates, an art historian and a longtime Republican foreign policy adviser, was promoted to senior director of international negotiations and moved offices to sit with Greenblatt's team in the Old Executive Office Building, across the street from the White House."

http://politi.co/2wDyKzj

PENTAGON FALLOUT -- "U.S. Navy to Relieve Admiral of Command After Collisions," by WSJ's Gordon Lubold: "The U.S. Navy plans to remove the commander of the fleet that has suffered four recent collisions in Asia and the deaths of several sailors, U.S. officials said Tuesday. Navy officials declined to comment. But two U.S. officials familiar with the matter said that Vice Adm. Joseph Aucoin, the three-star commander of the U.S. Seventh Fleet in Yokosuka, Japan, will be relieved of command on Wednesday in connection with four collisions since January, including two fatal ones. Vice Adm. Aucoin was expected to retire in coming weeks, but under the Navy's tradition of public accountability, commanders or ship captains are dismissed as soon as their superiors lose confidence in their leadership." http://on.wsj.com/2wDuDTL

FOR YOUR RADAR -- "North Korea photos suggest new solid-fuel missile designs," by AP's Eric Talmadge in Tokyo: "North Korea's state media released photos Wednesday that appear to show the designs of one or possibly two new missiles. Concept diagrams of the missiles were seen hanging on a wall behind leader Kim Jong Un while he visited a plant that makes solid-fuel engines for the country's ballistic-missile program. ... The photos [come] ... just two days after the United States and South Korea began annual military exercises that the North claims are a rehearsal for war. Tensions on the peninsula generally ratchet up during the maneuvers and a series of larger exercises held each spring." http://bit.ly/2vdVRgt

TRUMP'S WEDNESDAY -- THE PRESIDENT will be at the American Legion convention and then will return to Washington in the evening.

THE JUICE ...

-- SPOTTED : Secretary of Commerce Wilbur Ross and Secretary of State Rex Tillerson last night at Mirabelle along with a number of others, including Nina Totenberg, Chris Wallace and Marty Baron. They dined in a private room.

-- DENIS MCDONOUGH has been named an executive fellow of the Global Policy Initiative in the new Keough School of Global Affairs at the University of Notre Dame. He will be an instructor for 38 students in the new Master of Global Affairs program. http://ntrda.me/2v4Smgi

PAGING DON JR. AND ERIC -- TRUMP INC. -- "17th charity cancels its event at President Trump's Mar-a-Lago Club, blaming 'political turbulence,'" by WaPo's David Fahrenthold and Drew Harwell: "A Florida charity for children announced Tuesday that it was canceling plans to hold a fundraiser luncheon at President Trump's Mar-a-Lago Club next winter - adding to an exodus of its high-paying charity clients in the days after his comments about violent protests in Charlottesville.

"The Unicorn Children's Foundation, based in Boca Raton, explained its decision with a statement saying 'We are not a political organization and do not condone hatred or bullying on any level.' 'Due to the political turbulence associated with this choice of venue it would be a disservice to our supporters and our children to hold our event at Mar-a-Lago,' said Sharon Alexander, the group's chief executive, in the statement. 'We prefer the conversations to be centered off the venue and instead focused on how we can help kids with special needs excel in their communities.' ...

"These departures have had a serious impact on a major line of business for the president's club: hosting the ritzy galas and luncheons that are the highlights of Palm Beach's winter social 'season.' The events can bring in significant amounts of revenue: Charities hosting large galas can pay Trump's club between $125,000 and $275,000 for a single night's revelry. Even lunchtime events can cost charities between $25,000 and $85,000." http://wapo.st/2xblJd3

SCOOP -- "Trump team goes to bat for NRA-backed bill, overruling Park Service," by McClatchy's Stuart Leavenworth: "The National Park Service has several big

problems with NRA-backed legislation that would restrict the agency from regulating hunting and fishing within park boundaries. But according to a leaked memo obtained by McClatchy, the Trump administration has so far prevented the parks from voicing such concerns. National Park Service Acting Director Michael Reynolds prepared a June 30 memo detailing his agency's objections to the draft legislation, the 'Sportsmen's Heritage and Recreational Enhancement Act.' ... Reynolds objected to ... parts of the bill in a memo sent to the U.S. Department of Interior's Legislative Counsel. The park service later received a response from Interior, with sections of Reynolds' concerns crossed out, next to the initials 'C.H.' Agency officials were told they could not repeat their concerns to Congress." http://bit.ly/2v50jBW

BUSINESS BURST - "Trains in Vain: Epic CSX Traffic Jam Snarls Deliveries, From Coal to Fries," by WSJ's Paul Ziobro: "The freight-train ride from Chicago to Colesburg, Tenn., usually takes a few days. Earlier this month, though, the ride was 18 days, 13 hours and 57 minutes, logs show. Congestion, delays and erratic service are hitting CSX, one of only two railroad operators that handle nearly all the shipments that move by train east of the Mississippi River. The problems began in May and became much worse this summer, according to customers and weekly performance data reported by the Jacksonville, Fla., company. It's a colossal mess for businesses that have spent years streamlining supply chains to run with just-in-time inventories." http://on.wsj.com/2v4YO6N

MEDIAWATCH - "Emails: Breitbart editor pledges to do 'dirty work' for Bannon, smears Ivanka," by CNN's Oliver Darcy and Jake Tapper: "A self-described 'email prankster' seemingly fooled top editors at Breitbart over the weekend into believing he was Steve Bannon, the fired White House chief strategist who returned to the right-wing website as executive chairman on Friday. In the emails, Breitbart Editor-in-Chief Alex Marlow pledged that he and several other top editors would do Bannon's 'dirty work' against White House aides. The emails were shared with CNN by the prankster. ...

"The prankster, posing as Bannon, emailed Marlow a link to a Sunday Breitbart post that aggregated a Daily Mail report to suggest Ivanka Trump was instrumental in pushing Bannon from the White House. 'This was a fun read,' the fake Bannon account said. Marlow then shared a personal smear about the private life of Ivanka Trump, and her husband, Kushner. CNN has chosen not to repeat the smear because it is unfounded and unsubstantiated. 'Haha.. lovely stuff,' replied the fake Bannon account. 'So do you think you'll have them packed and shipping out before Christmas?' 'Let me see what I can do... hard to know given your description of them as evil,' Marlow replied." http://cnnmon.ie/2wmWVT0

Subject: BREAKING NEWS: Price says he'll pay for charter flights

HHS Secretary Tom Price said he will write a personal check to the federal government for the costs of traveling on private jets and will permanently halt his use of charter flights.

"The taxpayers won't pay a dime for my seat on those planes," Price said in a statement Thursday afternoon.

The announcement follows a POLITICO investigation finding that Price has taken at least 26 charter flights costing more than $400,000 since May to conduct official business within the country.

November 5, 2017
http://mtstandard.com/opinion/editorial/editorial-epa-s-new-region-boss-off-to-a-promising/article_ce3b2023-257f-591d-95aa-65e80931bafa.html

Since Butte was added to the Superfund National Priorities List in 1983, we've gone through six presidents, 14 EPA administrators (acting and permanent) and more than half a dozen Region 8 EPA administrators.

The latest to sit at the Region 8 desk is Doug Benevento, a Colorado attorney who has been an energy executive and has also run the state's Department of Public Health and Environment.

Fortunately, in the first three weeks of his tenure, he has done precious little sitting. Instead he has been traveling to learn firsthand about EPA's challenges in the region, which are too lengthy to list.

It's no accident that he spent four of his first 16 days in office in Montana. We are pleased to note that he spent intensive time with Gov. Steve Bullock, DEQ boss Tom Livers and their staffs. He also came to Butte this past Wednesday, and made a very good impression. He did not condescend. He came off as self-effacing, sincere and straightforward.

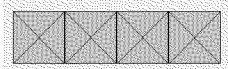
Perhaps the best thing Benevento said during his short visit was that he realized it was too short and is therefore coming back in a couple of weeks.

While that visit will focus more on the considerable issues EPA faces in Anaconda, he did indicate he would also return to Butte. On Nov. 14, The Montana Standard and Restore Our Creek Coalition will co-sponsor a rally at the Covellite Theatre. It should surprise no one that the central message that evening will be: Clean it up. Restore our Creek. Get it done.

We sincerely hope Benevento's return visit will include his presence at this event, which would enable him to hear very directly from the community. We urge him – and you – to attend.

Benevento clearly wishes to communicate clearly and move quickly. He said he hopes to have a Butte Priority Soils consent decree in place by early next year, and if that's not possible, he said, EPA stands ready to enforce the law and move the cleanup along with a unilateral administrative order.

That mirrors EPA Administrator Scott Pruitt's stated intention to move cleanups along more quickly.



While a burst of speed would certainly be welcome after three decades of glacial Superfund progress, speed alone won't be enough to do right by this town. If speed means taking the cheapest, most expedient path, Butte may never recover.

Any remedy, whether agreed upon by the state, county, EPA and Atlantic Richfield or unilaterally imposed by EPA, must be substantive. In other words, the pollutants must come out of the ground and out of the water. Overbroad "technical impracticability" zones or more "waste in place" patch jobs will not suffice. The quality of Butte's cleanup will define the town's future. A quick "get out of town" deal would be even more harmful than the plodding progress the town has endured so far.

With all of those caveats, Benevento's resolve, forthrightness – and presence in Butte – are all excellent signs. We applaud him for getting his tenure off to a very promising start.

Subject: POLITICO's Morning Transportation, presented by Coalition for Future Mobility: The FAA extension has landed — Travel ban out, new limits in — Norwegian U.K. gets final OK from DOT

By Brianna Gurciullo | 09/25/2017 10:00 AM EDT

With help from Stephanie Beasley

HURRY UP AND WAIT: House lawmakers will vote today on short-term FAA extension that would last through March. Six months was the minimum length that the Transportation Committee's top Democrat, Peter DeFazio (D-Ore.), said he would back. And Senate Commerce Chairman John Thune (R-S.D.) also favored a stopgap lasting this long. The House bill includes language related to private flood insurance, expiring health programs and tax breaks for those affected by hurricanes Harvey, Irma and Maria.

Losing steam? At least two House Republicans have said they would vote "no" on an extension because, in their view, it would merely hand Rep. Bill Shuster (R-Pa.) a few more months to keep selling his air traffic control proposal. But on Friday, one of those lawmakers, Rep. Ralph Abraham (R-La.), changed his tone a bit - "I will read the bill that's been proposed and determine whether it is the best path forward at this time," he said in a statement. "However, I still maintain that we ultimately need a long-term FAA authorization that does not place control of our nation's skies in the hands of a corporate board."

The question now: Will the attachment of the flood insurance, public health and tax provisions affect the overall bill in any way? (Smart money says no, at least not in the House, considering the bill will be considered under a procedure typically reserved for non-controversial bills.)

READY FOR A BUSY WEEK? Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. A lot is going on this week, so be sure to keep up with your favorite transportation-policy-reporting quintet: @brigurciullo, @Gardner_LM, @TSnyderDC, @Steph_Beasley and @kathrynwolfe. Send tips, feedback and lyrics for MT to me at bgurciullo@politico.com.

"And I promise I'll see you on the other side / We'll get high and go out for another ride."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

BREAKING LAST NIGHT: A series of travel limitations for individuals from eight nations will take the place of President Donald Trump's travel ban, POLITICO's Josh Gerstein and Ted Hesson report. Those countries are Chad, Iran, Libya, North Korea, Somalia, Syria, Venezuela and Yemen. (The administration took Sudan off its list of countries, while adding Chad, North Korea and Venezuela.) "Existing visa-holders are exempt, and waivers will remain available for travelers with U.S. ties, although those exemptions appear to be narrowed in the new directive," Josh and Ted write. More here.

IT'S OFFICIAL: DOT has given Norwegian U.K. final permission to fly to the United States, according to an order served Friday. The Air Line Pilots Association, Allied Pilots Association and Southwest Airlines Pilots' Association, concerned about Norwegian U.K.'s labor practices, were fighting against the airline's application for a foreign air carrier permit. The groups mounted a similar case against fellow Norwegian Air Shuttle subsidiary Norwegian Air International, which secured a permit in late 2016. "The Labor Parties have offered no arguments not already considered, and rejected, by the Department," DOT said in the final order for Norwegian U.K.

DENIED: After London's transit authority shot down Uber's bid for a new operating license, the company hinted it would be willing to change how it runs its business, POLITICO Europe's Joshua Posaner reports. Transport for London found that Uber wasn't "fit and proper to hold a private hire operator license" and lacked "corporate responsibility." London's mayor, Sadiq Khan, is standing behind TfL's decision to let the company's current license expire. Uber can keep operating while it appeals the decision. It also started a petition over the issue that so far has over 700,000 signatures.

The big picture: "European countries and cities have one-by-one outlawed one form or another of Uber's ride-booking services," Nicholas Hirst and Joshua report. "This latest blow for the California giant in Europe raises more doubts about the viability of its business model on this side of the Atlantic. ... To boot, Friday's decision by London is the latest indication that the company's bullish and brash corporate culture - which recently led to the ouster of Travis Kalanick, the company's founder - is hurting the company's global expansion plans."

NO PRESSURE, BUT ... As a Jan. 1 deadline looms, rail companies are hurrying to phase out their non-jacketed DOT-111 tanker cars. As Tanya reports for Pros, companies more often use DOT-111s to carry flammable liquids than any other railcar, by far. But PHMSA has ordered "non-jacketed" DOT-111s out of service by the start of the new year. Rail companies can retrofit DOT-111s to the specifications of DOT-117s, which "have an insulated layer, a fully protected head shield and protected top fittings and bottom valves that can't break off," Tanya writes. Only DOT-117s and retrofitted tankers will legally be able to carry flammable liquids by 2029.

SO CLOSE: TSA's intelligence office still isn't running as smoothly as it could be despite the agency making several improvements in the past year, according to a new report from the DHS inspector general. Among other grievances, intelligence agents said they weren't receiving training before starting their jobs and that there was no clear process for sharing information among divisions. Steph's got all the details for Pros here.

** **A message from the Coalition for Future Mobility**: Driving Safety: Human error. It's a factor in 94% of all crashes according to government data. So imagine how much safer our roads would be with Autonomous Vehicles. By reducing risky and dangerous driving behaviors, AVs will help save lives. Tell Congress to greenlight Autonomous Vehicle testing and deployment. http://bit.ly/gl-sd **

THIS WEEK:

Tuesday - The House Homeland Security Transportation and Protective Security Subcommittee holds a hearing on aviation security. FTA's Vincent Valdes and HNTB Corporation's Diana Mendes talk about "what the future may hold for our nation's cities." The House Transportation Water Resources and Environment Subcommittee holds a hearing on water infrastructure. DOT and the American Association of Port Authorities hold a webinar on the TIGER and INFRA grant programs.

Wednesday - D.C. Mayor Muriel Bowser, Sen. Ben Cardin (D-Md.) and Virginia Gov. Terry McAuliffe speak at the annual Capital Region Business Forum. The Owner-Operator Independent Drivers Association and other groups hold a news conference to push for a delay to the ELD mandate. Sens. John Thune (R-S.D.) and Amy Klobuchar (D-Minn.) speak at a 3M event about connected and self-driving cars. The Transportation Research Board holds a webinar on "integrating goods and services movement in smart growth environments." The Senate Commerce Committee holds a hearing on Howard "Skip" Elliott's nomination to be PHMSA administrator.

Thursday - The Institute for Defense and Government Advancement begins a conference called Patrol Boats and Cutters 2017. The Senate Commerce Aviation Subcommittee holds a hearing on TSA.

GOING BACK TO COMMERCIAL: Tom Price said over the weekend that he would no longer take official business trips on charter planes while the Department of Health and Human Services' inspector general investigates the situation. "POLITICO has now identified more than $400,000 in charter jet spending for Price's travels since May," Dan Diamond reports. HHS says Price started flying aboard charter planes after he couldn't make an event because his commercial flight was delayed. But the delay was caused by weather, which grounded charter planes as well, Dan reports.

HOW'S THE INFRASTRUCTURE PLAN COMING? Trump administration officials are making progress behind closed doors, but it's "been a little more, shall we say, hectic than even some of the most recent administrations, and a little less predictable," said Marcia Hale, the president of Building America's Future. "You always know with this administration that things could change quickly, or policies could change quickly, or allegiances could change quickly," she said. "So you just go with the flow." Our colleagues have the story on how businesses are grappling with Trump's shifting positions, or lack of a position, in a bunch of different policy areas.

FOR YOUR RADAR: Trump is expected to deliver an address on overhauling the U.S. tax code in Indiana on Wednesday. Also on Wednesday, Trump administration officials and GOP leaders in Congress will roll out their general proposal for a tax overhaul, POLITICO's Nancy Cook reports.

FOR THOSE ABOUT TO ROCK... The National Stone, Sand & Gravel Association is on the Hill this week with over 250 folks sitting down with lawmakers to advocate for "a permanent solution to the Highway Trust Fund shortfall," among other asks. Reps. DeFazio, Sam Graves (R-

Mo.), Jeff Denham (R-Calif.), Rodney Davis (R-Ill.), Bob Gibbs (R-Ohio) and others will speak to the group.

MT MAILBAG: Washington Gov. Jay Inslee wants the Senate to keep any plan to split air traffic control operations from the federal government out of its FAA bill. In a letter sent late last week, the Democratic governor wrote that he is worried about how such a change would affect safety as well as general aviation and rural areas. "With the support of the U.S. Congress, the FAA has made billions of dollars in investments to modernize the air traffic control system," Inslee wrote to Sens. Thune, Bill Nelson (D-Fla.), Patty Murray (D-Wash.) and Maria Cantwell (D-Wash.). "We should continue on that path, while maintaining the strong Congressional oversight that now exists."

Throwback: Oregon Gov. Kate Brown sent a letter in the summer to Shuster, DeFazio, Aviation Subcommittee Chairman Rep. Frank LoBiondo (R-N.J.) and ranking member Rep. Rick Larsen (D-Wash.) making similar points. The Democrat wrote that she is "especially concerned about the cost and impact on the 97 public use airports, eight Contract Air Traffic Control Towers and thousands of commercial and recreational users of the airspace here in Oregon."

THE AUTOBAHN:

- "Budget bus lines flout the rules with little consequence." The New York Times.

- "Berliners back call for city's Tegel Airport to stay open." The Associated Press.

- "China's travel growth to outpace U.S. over next decade." Bloomberg Businessweek.

- "1st cruise ship since Irma docks in Key West." The Associated Press.

- "Michelin wants to reinvent the wheel for the driverless age." The Verge.

- "Lufthansa seen offering to pay 200 million euros for Air Berlin assets: source." Reuters.

- "Energy entrepreneur hopes to bring commuter rail to Vermont." The Associated Press.

- "We tried all four of D.C.'s dockless bike-share systems. Here's our review." The Washington Post.

- "'We have them on their knees': 350 pilots at Ryanair urged to join union." The Irish Independent.

- "Turnpike, Parkway rest stop makeovers evoking mixed feelings." The Associated Press.

THE COUNTDOWN: DOT appropriations run out in 75 days. The FAA reauthorization expires in 6 days. Highway and transit policy is up for renewal in 1,102 days.

** **A message from the Coalition for Future Mobility**: Driving Safety: Human error. It's a

factor in 94% of all crashes according to government data. So imagine how much safer our roads would be with Autonomous Vehicles. By reducing risky and dangerous driving behaviors, AVs will help save lives. Tell Congress to greenlight Autonomous Vehicle testing and deployment.http://bit.ly/gl-sd **

Energy and Climate Report

Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

New Biofuel Exemption Prospects Spur Oil Giant Concern

Posted August 25, 2017, 7:30 A.M. ET

By Brian Dabbs

An era of relaxed biofuel blending requirements may be dawning for small oil refineries nationwide following a watershed court decision and new congressional direction for regulators.

That prospect is cheered on by many companies that operate small refineries, such as Silver Eagle Refining Inc. Refiners often complain of the high costs involved with complying with the blending requirements. Exemptions from that requirements, which are granted only to companies financially damaged by compliance, could provide them a windfall.

But the emergent trend is likely to put the Environmental Protection Agency, which has remodeled itself as an ally of the energy industry, in a tough position. Representatives of larger refiners are warning against the fallout tied to a wave of new exemptions, which would shift some of the burden of complying with the aggregate annual biofuel mandate.

That's because exemptions don't affect the EPA's annual blending requirements, so exemptions result in an uptick in the compliance obligations for those that still have to comply with the program.

"The exemptions take that obligated volume out of the stream, and you can't wave a magic wand and take that biofuel out of the total requirement," Suzanne Murray, a Haynes and Boone LLP attorney who represents refiners, told Bloomberg BNA. "Maybe with a couple of guys on the margins, it's OK, but when you start getting more and more folks, sooner or later it adds up to real volume."

Congress put the blending mandate, known as the renewable fuel standard (RFS), into law more than a decade ago. Proponents at the time said greater use of biofuels would cut down on greenhouse gas emissions and bolster U.S. energy independence.

The mandate requires refiners and importers to blend biofuels, such as traditional ethanol and advanced fuels like cellulosic ethanol, into gasoline or purchase credits to comply. The EPA decides on individual exemption petitions in consultation with the Energy Department.

Spreading the 'Burden'

Large refineries like ExxonMobil Corp., Chevron Corp., and Marathon Petroleum Co. LLC, as well as nonexempt small refineries, have to step in for those exempted. That puts them in an unfair position, Mike Tadeo, a spokesman for the American Petroleum Institute, which represents all the industry heavyweights, told Bloomberg BNA.

"EPA should take measures that reduce the overall RFS requirement when a refiner is exempted as to not spread that burden across the rest of the industry," Tadeo said.

Refineries are required to comply with the RFS based on the amount of petroleum processed, but the industry writ large must meet the aggregate annual mandate. A change like the one the American Petroleum Institute supports will likely require new legislation or a regulatory revamp. The EPA is accepting comments on the exemptions as part of its 2018 RFS proposal.

Some refineries say they already struggle to meet their current quotas.

Relief in the Pipeline

A federal appeals court shot down an EPA rejection of an exemption request Aug. 15, and now some small refineries will likely push the agency for more exemptions, according to Murray and Monte Shaw, executive director of the Iowa Renewable Fuels Association.

Those pleas are likely to fall on friendlier ears at the agency than in years past, Murray, Shaw, and a former EPA official told Bloomberg BNA. EPA Administrator Scott Pruitt, a past biofuel critic and oil industry ally, generally supports the exemptions, the former agency official, who worked directly with Pruitt, said, speaking on condition of anonymity.

A refinery must process 75,000 crude barrels a day or less to qualify for an exemption. Nearly 60 percent of all refineries operate under that threshold, according to the Energy Information Administration.

To qualify under the hardship criteria, a refinery must incur disproportionate cost or face the threat of insolvency linked to compliance.

Jerry Lockie, manager at Silver Eagle Refining Inc. refinery in Woods Cross, Utah, told Bloomberg BNA that his company now sees an opportunity for an exemption in the wake of the Sinclair decision.

"We're evaluating our options for filing for the exemption because it does create an economic disadvantage for us," said Lockie, who told Bloomberg BNA his refinery hasn't received an exemption to date. "We just transferred the information to our counsel and it's in review."

The EPA declined Bloomberg BNA requests for information on the small exemption policy, as well as a list of exemptions requests, denial and approvals. According to the 2018 RFS proposal, which the EPA released last month, the agency evaluated a dozen exemptions requests. But the rule doesn't discuss the decisions.

Those interviewed said they weren't aware of any exemptions approved in 2016. Bloomberg BNA reached out to dozens of companies that operate small refineries and most declined to comment or didn't respond.

But Keith Johnson, a spokesman for the refinery operator Delek Group Ltd., told Bloomberg BNA that he's aware of some recent exemptions. The EPA waived RFS obligations last year for a Delek facility at El Dorado, Ark., and an Alon Israel Oil Co. Ltd. facility at Krotz Springs, La., Johnson said.

Delek absorbed Alon in recent weeks. The company aims to apply for exemptions at both facilities again this year, Johnson said.

More Energy Department Clout?

On top of the impact of the decision and Pruitt's position, the agency also is constrained by a new directive that could encourage exemptions.

A report that accompanied the 2017 funding law directed the EPA to follow Department of Energy recommendations on the exemptions. The Energy Department recommended exemptions in the past, but the EPA disregarded its views, according to some of those interviewed by Bloomberg BNA.

The 2018 RFS proposal suggests that new language may have teeth.

"This directive could impact how EPA evaluates small refinery hardship petitions and the number and magnitude of exemptions granted," the EPA said in its 2018 RFS proposal, which released last month.

But despite that language, Thomas White of the Energy Department's Office of Energy Policy and Systems Analysis said the department's "influence has not changed," adding that the DOE "has always provided EPA an evaluation of a petitioner."

Those interviewed said increased exemptions are likely but not guaranteed.

"You can't necessarily expect EPA to grant all these. They may listen to the bigger refiners," Shaw, the Iowa Renewable Fuels Association leader, told Bloomberg BNA. "I'd say there's a smoother path now, but that doesn't make any of them a slam dunk."

Texas Coal Plants May Not Be Saved by Scaled Back Visibility Rules

Posted August 25, 2017, 11:45 A.M. ET

By Nushin Huq

The EPA is giving Texas a chance to rework a proposed multibillion-dollar air pollution regulation for utilities, but that likely won't be enough to save some coal-fired power plants from shutting down, energy analysts told Bloomberg BNA.

The proposal, issued in the final days of the Obama administration, would require Texas power plants to install new pollution controls in order to improve visibility in nearby national parks, including the Big Bend and Guadalupe Mountains national parks. Luminant Generation Co. LLC, a subsidiary of Vistra Energy, which owns several power plants that would be covered by the regulation, projected the proposal would require utilities to spend more than $3 billion dollars on emissions controls.

Several Texas utilities voiced support for the successful negotiations between the EPA and Texas,

but more flexible regulations may not be enough to save some coal plants from retirement. Market pressure from renewables will still likely force some Texas plants to shutter, according to Rob Whaley, an analyst with the consulting firm Wood Mackenzie who focuses on the Electricity Reliability Council of Texas, the state's electricity grid operator.

"The ERCOT market, with all the wind generation coming on, is really suppressing prices and making it really hard for these baseload units to make money," Whaley said.

Emissions Trading Planned

The EPA is under a Sept. 9 deadline to issue final visibility regulations for Texas, but the Trump administration recently asked a federal judge to extend that deadline until the end of 2018, citing a breakthrough in talks with state regulators.

"Circumstances have changed significantly over the past several months and weeks as EPA and Texas have engaged in a productive level of dialogue that has not occurred in many years," the agency said.

The Texas Council on Environmental Quality declined Bloomberg BNA's request to comment on those talks, but the state regulatory agency said in an Aug. 24 court filing that it intends to spend the next six months developing a proposed emissions trading program in order to meet its "best available retrofit technology" obligations under the EPA's regional haze program.

The Obama administration's proposal didn't opt for an emissions trading approach, something that utilities hoped it would have done, according to Eric Groten, an environmental attorney with Vinson & Elkins LLP in Austin.

"That's the most significant change in what the EPA is saying it would like to do now," Groten said. "It's no great leap of faith to say it's planning not to impose specific limitations on specific plants that must be met by those plants. What it will do instead is impose emission limitations on those plants but then allow trading."

The EPA's decision to give Texas a chance to develop a more flexible set of requirements marks the second possible reprieve on regional haze rules for the state's utilities since Inauguration Day: In March a federal appeals court gave the EPA a chance to reconsider a different regional haze regulation that would have required seven Texas coal plants to install about $2 billion in pollution controls.

Windy Times in Texas

The cost of complying with the regional haze requirements, combined with Texas' recent significant gains in wind energy product, could have led to the retirement of Luminant's Big Brown, Martin Lake, Monticello and Sandow power plants by 2024, according to Whaley.

If the emissions targets for the plants are scaled back by the Trump administration, some of those Luminant plants projected to retire may become economical, Whaley said. But it is possible that price pressure might still take half of that generating capacity offline, he said.

"I think of the 3.5 gigawatts of generation we predict will retire under current rules, about half may survive, but I still don't think all of it will," Whaley said.

Wind generation accounted for nearly 23 percent of ERCOT's power generation in the first quarter of 2017. That level marked the highest quarterly wind penetration in ERCOT's history and highlighted the market challenges facing the coal industry in Texas.

At present, some of the coal plants "are running only seasonally," Matt Preston, a coal analyst for Wood Mackenzie, told Bloomberg BNA.

Some utilities already have taken action to comply with the EPA's regional haze regulations for Texas. For example, NRG Energy decided to switch the fuel used at its Limestone power plant from lignite to a coal that has a lower sulfur content, according to company spokesman David Knox.

Knox told Bloomberg BNA that given the "environmental co-benefit of the fuel switch" and the expected level of operation of the Limestone plant, NRG expects to meet its regional haze obligations.

Industry Welcomes EPA Reversal

Luminant declined to comment on the regional haze rule and the pending litigation, but in comments filed in March, the utility said it would support an extension of the deadline to allow for the EPA to "work cooperatively" with Texas on an alternative plan.

Several other utilities that operate in Texas openly welcomed the fruitful negotiations between the EPA and Texas regulators.

"We are pleased that EPA and the State of Texas have been working so closely together, and look forward to participating in the state's efforts to develop its plan," Wes Reeves, Xcel Energy spokesman, told Bloomberg BNA in a statement.

Dynegy, which operates the Coleto Creek coal plant in Texas, also supports giving Texas regulators enough time to develop a suitable state plan for regional haze, company spokeswoman Meredith Moore told Bloomberg BNA.

"We support TCEQ and EPA working collaboratively to reach agreement on a Texas state implementation plan that meets the statutory requirements of the regional haze rule, protects the environment, and treats all in-state generators equitably," Moore said.

National Rule Next?

Regional haze regulations have been an industry target for the past decade, Gloria Smith, managing attorney for the Sierra Club's Environmental Law Program, told Bloomberg BNA. The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, the majority owner of Bloomberg L.P., parent of Bloomberg BNA.

On a national level, the EPA will likely take action on a regional haze regulation issued in January, according to Smith. The regulation drew criticism from states and industry over its handling of requirements that states develop long-term strategies for making reasonable progress toward national visibility goals.

EPA Administrator Scott Pruitt is likely not a fan of that regulation. During his time as Oklahoma attorney general, he joined with seven other state attorneys general in comments that identified various alleged legal flaws in the agency's approach.

"We're certain that EPA will be asked to pull that rule back and to revisit it, similarly like in Texas," Smith said. "We're really frustrated because we thought everyone had come together…and now we're going to throw things into chaos again."

The reasonable progress regulation clarifies the four statutory factors under the Clean Air Act that industry has to comply with, Smith said. Those statutory factors will remain unless Congress changes the law, she said.

"There's actually a lot of momentum right now for reducing emissions, curbing coal-fired generation," Smith said. "The regional haze rule was instrumental for a number of years for cleaning up our national parks, and I don't see that momentum stopping."

Shell Joins Solar Push in Coal Country of World's Top Exporter

Posted August 25, 2017, 8:38 A.M. ET

By Ben Sharples and Perry Williams

Royal Dutch Shell Plc is investigating a solar power project in an Australian region better known for its fossil fuels, particularly coal.

The company is studying the feasibility of a solar development on its land in the Western Downs area of Queensland, which is subject to a final investment decision, a spokeswoman said by email. Though Shell's statement didn't elaborate on timing or size, the regional council this week said it had approved construction of the 250-megawatt Delga Solar Farm project proposed by Shell at Woleebee, near Wandoan.

Shell plans to spend as much as $1 billion a year on its New Energies division as the transition to renewable power accelerates, and will partner with Sunseap Group Pte to invest in solar throughout the Asia Pacific. Equis Energy earlier this month approved a 1,000-megawatt solar plant near Wandoan, a region long associated with a potential large coal mine development by Glencore Plc.

"Investment in Australia's large-scale solar sector has had a record-breaking 12 months with around 1,678 megawatts worth of new projects currently under construction across the country," said Leonard Quong, an associate with Bloomberg New Energy Finance in Sydney. Falling technology costs and surging electricity prices are helping to drive a boom in the sector, Quong said.

Equis' A$1.5 billion ($1.2 billion) Wandoan South Solar Project will be one of the largest in the country and is scheduled to start delivering power in 2019, the Singapore-based company said Aug. 7. Australia is the world's biggest exporter of thermal and metallurgical coal.

There are 38 solar plants operating in Australia with a capacity to generate 411 megawatts of power, and a further 29 under construction, according to BNEF.

Duke Asks to Cancel Planned South Carolina Nuclear Reactors

Posted August 25, 2017, 01:16 P.M. ET

By Jim Polson

Duke Energy Corp. asked to cancel its planned nuclear plant in South Carolina, citing the bankruptcy of reactor manufacturer Westinghouse Electric Co.

The Charlotte-based company also said Aug. 25 in a state filing that North Carolina utility regulators should require customers of the company's Duke Energy Carolinas unit to pay $353 million of pre-construction costs spent on the Lee Nuclear Station over the next dozen years.

The company's decision is the latest blow to the U.S. nuclear industry in the wake of the Westinghouse's filing for bankruptcy earlier this year. South Carolina utilities Scana Corp. and Santee Cooper pulled the plug on a half-finished plant earlier this month after delays and cost overruns, and Southern Co. is weighing whether to halt work on two Georgia reactors.

Nuclear units that were operating for decades have shut, unable to compete with low-cost renewable energy and abundant supplies of natural gas from shale basins.

"Risks and uncertainties to initiating construction on the Lee Nuclear project have become too great and cancellation of the project is the best option for customers," Duke said in a separate statement.

A similar request will be made with South Carolina utility regulators in the future, Rick Rhodes, a company spokesman, said by phone Aug. 25. The U.S. Nuclear Regulatory Commission issued a construction and operating license for the plant last year and Duke will maintain that license "to build new nuclear at this site in the future if it is in the best interest of customers."

NextEra Energy Inc. has said it's decided to "pause" an expansion of its Turkey Point nuclear plant in Florida, but the company is still seeking approval to obtain and then maintain a federal license for two reactors there.

Week Ahead: 'Garbage Juice,' Snow Leopards, EPA Modeling Debated

Posted August 25, 2017, 01:34 P.M. ET

By Chuck McCutcheon

"Garbage juice" in North Carolina, the snow leopard's role in addressing climate change, and an EPA panel's scrutiny of regulation models are among the topics at energy and environment events during the week of Aug. 28.

North Carolina lawmakers are scheduled to vote Monday on overriding Gov. Roy Cooper's (D) veto of a bill (H.B. 576) that would allow the state's landfill operators to spray leachate and wastewater into the air to help manage solid waste. The technique is known as "aerosolization," but opponents have termed it "garbage juice spraying."

In his veto message, Cooper said he opposed the bill because it would limit the future use of more environmentally protective technologies. Despite the earlier blessing from state lawmakers, the owner of most of North Carolina's landfills—Phoenix-based Republic Services Inc.—is now backing away from aerosolization.

Republic Services "concluded that the technique is not a viable alternative for our liquids management in North Carolina," the company said in a statement to Bloomberg BNA. The company said it didn't plan to use the method in the future and was "committed to working with regulators on future ideas and opportunities that might further enhance the management of an evolving waste stream."

Another company, Charah LLC, which operates a landfill near Moncure, N.C., told state regulators that it wants to withdraw its request for an aerosolization permit, according to a news report. Andrew Ballard will cover.

In Other News

World Water Week: Stockholm's annual conference addressing global water issues, organized by the Stockholm International Water Institute, runs Sunday through Friday. Thousands of attendees from more than 100 countries will listen to panel discussions on topics such as irrigating forests with wastewater and using hydropower to address climate change.

One of Monday's panels will address how snow leopards are bringing together 12 countries in Asia's Third Pole region to deal with water and climate security. The animals are considered to show potential resiliency against the direct impacts of climate change in the near term: They are able to tolerate a range of temperatures and require minimal fresh water. But scientists are concerned about the snow leopards' longer term future as climate change accelerates.

Hurricane Harvey: Bloomberg BNA staff will monitor the hurricane's impact on the Gulf Coast region's oil and gas sector and other energy and environmental effects.

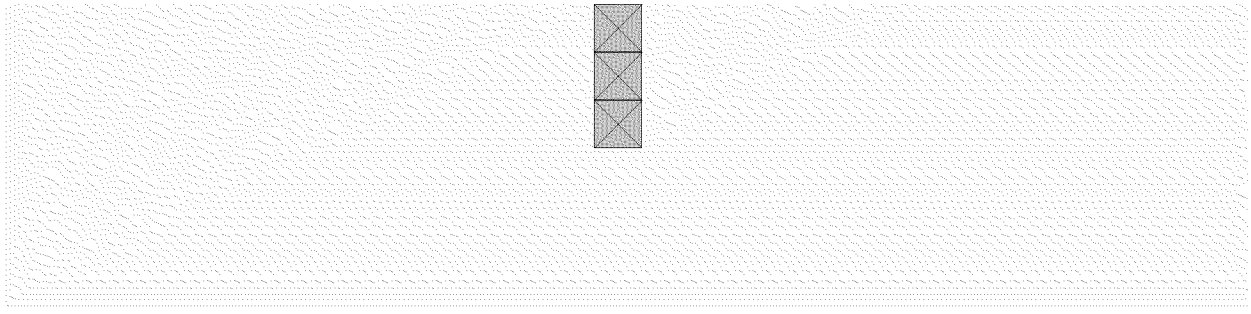
Regulation modeling: The Environmental Protection Agency's Science Advisory Board meets Tuesday and Wednesday in Arlington, Va. Among the topics is a review of a draft board report on economywide modeling of environmental regulations' costs and benefits. Peter Wilcoxen, a Brookings Institution nonresident senior fellow in economic studies and co-director of the Brookings Climate and Energy Economics Project, chairs the committee on the topic and will make a presentation. Sylvia Carignan will watch.

Perry to Ukraine: Energy Secretary Rick Perry on Monday will lead a U.S. delegation to Kyiv, Ukraine. The group will meet with President Petro Poroshenko, as well as other Ukrainian officials to discuss energy partnerships. The department, along with Xcoal Energy & Resources, announced Aug. 21 the first shipment of Pennsylvania thermal coal to Ukraine.

Conowingo Dam: The Maryland Environmental Service is expected Thursday to issue a detailed request for proposal for a demonstration project to determine the costs of dredging the Conowingo Dam. The project also will seek to identify markets for reuse of dredged material. Recent research shows that the hydroelectric dam, located on the Susquehanna River in northern Maryland, has been filling with sediment faster than expected. Leslie A. Pappas will cover.

Infrastructure investment: The Atlantic Council will hold a Monday forum in Chapel Hill, N.C., on the Trump administration's infrastructure proposal featuring Rep. David Price (D-N.C.).

EPA webinars: The EPA will hold a Tuesday webinar on reducing plastic products' pollution and a Thursday webinar on suspect screening of chemicals in consumer products.



—With assistance from Andrew Ballard.

Highlights

Leading the News

Election 2017: Offshore Drilling Opponent Wins Virginia Governor Race

By *Amena H. Saiyid, Paul Shukovsky, Gerald B. Silverman, Alex Ebert, John Herzfeld, Paul Shukovsky* and *Tripp Baltz*

Opponents of offshore oil and gas drilling scored a victory with the election Nov. 7 of Democrat Ralph Northam to be Virginia's next governor.

Senate to Start Debate on EPA Air Pick, Teeing Up Final Vote

By *Abby Smith*

Senators are expected to soon begin debate on President Donald Trump's pick to head the EPA's air office, teeing up a confirmation vote as soon as this week.

Trump Nominee Drops Paganism Claim, Says Climate Change Is Real

By Ari Natter

An environmental nominee of President Donald Trump who had dismissed the threat of climate change and labeled carbon dioxide plant food, abandoned those positions Nov. 8 under questioning from Senate Democrats.

EU Seeks to Cut Cars' Carbon Dioxide Emissions 30 Percent By 2030

By *Stephen Gardner*

BMW Group, Daimler, and other carmakers in the European Union would be required to improve the fuel economy of their vehicles or increase the proportion of electric cars they produce to meet 2030 carbon dioxide reduction targets proposed by the European Commission Nov. 8.

High-Voltage Transmission Lines Coming, Mexico's Energy Ministry Says

By *Emily Pickrell*

A much-awaited bidding process for Mexico's first private auction on a $1.2 billion high-voltage line will take place in the first quarter of 2018, after a year of delays, according to a senior energy minister.

Today's News

Passive Investing Giants Get More Active on Climate, Diversity

By *Andrea Vittorio*

State Street Corp., Vanguard Group, and other big passive investment managers' increasingly vocal stance on issues such as climate change and diversity shows in the way they vote.

Bill Aims to Make Energy Regulator Lead Agency in Hydro Reviews

By *Rebecca Kern*

The Federal Energy Regulatory Commission would take the lead role in coordinating the interagency licensing process for hydropower projects in a bill that is up for a vote on the House floor Nov. 8.

How Coal Giant Peabody's Ideas Ended Up in Trump's Coal Study

By *Ari Natter*

Days after Energy Secretary Rick Perry requested a study on how to help coal-fired power plants, a lobbyist for the largest U.S. coal producer contacted the department to offer his advice. Many of those ideas became part of the department's efforts to help companies who provide the fuel source.

California Limits Farmers' Pesticide Use Near Schools

By *Carolyn Whetzel*

California farmers can't spray pesticides near schools and daycare centers during weekdays under new restrictions the state adopted Nov. 7.

Arkansas Plant Board Votes in Favor of In-Season Dicamba Ban

By *Lydia Mulvany*

Arkansas is one step closer to banning agricultural use of the weedkiller dicamba during the summer growing season following approval by the Arkansas Plant Board.

Bill to Boost Federal Oil and Gas Production Advances

By *Alan Kovski*

A bill that would promote wider offshore oil and gas drilling and a greater state role in onshore oil and gas permitting advanced out of the House Natural Resources Committee Nov. 8 on a mostly party-line vote of 19-14.

Wisconsin's 'Prove it First' Mining Ban Headed for Repeal

By *Stephen Joyce*

Highland Copper Co. Inc., Komatsu Mining Corp. and other global mining equipment and development firms could benefit from the Wisconsin Legislature's approval of a bill repealing a 20-year mining moratorium.

Microgrid Industry Seeks Regulations in Order to Grow

By *Adrianne Appel*

The business of building microgrids is ready to grow but is being held back by a lack of state rules and guidance about how utilities should relate to microgrids, business sources said.

Pollution Claims Against Rug Makers Batted to State Court

By *Steven M. Sellers*

Water pollution claims against many of the nation's carpet manufacturers belong in Alabama state court, a federal court in Alabama ruled Nov. 7.

Icahn Subpoenaed by U.S. Over Biofuel Policy While Trump Adviser

By Miles Weiss and Jennifer A. Dlouhy

Federal investigators have issued subpoenas for information on Carl Icahn's efforts to change biofuel policy while serving as an informal adviser to President Donald Trump, according to regulatory filings.

Ford Seals Big Deal for Chinese Electric Cars in Time for Trump

By Bloomberg News

Ford Motor Co. is going all-in on electric cars in China, the world's largest market

for battery-powered vehicles, and it wants President Donald Trump to know about it.

EPA Seeks to Take Coal Ash Decisions Out of Court's Hands

By *Sylvia Carignan*

Utilities unhappy with EPA's coal ash regulations are pleased the agency wants to consider some rule changes and take the matter out of court.

California to Tackle Shrinking Salton Sea With $383M Plan

By *Carolyn Whetzel*

California has signed off on a $383 million *plan* to build wetlands and control dust along the Salton Sea's shrinking shoreline over the next 10 years.

Beijing Beaten as Pollution in Indian Capital Goes Off the Chart

By *Iain Marlow* and *Anindya Upadhyay*

Thick toxic smog enveloped New Delhi for a second straight day on Nov, 8, forcing schools to shut down, halting traffic on highways, and sending residents scurrying to buy air purifiers and filtration masks.

EU Climate Chief Calls for Carbon-Market Reform Deal This Week

By *Ewa Krukowska* and *Jonathan Stearns*

The European Union should reach an agreement on an overhaul of the world's biggest carbon market this week to prove leadership in combating emissions at the United Nations climate talks, according to EU Climate and Energy Commissioner Miguel Arias Canete.

Russia Seeks Technology as Condition for Bayer-Monsanto Deal

By *Irina Reznik* and *Anatoly Medetsky*

Russia delayed the approval of Bayer AG's takeover of Monsanto Co. until the merged company agrees to share technology and data with the country, the first time authorities have demanded corporate secrets in exchange for access to the local market.

France Says Cutting Nuclear Reliance Could Take Extra 10 Years

By Francois de Beaupuy

France may delay its goal of reducing nuclear power to half of electricity output by five to 10 years because it needs more time to develop renewable energy, Ecology Minister Nicolas Hulot said.

Copper Consumption to Get Boost as World Wagers on Electric Cars

By *Archana Chaudhary* and *Swansy Afonso*

Demand for copper globally is set to jump 22 percent in as soon as five years on increasing usage of the metal in electric vehicles, solar and wind power sectors, according to Indian billionaire Kumar Mangalam Birla's Hindalco Industries Ltd.

No Sales Growth? No Problem! Utilities See Money in

Grid Repairs

By Mark Chediak

Faced with stagnant sales, big power companies say they can still grow in the U.S. by investing billions in upgrading their grids to accommodate renewables and protect against extreme weather events.

As Trump Steps Back from UN Climate Talks, Coke and HP Move In

By Jennifer A. Dlouhy

On the fringes of the ongoing global climate summit in Bonn, U.S. leaders will once again demonstrate their commitment to the issue, with a packed agenda of film screenings, panel discussions and cocktail parties where they will highlight the country's carbon dioxide cuts.

A Year After Trump's Election, Coal's Still Losing to Renewables

By Brian Eckhouse and Tim Loh

It's been a year since President Donald Trump's election and his *pledges* to transform the energy markets haven't exactly come to pass.

Chlorine's Deadly Hazards Fuel Stock Rally as Supply Tightens

By *Jack Kaskey*

Armies used chlorine as a weapon in World War I. Thousands of lives are put at risk every time a railroad tank car rolls through a city carrying the chemical. It's among the biggest fears of safety regulators.

Lead Paint Nuisance Ruling Could Have Big Impact

By *Peter Hayes*

Sherwin-Williams Co., NL Industries Inc. and ConAgra Grocery Products Co. are expected to learn before Thanksgiving whether a California trial court validly ordered the manufacturers to pay $1.15 billion to remove or abate lead paint hazards from hundreds of thousands of California homes.

Tuesday Night Wrapup

Olive Oil, Quinoa Among Repeat Offenders on Pesticide Watch List

By *Tiffany Stecker*

The FDA is looking at more than two dozen imported foods that might warrant "special attention" from inspectors because they contain pesticide residues in excess of U.S. limits, many of which have drawn agency scrutiny before.

Trump Administration Drops Call for New WTO Pesticide Standards

By *Bryce Baschuk*

The Trump administration dropped its bid for a World Trade Organization accord to harmonize international pesticide residue standards for food imports.

Shareholders Sue to Access GM Records on

Emissions Compliance

By *Yin Wilczek*

Shareholders are suing General Motors Co. to access documents they say may shed light on whether directors allowed the company to illegally evade emissions standards.

Flood Insurance Reauthorization Stalls at House Rules Panel

By *Brandon Ross*

House Rules Committee action on a bill to reauthorize the National Flood Insurance Program was postponed Nov. 7 and an aide told Bloomberg Government that the measure is now unlikely to be taken up this week.

Subject: First Move: Tax Time Arrives • House to Move on Wildfires • Colorado Mine's Concerns

What you need to know to start your day.

Tax Time Arrives • House to Move on Wildfires • Colorado Mine's Concerns

By Chuck McCutcheon

House Republicans are rolling out a gigantic tax bill today. And the bill faces a couple of gigantic challenges.

One is the bill must gain reasonably broad GOP support. Another is it has a speed-of-light—by legislative standards—time frame devised with the goal of delivering a resounding Christmas present for President Trump and its backers in Congress.

It's possible that U.S. oil explorers could be big winners, and see a multibillion-dolla benefit from a move to slash the U.S. corporate tax rate. Domestic energy producers paid the second-highest effective tax rate of any business sector in 2014 at 37 percent.

Tax credits for wind and solar energy also have been discussed. Congress voted to extend credits for both under a 2015 deal, but EPA Administrator Scott Pruitt is calling for those credits to end early, saying wind and solar should "stand on their own" and compete against coal and other fossil fuels.

Supporters of the wind and solar credits have made their pitch to preserve those, as well as renew similar tax credits for other cleaner energy sources, including geothermal and fuel cells.

Texas Republican Kevin Brady, who heads the tax-writing panel, could tinker with the legislation before all his committee members get together next month to start the markup process.

The House is expected to consider a bill today in response to recent devastating wildfires.

A flag hangs in front of a fire-destroyed home in Santa Rosa, Calif.
Photo by Justin Sullivan/Getty Images

Arkansas Republican Bruce Westerman's measure seeks to reduce the risk of

wildfires by giving the U.S. Forest Service various ways to fund fire suppression while giving loggers access to thin overgrown forests. It's a reworked version of legislation that passed the House in 2015 with the backing of 20 Democrats before failing to make it out of the Senate.

The White House late yesterday said it has concerns about the bill's proposed changes to the Stafford Act disaster relief law. Those called-for changes, it said, "would force competition for funding between wildfires on federal land and other disasters already covered by the Stafford Act, including hurricanes."

Big mining companies such as Peabody Energy and Alpha Natural Resources are watching what happens at Arch Coal's West Elk Mine in Colorado.

The mine is emitting volatile organic compounds—compounds that easily become vapors or gases—at levels that violate Colorado's air quality standards, Tripp Baltz reports. Environmentalists say the state is dragging its heels on enforcement because of industry-induced pressure. State officials deny that, citing in part how hard it is to estimate emissions.

The unfolding debate could have an impact on Clean Air Act permitting requirements at other underground coal mines nationwide with large methane emissions.

Other Stories We're Covering

- Scientists who get EPA grants can no longer serve on an agency's scientific advisory panel. Sylvia Carignan takes a look at what that means.
- Refrigeration industry trade companies and officials are pushing for the Trump administration to keep intact at least one Obama-era climate policy: a deal to phase down refrigerant chemicals that are potent greenhouse gases. Abby Smith is following.
- A week after vowing that he's getting tough on corporate polluters, Pruitt says Exxon Mobil will pay more than $300 million to resolve air pollution violations tied to eight chemical plants in Texas and Louisiana.
- Turning California's giant San Pedro Bay Port Complex into a zero-emissions operation will cost $14 billion under a plan that harbor commissioners will consider Thursday. Carolyn Whetzel is covering.
- The EPA's Pesticide Program Dialogue Committee, a panel of environmentalists, trade group representatives, and state officials, will meet today and Thursday to discuss top issues the agency's pesticides program faces. Tiffany Stecker is covering.

Quote of the Day

"This is like your best friend drove a truck through your house."
—Former FERC chairman Pat Wood III, a Texan, lamenting Energy Secretary Rick

Perry's proposal to help the coal and nuclear industries after having cheered Perry's backing of renewables when he was Texas governor.

Today's Events

- **10 a.m. • Nominations** • Senate commerce and science panel considers nominations for NASA administrator and assistant commerce secretary for environmental observation and prediction.
- **12:30 p.m. • Energy Efficiency** • Johns Hopkins University sponsors talk on how energy efficiency can be financed in emerging markets.
- **3 p.m. • Latin America** • Wilson Center offers webcasted event on developing low-carbon economies in Latin America.
- **6 p.m. • Climate** • Columbia University's Center on Global Energy Policy holds webcasted discussion on Bonn climate talks featuring a Paris Agreement negotiations co-chair.

Around the Web

- A Belgian beech tree is tweeting information from attached sensors about its health, something scientists hope can help with climate protection.
- A conceptual artist is turning water bottles from Flint, Mich., into raincoats and swimwear.
- Alaska oil and gas regulators have issued an emergency order to review of North Slope wells after a spill was connected to thawing permafrost, subsidence and a cracked casing.

Subject: Morning Media: Trump attacks the media (again) -- 28 million watch Afghanistan speech -- Breitbart gets pranked

By Alex Weprin | 08/23/2017 06:20 AM EDT

With Cristiano Lima

STOP ME IF YOU'VE HEARD THIS ONE BEFORE: President Donald Trump used his rally in Phoenix, Arizona, last night to rail against the "dishonest media." He busted out a few old classics, taking on the "failing New York Times," the "Amazon Washington Post" and CNN, to which the crowd responded by chanting "CNN sucks!" He defended "Poor Jeffrey" Lord, who CNN released as a contributor after he tweeted "sieg heil" at someone on Twitter. He also criticized ABC News anchor George Stephanopoulos, who he belittled as "little George Stephanopoulos," for an interview he conducted with U.N. Ambassador Nikki Haley yesterday morning.

-Trump's roughly 20 minute off-prompter media rant -- which was carried live on the cable news channels -- was inspired by the media coverage of his Charlottesville presser last week.

-"It's time to expose the crooked media deceptions," he told the crowd at one point, adding that the media was "trying to take away our history and our heritage," and that journalists were "sick people" who "don't like our country."

-He said The New York Times apologized to him after the election (it did not) and said "CNN does not want its falling viewership to watch what I'm saying tonight" (CNN carried the comments live). At one point he said that the red lights on the cameras were turning off, suggesting that coverage of his speech was being dropped, though the TV coverage continued uninterrupted. MSNBC, at a few points during his comments, broke into his speech to correct things he said to the crowd. "This is the president lying about the media," Lawrence O'Donnell said at one point.

-Trump did, however, heap praise on Fox News, telling the crowd "I must tell you, Fox has treated me fairly," before praising individual programs. "Hannity, how good is Hannity? And he's a great guy. He's an honest guy," he said, before adding that "Fox & Friends" "is a great show, the most honest show."

-After the rally was over, the cable news punditry began. "What we have witnessed was a total eclipse of the facts. Someone who came out on stage and lied directly to the American people," said CNN anchor Don Lemon. "We saw this during the campaign, it got to the point where it got so far as to almost becoming dangerous," said Fox News White House correspondent John Roberts, speaking about Trump's comments on the media. "I think as a responsible leader he shouldn't go so far as he did, and he did go too far tonight."

Good morning and welcome back to Morning Media. I want to make Morning Media better

and more useful to you, so please send me tips, ideas and feedback! I'm on Twitter @alexweprin and on email at alexweprin@gmail.com. Morning Media is produced with help from **Cristiano Lima (clima@politico.com / @ludacristiano)**. Archives . Subscribe.

28 MILLION PEOPLE: That is how many, on average, watched President Trump's address to the nation about Afghanistan Monday night on TV, according to ratings data from Nielsen. That figure does not include channels like C-SPAN, which is not rated by Nielsen, nor does it count anyone who may have streamed the speech online. All told, the speech drew millions fewer viewers than President Obama's address to the nation on Afghanistan, which he also made in his first year in office. That speech, from December 2009, averaged 40.8 million viewers.

-Breaking things down even further: ABC was tops among the broadcast networks, averaging just over 5 million viewers, while Fox News led among cable channels, averaging 4.7 million viewers. As TV scribe Joe Adalian noted on Twitter, however, MSNBC was the only channel to see its ratings go up after the speech ended, with an abbreviated edition of Rachel Maddow averaging 3.1 million viewers, up from 2.9 for the speech.

-CNN's Brian Stelter makes a good point here. Are the relatively modest ratings about President Trump? Or are they about America's view on Afghanistan? "The relatively low ratings may, to some degree, reflect the country's pessimism about the war effort."

-Smart story from Bloomberg's Gerry Smith here. The broadcast news divisions are seeing viewership shift to cable news. People want more political coverage., and the broadcast news shows just aren't fitting the bill as well as cable is at the moment.

-I didn't forget about the eclipse, by the way. Among cable news channels, Fox News averaged 2.1 million viewers, CNN 1.7 million and MSNBC 1.2 million. The broadcast ratings won't come in until today, but overnight numbers suggest ABC led the pack. Here's my question: who are these millions of people that watched the eclipse on TV? It is one of the few news events almost everyone could experience themselves, just by going outside and looking up, hopefully with protective eyewear.

BREITBART GOT PRANKED: A self-described "email prankster" pretending to be Breitbart executive chairman Steve Bannon pulled a fast one on staff at the media outlet. In the process, he fooled reporters into promising to do the faux-Bannon's "dirty work" against White House aides, including first daughter Ivanka Trump and her husband, senior White House adviser Jared Kushner. In one thread, Breitbart EIC Alex Marlow went as far as to suggest they could get Ivanka Trump and Kushner ousted from the administration "by end of the year." The email exchanges, which was leaked to CNN by the prankster , is the latest sign that Breitbart will look to target former opponents of Bannon in the West Wing now that he is once again atop the explosive populist news site. Read the juicy details here.

THE VILLAGE VOICE ABANDONS PRINT: Tuesday was a sad day for New York media and alt-weekly fans. The Village Voice is ending its free weekly print edition, which has been distributed across the New York area since 1996. The Voice has published a print edition in some capacity since 1955, first available as a subscription and at newsstands before going free in

1996 in a bid to boost circulation. Going forward, the Voice will "maintain its iconic progressive brand with its digital platform and a variety of new editorial initiatives and a full slate of events that will include The Obie Awards and The Pride Awards," owner Peter Barbey said in announcing the change.

SOUNDBITE: "We collectively made the decision with Robert to switch games as the tragic events in Charlottesville were unfolding, simply because of the coincidence of his name. In that moment it felt right to all parties. It's a shame that this is even a topic of conversation and we regret that who calls play by play for a football game has become an issue." -*A spokesperson for ESPN*, explaining why college football announcer Robert Lee (no relation to the Confederate general) was being moved off of Saturday's game between William & Mary and the University of Virginia.

-If you're curious, Sports Illustrated's Richard Deitsch has the backstory.

REVOLVING DOOR:

-D.C. is losing one of its most veteran reporters, as Fox News chief political correspondent Carl Cameron announced Tuesday that he would be retiring. Cameron, who joined Fox News in 1995, before it officially launched, covered events such as the 2000 election, Hurricane Katrina and the 9-11 attacks. Axios has more, including an excerpt from a note to staff from president of news Jay Wallace. And here's Bret Baier's tribute to "Campaign Carl."

-Notable changes at NPR: executive editor Edith Chapin will move to a new role overseeing the strategy and execution of our collaborative journalism aspirations and editorial partnerships," according to an email to staff sent by Michael Oreskes, SVP of news and editorial director. Bruce Auster has been promoted to senior director for the Collaborative Journalism Network, while David Sweeney will assume supervision of the newsroom following Chapin's departure.

-HuffPost announced the additions of Tommy Craggs and Luke O'Brien on Tuesday. Craggs, who previously ran Deadspin and Gawker, joins as a senior enterprise editor, and O'Brien joins as a reporter and contributor editor for Highline.

-BuzzFeed News has hired a new business editor. Jennifer Kingson joins from The New York Times.

-Meanwhile, BuzzFeed News is also shaking up its video department, with head of news video Henry Goldman and senior producer Jessica Naudziunas leaving the company. Going forward, BuzzFeed News "will be moving from having a single, centralized video team to video groups more directly connected with parts of our news operation," editor in chief Ben Smith told The Hollywood Reporter.

-Former NBC "Today" correspondent Jenna Wolfe has joined Fox Sports as the host of morning show "First Things First" on FS1.

JUICY READ OF THE DAY: This is always one of my favorite stories every year: Variety's

list of the highest-paid people in television . For news junkies, you may be interested to know that NBC "Today" anchor Matt Lauer was the highest-paid person in TV news with an estimated $25 million per year salary. His soon-to-be "Today" colleague Megyn Kelly and ABC "Good Morning America" anchor Robin Roberts were second with $18 million. George Stephanopoulos earns $15 million, while CNN's Anderson Cooper earns $12 million. Jimmy Fallon is the highest-paid late night host earning $16 million, with Jimmy Kimmel and Stephen Colbert right behind him.

WOMEN RULE NEWSLETTER - POLITICO's Women Rule series, produced in partnership with founding partners Google and the Tory Burch Foundation, is a journalism series dedicated to exploring women's leadership in politics, policy and their communities. Stay up to speed on what's happening in the Women Rule community with our monthly Women Rule Newsletter. Subject: Oct 2 PRG Energy Update On Tap: Solar Tariff Remedy Case, Key EPA Nominations, SEJ

Friends,

The news cycle will be totally overrun this week by the terrible shooting in Las Vegas last night and our thoughts and prayers go out to those impacted, as well as our gratitude to those who helped others.

In the sports world this week, baseball playoff kick off tomorrow with the Yankee and Twins, but also some great match ups are already set: (Cubs/Nats & RedSox/Astros). As well, the update's favorite season also launches this week: the NHL hockey season.

Tomorrow, the US International Trade Commission returns to the solar trade case with a public hearing on the remedy phase. We will be in full impact mode. We can help you with a full ***array*** of resources that will be impacted from utilities to contractors to manufacturers to retailers.

The big event on Capitol Hill this week is Wednesday's Senate Environment nomination hearing for several EPA nominees including Bill Wehrum for the air office. Other events include grid hearings tomorrow in House Science and House Energy (industry sector experts testifying including SEIA's Abby Hopper, AWEA's Tom Kiernan, ACCCE's Paul Baily and NEI's Maria Korsnick). Also Wednesday, Senate Commerce Committee will mark up a bill meant to boost self-driving cars. Our friends at SAFE can provide you with excellent background and resources, as they did here in the *San Jose MercNews*. Finally Thursday, House Energy returns to electricity to hear from consumer groups/advocates.

This week on Wednesday, SEJ launches its annual meeting in Pittsburgh. There will be a number of great tours during the day Thursday and great policy panels on Friday and Saturday. And, of course, Bracewell is hosting our annual reception on Thursday night.

Finally, Congrats to the Business Council for Sustainable Energy, who is celebrating its 25th

Anniversary, with a reception Thursday evening at Stanton & Greene. Good luck on the next 25!!!!

Supreme Court Fall Term launches today. Call with questions. Best,

Frank Maisano

(202) 828-5864

c. (202) 997-5932

FRANKLY SPOKEN

"American energy security has now improved for five years in a row, despite rapidly challenging market conditions and geopolitical tensions. Just five years ago, the story was much different. But because of the shale revolution that has taken place during this time period, our nation enjoys much greater energy self-sufficiency, which translates into fewer imports, lower costs, and reduced emissions."

Karen Harbert, president and CEO of the U.S. Chamber of Commerce's Global Energy Institute.

"From the outset, Georgia Power and the project co-owners have worked to minimize the impact of the project on our customers' bills and these additional loan guarantees will help us continue to reduce our financing costs."

Paul Bowers, chairman, president and CEO of Georgia Power.

IN THE NEWS

Georgia Power Received Additional Loan Guarantee Commitments for New Vogtle Units – The DOE has conditionally approved a $3.7 billion increase in the federal loan guarantees for the over-budget Vogtle nuclear project in Georgia, the agency announced this morning. Georgia Power had previously secured loan guarantees of $3.46 billion for the construction of Vogtle units 3 and 4, the first to be built in the United States in more than 30 years. With a total of more than $5 billion in anticipated DOE loan guarantees, Georgia Power expects to be able to provide more than $500 million in present-value benefits to its customers.

More Information on Decision, Vogtle – Georgia Power owns 45.7% of the new units, with the project's other Georgia-based co-owners including Oglethorpe Power, MEAG Power and Dalton Utilities. On August 31, Georgia Power filed a recommendation with the Georgia Public Service Commission (PSC) to continue construction of the Vogtle nuclear expansion supported by all of the project's other co-owners. The recommendation was based on the results of a comprehensive schedule, cost-to-complete and cancellation assessment launched following the bankruptcy of Westinghouse in March. The Georgia PSC is expected to review the recommendation and make a decision regarding the future of the Vogtle 3 & 4 project as part of the 17th Vogtle Construction Monitoring (VCM) proceeding. Final approval and issuance of these additional loan guarantees by the DOE cannot be assured and are subject to the negotiation of definitive agreements, completion of due diligence by the DOE, receipt of any necessary regulatory approvals, and satisfaction of other conditions.

-

Rural Co-ops Support Oglethorpe, SoCo – The rural co-ops weighed in on the DOE's loan guarantee for the Plant Vogtle nuclear power project. Co-Op Oglethorpe Power in Georgia is one of the co-owners and will have a share of the loan (about $1.6 billion). NRECA CEO Jim Matheson today applauded the decision saying: "Today's announcement is welcome news for Oglethorpe Power, the Vogtle project, and the future of America's electric generation. Nuclear energy is an essential source of emissions-free, 24/7 power. This DOE loan guarantee will help promote a diverse fuel mix, which is vital as electric co-ops work to meet 21st century energy needs and ensure continued access to affordable, reliable power. I applaud DOE and Secretary Perry for recognizing the value of this project and making it more affordable for our members."

DOE Urges FERC to Take Swift Action to Address Threats to Grid Resiliency – DOE formally proposed that FERC take swift action to address threats to U.S. electrical grid resiliency. Pursuant to his authority under Section 403 of the Department of Energy Organization Act, the Secretary urged the Commission to issue a final rule requiring its organized markets to develop and implement reforms that would fully price generation resources necessary to maintain the reliability and resiliency of our nation's grid.

Why DOE – After Department of Energy (DOE) Secretary Rick Perry issued his April 14 memo directing staff to study baseload power concerns, we explained that DOE had authority to direct the Federal Energy Regulatory Commission (FERC) to undertake rulemakings. Secretary Perry is primarily responsible for ensuring the electrical grid meets America's needs now and into the future and FERC is charged with regulating the markets to achieve that mission. The recent Staff Report to the Secretary on Electricity Markets and Reliability showed that while today's grid is reliable, market distortions are threatening its resilience and the future of American energy security.

Letter to FERC/NOPR – The full text of the Secretary's Letter to the Commission as well as the Proposed Rule are both available at DOE's website, www.energy.gov.

Insight From ClearPath – ClearPath Executive Director Rich Powell offered insights saying by urging FERC to establish a new tariff allowing highly reliable and resilient operators (who have 3 months or more of on-site fuel supply in place) to recover their full costs of generation, DOE today takes a historic step to shore up our vital national nuclear fleet. This approach will work within the wholesale electricity markets as opposed to forcing further bottom-up state action to save the plants -- out of market actions that add further complexity and uncertainty to our already un-level playing field for power. ClearPath hopes this is the beginning of a holistic review of the functioning of the wholesale power markets, which might also include changes to how generators are compensated, as well as formal valuation of clean power. Some observers may be concerned that this measure compensates all highly reliable sources of power, including unmitigated coal. ClearPath believes that FERC, and the RTOs and ISOs, will be able to design a tariff structure that compensates all highly reliable generators to remain online and ready to run, without necessarily increasing the dispatch of emitting sources like unmitigated coal. ClearPath has been calling for FERC to move ahead rapidly on this price formation reform agenda -- see below: https://clearpath.org/jay-and-richs-take/why-rebuilding-ferc-quorum-matters-for-nuclear

Renewables Express Concern – The American Wind Energy Association also released this statement regarding DOE's announcement on grid resiliency: Amy Farrell, Senior Vice President, Government and Public Affairs, American Wind Energy Association: "We worry today's proposal would upend competitive markets that save consumers billions of dollars a year. The best way to guarantee a resilient and reliable electric grid is through market-based compensation for performance, not guaranteed payments for some, based on a government-prescribed definition." On background, in June, the CEO of NERC testified to the Federal Energy Regulatory Commission that "the state of reliability in North America remains strong, and the trend line shows continuing improvement year over year." Christopher Mansour, vice president of federal affairs for the Solar Energy Industries Association: "While we agree that wholesale markets should fully compensate generators for all the energy, capacity and ancillary

services they provide, healthy competition should always promote the best, most innovative solutions," he said. The conservative R St. Institute called Perry's plan "an arbitrary backdoor subsidy to coal and nuclear plants."

Ameren to Add Wind, Solar, Reduce Emissions – Ameren Missouri has announced plans to add enough solar and wind electricity to power 214,000 homes. The St. Louis-based subsidiary of Ameren Corp. said adding at least 700 megawatts of wind power would cost about $1 billion and take until 2020. Ameren says improving technology and renewable energy initiatives with large customers could boost the wind investment higher. Adding 100 megawatts of solar power is expected to occur over 10 years, but no costs estimates are available. One solar facility at St. Louis Lambert International Airport is slated to be completed next year. Ameren is working to reduce its carbon emissions 80% by 2050 from 2005 levels.

Chamber Releases Energy Security Index – The 2017 edition of Global Energy Institute's *Index of U.S. Energy Security Risk* finds that U.S. energy security is continuing to rapidly improve to one of the best scores in decades, after hitting bottom just five years ago. The Index employs 37 different energy security metrics in four major areas of risk: geopolitical, economic, reliability, and environmental. A lower Index score indicates a lower level of risk. The eighth annual edition of the Index covers 1970-2040 and incorporates the latest historical data and forecast models. In 2016—the most recent year available—the risk score dropped another 1.3 points to 76.0, the lowest score since 1995. Since 2011, the total risk index score has dropped by 25 points, the largest rise or fall during any five year period since 1970. Of the 37 metrics, 18 showed decreases of more than 1 percent, while another 9 remained about the same. Among the areas of improvement were fuel imports, energy expenditures, energy use intensity, and environmental categories. The biggest areas of improvement in the Index were related to oil and gas expenditures, which are a result of increased domestic shale production. The single largest category that saw improvement was security of US natural gas imports. On the flip side, price volatility risks, related largely to the recent plunge in the price for crude oil, remained high. Metrics related to electric grid reliability risks during periods of peak demand also inched higher. This year's Index features special sections on electricity capacity margins and transmission lines, which contains additional data and analysis regarding demand and infrastructure. The Index and its companion, the International Energy Security Risk Index, are available on our website at: www.globalenergyinstitute.org/energysecurity. The U.S. index is once again available in an online, interactive web tool format, which makes it easy to see how various metrics change from year to year.

ON THE SCHEDULE THIS WEEK

Geothermal Conference Set for Utah – The Geothermal Energy Association (GEA) is holding GEOEXPO+ on today through Wednesday at the Salt Palace in Salt Lake City, UT. The meeting will be held in conjunction with the GRC Annual Meeting.

FERC Commissioner, Interior Official Headlines NA Gas Forum – The North American Gas Forum is being held today and tomorrow in Washington DC. FERC Cheryl LeFleur and Interior's Vincent DeVito will deliver a keynotes tomorrow and there will be a members panel featuring Reps. Scott Tipton, Joe Barton, Bill Johnson and Others. Other speakers include INGAA's Don Santa, former FERC Commissioner Tony Clark, RFF's Richard Newell, ClearView's Kevin Book, PJM's Craig Glazer, NGSA's Dena Wiggins and DOE's Fossil Energy Office acting chief Robert Smith.

WCEE Hosts Federal Lands Discussion – Today at Noon, the Women's Council on Energy and the Environment (WCEE) holds a forum to discuss current opportunities and challenges for the development of energy and mineral resources under the new Administration. Among other hotly debated topics, the event will cover the role of climate change considerations in decision-making, potential changes in mitigation requirements, issues regarding royalty valuation and payment, and still unresolved issues regarding the scope of Presidential withdrawal authority onshore and offshore under decades-old statutes.

CCS Forum to Look at Norway Success Story – The Global CCS Institute will hold a forum tomorrow at 9:00 p.m. in National Press Club's Zenger Room on the Innovation and low-carbon policies that are driving the development of clean energy technologies around the world. The discussion will explore how Norway has fostered the development of its carbon capture infrastructure, as well as the emerging business case for carbon capture in the U.S. and globally. Featured speakers Gassnova CEO Trude Sundset, Rich Powell of ClearPath Foundation, Thina Saltvedt of Nordea Bank Norge and Statoil VP of New Energy Solutions Steinar Eikaas, who operates the world's most successful carbon capture project in the North Sea.

US ITC to Hold Solar Remedy Hearing – The US International Trade Commission will hold a hearing at 9:30 a.m. on the remedy portion of its solar trade case. Last week, petitioners filed testimony in the case with the solar industry further attacking the case.

House Science to Look at Grid – The House Science Committee will hold a full committee hearing tomorrow at 10:00 a.m. looking at grid resiliency. The purpose of the hearing is to define resiliency, examine electric resiliency from both physical and cyber threats, and to study the

effectiveness of private and government coordination on resiliency across the electricity delivery sectors. This hearing will specifically discuss the recommendations made by the National Academies of Sciences. Witnesses will include the University of Illinois' William Sanders, Pacific Northwest National Laboratory Electricity Market Manager Carl Imhoff, Gavin Dillingham of the Houston Advanced Research Center and Walt Baum of the Texas Public Power Association.

Senate Energy to Vote on Noms, Discuss Energy Storage – The Senate Energy Committee will hold a hearing tomorrow at 10:15 a.m. to vote on DOE nominees Bruce Walker for DOE's assistant secretary for the Office of Electricity Delivery and Energy Reliability and Steven Winberg as DOE's assistant secretary of fossil energy. The Committee will then turn to a Hearing on energy storage technologies. Witnesses include Pacific Northwest National Laboratory expert Vincent Sprenkle AES Energy Storage VP Praveen Kathpal, Simon Moores of Benchmark Mineral Intelligence and Voith's John Seifarth.

CAP to Discuss Hurricane Impacts – The Center for American Progress and former Federal Emergency Management Agency (FEMA) Administrator Craig Fugate will host a forum tomorrow at 10:00 a.m. on disaster lesson learned. Fugate will discuss his experience following Superstorm Sandy. His remarks will be followed by a panel of experts who will highlight different aspects of the recovery, including best practices for building resilient infrastructure, public health challenges in the wake of disasters, and the need for aid to flow to historically disadvantaged communities simultaneously dealing with flood damage, toxic waste, and air pollution in the aftermath of hurricanes Harvey, Irma, and Maria.

Forum to Look at Iran Deal – Tomorrow at 1:30 p.m., the Center for a New American Security will hold two panel discussions on the implications of the potential collapse of the Joint Comprehensive Plan of Action (JCPOA). The discussion will focus on what happens if President Trump begins unraveling the nuclear agreement in mid-October by not certifying Iranian compliance to Congress and will also examine other potential collapse scenarios. Our friend Elizabeth Rosenberg is among the panelists.

House Energy to Return to Reliability – The House Energy panel returns to the resiliency theme for part II of last week's hearing on the topic. This hearing will include comments from the industries that were supposed to be featured in the initial afternoon session. Witnesses include SEIA's Abigail Ross Hopper, ACCCE's Paul Bailey, API's Marty Durbin, AWEA's Tom Kiernan, NEI's Maria Korsnick, NRDC's FERC expert John Moore, Energy Storage Association CEO Kelly Speakes-Backman and Chelan County PUD General Manager Steve Wright on behalf of National Hydropower Association.

NatGas Winter Outlook Set – The Natural Gas Supply Association holds its winter outlook media briefing for 2017-2018 Wednesday at 9:30 a.m.

EPA, NRC Noms Hearing Reset – The rescheduled Senate Environment Committee confirmation hearing will be held Wednesday for several EPA posts and Jan Baran at the Nuclear Regulatory Commission. Testifying will be four EPA nominees: Bill Wehrum to run the air office, Matthew Leopold to be general counsel, Michael Dourson to run the Office of Chemical Safety and Pollution Prevention and David Ross to run the water office. The committee shelved a hearing planned for last week on the picks after the Senate adjourned earlier than expected for Rosh Hashanah.

Senate Commerce to Mark up AV Legislation – The Senate Commerce Committee will mark up a bill meant to boost self-driving cars on Wednesday at 10:00 a.m. The "American Vision for Safer Transportation Through Advancement of Revolutionary Technologies (AV START) Act," S. 1885, aims to reform existing laws to get self-driving cars on the road, clarify state and federal oversight of the technology, and direct the Transportation Department to set new safety standards. It is sponsored by Sen. Gary Peters and Chairman John Thune with co-sponsors Roy Blunt and Debbie Stabenow. Our friends at SAFE can provide you with excellent background and resources.

House Energy to Look at Air Quality, Wildfires – House Energy and Commerce Environment Subcommittee will hold a hearing on Wednesday at 10:00 a.m. to get the perspectives of key stakeholders on the air quality impacts of wildfires. Witnesses include John Bailey of Oregon State University, Florida Forest Service director Jim Karels, Murphy Company Resources VP Knox Marshall and Restoring America's Forests Director Christopher Topik.

Clean Energy Conservatives Meet – On Wednesday at 6:00 p.m. at the Hyatt Regency Washington on Capitol Hill, the Christian Coalition, Young Conservatives for Energy Reform, and Veterans for Energy Reform are hosting an evening reception at their annual Conservative Clean Energy Summit. Last year, the event brought in over 500 attendees from around the country and focused on the issue of energy reform. The event includes visits to Capitol Hill with conservative lawmakers.

Holmstead Featured at EPIC Forum on Energy – My colleague Jeff Holmstead is joining a panel hosted by the Energy Policy Institute at the University of Chicago (EPIC) on Wednesday at 6:30 p.m. that will address what Americans think about the direction of energy and climate policy. Holmstead and Sue Tierney (EPIC's inaugural policy fellows) will be moderated by our friend Jon Fahey, AP's Global Health & Science Editor. The event will focus on the results of an EPIC/AP-NORC poll coming out on Monday that tracks opinions on central topics shaping the energy and climate landscape. More. It will be livestreamed at epic.uchicago.edu/live.

SEJ Set for Pittsburgh – Speaking of Pittsburgh, SEJ's 27th annual conference is set for Wednesday through Saturday in Steel City. Bracewell hosts its annual reception on Thursday night.

Vets in Energy Forum Set – Veterans In Energy will hold a forum on Thursday and Friday at NRECA in Arlington. VIE provide transition, retention and professional development support to the growing population of military veterans who have chosen energy careers. Speakers will include Chris Hale of GI Jobs and Gen. John Allen, former Dep Commander of US Central Command.

CSIS to Look at Electricfication – The CSIS Energy & National Security Program will host a discussion on Thursday at 9:30 a.m. looking at the future of electrification with Arshad Mansoor, Senior Vice President of Research and Development at the Electric Power Research Institute (EPRI). Mansoor will provide an overview of the recent EPRI report, *The Integrated Energy Network: Connecting Customers with Reliable, Affordable and Cleaner Energy*, which calls for a more interconnected and integrated energy system through greater electrification. Frank O'Sullivan, Director of Research and Analysis at the MIT Energy Initiative, and Ken Colburn, Principal and U.S. Program Director at the Regulatory Assistance Project, will follow with views on the opportunities and benefits, as well as obstacles and potential drawbacks of a path to a more electrified economy. This event is part of CSIS's ongoing work on Electricity in Transition, which surveys the current landscape of the U.S. and global electricity sector.

CSIS to Look at Hurricane Impacts – The Center for Strategic & International Studies will also hold a forum on Thursday at 10:00 a.m. on rebuilding better after hurricanes. Puerto Rico recently suffered devastating damage as a result of Hurricanes Irma and Maria. Hurricane Irma, a category 5 hurricane, caused power outages for over 1 million people living in Puerto Rico. The forum will engage in discussions geared toward reform, reconstruction, and modernization of infrastructure and preparedness. It will feature Luis Fortuño, 10th Governor of Puerto Rico.

House E&C to Look at Consumer Views of Electric Markets – The House Energy & Commerce Committee will convene a hearing on Thursday at 10:00 a.m. on consumer-oriented perspectives on improving the American electricity markets. Witnesses include Joseph Bowring of Monitoring Analytics, Stefanie Brand of the New Jersey Division of Rate Counsel, Electricity Consumers Resource Council head John Hughes, Public Citizen's Tyson Slocum, Rebecca Tepper of the consumer liaison group for the ISO New England Region and Walmart's Mark Vanderhelm.

Forum to Look at LNG in Latin America – The Atlantic Council hosts a forum on Thursday at Noon looking at the Growing Role of LNG in Latin America. Natural gas is emerging as a critical source of energy in the Americas and around the world, and Latin America is rapidly becoming a key destination for US LNG exports. Latin America is currently the number one destination for US LNG exports, accounting for over 40%. Many governments in the region see natural gas as a low-carbon energy option that can support their increasing turn towards renewables. Additionally, lower global LNG prices, the impacts of drought conditions on the region's hydropower sector, and a departure from industries such as coal and diesel have driven the demand for LNG and calls into question whether this is an opportunity for Latin America to become more integrated. The forum will feature a conversation with Argentinian Ministry of Energy and Mining Transport Director Gonzalo Aguirre, Jose Luis Castro of Sociedad Portuaria El Cayao (SPEC), Giovani Machado of Empresa de Pesquisa Energética and the State Department's acting Deputy Assistant Secretary of Energy Resources Sue Saarnio.

ELI, DC Bar to Look at Policy Reversals – The Environmental Law Institute and the DC Bar are hosting a forum on Thursday on how agencies often reverse policy. Since the presidential transition, EPA and other agencies have used a variety of tools to change policies and regulations. Three common tools they have used are stays, remands, and reconsideration. Agencies administratively stay the effective date of rules preventing them from going into effect, seek voluntary remand of rules in litigation to revisit rules administratively while avoiding a judicial decision, and administratively reconsider rules. Some of these actions have been the subject of the heated litigation, and the courts have acted to constrain agency discretion, including in an important D.C. Circuit decision rejecting EPA's stay of the oil and gas methane rule. Expert panelists will discuss the use of these legal tools in changing agency policy, and offer cutting-edge perspectives from the government, the private sector, and the environmental advocacy community.

IN THE FUTURE

WRI to Host Forum – Experts from the Open Government Partnership and World Resources Institute will hold a forum next Tuesday at 12:30 p.m. on climate action. The forum will profile a range of innovative approaches that open government advocates have taken to strengthen countries' climate commitments under the Paris Agreement. Together, they will unpack how improving transparency, accountability and public participation in climate decision-making processes can help governments and civil society leaders around the world achieve ambitious climate targets.

Forum to Look at US-China Relations – The Atlantic Council's Global Energy Center and the Brent Scowcroft Center's Asia Security Initiative will hold a timely conversation next Tuesday on the role energy plays in the US-China relationship. The US administration's emerging diplomatic strategy and the upcoming nineteenth national congress of the Communist Party of China provide an opportunity to take stock of the role energy plays in the US-China relationship, as well as in how China views its future. Key issues in the US-China relationship include the role of liquefied natural gas (LNG) in the US-China Comprehensive Economic Dialogue, China's view of US energy exports, and how energy fits into the administration's trade agenda. Speakers include our friend Robert Fee of Cheniere Energy, ITC Assistant Secretary Alan Turley and DOE China advisor Maria DiGuilian with our friend Keith Johnson of *FP* moderating.

Report top Look at Highly-Enriched Uranium Facilities – On Wednesday October 11th, the Fissile Materials Working Group and International Panel on Fissile Materials will launch of a major new IPFM research report, edited by Pavel Podvig, with contributions by six leading Russian experts on highly enriched uranium (HEU) facilities. The report describes in unprecedented detail Russian programs that use HEU as fuel in military and civilian applications. Further, it asses Russia's contribution to the effort to convert research reactors from HEU to non-weapon-usable low-enriched uranium fuel, and Russia's efforts to repatriate HEU fuel it had supplied to facilities abroad. Finally, it evaluates the organizational structure and regulations governing the security of HEU in civilian facilities in Russia. It makes recommendations for securing Russia's commitment to the goal of a comprehensive global HEU minimization strategy.

ACORE Finance Forum Set – The American Council on Renewable Energy will hold forum on the state of the renewable energy public policy, financial markets and corporate renewables strategy when they hold ACORE Finance West on October 12th at the Bently Reserve in San Francisco. This annual conference convenes senior investors, industry executives, and other top transactional professionals to address market trends in the context of renewable investment opportunities in the Western U.S.

Bloomberg Hosts Sustainability Forum – Bloomberg holds its 3rd annual Sustainable Business Summit on October 12-13th in its New York offices to discuss how companies are yielding

positive returns for investors, creating sustainably valuable products and processes, and developing innovative sustainable business models. Uniquely positioned at the intersection of sustainable business and sustainable investing, the summit will explore the challenges and even greater opportunities emerging across industries.

WAPA to Host Road Rally – The Washington Automotive Press Association holds its 2017 WAPA Rally on October 12th. This year's event will be a drive event on the roads just beyond the Chesapeake Bay Bridge on the scenic Eastern Shore of Maryland. The event provides the opportunity to drive or ride in the latest and greatest cars, trucks and SUVs provided by WAPA's automotive partners.

CSIS to Host IEA Renewable Energy Report Launch – The CSIS Energy and National Security Program is hosting Heymi Bahar, Project Manager of the Renewable Energy Division at the International Energy Agency (IEA), on Thursday October 12th for a presentation of the IEA's Renewable Energy Market Report 2017 (formerly titled Medium-Term Renewables Market Report). The report provides a detailed market analysis and overview of renewable electricity capacity and generation, biofuels production, and heat consumption, as well as a forecast for the period between 2017 and 2022. This year's report also assesses the off-grid solar market in Africa and developing Asia and the contribution of electric vehicles to renewable road transport. Our friend Kevin Book will moderate.

BPC to Host Moniz on Nuclear – The Bipartisan Policy Center will host former Energy Secretary Ernest Moniz a conversation on October 18th at 9:00 a.m. with BPC President Jason Grumet to discuss the vital role U.S. nuclear energy plays in achieving national security objectives. The conversation will highlight the key takeaways from *The U.S. Nuclear Energy Enterprise: A Key National Security Enabler*, a report issued by Sec. Moniz's new Energy Futures Initiative.

Renewable Tour Set for October Shenandoah Fall – JMU's Center for Wind Energy joins the nonprofit American Solar Energy Society (ASES) and hundreds of solar-savvy installers and grassroots organizations throughout America to showcase thousands of solar-powered homes, schools and businesses in Virginia and across North America -- for the 22nd Annual National Solar Tour, the world's largest grassroots solar event. The ASES National Solar Tour shows families and businesses real-life examples of how their neighbors are harnessing free energy from the sun to generate electricity, warm and cool their homes, heat water and slash monthly utility bills.

Green Bonds Conference Set for NYC – Environmental Finance will host Green Bonds 2017 at 10 on the Park in New York City on October 23rd. According to the Green Bonds Database, the American green bonds market has continued its rapid growth with over 17$ billion issued in the last twelve months.

At the conference this year we will look at the drivers behind this boom and how to ensure sustainable growth as the market matures.

Energy and Climate Report

Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

U.S. Seen Having Long Way to Go to Market Energy Department Land

Posted September 28, 2017, 12:50 P.M. ET

By Emma Ockerman

The U.S. Department of Energy needs to develop a more accurate inventory of federal lands it manages to promote energy projects by private companies.

While other government agencies such as the Department of the Interior have looked at opportunities to promote renewable energy on public lands, the Energy Department appears to have lagged behind, according to a report released Sept. 28 by the National Academies of Sciences, Engineering, and Medicine.

It recommended the department carry out an up-to-date assessment of properties that can be leased or sold among its 164 sites, with a view to eventually getting companies on board to start developing energy projects. The agency is responsible for 2.4 million acres of land, according to its website—about 735,000 acres fewer than the state of Connecticut.

The report authors reviewed two studies from the National Renewable Energy Laboratory and Colorado School of Mines, intended to examine the potential for energy resource development, which it said were hampered by limited data and budgets.

Given the limited funding, the Colorado analysis of available fossil fuels was "fairly rudimentary," said Paul DeCotis, chair of the committee behind the report and senior director of energy and utilities at West Monroe Partners.

The Colorado report found few opportunities for oil and natural gas development. Nevertheless, if the department were to open an office tasked with managing the leasing of its lands, it could engage developers on what would make them willing to snap up acreage.

"Really it's a question now of perhaps better characterizing the sites and partnering with the private sector to draw private capital to develop the sites," DeCotis said in an interview.

Interior Expects Hot Bidding for Offshore Wind Energy Leases

Posted September 28, 2017, 03:48 P.M. ET

By Adrianne Appel

The Bureau of Ocean Energy Management is betting on heightened interest in offshore wind to drive up the price of the Atlantic ocean leases it will auction next year— parcels that just two years ago had no takers.

The Interior Department agency will auction two ocean parcels about 15 miles off the Massachusetts coast in late summer or fall of 2018, James Bennett, chief of renewable energy at BOEM, told Bloomberg BNA in a Sept. 28. The agency, which leases federal ocean areas for oil, gas and now, offshore wind, will announce details of the auction in the Federal Register by the end of the year, Bennett said.

"We've had two unsolicited bids" for the parcels already, Bennett said. That and the fact that a recent BOEM auction for an ocean parcel off Long Island, N.Y., netted a $42.5 million winning bid "indicates to us that interest in offshore wind has changed dramatically in just two years," Bennett said.

Perry to Talk Rare Earth Minerals at Pennsylvania Coal Mine

Posted September 28, 2017, 02:23 P.M. ET

By Stephen Lee

Energy Secretary Rick Perry is expected to make an announcement today about retrieving rare earth elements from coal during his visit to the Jeddo Coal Mine in Wilkes-Barre, Pa.

Rare earth elements can be found in coal and coal waste products. The minerals are used to make products such as cell phones, computers, wind turbines, and medical devices.

The Trump administration is getting behind research on extracting rare earth elements from coal to boost domestic demand for coal and reduce the need for foreign imports of the metals.

Merkel May Have Promised Too Much in Carbon Pollution Fight

Posted September 28, 2017, 9:21 A.M. ET

By Mathew Carr, Brian Parkin and Lars Paulsson

As German Chancellor Angela Merkel embarks on coalition talks to bed down her fourth term in office, a promise made shortly before her re-election may come back to haunt her.

At least that's the view of nine analysts and researchers from Berlin to London who all say her target of reducing carbon emissions in Europe's biggest economy by 40 percent in 2020 will probably fail. On Sept. 14, Merkel went as far as saying that she will find ways to meet the goal, no matter what. At the end of last year, those emissions were down 27 percent from 1990 levels.

"I think we all know that we're pretty far away from those, and I personally believe it will be extremely challenging to try to reach," said Klaus Schaefer, chief executive officer of Uniper SE, for

which fossil fuels accounted for 57 percent of profit in the first half.

Merkel's stoic approach to meet the non-binding 2020 goal would most likely come down to how tough the governing coalition is prepared to be on the nation's biggest polluters. Plants burning coal still produced about 40 percent of the nation's power last year.

But she's got a problem. Ploughing up acre after acre, sometimes moving whole villages, to get to the lignite Germany still very much relies on will put her on collision course with voters expecting her to deliver on the promise to cut emissions. At the same time, closing down sites would irk unions representing thousands of workers in some of the most impoverished parts of the country.

"It's up to the next government to make an exerted effort in the short window available to land on target," said Michael Schroeren, a spokesman for the German environment ministry in Berlin. "This could be achieved in the energy sector in connection with other sectors."

Climate Talks

Germany's work toward meeting its target may face also international scrutiny in November as climate envoys from around the world will descend on its old capital of Bonn for United Nations talks that will be presided over by Fiji.

The talks are meant to beef up the rules of the Paris agreement. So far, climate talks have have failed to make much headway in cutting emissions in the two years since the Paris deal was struck, with global emissions steady at record levels.

Berlin-based environmental think tank Agora Energiewende reckons Germany will miss its target by about 10 percentage points. Emissions reductions "won't be a near miss but a booming failure," Agora researchers wrote in a report.

As many as 135,000 people work in the traditional power sector and associated coal mining industry.

Closing down much of the country's coal power output would result in the loss of thousands of jobs, according to Jahn Olsen, an analyst in London at Bloomberg New Energy Finance. But there's no way the goal can be met by improving energy efficiency or encouraging electric car use at the pace required within four years, he said.

The country could theoretically meet the reduction level through buying international emissions credits or allowances, Olsen said. But that option would counter earlier statements by the nation that it intends to meet its target domestically, making it "politically unpalatable," he said.

Merkel's Christian Democratic Union-led bloc won the weekend ballot with its worst performance since 1949. Her party needs a three-way alliance with the pro-business Free Democratic Party and the Greens, which could take months of negotiating, Barclays Plc said Sept. 25 in a note.

The coalition negotiations between parties with such different positions mean Germany probably won't be able to put together a plan to hit the target, said Deepa Venkateswaran, an analyst in London at Sanford C. Bernstein & Co.

"The Greens want it and the FDP are against," she said. "They might agree to a long-term exit from coal, but it won't be as aggressive as the Greens want."

China Gives Carmakers More Time in Biggest Electric-Vehicle Plan

Posted September 28, 2017, 8:36 A.M. ET

By Bloomberg News

China unveiled a comprehensive set of emission rules and delayed a credit-score program tied to the production of electric cars, giving automakers more time to prepare for the phasing out of fossil-fuel powered vehicles.

Under the so-called cap-and-trade policy, automakers must obtain a new-energy vehicle score—which is linked to the production of various types of zero- and low-emission vehicles—of at least 10 percent starting in 2019, rising to 12 percent in 2020, the Ministry of Industry and Information Technology said on its website. The rule applies to carmakers that manufacture or import more than 30,000 traditional vehicles annually and those who fail to comply must buy credits or face fines.

"This is the single most important piece of EV legislation globally," said Colin McKerracher, a London-based analyst at Bloomberg New Energy Finance. "Overall, it provides further support for the EV industry in China. EV sales will continue growing quickly, despite the phase-down in direct subsidies."

China previously proposed to start implementing the policy next year, a target that was viewed by automakers as overly ambitious. China, which has vowed to cap its carbon emission by 2030 and curb worsening air pollution, joins the U.K. and France in seeking a timetable for the elimination of vehicles using gasoline and diesel. The country needs to use alternative energy to power some 200 million vehicles that ply its roads and reduce dependence on oil imports.

The targets look achievable for the industry as a whole, McKerracher said. Considering the credit structure, 12 percent in 2020 would translate to about 4 percent to 5 percent of actual vehicle sales, he said.

"Political considerations must have weighed in on the decision to delay the commencement date by a year," said Cao He, chairman of Quanlian Auto Investment Management Co. "Local automakers will likely benefit from this as they will have more buffer time to get ready on the technology front."

Honda, BYD

Honda Motor Co., which plans to sell an electric vehicle in China next year and plans to expand that business going forward, will work to achieve the credit-score target, a company spokeswoman said. Toyota Motor Corp. refrained from commenting on a specific government policy.

"China is sending a clear signal to domestic automakers that had been dragging their feet on EVs that it's time to get on board," McKerracher said.

Earlier this month, China's government said it's working on a timetable to phase out fossil-fuel powered vehicles, helping lift shares of local automakers such as BYD Co., a carmaker that's backed by Warren Buffett. Groups like BYD, Geely, Chery and others will have excess credits,

McKerracher said.

While global manufacturers from billionaire Elon Musk's Tesla Inc. to Nissan Motor Co. and General Motors Co. are racing to grab a slice of the electric-vehicle market in China, local manufacturers such as Geely Automobile Holdings Ltd. have also found considerable success in the market, thanks to generous government subsidies.

BYD topped the new energy vehicle makers in sales in the first seven months of this year, delivering 46,855 electric and plug-in hybrid vehicles, resulting in about 30,000 credit points in the first half, according to the company's calculation.

Beijing Electric Vehicle, the EV division of state-owned BAIC Motor, followed with 36,084 units. By comparison, GM has sold 738 cars that run on electricity since it launched the Velite 5 plug-in hybrid model at the Shanghai auto show this April.

As part of efforts to boost sales of electric vehicles, foreign automakers are setting up new joint ventures in China. Ford Motor Co. is exploring setting up a joint venture to produce electric vehicles in China with Anhui Zotye Automobile Co. while Volkswagen AG has partnered with Anhui Jianghuai Automobile Group Corp. to make electric cars.

Battery Boom Spurs One Bank's Pivot from Iron Ore to Lithium

Posted September 28, 2017, 9:14 A.M. ET

By Jasmine Ng

Westpac Banking Corp., Australia's second-largest lender, is targeting deals linked to China that finance renewable energy minerals such as lithium and cobalt as a decade of unprecedented iron ore mining expansion in its home market has largely run its course.

"The next growth area is related to renewables," Paul Gardner, global head of structured commodity finance, said in an interview in Singapore. "If you look to the future, and you look to the electric cars etc., a lot of the lithium where there's accessible sourcing is actually in Australia."

Westpac's planned shift represents a pivot away from old economy iron ore, used to make steel, toward a focus on materials that are attracting increased investor attention as the building blocks for electric vehicles and renewable energy. Rising Chinese demand for the lithium-ion batteries that are needed for new vehicles and energy storage is driving price gains as well as an asset boom in Australia, already the world's largest lithium supplier.

"Right now, what I've seen pick up is interest from Australian miners in China and in pre-payment products," Gardner said. "For a company like ours to join the dots and to put pre-payment type financing structures in place—so the mine gets its capital, and in return for its capital it has a long-term offtake agreement with the Chinese buyer—that would be perfect scenario for us."

Earlier this month, China put the automotive industry on notice by becoming the largest country to seek a phase-out of fossil-fuel powered vehicles, a move sure to accelerate the shift toward electric-

car development. That's helped to spur the race for raw materials used in the new technology, including cobalt.

Australia's government said in its latest resources quarterly that lithium, graphite and cobalt are being pulled "into a second commodity boom, with demand rising, prices spiking, and investment gathering steam." In lithium, "a host of companies in Western Australia are already targeting near-term concentrate production for sale to Chinese conversion facilities," it said.

Strategic Resource

Other countries are also seeking to beef up supplies. In Chile, a government commission is expected to offer guidance by the year-end for private companies that want to start lithium operations, according to Mining Minister Aurora Williams. Lithium is considered a strategic resource in the South American country, and no company has obtained a license in over two decades.

For now, Australia is more associated with iron ore, and the country is the largest exporter, with shipments running at a record pace. Still, resources companies have scaled back investments in increased capacity after a period of breakneck growth, with BHP Billiton Ltd. calling the end of an era of massive expansions in the steel-making raw material in 2014.

Iron has been in retreat, while lithium is soaring. The steel-making raw material is 19 percent lower in 2017, set for the fourth drop in the past five years. Lithium carbonate, the primary base-chemical produced by the industry, more than doubled in the five years to 2016, according to UBS Group AG.

"We've seen a lot of business around iron ore historically because it's abundant: dig a spade in the ground almost anywhere in the Pilbara, you're going to get iron ore," said Westpac's Gardner. "But those large developments in that space have now matured and we're at oversupply."

Modi's $2.5 Billion Power Plan May Stumble on Ailing Buyers

Posted September 28, 2017, 8:49 A.M. ET

By Rajesh Kumar Singh and Anindya Upadhyay

The success of Prime Minister Narendra Modi's ambitious plan to electrify all households in India by December 2018 faces a familiar hurdle: the money-losing state power retailers.

Modi earlier this week announced the government will spend 163.2 billion rupees ($2.5 billion) to provide electricity connections to every home in India by the end of next year, ahead of an earlier deadline of March 2019. The bulk of the cost for providing equipment such as power cables and electricity meters to every poor household will be borne by the federal government and partly by the states and the power retailer.

"The key is not the scheme but the political will to allow for commercial operations of discoms," CLSA analyst Bharat Parekh said in a report on Tuesday, referring to electricity distribution companies. "The key issue is that after electrifying the households, how much power will discoms supply and how will they recover the money."

Several power retailers are losing money on selling electricity below cost, and turning them around is in the hands of the state governments, which have traditionally used cheap power to shore up popular support and advance their political goals. Convincing states to allow profitable power tariffs will be Modi's biggest challenge in fulfilling the pledge that helped him rise to power in New Delhi in 2014. Modi is up for re-election in 2019.

"The onus now lies with the states," according to Debasish Mishra, a partner at Deloitte Touche Tohmatsu LLP in Mumbai. "The federal government is paying for connections, but the purpose will be defeated if the states fail to supply reliable power to people. And for that to happen operational autonomy of the distribution companies and timely payment of subsidies is a must."

Discom Losses

The announcement follows a 2015 proposal to reform power distribution, which sought to transfer three-quarters of utilities' debt to their respective state governments. The utilities were set targets to bring down losses. As a result, total losses of utilities that signed up for the plan dropped 21.5 percent from a year earlier to 403 billion rupees in the year ended March 31.

There's pressure on state governments to bring losses down even further. Starting this financial year, states will begin sharing a part of the losses their retailers make, according to the plan to turn around power distributors. In the year ending March, provincial governments will take over 5 percent of their retailers' losses in the previous year. The state's share of losses will rise each year, reaching up to 50 percent in the year ending March 2021.

Years of selling electricity below cost has eroded discoms' ability to invest in infrastructure, buy enough power from generators and repay bank debts. Power generation plants operate at just about half their capacity, unable to sell all the power they can produce. The power-for-all plan could "act as a major stimulus for the ailing power sector in India, with demand revival," Deutsche Bank analyst Abhishek Puri said in a Sept. 26 report.

"Our analysis suggests that power demand could potentially grow by 20 percent to 35 percent from current levels in two years, if the government is able to meet its target, as against the tepid 15% cumulative growth in the past five years," Puri said.

'Actual Supply'

The Sept. 25 announcement supplements an earlier program to invest 760 billion rupees in rural electrification. Modi's administration embarked on the plan in 2015, beginning with electrifying more than 18,000 un-electrified villages. About 3,000 villages still remain to be electrified, which means creating the infrastructure to take electricity to villages, making sure at least 10 percent of the households and public buildings there have power connections. Taking electricity to every home is the next phase of the plan.

Retailers have coped with losses by limiting power supplies to consumers in rural areas, who are heavily subsidized, and selling more expensive electricity to industrial consumers to help fund a part of the losses. Even if all rural households get power, making adequate returns on their investment will be a challenge for retailers given the low-usage pattern.

"This ambitious scheme needs to be followed up with equal emphasis on actual hours of supply, otherwise there'll be a danger of people not getting the true benefits of electrification, which can reduce their willingness to pay," said Ashwini Chitnis, a researcher at Prayas, a non-profit advocacy

group that focuses on energy, health and education. “Poor cost recovery can result in poor maintenance and thus huge investments in network infrastructure can go waste.”

Chile Aims to Boost Lithium Output as Electric Cars Rise

Posted September 28, 2017, 12:15 P.M. ET

By Laura Millan Lombrana

The country holding the world’s largest reserves of lithium is drafting regulations that would allow companies to set up new mines amid soaring demand for the mineral used in electric-car batteries.

A Chilean government commission is expected to offer guidance by the end of the year for private companies that want to start lithium operations in the country, Mining Minister Aurora Williams said in an interview.

Lithium is considered a strategic resource in Chile, and no company has obtained a license in more than two decades. While global demand for lithium is expected to surge this year as carmakers such as Tesla Inc., Mitsubishi Corp. and others push to bring electric vehicles to the mass market, only two companies mine lithium in Chile.

“What Chile wants is to maintain and increase production so we can capture this space in the market,” Williams said. “We are working on a set of documents that effectively set up ways and procedures to mine lithium.”

Chile holds more than half of the world’s known reserves of the mineral, and CRU Group says the country has the lowest mining costs. Miners pump lithium-rich brine from beneath salt flats in the country’s north and leave it to dry in evaporation pools. Sociedad Quimica y Minera de Chile SA and Albemarle Corp. remain the only companies producing lithium in the nation.

The Chilean government will also unify environmental monitoring in Atacama, where both SQM and Albemarle are operating, to ensure that mining operations have no irreversible impact on the salt-flat’s delicate environment and on the communities living around it, Williams said.

Privately owned companies that want to start a lithium operation in Chile can either partner with a state-owned company or negotiate special contracts directly with the government. Chilean-owned Minera Salar Blanco spent months in talks with the government before withdrawing from the process.

‘No Rules’

“There are no rules, no one knows what the requirements are,” Minera Salar Chief Executive Officer Cristobal Garcia-Huidobro said in an interview in his office in Santiago. “When we realized the process wasn’t advancing. we decided to withdraw and wait for the government to write down the rules.”

The new framework won’t change lithium’s special status, and companies will still have to negotiate directly with the state, according to Sergio Hernandez, executive vice-president of the Chilean copper commission Cochilco, a member of the committee drafting the rules.

However, it will provide more clarity on financial guarantees for projects, investment requirements, compensation to communities or land owners, environmental rules, taxes, and royalties.

"The lithium royalty will probably be a bit higher than for copper," Hernandez said. "This makes sense because of the natural advantages of starting production of a resource that is fresh, low-cost and easy to extract."

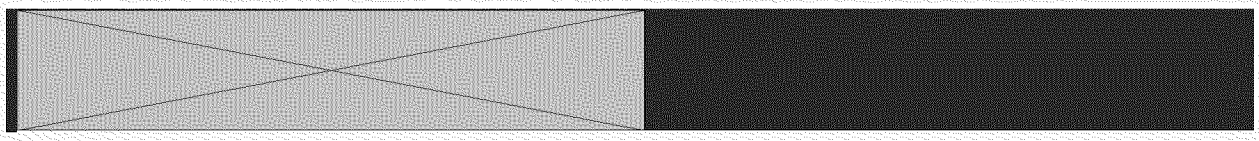
New Players

The framework would be a sign that Chile is opening up to new players and that much more new, low-cost lithium production could enter the market over the medium term. Even a sign that the regulation is business-friendly would have an effect on prices, according to Marcelo Awad, a Wealth Minerals Ltd. manager in Chile.

The lithium market is in deficit, but it could go into a small surplus this year even as new projects experience delays during ramp up and as demand is expected to increase 14 percent, according to Bank of America Merrill Lynch. Established producers including China's Tianqi Lithium Corp. and Albemarle are expanding production in their current operations. But supply disruptions could easily put it back into deficit, according to CRU Group.

"Long-term lithium prices, used to evaluate projects globally, could drop 25 percent when the regulatory framework is out," said Awad, whose company has acquired mining concessions in salt flats across the country. "Chile has the world's largest reserves that can be mined at the lowest price, so the mere announcement should lower the long-term price."

Companies are using long-term estimates of $11,000 to $12,000 per metric ton of lithium carbonate, which would fall to $8,000 to $9,000 per ton when the regulations are put in place, Awad said. Lithium prices have more than doubled in the five years to 2016, according to UBS Group AG. The mineral averaged $14,250 a ton in July, according to Benchmark Minerals.



"It is important that companies wait for the definitions, but whatever the demands are, they will not diminish in any significant way Chile's geological and institutional advantages as a lithium producer," Hernandez said. "We will remain attractive."

Rebel base names, statues disgrace U.S. military facilities and Congress

By Joe Davidson

White nationalist demonstrators walk into Lee park surrounded by counter demonstrators in Charlottesville, Saturday. (Steve Helber/AP)

With all the attention on the white nationalist terrorist attack in Charlottesville, let's not forget Uncle Sam's curious comforting of treasonous Confederates.

While places such as Maryland, New Orleans and Charlottesville have taken action against proslavery and Confederate statues, 10 U.S. military bases continue to honor the rebels by carrying names of their leaders.

Consider the irony — American military facilities are named after Confederate generals who waged war on the United States government and killed its troops. How crazy is that?

All 10 bases are located in the former Confederacy, according to a Southern Poverty Law Center list. They are:

- Fort Rucker (Gen. Edmund Rucker), Ala.
- Fort Benning (Brig. Gen. Henry L. Benning), Ga.
- Fort Gordon (Maj. Gen. John Brown Gordon), Ga.
- Camp Beauregard (Gen. P.G.T. Beauregard), La.
- Fort Polk (Gen. Leonidas Polk), La.
- Fort Bragg (Gen. Braxton Bragg), N.C.
- Fort Hood (Gen. John Bell Hood), Tex.
- Fort A.P. Hill (Gen. A.P. Hill), Va.
- Fort Lee (Gen. Robert E. Lee), Va.
- Fort Pickett (Gen. George Pickett), Va.

Additional tributes come in the form of state flags that include Confederate

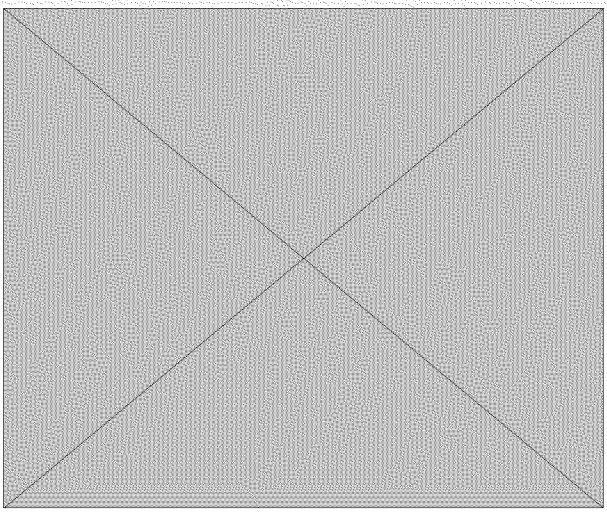
ADVERTISEMENT

symbols and decorate congressional hallways.

A car plowed into crowds at a white nationalist gathering in Charlottesville on Aug. 12, killing one person and injuring 19 others. (The Washington Post)

More shameful are the statues of confederates that disgrace the Capitol complex. A story by colleague Mike DeBonis, aptly headlined "A field guide to the racists commemorated inside the U.S. Capitol," lists these white supremacists who are venerated by Congress:

- Jefferson Davis of Mississippi, Confederate president and former U.S. senator and representative
- Alexander Hamilton Stephens of Georgia, Confederate vice president
- John C. Calhoun of South Carolina, proslavery senator
- Wade Hampton III of South Carolina, Confederate general
- Charles Brantley Aycock, a North Carolina governor who worked to disenfranchise African Americans and bragged that "we have solved the negro (sic) problem. … We have taken him out of politics and have thereby secured good government."



Confederate military officers honored with statues on the Capitol grounds are:

- Robert E. Lee of Virginia
- James Zachariah George of Mississippi
- Edmund Kirby Smith of Florida
- Joseph Wheeler of Alabama.

"We will never solve America's race problem if we continue to honor traitors who fought against the United States in order to keep African Americans in chains," said Congressional Black Caucus Chairman Cedric L. Richmond (D-La.) "By the way, thank God, they lost."

No help in solving the "race problem" comes from President Trump, who continues, appallingly, to comfort white nationalists by leveling "blame on both sides" for the Charlottesville violence.

The Confederate tributes — base names, statues and flag representations — revere those who supported the enslavement of African Americans. The display of Confederate symbols today is an affirmation of white supremacy and black oppression. But that is not the only reason all Americans should be outraged.

Even Confederate battle flag-waving racists who consider themselves patriotic should consider the treason the symbols represent.

Many of these memorials honor those who, although not tried as traitors, certainly fit this Constitutional definition: “Treason against the United States, shall consist only in levying War against them, or in adhering to their Enemies, giving them Aid and Comfort.”

Removing the military base names and the statues is not erasing history. In fact, more people need to know the true history of the Confederacy, so they won’t get stuck in the “that’s my heritage” trap. How can any self-described patriot glorify those who killed American troops?

Patriotic organizations of veterans, whose professional ancestors were killed by Confederates, have been slow to condemn the rebel symbols. But the largest group, the American Legion, now has done so.

In reaction to the attack in Charlottesville, where Nazi sympathizer James Alex Fields Jr. allegedly rammed his Dodge Challenger into a crowd, killing Heather Heyer, the American Legion issued this condemnation: “Americans fought fascism and crushed the Nazis in World War II, and anyone who waves a Nazi flag on our soil is, by very definition, anti-American. The disgusting displays of hatred and bigotry on display in Charlottesville dishonor all veterans who fought and died to stamp out fascism. We have one flag: the American flag. We are one people: the American people.”

Two Virginia State Police officers, H. Jay Cullen and Berke Bates, who had monitored the demonstrations related to the planned removal of a Lee

Related Articles Federal workers: The debt limit and the TSP

The Legion's statement did not mention the Confederate battle flag, which also was displayed by those protesting the statue's removal. So I asked if the Legion considers those displaying that flag to be "by very definition, anti-American."

It took some prodding, but the Legion answered "yes." That was the first time the Legion has condemned the flag of treason. Other major veterans' groups have remained silent. The Legion had nothing to say about changing the base names.

Neither did a Pentagon spokesman, who offered "at this time, there is no discussion on this topic."

There needs to be, and Congress is the ideal place. But no one is leading the charge on this point.

Rep. Jared Huffman (D-Calif.) did lead an effort to ban the flying of Confederate banners on Department of Veterans Affairs and National Park Service cemetery flagpoles. His legislation did not pass, but VA decided not to allow Confederate flags on permanently fixed flagpoles. Last month, the Black Caucus filed a Supreme Court brief in support of a Mississippi resident's complaint that incorporating a Confederate emblem in the state flag denies him "equal treatment and dignity under the law."

That emblem also denies the dignity of the United States. Honoring the traitors and racists of the Confederacy, particularly by the U.S. government, should be as unthinkable as providing them presidential succor.

President Trump defended his initial statement following the violence in Charlottesville, Va. while speaking at a news conference in New York on Aug. 15. (The Washington Post)

BREAKING -- "NEW YORK (AP) - POLL ALERT: Alabama is No. 1 in preseason Top 25 for 2nd straight season, followed by Ohio St, Florida St, USC, Clemson."

Good Monday afternoon and happy eclipse day. The eclipse will peak and cover 81 percent of the sun at 2:42 p.m. in Washington, according to Capital Weather Gang (http://wapo.st/2fZm4fT). Seriously, do NOT stare directly into the sun. **THE PRESIDENT** will watch the eclipse from the Truman Balcony with the first lady, per pooler Ben Jacobs of The Guardian.

AP//BARCELONA -- "Police shoot and kill Barcelona van attacker": "Regional police in Spain have confirmed that fugitive Barcelona van suspect Younes Abouyaaqoub has been shot dead in a small town outside the city. Police say he wore what appeared to be an explosives belt when he was shot in Subirats, 45 kilometers (28 miles) west of Barcelona.

"Abouyaaqoub had been the focus of an intense manhunt after authorities say he used a van to mow down pedestrians in Barcelona's famous Las Ramblas promenade on Thursday, killing 13 people and injuring over 120. Police also say he stabbed a driver to death and hijacked his car Thursday night in his getaway." http://bit.ly/2fZPzht

SPEAKER PAUL RYAN takes it a step further in a new Facebook post entitled **"Let There Be No Confusion":** "[W]e all need to make clear there is no moral relativism when it comes to neo-Nazis. We cannot allow the slightest ambiguity on such a fundamental question." http://bit.ly/2wgLrjW

-- BREAKING IN THE PAST HOUR: House Republicans held a conference call to discuss the fall agenda. The leadership and top appropriators discussed the eight remaining spending bills that need to be cleared before the end of September. **HOUSE MAJORITY WHIP STEVE SCALISE** was on today's members-only conference call. He thanked his No. 2 whip, Patrick McHenry of North Carolina, for his help after the shooting. Scalise is still in rehab and his return will depend on doctors' advice.

ALMOST A TREND -- @Sarah_Boxer: ".@HallieJackson just asked @SenatorCollins if Trump will be GOP nominee in 2020. Collins: 'It's too difficult to say'" ...

-- ROLL CALL's JONATHAN ALLEN: "On Friday morning, I sent a note to Corker's office asking whether he would support Trump for renomination in 2020. 'One thing your boss didn't address to my knowledge is whether he supports President Trump for renomination in 2020,' I wrote. 'Since the president's re-election campaign is up and running, and in light of Sen Corker's concerns about the president's stability, will he weigh in on Trump for re-nomination?' And here's what I got back from Corker's communications director, Micah Johnson: 'I don't have anything to add to the senator's comments yesterday.'" http://bit.ly/2iiYTxM

A WARNING TO THE PRESIDENT -- ARIZONA REPUBLIC EDITORIAL: Convicted former Sheriff Joe Arpaio "is a lightning rod. Always has been. He was finally defeated in the last election and recently convicted of criminal contempt of court for ignoring a court order to stop racially profiling Latinos. ... Arpaio remains popular with Trump's core supporters, and the president may want to placate them after Bannon's departure. But pardoning Arpaio would permanently stain this presidency.

"It would define Trump as a president who has little regard for the judicial system and less respect for the need to hold law enforcement accountable for violations of minorities' rights. It would be a clear insult to those who patiently used the legal system to hold an unjust sheriff accountable. It would also represent a missed opportunity for Trump to begin realigning his presidency to reflect a mature view of what this country needs." http://bit.ly/2v7scWf

PUTIN'S NEW MAN IN AMERICA -- "Putin appoints new Russian ambassador to US," from the AP: "The Kremlin said on Monday Putin has replaced Sergei Kislyak, whose tenure ended in July, with Anatoly Antonov, a deputy foreign minister and former deputy defense minister seen as a hardliner regarding the U.S. The outgoing ambassador played a prominent role the controversy over Russia's possible involvement in the 2016 U.S. presidential election." http://bit.ly/2uYxBD2

AFTERNOON READ -- "A Most American Terrorist: The Making of Dylann Roof," by Rachel Kaadzi Ghansah in GQ: "I had come to Charleston intending to write about them, the nine people who were gone. But from gavel to gavel, as I listened to the testimony of the survivors and family members, often the only thing I could focus on, and what would keep me up most nights while I was there, was the magnitude of Dylann Roof's silence, his refusal to even look up, to ever explain why he did what he had done. Over and over again, without even bothering to open his mouth, Roof reminded us that he did not have to answer to anyone. He did not have to dignify our questions with a response or explain anything at all to the people whose relatives he had maimed and murdered. Roof was safeguarded by his knowledge that white American terrorism is never waterboarded for answers, it is never twisted out for meaning, we never identify its 'handlers,' and we could not force him to do a thing. He remained inscrutable. He

remained in control, just the way he wanted to be.

"And so, after weeks in the courtroom, and shortly before Dylann Roof was asked to stand and listen to his sentence, I decided that if he would not tell us his story, then I would. Which is why I left Charleston, the site of his crime, and headed inland to Richland County, to Columbia, South Carolina-to find the people who knew him, to see where Roof was born and raised. To try to understand the place where he wasted 21 years of a life until he committed an act so heinous that he became the first person sentenced to die for a federal hate crime in the entire history of the United States of America." http://bit.ly/2uYPlOA

FROM THE WHITE HOUSE -- @realDonaldTrump at 9:27 a.m.: "Jerry Falwell of Liberty University was fantastic on @foxandfriends. The Fake News should listen to what he had to say. Thanks Jerry!" ... **at 9:32 a.m.,** quote tweeting a supporter bashing the media: "Thank you, the very dishonest Fake News Media is out of control!"

-- EVANGELICAL leaders like Falwell have been some of the few conservatives who have publicly supported Trump post-Charlottesville.

BAD NEWS FOR ANTI-VAXXERS -- "As White House appoints pro-vaccine officials, plan for safety commission appears stalled," by Stat News' Helen Branswell: "Robert Kennedy Jr., the environmental activist and leading vaccine skeptic, says that it has been months since he has talked with White House officials about chairing a vaccine safety commission -- and that the idea of such a panel may no longer be under consideration. 'I've had no discussions specifically about the vaccine safety commission, probably since February,' Kennedy told STAT. 'You'd have to ask the White House. It may be that it's evolved.' Kennedy said, however, he has met with a series of top administration officials about vaccine safety since Trump took office, including officials at the upper ranks of the Food and Drug Administration and National Institutes of Health. He said those meetings took place at the request of the White House.

"A White House spokesman, asked about the vaccine safety commission, said there were no announcements to make at this time. He declined to comment on whether the White House had arranged meetings for Kennedy. Other officials confirmed that Kennedy had met with agency leaders, but emphasized that U.S. health officials strongly believe in the safety and efficacy of vaccines." http://bit.ly/2uYjhKN

TRUMP INC. -- "Republican committees have paid nearly $1.3 million to Trump-owned entities this year," by WaPo's Matea Gold and Anu Narayanswamy: "The [RNC] paid the Trump International Hotel in Washington $122,000 last month after the party held a lavish fundraiser at the venue in June, the latest example of how GOP

political committees are generating a steady income stream for President Trump's private business, new [FEC] records show.

"At least 25 congressional campaigns, state parties and the Republican Governors Association have together spent more than $473,000 at Trump hotels or golf resorts this year, according to a Washington Post analysis of campaign finance filings. Trump's companies collected an additional $793,000 from the RNC and the president's campaign committee, some of which included payments for rent and legal consulting." http://wapo.st/2uZ3PxJ

-- "Which charities have canceled galas at Mar-a-Lago Club? How much money is at stake? Catch up on the story with our Q&A," by WaPo's David Fahrenthold and Drew Harwell: "In all, 15. That includes 11 charities that had planned galas or other large dinner events. These are the most important events of Palm Beach's traditional winter 'season,' when wealthy people from colder climes gather for five months of gala balls, golf, croquet lessons, sequins and pastel fabrics. Some of the biggest charity galas can attract 600 people or more, and raise more than $1.5 million in an evening." http://wapo.st/2xI2f6b

BACK IN IT -- "Ed Perlmutter changes course and will run for re-election to Congress," by The Denver Post's Mark Matthews http://dpo.st/2fZ0hov

MEDIAWATCH -- "My Life at a Russian Propaganda Network," by former Sputnik reporter Andrew Feinberg in POLITICO Magazine: "In practice, Sputnik's mission statement -- 'Telling the Untold' -- means that Sputnik's content should reflect the Russian side of any news story, whether it lines up with reality or not. When it came to the issue of Crimea (which has been occupied by Russian-backed troops since 2014), we were never to write anything on the subject that didn't include language noting that 90 percent of Crimea residents voted in a referendum to rejoin Russia. Of course, when I'd include details of the tanks and armed men that lined the streets while the people of Crimea voted in that referendum, it would be removed from the story before it went live. When asking about Ukraine, I'd based the premise of my question on the reality of the situation, and the pushback, as I interpreted it, was swift.

"On Monday -- our next day back in the office -- I received an email from [editor Peter] Martinichev ordering me to clear any future questions I intended to ask at the White House with my editors, 'so that everyone is on the same page' That is, he instructed me, if my editors didn't have a specific question they wanted me to ask. My question 'should never be a surprise,' he wrote. 'We also need emergency questions in case [somebody] asks the same before us.'" http://politi.co/2uYDbVO

JPMORGAN CHASE has pledged $1 million to be split between the Southern Poverty Law Center and Anti-Defamation League. The company will also "launch a special

campaign to match two-for-one our employees' donations to a wide range of human and civil rights organizations, up to an additional $1 million." ***Read the letter from Peter Scher*** http://politi.co/2uYsQcz

FIRST PERSON - "This Is How Sexism Works in Silicon Valley: My lawsuit failed. Others won't," by Ellen Pao in N.Y. Mag, in an excerpted from her new book "Reset": "I had been working for six years at the Silicon Valley firm Kleiner Perkins Caufield & Byers as a junior partner and chief of staff for managing partner John Doerr. ... One day, I was part of a small group flying from San Francisco to New York on the private jet of another managing partner, Ted Schlein. ... Once we were airborne, the [tech] CEO, who'd brought along a few bottles of wine, started bragging about meeting Jenna Jameson, talking about her career as the world's greatest porn star and how he had taken a photo with her at the Playboy Mansion. ...

"Then the CEO switched topics. To sex workers. He asked Ted what kind of 'girls' he liked. Ted said that he preferred white girls - Eastern European, to be specific. Eventually we all moved to the couch for a working session to help the tech CEO; he was trying to recruit a woman to his all-male board. I suggested Marissa Mayer, but the CEO looked at me and dismissively said, 'Nah, too controversial.' Then he grinned at Ted and added, 'Though I would let her join the board because she's hot.' ...

"Seven months later, I would sue Kleiner Perkins for sexual harassment and discrimination in a widely publicized case in which I was often cast as the villain - incompetent, greedy, aggressive, and cold. My husband and I were both dragged through the mud, our privacy destroyed. For a long time I didn't challenge those stories, because I wasn't ready to talk about my experience in detail. Now I am. ... People in the venture world spoke fondly about the early shenanigans at big companies. A friend told me how he sublet office space to Facebook, only to find people having sex there on the floor of the main public area. They wanted to see if the Reactrix -- an interactive floor display hooked up to light sensors -- would enhance their experience." http://bit.ly/2vQTEdo

Despite Trump, States Still on Pace to Reach Paris Climate Goals

Posted September 20, 2017, 02:15 P.M. ET

By Joe Ryan

A coalition of states that vowed to fight global warming is on track to meet its share of U.S. targets set under the Paris Climate Agreement, even as President Donald Trump guts federal environmental efforts.

California, New York, and other members of the U.S. Climate Alliance have collectively cut greenhouse gases 15 percent since 2005, putting them within reach of the national goal of reducing emissions at least 26 percent by 2025, according to a Sept. 20 report. The rest of the nation has trimmed emissions by 10 percent, according to Rhodium Group research cited in the report.

The push reflects growing state-level efforts aimed at fighting climate change, even as the White House moves in the opposite direction. That still may not be enough. Unless more states work to aggressively cut emissions from power plants and automobiles—or federal policy changes—the U.S. will still fall short of its goals set under the historic pact brokered at the French capital in 2015.

"It's very clear that we need a president to take leadership on climate action," California Gov. Jerry Brown said in an interview. "But Trump is on the sidelines. So the answer is that states and cities and corporations need to do everything they can."

Economic Upside

Brown is set to unveil the analysis at an event in Manhattan along with New York Gov. Andrew Cuomo (D), Washington Gov. Jay Inslee (D) and former Secretary of State John Kerry as world leaders and industry executives gather for Climate Week NYC and the United Nations general assembly. Confronting climate change does not necessarily require economic sacrifice. Clean energy policies have attracted billions in investments and helped create 1.3 million jobs.

The three governors formed the U.S. Climate Alliance in June, after Trump announced he would withdraw from the Paris accord. It now comprises 14 states and Puerto Rico, with more than one-third of the U.S. population and accounting for $7 trillion in economic output. That's more than any single nation other than the U.S. and China.

Corporations have also pledged to work toward the U.S.'s Paris targets. The World Resources Institute and other environmental groups released a list this week of more than 300 companies that have pledged to cut emissions, including Adobe Systems Inc., United Technologies Corp., Nike Inc. and Merck & Co.

Despite the push by states and corporations, Rhodium Group projected in May that the U.S. is on pace to reduce emissions between 15 and 19 percent by 2025, short of its goal of 26 to 28 percent.

"Climate change is a profound threat to the world," Cuomo said in an emailed statement. "Despite the federal government's reckless neglect of our environment, New York and the other U.S. Climate Alliance members are calling on other states to join us in this challenge to adopt aggressive policies to combat climate change."

Airline Carbon Permitting Clash Brewing in the EU

Posted September 20, 2017, 01:02 P.M. ET

By Ewa Krukowska

European Union lawmakers are on a collision course over a proposal that would allow utilities and manufacturers to use allowances that currently are earmarked only for airlines in the world's biggest emissions market.

The European Parliament has proposed deleting a provision in carbon-market laws that prevents stationary installations from using aviation permits for compliance. EU governments oppose that move, according to two people with knowledge of the matter, who asked not to be identified.

Representatives of the EU Parliament and the 28-nation bloc's governments will start negotiations on Sept. 25 about a revision to the carbon-market law.

Those could extend an exemption on foreign flights from the cap-and-trade program. The EU Parliament adopted its mandate for the talks last week, and the governments approved their stance at a meeting in Brussels on Wednesday.

12,000 Facilities Impacted

The EU emissions trading system imposes emission quotas on about 12,000 facilities owned by manufacturers and utilities. It forces those that exceed their caps to buy permits from businesses that pollute less. Emitters, which also include airlines, must hand in allowances to match the previous year's emissions by the end of each April.

Prices in the program lost almost 70 percent in the past nine years as an economic crisis cut industrial output and imports of United Nations carbon credits added to a supply surplus.

Some lawmakers in the EU Parliament support removal of a firewall differentiating permits used by airlines from those that industry can access. They have argued that such a move would allow utilities and manufacturers to avoid excessive costs should their allocation of free permits become limited by a special rule on a correction factor.

Those members of the European assembly have pointed out that the proposal will increase the efficiency of the cap-and-trade program and won't aggravate the surplus in the market, since airlines may be short of allowances in coming years. The cap on aviation emissions will be subject to an annual reduction starting from 2021 under the draft law.

The final version of the law will need to be ironed out in talks that include the European Commission, the EU regulatory arm. The commission declined to comment because the negotiations are ongoing.

U.K. Brushes Off Trump on Iran with $720 Million Solar Deal

Posted September 20, 2017, 03:01 P.M. ET

By Anna Hirtenstein

The U.K. deepened its economic relationship with Iran in a solar deal worth $720 million less than a day after U.S. President Donald Trump called the Persian Gulf nation a "rogue state" and threat to global security.

Current and former Iranian and U.K. officials gathered in London to announce a 600-million euro ($714 million) plan to develop a giant solar park with cash from investors in Asia, Europe and the Middle East. The agreement underscores how difficult it will be for Trump to dismantle the 2015 nuclear accord, or JCPOA, between six world powers and Iran.

"The British government has made it absolutely clear that it sees the JCPOA as important, it thinks the JCPOA should continue," Norman Lamont, a former chancellor of the exchequer who is also chairman of the British Iranian Chamber of Commerce, said at a press conference Sept. 19. "The British government is also backed by other governments in the U.K. and in Europe."

The future of the accord, which caps Iranian nuclear activities in exchange for sanctions relief, has been at risk since Trump took office in January. Even as UN monitors have certified eight separate times since January 2016 that Iran is sticking by the terms of the accord, the U.S. administration has accused the government in Tehran of violating the spirit of the agreement. Trump told leaders Sept. 18 in New York it was "one of the worst" deals the U.S. has entered.

All the other signatories to the nuclear accord—China, France, Germany, Russia and the U.K.—have announced that they're committed to keeping the deal. The solar project by Quercus Investment Partners Ltd., a London-based renewables developer, shows international interest continues in Iran's market, despite Trump's rhetoric.

"The fact that the European partners are rushing to Iran, for different industries, auto industries energy industry, shows that they do not believe at all that the failure of JCPOA is an option," Hamid Baeidinejad, ambassador of Iran in the U.K., said at the press conference.

The U.K's trade with Iran rose 42 percent from January to October in 2016 and 57 percent in the same period in 2017, according to Lamont. Global trade with Iran rose 13 percent last year to $113 billion, according to data compiled by Bloomberg.

"The opportunities are tremendous, they really are tremendous," said Richard Bacon, a current

member of Parliament from the ruling Conservative Party. “I sense that we’re on the cusp of something very special, the scale of the opportunities is really quite extraordinary.”

The U.K. investment follows separate announcements by China, the European Union, France, Japan and Russia that they’ll continue to support the accord. Europeans are also positioning themselves against a unilateral withdrawal from the JCPOA.

“This would damage not only U.S. interests but U.S. international standing and credibility,” 76 European leaders wrote in an open letter urging Trump to stick with the agreement.

Should the U.S. abandon the accord, the other countries “would work to see the nuclear deal continued with Iran, even in the absence of U.S. participation, and that could include defending European companies and individuals from any re-introduced U.S. sanctions and supporting legal action to do so.”

A U.S. bid to toughen the Iranian accord has inspired unified UN opposition.

Biggest Miner Aims to Show Carbon Neutrality Won’t Cut Growth

Posted September 20, 2017, 8:21 A.M. ET

By David Stringer

BHP Billiton Ltd., the mining giant that’s made the biggest cuts to greenhouse gas emissions among the world’s top corporate emitters, has set itself the goal of becoming carbon neutral as new research across diverse industry sectors shows reductions don’t have to come at the cost of growth.

The company is aiming to meet a target of net zero emissions from its operations in the second half of this century, by making further cuts and using carbon offsets, according to a report published Sept. 20. Along the way, it’s aiming to hold emissions at, or below, levels recorded in the 12 months ended June 30 over the next five years.

The world’s biggest miner has been emboldened after proving it can lift output at the same time it curbs emissions, according to Fiona Wild, BHP’s vice president, climate change and sustainability. BHP cut emissions about 61 percent in the six years to 2016, the largest reduction among the top 10 corporate emitters, Bloomberg New Energy Finance said in a Sept. 14 report.

Other industry sectors are also proving cuts to emissions can co-exist with growth, according to the report. In the five years to 2015, health care and consumer staples companies reduced emissions at the same time as increasing revenues, the data shows. “There’s a massive decoupling of emissions from production growth, and that’s the thing that we are trying to drive across the organization,” Wild said by phone Sept. 20.

South Africa Sees No Hurry for New Coal, Gas Power Projects

Posted September 20, 2017, 8:36 A.M. ET

By Paul Burkhardt

South African programs to add coal and gas power generation from independent providers should wait until policies are updated and the nation's future needs are clearer, said Energy Minister Mmamaloko Kubayi.

The government is also seeking a "middle ground" with developers in a program to add renewable-energy projects, she said in a phone interview Sept. 19. Kubayi announced earlier this month that the long-delayed contracts must be signed by the end of October, but not before pricing was renegotiated to make the deals more attractive to state-owned power utility Eskom Holdings SOC Ltd.

South Africa expanded the so-called independent power-producer programs to diversify its energy mix and ease the burden on Eskom, which was forced to implement rolling blackouts in 2015 after seven years of shortages hindered economic growth. However, the country now has surplus capacity after growth in demand stalled and more units from Eskom's new coal plants came online.

"Let's look at how much capacity do we need, and when," Kubayi said. The calculations should include economic growth estimates and determinations of how much generation is required from each technology, she said.

The gas-to-power program included plans for about 3,000 megawatts of capacity from proposed plants on South Africa's coast, the department said in October last year. Its coal program was designed to add 2,500 megawatts of capacity.

South Africa needs to conclude the revision of its Integrated Energy Plan and Integrated Resource Plan, which set long-term policy, before moving ahead with additional programs to procure electricity from gas and coal, Kubayi said.

Can't Proceed

"For those, we can't proceed right now," she said.

While the country's program to add renewable energy from private developers has drawn more than 200 billion rand ($15 billion) of investment, the most recent bidding rounds have stalled as Eskom refused to sign new power-purchase contracts.

While developers welcomed Kubayi's announcement on Sept. 1 that the deals would be signed by the end of October, industry lobby groups have questioned her comments that pricing must be renegotiated. South Africa's cabinet and Eskom recommended a maximum price of 0.77 rand per kilowatt-hour.

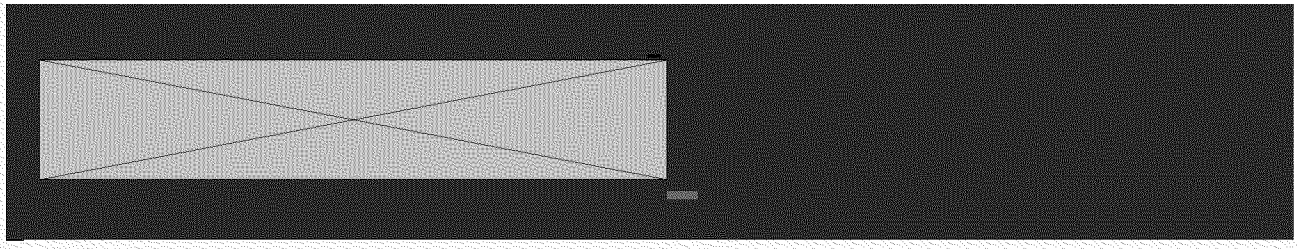
Bidders will need to consider the legal, financial, and credit-risk implications on their projects if deals are renegotiated, according to the South Africa Photovoltaic Industry Association.

Setting a price ceiling on the renewable projects "actually removes all of the legitimacy of that program," said Niveshen Govender, program manager for Sapvia. "It's become actually difficult to understand where we're moving towards."

It's also unclear how the recommended price cap was settled on, said the South African Wind Energy Association.

"Undertaking negotiation after a duly concluded procurement process goes against South Africa's procurement rules," association Chief Executive Officer Brenda Martin said in an emailed statement. "We would hate to think that the extended delay and related job losses are set to continue for much longer, on the basis of an unachievable target."

About 20 of the projects that the government plans to renegotiate can be completed for below the 0.77 rand level, Kubayi said. She said she isn't biased for or against any particular type of generation.



While the government "seems to be in its legal rights to stipulate a price cap," the uncertainty may deter investors in the future, Jason Harlan, CEO of Fieldstone Africa, a Johannesburg-based, energy-focused investment bank, said in an emailed reply to questions.

Subject: Federal Insider: Stories of Uncle Sam's pervasive culture of sexual misconduct

Stories of Uncle Sam's pervasive culture of sexual misconduct

By Joe Davidson

ADVERTISEMENT

Denice Rice, a Forest Service employee, who says she suffered retaliation after complaining about a supervisor who "poked my breast." (Photo courtesy of Denice Rice)

At the end of my last column, covering a House committee report on sexual misconduct in the federal government, I asked readers about their experiences and their views on how pervasive that misconduct is.

It was not a scientific survey, but based on the responses, it is safe to say that Uncle Sam has not escaped the poisonous culture of assumed male privilege over female bodies that is pervasive generally.

The previous column covered a House Oversight and Government Reform Committee report about the government's inconsistent disciplinary practices and poor record keeping on sexual misconduct. That document cited:

- Environmental Protection Agency's "lack of action to strengthen internal guidance for disciplining sexual misconduct," which the report called

"stunning."

ADVERTISEMENT

- National Park Service's "history of sexual harassment and misconduct within its ranks."
- Forest Service's "hostile and discriminatory work environment for women … as well as a history of sexual harassment and misconduct that often went unaddressed."

Email replies to my questions came from employees of various agencies, but the Forest Service more than any other, perhaps because it was shamed at a House Oversight Committee hearing I covered in December. Then, Denice Rice, an employee of California's Eldorado National Forest, told about how a male supervisor held a letter opener and "poked my breast, both breasts, with a smile on his face in an arrogant way, like he could get away with it."

Almost a year after the hearing and "months of pure hell," things are no better for Rice, who said she lost her supervisory duties after reporting the harassment.

"The agency protected him. … I was removed of my supervisor duties. Moved away from my peers. … Completely ostracized," she said Thursday. "I'm still fighting for my supervisor position back."

Asked about the federal government's policy on sexual misconduct, the Office of Personnel Management punted to the Equal Employment Opportunity Commission, which also provided no answer.

Among the readers' responses was one from a government lawyer working overseas. He did not want his or his organization's name used, because he fears retaliation. He was exonerated of sexual misconduct, but it came at a painful price.

Federal agencies "have a bunch of slipshod rules enforced by poorly trained staff," he said. "The result is that the rights of the accused are often brushed aside on the altar of sexual harassment enforcement. … For African-American men, the system is particularly biased as accusers are able to play on the institutional racism that is inclined to see black men as either criminals or sexual predators. … The accused has no rights."

Certainly, accusations too often pass for facts. But his experience is not that of women like Rice, who say they were punished after reporting sexual

she said. "This is a pervasive problem across our country. This must stop."

Here's a story is not the worst. Here are a few others:

- From Within the Service: "I was drugged while working as a National Park Service firefighter in Central California. "More and more I was getting intoxicated with encouragement from crew mates and supervisors to partake. I was eventually the victim of two sexual assaults. … I had drugged in some way that night because I passed out very quickly that night and I had been raped but was too out of sorts and embarrassed to drive to the nearest town and report it."
- From Within the Service: "I was working for the Forest Service in California. Her email said her boss forced "me to tell him when I started my menstrual cycle every month so he can keep track of me." Watch over me like a hawk to find. My coworker physically jumps on my neck ride me like a horse while I cry and beg for him to stop while other crew members watched and laughed. Having my boss … put me in a choke hold and trying to rape me as I beg for him to stop and now [he] has been promoted … while I'm not allowed to work! And so much more I can go on and on!"
- Cheryl Raines spent 25 years fighting fires in the Cleveland Nation Forest in California and recalled an engine captain "who tried everything to get me to sleep with him for a few years and when he became my supervisor he made things miserable, including holding back training, fire assignments and eventually promotions. … After 2 years of hell of trying to go through the process and resolution, the harasser still has his job and life goes for him with no type of punishment, this sends a message that they can get away with it and keep their jobs."

Better training often is suggested to combat harassment. Rep. Brenda Lawrence (D-Mich.) introduced legislation Thursday that would require congressional staff to take anti-harassment training as she said executive branch employees do.

More from Federal Insider

Uncle Sam is a slacker in policing sexual misconduct in agencies

It's hard to know the extent of sexual misconduct in the federal government because of poor and inconsistent

disciplinary practices and record-keeping.

New Zealand Moves Up Microbeads Ban, Expands Scope

Posted August 25, 2017, 01:39 P.M. ET

By Murray Griffin

New Zealand plans to ban plastic microbeads in a broader range of products and tighten the deadline so the ban will go into effect in May 2018.

A Ministry for the Environment spokeswoman Aug. 24 told Bloomberg BNA that the country had to give the World Trade Organization six months' notice of its intention to introduce regulations that would implement the ban on plastic beads less than 5 millimeters in diameter.

This ban is part of a global initiative to reduce the amount of plastic ending up in oceans, said Associate Environment Minister Scott Simpson. The regulations will make it illegal to sell or manufacture products containing plastic microbeads, and the ban also will extend over a wider range of products.

"We anticipate the regulations will be ready to be published by November 2017, which means the regulations would come into force in May 2018," the spokeswoman said in emailed comments. The government originally intended to introduce a ban that would go into effect July 1, 2018.

Garth Wyllie, executive director of the Cosmetic Toiletry & Fragrance Association of New Zealand, Aug. 24 told Bloomberg BNA that his organization fully supported the ban, although the earlier start date was "a little surprising." The association's members include Chanel, Clarins, and Elizabeth Arden.

The government initially intended applying the regulations only to personal care items, but will now extend it to all "wash-off" products, which includes cleaners and personal care products. The broader ban will be more effective at preventing microbeads from entering waterways, the ministry spokeswoman said.

The ban will not apply to wipe-off make-up products, such as powder foundation and eyeshadows,

which could contain polymers, she said.

"These are supposed to be wiped off with a tissue and disposed of in a bin," the spokeswoman said. Nor will the ban apply to "leave-on" products such as anti-aging creams, sunscreens, and hairsprays, she said.

Widespread Support for Ban

The U.S. makes the same distinctions about personal care products in its imminent microbeads ban, according to the the spokeswoman.

"The precise scope of the ban will be defined in the regulations," she said.

The proposed ban received widespread support following the release of a consultation paper in February, according to a government summary of submissions.

Non-wash-off cosmetics containing microbeads, which won't be banned, don't pose a risk to the environment because when they are removed "they end up in landfill," Wyllie said. Nevertheless, companies are working to remove microbeads from these products, he said in emailed comments.

Katherine Rich, chief executive of the New Zealand Food & Grocery Council (NZFGC), told Bloomberg BNA that her organization supported the ban.

Members of the council anticipate products containing microbeads "will have disappeared from shelves well before then," Rich said in Aug. 24 emailed comments.

"A survey last year by NZFGC of its members and others in the industry showed that many were not using microbeads, or were well down the track of reformulation," Rich said.

Greenpeace said it welcomed the government's move, but was waiting to see more details. A spokeswoman for the environment group said the ban appeared not to include bioplastics or liquid plastics, some of which are not biodegradable. Nor did it appear to include nanoplastics, which the government appeared to consider too small to be a microbead.

The regulations banning microbeads will be introduced under the Waste Minimization Act 2008.

"The New Zealand ban parallels similar initiatives in the United States, United Kingdom, Canada, the European Union and Australia to ban or phase out plastic microbeads in products."

New Biofuel Exemption Prospects Spur Oil Giant Concern

Posted August 25, 2017, 7:30 A.M. ET

By Brian Dabbs

An era of relaxed biofuel blending requirements may be dawning for small oil refineries nationwide following a watershed court decision and new congressional direction for regulators.

That prospect is cheered on by many companies that operate small refineries, such as Silver Eagle Refining Inc. Refiners often complain of the high costs involved with complying with the blending requirements. Exemptions from that requirements, which are granted only to companies financially

damaged by compliance, could provide them a windfall.

But the emergent trend is likely to put the Environmental Protection Agency, which has remodeled itself as an ally of the energy industry, in a tough position. Representatives of larger refiners are warning against the fallout tied to a wave of new exemptions, which would shift some of the burden of complying with the aggregate annual biofuel mandate.

That's because exemptions don't affect the EPA's annual blending requirements, so exemptions result in an uptick in the compliance obligations for those that still have to comply with the program.

"The exemptions take that obligated volume out of the stream, and you can't wave a magic wand and take that biofuel out of the total requirement," Suzanne Murray, a Haynes and Boone LLP attorney who represents refiners, told Bloomberg BNA. "Maybe with a couple of guys on the margins, it's OK, but when you start getting more and more folks, sooner or later it adds up to real volume."

Congress put the blending mandate, known as the renewable fuel standard (RFS), into law more than a decade ago. Proponents at the time said greater use of biofuels would cut down on greenhouse gas emissions and bolster U.S. energy independence.

The mandate requires refiners and importers to blend biofuels, such as traditional ethanol and advanced fuels like cellulosic ethanol, into gasoline or purchase credits to comply. The EPA decides on individual exemption petitions in consultation with the Energy Department.

Spreading the 'Burden'

Large refineries like ExxonMobil Corp., Chevron Corp., and Marathon Petroleum Co. LLC, as well as nonexempt small refineries, have to step in for those exempted. That puts them in an unfair position, Mike Tadeo, a spokesman for the American Petroleum Institute, which represents all the industry heavyweights, told Bloomberg BNA.

"EPA should take measures that reduce the overall RFS requirement when a refiner is exempted as to not spread that burden across the rest of the industry," Tadeo said.

Refineries are required to comply with the RFS based on the amount of petroleum processed, but the industry writ large must meet the aggregate annual mandate. A change like the one the American Petroleum Institute supports will likely require new legislation or a regulatory revamp. The EPA is accepting comments on the exemptions as part of its 2018 RFS proposal.

Some refineries say they already struggle to meet their current quotas.

Relief in the Pipeline

A federal appeals court shot down an EPA rejection of an exemption request Aug. 15, and now some small refineries will likely push the agency for more exemptions, according to Murray and Monte Shaw, executive director of the Iowa Renewable Fuels Association.

Those pleas are likely to fall on friendlier ears at the agency than in years past, Murray, Shaw, and a former EPA official told Bloomberg BNA. EPA Administrator Scott Pruitt, a past biofuel critic and oil industry ally, generally supports the exemptions, the former agency official, who worked directly with Pruitt, said, speaking on condition of anonymity.

A refinery must process 75,000 crude barrels a day or less to qualify for an exemption. Nearly 60 percent of all refineries operate under that threshold, according to the Energy Information Administration.

To qualify under the hardship criteria, a refinery must incur disproportionate cost or face the threat of insolvency linked to compliance.

Jerry Lockie, manager at Silver Eagle Refining Inc. refinery in Woods Cross, Utah, told Bloomberg BNA that his company now sees an opportunity for an exemption in the wake of the Sinclair decision.

"We're evaluating our options for filing for the exemption because it does create an economic disadvantage for us," said Lockie, who told Bloomberg BNA his refinery hasn't received an exemption to date. "We just transferred the information to our counsel and it's in review."

The EPA declined Bloomberg BNA requests for information on the small exemption policy, as well as a list of exemptions requests, denial and approvals. According to the 2018 RFS proposal, which the EPA released last month, the agency evaluated a dozen exemptions requests. But the rule doesn't discuss the decisions.

Those interviewed said they weren't aware of any exemptions approved in 2016. Bloomberg BNA reached out to dozens of companies that operate small refineries and most declined to comment or didn't respond.

But Keith Johnson, a spokesman for the refinery operator Delek Group Ltd., told Bloomberg BNA that he's aware of some recent exemptions. The EPA waived RFS obligations last year for a Delek facility at El Dorado, Ark., and an Alon Israel Oil Co. Ltd. facility at Krotz Springs, La., Johnson said.

Delek absorbed Alon in recent weeks. The company aims to apply for exemptions at both facilities again this year, Johnson said.

More Energy Department Clout?

On top of the impact of the decision and Pruitt's position, the agency also is constrained by a new directive that could encourage exemptions.

A report that accompanied the 2017 funding law directed the EPA to follow Department of Energy recommendations on the exemptions. The Energy Department recommended exemptions in the past, but the EPA disregarded its views, according to some of those interviewed by Bloomberg BNA.

The 2018 RFS proposal suggests that new language may have teeth.

"This directive could impact how EPA evaluates small refinery hardship petitions and the number and magnitude of exemptions granted," the EPA said in its 2018 RFS proposal, which released last month.

But despite that language, Thomas White of the Energy Department's Office of Energy Policy and Systems Analysis said the department's "influence has not changed," adding that the DOE "has always provided EPA an evaluation of a petitioner."

Those interviewed said increased exemptions are likely but not guaranteed.

"You can't necessarily expect EPA to grant all these. They may listen to the bigger refiners," Shaw, the Iowa Renewable Fuels Association leader, told Bloomberg BNA. "I'd say there's a smoother path now, but that doesn't make any of them a slam dunk."

Water Pollution Testing Rule Increases State Compliance Options

Posted August 25, 2017, 01:05 P.M. ET

By David Schultz

The EPA issued new testing guidelines for testing effluent levels in water, which will provide states with more options for complying with federal pollution regulations.

The guidelines, which the Environmental Protection Agency periodically revises, lay out which testing methods are acceptable to use on water for finding levels of toxic chemicals, harmful compounds, and other pollutants.

Frances Bothfeld, an analyst with the Association of Clean Water Administrators, told Bloomberg BNA that the EPA had all but completed these guidelines late last year. But, she said the agency waited to formally make them final until new political leadership at its Office of Water had a chance to review the guidelines.

The guidelines will be published in the Federal Register Aug. 28.

Texas Coal Plants May Not Be Saved by Scaled Back Visibility Rules

Posted August 25, 2017, 11:45 A.M. ET

By Nushin Huq

The EPA is giving Texas a chance to rework a proposed multibillion-dollar air pollution regulation for utilities, but that likely won't be enough to save some coal-fired power plants from shutting down, energy analysts told Bloomberg BNA.

The proposal, issued in the final days of the Obama administration, would require Texas power plants to install new pollution controls in order to improve visibility in nearby national parks, including the Big Bend and Guadalupe Mountains national parks. Luminant Generation Co. LLC, a subsidiary of Vistra Energy, which owns several power plants that would be covered by the regulation, projected the proposal would require utilities to spend more than $3 billion dollars on emissions controls.

Several Texas utilities voiced support for the successful negotiations between the EPA and Texas, but more flexible regulations may not be enough to save some coal plants from retirement. Market pressure from renewables will still likely force some Texas plants to shutter, according to Rob Whaley, an analyst with the consulting firm Wood Mackenzie who focuses on the Electricity Reliability Council of Texas, the state's electricity grid operator.

"The ERCOT market, with all the wind generation coming on, is really suppressing prices and

making it really hard for these baseload units to make money," Whaley said.

Emissions Trading Planned

The EPA is under a Sept. 9 deadline to issue final visibility regulations for Texas, but the Trump administration recently asked a federal judge to extend that deadline until the end of 2018, citing a breakthrough in talks with state regulators.

"Circumstances have changed significantly over the past several months and weeks as EPA and Texas have engaged in a productive level of dialogue that has not occurred in many years," the agency said.

The Texas Council on Environmental Quality declined Bloomberg BNA's request to comment on those talks, but the state regulatory agency said in an Aug. 24 court filing that it intends to spend the next six months developing a proposed emissions trading program in order to meet its "best available retrofit technology" obligations under the EPA's regional haze program.

The Obama administration's proposal didn't opt for an emissions trading approach, something that utilities hoped it would have done, according to Eric Groten, an environmental attorney with Vinson & Elkins LLP in Austin.

"That's the most significant change in what the EPA is saying it would like to do now," Groten said. "It's no great leap of faith to say it's planning not to impose specific limitations on specific plants that must be met by those plants. What it will do instead is impose emission limitations on those plants but then allow trading."

The EPA's decision to give Texas a chance to develop a more flexible set of requirements marks the second possible reprieve on regional haze rules for the state's utilities since Inauguration Day: In March a federal appeals court gave the EPA a chance to reconsider a different regional haze regulation that would have required seven Texas coal plants to install about $2 billion in pollution controls.

Windy Times in Texas

The cost of complying with the regional haze requirements, combined with Texas' recent significant gains in wind energy product, could have led to the retirement of Luminant's Big Brown, Martin Lake, Monticello and Sandow power plants by 2024, according to Whaley.

If the emissions targets for the plants are scaled back by the Trump administration, some of those Luminant plants projected to retire may become economical, Whaley said. But it is possible that price pressure might still take half of that generating capacity offline, he said.

"I think of the 3.5 gigawatts of generation we predict will retire under current rules, about half may survive, but I still don't think all of it will," Whaley said.

Wind generation accounted for nearly 23 percent of ERCOT's power generation in the first quarter of 2017. That level marked the highest quarterly wind penetration in ERCOT's history and highlighted the market challenges facing the coal industry in Texas.

At present, some of the coal plants "are running only seasonally," Matt Preston, a coal analyst for Wood Mackenzie, told Bloomberg BNA.

Some utilities already have taken action to comply with the EPA's regional haze regulations for Texas. For example, NRG Energy decided to switch the fuel used at its Limestone power plant from lignite to a coal that has a lower sulfur content, according to company spokesman David Knox.

Knox told Bloomberg BNA that given the "environmental co-benefit of the fuel switch" and the expected level of operation of the Limestone plant, NRG expects to meet its regional haze obligations.

Industry Welcomes EPA Reversal

Luminant declined to comment on the regional haze rule and the pending litigation, but in comments filed in March, the utility said it would support an extension of the deadline to allow for the EPA to "work cooperatively" with Texas on an alternative plan.

Several other utilities that operate in Texas openly welcomed the fruitful negotiations between the EPA and Texas regulators.

"We are pleased that EPA and the State of Texas have been working so closely together, and look forward to participating in the state's efforts to develop its plan," Wes Reeves, Xcel Energy spokesman, told Bloomberg BNA in a statement.

Dynegy, which operates the Coleto Creek coal plant in Texas, also supports giving Texas regulators enough time to develop a suitable state plan for regional haze, company spokeswoman Meredith Moore told Bloomberg BNA.

"We support TCEQ and EPA working collaboratively to reach agreement on a Texas state implementation plan that meets the statutory requirements of the regional haze rule, protects the environment, and treats all in-state generators equitably," Moore said.

National Rule Next?

Regional haze regulations have been an industry target for the past decade, Gloria Smith, managing attorney for the Sierra Club's Environmental Law Program, told Bloomberg BNA. The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, the majority owner of Bloomberg L.P., parent of Bloomberg BNA.

On a national level, the EPA will likely take action on a regional haze regulation issued in January, according to Smith. The regulation drew criticism from states and industry over its handling of requirements that states develop long-term strategies for making reasonable progress toward national visibility goals.

EPA Administrator Scott Pruitt is likely not a fan of that regulation. During his time as Oklahoma attorney general, he joined with seven other state attorneys general in comments that identified various alleged legal flaws in the agency's approach.

"We're certain that EPA will be asked to pull that rule back and to revisit it, similarly like in Texas," Smith said. "We're really frustrated because we thought everyone had come together…and now we're going to throw things into chaos again."

The reasonable progress regulation clarifies the four statutory factors under the Clean Air Act that

industry has to comply with, Smith said. Those statutory factors will remain unless Congress changes the law, she said.

"There's actually a lot of momentum right now for reducing emissions, curbing coal-fired generation," Smith said. "The regional haze rule was instrumental for a number of years for cleaning up our national parks, and I don't see that momentum stopping."

Duke Asks to Cancel Planned South Carolina Nuclear Reactors

Posted August 25, 2017, 01:16 P.M. ET

By Jim Polson

Duke Energy Corp. asked to cancel its planned nuclear plant in South Carolina, citing the bankruptcy of reactor manufacturer Westinghouse Electric Co.

The Charlotte-based company also said Aug. 25 in a state filing that North Carolina utility regulators should require customers of the company's Duke Energy Carolinas unit to pay $353 million of pre-construction costs spent on the Lee Nuclear Station over the next dozen years.

The company's decision is the latest blow to the U.S. nuclear industry in the wake of the Westinghouse's filing for bankruptcy earlier this year. South Carolina utilities Scana Corp. and Santee Cooper pulled the plug on a half-finished plant earlier this month after delays and cost overruns, and Southern Co. is weighing whether to halt work on two Georgia reactors.

Nuclear units that were operating for decades have shut, unable to compete with low-cost renewable energy and abundant supplies of natural gas from shale basins.

"Risks and uncertainties to initiating construction on the Lee Nuclear project have become too great and cancellation of the project is the best option for customers," Duke said in a separate statement.

A similar request will be made with South Carolina utility regulators in the future, Rick Rhodes, a company spokesman, said by phone Aug. 25. The U.S. Nuclear Regulatory Commission issued a construction and operating license for the plant last year and Duke will maintain that license "to build new nuclear at this site in the future if it is in the best interest of customers."

NextEra Energy Inc. has said it's decided to "pause" an expansion of its Turkey Point nuclear plant in Florida, but the company is still seeking approval to obtain and then maintain a federal license for two reactors there.

Shell Joins Solar Push in Coal Country of World's Top Exporter

Posted August 25, 2017, 8:38 A.M. ET

By Ben Sharples and Perry Williams

Royal Dutch Shell Plc is investigating a solar power project in an Australian region better known for its fossil fuels, particularly coal.

The company is studying the feasibility of a solar development on its land in the Western Downs area of Queensland, which is subject to a final investment decision, a spokeswoman said by email. Though Shell's statement didn't elaborate on timing or size, the regional council this week said it had approved construction of the 250-megawatt Delga Solar Farm project proposed by Shell at Woleebee, near Wandoan.

Shell plans to spend as much as $1 billion a year on its New Energies division as the transition to renewable power accelerates, and will partner with Sunseap Group Pte to invest in solar throughout the Asia Pacific. Equis Energy earlier this month approved a 1,000-megawatt solar plant near Wandoan, a region long associated with a potential large coal mine development by Glencore Plc.

"Investment in Australia's large-scale solar sector has had a record-breaking 12 months with around 1,678 megawatts worth of new projects currently under construction across the country," said Leonard Quong, an associate with Bloomberg New Energy Finance in Sydney. Falling technology costs and surging electricity prices are helping to drive a boom in the sector, Quong said.

Equis' A$1.5 billion ($1.2 billion) Wandoan South Solar Project will be one of the largest in the country and is scheduled to start delivering power in 2019, the Singapore-based company said Aug. 7. Australia is the world's biggest exporter of thermal and metallurgical coal.

There are 38 solar plants operating in Australia with a capacity to generate 411 megawatts of power, and a further 29 under construction, according to BNEF.

Canada Making Progress on Central Arctic's First Deep-Water Port

Posted August 25, 2017, 11:18 A.M. ET

By Peter Menyasz

Canada's Nunavut territory is taking early steps toward building the first deep-water port in the Central Arctic, located at the mid-point of the Northwest Passage.

The port would ease access to international markets for the territory's gold, copper, and diamond mines. Companies active in the region include MMG Ltd., currently developing a zinc and copper mine near Izok, TMAC Resources Inc., developing a gold mine at Hope Bay, and Tundra Copper Corp., which is exploring for copper near the proposed port's location.

The Grays Bay project also would link Nunavut to the national highway and rail systems of the Northwest Territories via the proposed Tibbitt-Contwoyto Winter Road, which would be the first to connect Nunavut to the rest of Canada and forge the first overland connection between Canada and a port on the Northwest Passage, according to the project overview.

The territorial government on Aug. 24 said the Nunavut Impact Review Board formally accepted the Grays Bay Road and Port project proposal, clearing the way for screening the project.

The port and road could transform the territory's economy. The port would be built, managed and operated jointly by the Nunavut government and the Kitikmeot Inuit Association aboriginal group and would connect the significant mineral resources of the Slave Geological Province, which straddles Nunavut and the Northwest Territories, to Arctic shipping routes.

"We are beginning to shape the potential development of Nunavut's economic future with nation-building infrastructure," Monica Ell-Kanayuk, the territory's Minister of Economic Development and Transportation, said in a statement. The screening process will give all stakeholders and the public a chance to understand the details of the project, she said.

The Kitikmeot Inuit community is excited by this milestone in the project approval process, which has included significant support from local municipalities and the community's approximately 6,000 members, Paul Emingak, executive director of the Kitikmeot Inuit Association, said Aug. 24.

To date, there hasn't been any significant opposition to the project, Emingak told Bloomberg BNA. "We haven't heard from environmental groups on whether or not they oppose it. We're not at that stage yet."

Full Environmental Review Sought

World Wildlife Fund Canada wants a full, stringent environmental review of the project, particularly because the proposed all-weather road would cross the calving ground for the Bathurst caribou herd, Brandon Laforest, the environmental group's senior specialist on Arctic species and ecosystems, said Aug. 25.

"Our position is that there should be no development at all in the calving area," Laforest told Bloomberg BNA, noting that the Bathurst herd's population has dropped to 20,000 from a high of 470,000 and that aboriginal groups in the Northwest Territories are heavily dependent on it for their traditional way of life.

The Grays Bay proposal calls for construction of a deep-water port at Grays Bay on the Coronation Gulf and a 233-kilometer (145-mile), all-season road from the port to Jericho Station, home to the Jericho Diamond Mine, which is currently dormant.

TMAC Resources' Hope Bay project involves three high-grade gold deposits in Nunavut's Kitikmeot Region which are estimated by the company to contain 4.9 million ounces of gold. Tundra Copper Corp., owned by Vancouver-based Kaizen Discovery Inc., is exploring for copper resources on more than 3,500 square kilometers (1,350 square miles) near the town of Kugluktuk, also on the Coronation Gulf.

The port would be open to ships and small vessels during the July-October open water season. The four-year construction project also would include bridges and culverts, quarries, diesel storage tanks, a runway and other port facilities.

Caribou Crossing

Caribou populations that traverse the area where the port would be located could be affected, but that has been taken into consideration from the start in designing the proposal, Emingak said. "We take caribou issues seriously," he said.

The project would affect land used by three caribou herds, but the proponents are developing a range of measures to minimize negative impacts, according to a project overview on the assessment agency's website.

The port will not be open when caribou are crossing the Coronation Gulf in the spring and fall, and

the all-weather road that is also part of the project will be closed to vehicles when another herd is calving, the overview said. Side slopes of the road will be flatter and packed down in areas where caribou are expected or known to cross, and construction activity will be shut down at times when large numbers of caribou are nearby, it said.

Laforest said the proposed measures to limit the road's impact might work under normal circumstances, but even the presence of a road can be a problem for a calving ground, particularly for a herd that is already suffering.

The project overview noted that future users of the port aren't considered directly part of the project as their activities are conducted away from the port and wouldn't be under the direct management of the port's owners. "Such future users would include any ships or trucks needed to build or operate future mining projects, such as the Izok Corridor Project. These types of projects would have to go through their own environmental assessment," the overview said.

MMG Ltd.'s C$6.5 billion ($5.2 billion) Izok Corridor Project involves development of a zinc and copper mine near Izok Lake. Shortly after the Nunavut agency launched a detailed review in 2013, the company decided the project was uneconomic due to the infrastructure requirements of construction in the Arctic. The company's website says it continues to work on making the project feasible.

Decision Due in 45 Days

The territorial agency has 45 days to complete the screening assessment, which includes a public comment period. The agency can: approve the project, potentially imposing terms and conditions; require a full environmental and socio-economic review; send the proposal back to the proponent for clarification; or recommend that the project be modified or abandoned.

Based on the agency's conclusion, federal Indigenous and Northern Affairs Minister Carolyn Bennett can accept or reject a decision to allow the project to proceed, direct the agency to reconsider any terms and conditions imposed, overturn a negative decision if the project is deemed to be in the national interest, or refer the decision report back to the agency for further review.

Reviews are more comprehensive assessments generally reserved for major development projects or projects that may cause significant public concern, the agency says in a description of its screening process. Reviews require the proponent to develop an environmental impact statement and the scheduling of a full public hearing, and projects approved after a review are issued a project certificate, it said.

"We expect it to go forward to a broader review where all these things will come out," Laforest of the World Wildlife Fund said. "There's a lot at stake with this project."

After 40 Years, Shared Water Pollution Permits Still Puzzle States

Posted August 25, 2017, 9:00 A.M. ET

By Amena H. Saiyid

Several states want to issue water pollution permits that for decades have been controlled by the federal government, but a recent report highlights how they're being hindered by confusion over costs and even which waters are eligible for state oversight.

At issue are dredge-and-fill permits needed before mining, construction, and some farming activities can be carried out in and near federally protected waters.

In most of the country, those permits are issued by the U.S. Army Corps of Engineers, which uses the permits to ensure these federal waters aren't polluted by commercial and agricultural activity.

But the process can take years, and some states want to take over the permitting role to speed up the process, end duplication with state permits, and provide consistency for the companies that need the permits before excavating in or around some wetlands or water bodies.

Lingering Uncertainty

Congress gave states the right to take over these permitting duties 40 years ago, and the the actual dredge-and-fill permit requirements are identical whether administered by a state or the federal government. But only two states—Michigan in 1984 and New Jersey in 1994—have actually assumed permitting responsibilities from the federal government, though seven additional states have explored the notion.

One of the biggest lingering issues facing those states is a lack of clarity over which types of federally protected waters they can assume control over and which ones must remain under the purview of the corps. (New Jersey worked out a compromise to clarify its role in permitting on federal waters and wetlands before taking over responsibility in 1994. But the corps doesn't want to follow that approach now.)

The Environmental Protection Agency asked an advisory committee to answer the question of exactly which federal waters would be covered, but the panel recently failed to reach a consensus.

The corps dissented from an approach endorsed by other federal and state agencies—and backed by the National Wildlife Federation—that would have made clear that states could issue permits over navigable waters covered under the Clean Water Act of 1972, even while the corps retained permitting authority over major water bodies that transport people and goods that are covered under the Rivers and Harbors Act of 1899.

That ongoing uncertainty, combined with a tough budget environment for state environmental agencies, has discouraged states like Alaska and Oregon from following through on their desire to take the lead on dredge-and-fill permitting.

Of the seven state agencies contacted by Bloomberg BNA since the May release of the panel's report, Arizona was the only one to report active discussions with its state legislature on assuming the permitting program.

Arizona Eyes Faster Permitting

Obtaining a dredge-and-fill permit from the corps can take anywhere from six months to several years, depending on the complexity of the permit, the location of the project, and whether endangered species could be affected, according to Neal McAliley, an attorney at Carlton Fields in Miami, who has sought permits for clients.

For a state to take over permitting from the corps, it needs funding, legislative backing, and EPA approval. The actual cost of assuming the dredge-and-fill program varies by state, but Virginia in 2012 estimated the cost of staffing and operating a permitting program to be about $3.4 million a year.

Arizona regulators remain interested in assuming the program and are talking with state lawmakers about legislation to expedite the process, according to a state water official.

"The interest we have in obtaining the Section 404 [of the Clean Water Act] dredge-and-fill permit program is that we will be able to have a more consistent environment to do business," Trevor Baggiore, water quality division director for the Arizona Department of Environmental Quality, told Bloomberg BNA. "We can provide a faster service than the corps."

Construction and mining are the main industries that obtain those permits in Arizona. The state's efforts are backed by Phoenix-based Freeport-McMoRan, spokesman Eric Kenner told Bloomberg BNA in an email. That company is the world's largest producer of molybdenum, which is used as an alloy in steel manufacturing, and second largest producer of copper.

Don Taylor, chief operating officer for Arizona Mining Inc., wouldn't speculate on the impact on his company's operations until Arizona actually enacts changes, but he told Bloomberg BNA that any change to streamline the permitting process and ensure more consistent communication with regulators would be a positive for all businesses that deal with the issue.

Baggiore said funding is not as much of an issue for Arizona as it is for other states because it charges fees for Clean Water Act discharge permits, a process that would continue if Arizona assumes the dredge-and-fill program.

Interest Remains, But ...

While Arizona is still working to take over the permitting process, the interest of several states has been dampened by confusion over which waters they would assume and which would be retained by the corps.

Congress authorized states in 1977 to take over permitting of waters and wetlands covered by the Clean Water Act, but not those that fall under the Rivers and Harbors Act, which includes major rivers and lakes where transportation of goods and people takes place.

States have been confused over whether that's the final word, so the EPA attempted to clear up that situation by asking its National Advisory Council for Environmental Policy and Technology (NACEPT) to weigh in. But the corps didn't agree with the rest of the panel.

The corps insisted that it retain permitting authority over a category of navigable waters—including small ponds like Minnesota's Bah Lakes—that go beyond major arteries used for transporting goods. The corps also wanted to retain authority over wetlands adjacent to major rivers on a case-by-case basis.

State assumption was a bipartisan compromise Congress enacted to protect states' traditional land-use authorities while extending federal standards to many waters that were not regulated, according to Virginia Albrecht, special counsel to Hunton & Williams LLP, who served on the advisory panel.

"It's a mystery why the corps representative on [a NACEPT panel] refused to implement this clear congressional intent," Albrecht told Bloomberg BNA in an email.

The corps deferred all next steps to the EPA, which told Bloomberg BNA that it is still reviewing the report, but remains committed to giving states an opportunity to be equal regulatory partners.

States Need Funding

Montana's interest in assuming dredge-and-fill permitting waned because the advisory committee didn't provide the steps necessary for takeover and because its state Legislature didn't back the effort, Jeni Garcin, spokeswoman for the state Department of Environmental Quality, told Bloomberg BNA.

Florida and Virginia environmental officials told Bloomberg BNA that the subject wasn't on the agency's radar screen, while Maryland failed to respond. Other states remain interested, but they can't pursue the takeover because of tight budgets.

In Alaska, the current budget climate doesn't support taking over program, Michelle Hale, water division director for Alaska's Department of Conservation, told Bloomberg BNA in an email.

Oregon's interest has been tempered since it discovered it may run afoul of Endangered Species Act protections for the state's salmon species, Bill Ryan, deputy director of Oregon Department of State Lands, told Bloomberg BNA.

The corps consults with other federal agencies to make sure no permitted activity threatens salmon. If the state takes over the permitting program, it would need legislative permission and funding to set up another regulatory program to deal with any harm to the salmon caused by dredging and filling of streams, a move for which there is "neither appetite nor budget" in Oregon, Ryan said.

Week Ahead: 'Garbage Juice,' Snow Leopards, EPA Modeling Debated

Posted August 25, 2017, 01:34 P.M. ET

By Chuck McCutcheon

"Garbage juice" in North Carolina, the snow leopard's role in addressing climate change, and an EPA panel's scrutiny of regulation models are among the topics at energy and environment events during the week of Aug. 28.

North Carolina lawmakers are scheduled to vote Monday on overriding Gov. Roy Cooper's (D) veto of a bill (H.B. 576) that would allow the state's landfill operators to spray leachate and wastewater into the air to help manage solid waste. The technique is known as "aerosolization," but opponents have termed it "garbage juice spraying."

In his veto message, Cooper said he opposed the bill because it would limit the future use of more environmentally protective technologies. Despite the earlier blessing from state lawmakers, the owner of most of North Carolina's landfills—Phoenix-based Republic Services Inc.—is now backing away from aerosolization.

Republic Services "concluded that the technique is not a viable alternative for our liquids management in North Carolina," the company said in a statement to Bloomberg BNA. The company said it didn't plan to use the method in the future and was "committed to working with regulators on future ideas and opportunities that might further enhance the management of an evolving waste stream."

Another company, Charah LLC, which operates a landfill near Moncure, N.C., told state regulators

that it wants to withdraw its request for an aerosolization permit, according to a news report. Andrew Ballard will cover.

In Other News

World Water Week: Stockholm's annual conference addressing global water issues, organized by the Stockholm International Water Institute, runs Sunday through Friday. Thousands of attendees from more than 100 countries will listen to panel discussions on topics such as irrigating forests with wastewater and using hydropower to address climate change.

One of Monday's panels will address how snow leopards are bringing together 12 countries in Asia's Third Pole region to deal with water and climate security. The animals are considered to show potential resiliency against the direct impacts of climate change in the near term: They are able to tolerate a range of temperatures and require minimal fresh water. But scientists are concerned about the snow leopards' longer term future as climate change accelerates.

Hurricane Harvey: Bloomberg BNA staff will monitor the hurricane's impact on the Gulf Coast region's oil and gas sector and other energy and environmental effects.

Regulation modeling: The Environmental Protection Agency's Science Advisory Board meets Tuesday and Wednesday in Arlington, Va. Among the topics is a review of a draft board report on economywide modeling of environmental regulations' costs and benefits. Peter Wilcoxen, a Brookings Institution nonresident senior fellow in economic studies and co-director of the Brookings Climate and Energy Economics Project, chairs the committee on the topic and will make a presentation. Sylvia Carignan will watch.

Perry to Ukraine: Energy Secretary Rick Perry on Monday will lead a U.S. delegation to Kyiv, Ukraine. The group will meet with President Petro Poroshenko, as well as other Ukrainian officials to discuss energy partnerships. The department, along with Xcoal Energy & Resources, announced Aug. 21 the first shipment of Pennsylvania thermal coal to Ukraine.

Conowingo Dam: The Maryland Environmental Service is expected Thursday to issue a detailed request for proposal for a demonstration project to determine the costs of dredging the Conowingo Dam. The project also will seek to identify markets for reuse of dredged material. Recent research shows that the hydroelectric dam, located on the Susquehanna River in northern Maryland, has been filling with sediment faster than expected. Leslie A. Pappas will cover.

Infrastructure investment: The Atlantic Council will hold a Monday forum in Chapel Hill, N.C., on the Trump administration's infrastructure proposal featuring Rep. David Price (D-N.C.).

EPA webinars: The EPA will hold a Tuesday webinar on reducing plastic products' pollution and a Thursday webinar on suspect screening of chemicals in consumer products.

Driving the Day

Good Tuesday morning. INTEL'S BRIAN KRZANICH has dropped off President Donald Trump's American Manufacturing Council.

THE AFTERSHOCK -- "Trump gives heartburn to American CEOs," by Dan Diamond: "It took three weeks for Merck CEO Kenneth Frazier to go from a 'business genius' to a 'ripoff' drug executive -- at least in the eyes of President Donald Trump. Frazier appeared at the White House on July 20 to celebrate a new jobs initiative, where the president hailed him as a 'great, great business leader' and thanked Merck for investing in American jobs. But on Monday, the president blasted Frazier after the executive announced he was leaving a White House advisory council over Trump's failure to condemn the hate groups that demonstrated in Charlottesville, Va. ...

"Frazier's decision and his subsequent tongue-lashing on Twitter illustrate the tricky balancing act for America's CEOs: Avoid Trump and run the risk of being his target - or get close to this White House at your peril. More than two dozen CEOs and other leaders were invited to serve on Trump's councils, a somewhat symbolic role that gives business executives a chance to bend the ear of the president and potentially win favorable treatment. A number of those leaders, like General Electric's Jeff Immelt, also served on similar advisory councils for former President Barack Obama.

"Late Monday, Intel's CEO, Brian Krzanich, posted in a company blog that he, too, was stepping down from the manufacturing council. 'I have already made clear my abhorrence at the recent hate-spawned violence in Charlottesville,' he wrote, 'and earlier today I called on all leaders to condemn the white supremacists and their ilk who marched and committed violence. I resigned because I want to make progress, while

many in Washington seem more concerned with attacking anyone who disagrees with them.' That announcement followed tweets from Under Armour, which said its chief executive, Kevin Plank, had decided to quit, as well." http://politi.co/2wLch10

-- IAN KULLGREN: "AFL-CIO President Richard Trumka hinted [Monday] that he may resign from President Donald Trump's manufacturing council after the president's initial reluctance to condemn white supremacist and neo-Nazi marchers in Charlottesville, one of whom allegedly killed a young woman protesting the march. In a statement to POLITICO, Trumka also criticized the White House manufacturing council as ineffective."

-- TRUMP SEEMS TO LOVE nothing more than meeting with CEOs at the White House. He's had more public meetings and roundtables with executives from different industries than President Barack Obama or President George W. Bush. (The pace of the gatherings has slowed considerably.) But, if he gets too close to controversial issues these CEOs will be quick to skip a photo-op or appointment to what are largely ceremonial positions.

BANNON GETS NUDGED UNDER THE BUS -- NYT, A1: "Bannon in Limbo as Trump Faces Growing Calls for the Strategist's Ouster," by Maggie Haberman and Glenn Thrush: "Rupert Murdoch has repeatedly urged President Trump to fire him. Anthony Scaramucci, the president's former communications director, thrashed him on television as a white nationalist. Lt. Gen. H. R. McMaster, the national security adviser, refused to even say he could work with him.

"For months, Mr. Trump has considered ousting Stephen K. Bannon, the White House chief strategist and relentless nationalist who ran the Breitbart website and called it a 'platform for the alt-right.' Mr. Trump has sent Mr. Bannon to a kind of internal exile, and has not met face-to-face for more than a week with a man who was once a fixture in the Oval Office, according to aides and friends of the president.

"So far, Mr. Trump has not been able to follow through -- a product of his dislike of confrontation, the bonds of a foxhole friendship forged during the 2016 presidential campaign and concerns about what mischief Mr. Bannon might do once he leaves the protective custody of the West Wing. ... Despite being marginalized, Mr. Bannon consulted with the president repeatedly over the weekend as Mr. Trump struggled to respond to the neo-Nazi rally in Charlottesville, Va. In general, Mr. Bannon has cautioned the president not to criticize far-right activists too severely for fear of antagonizing a small but energetic part of his base." http://nyti.ms/2vXkDF5

-- THIS FEELS LIKE a Friday-night-in-August type of departure. Don't touch that dial. ... **MAGGIE** and **GLENN** hit on this, but many top House conservatives truly trust Bannon and use him as a way to send messages to the president. Without him and Reince Priebus, many members of Congress will feel like they have no way into the White House.

-- AHEM ... -- JOSH GREEN has joined CNN as a political analyst effective Monday. He'll remain at Bloomberg Businessweek.

-- FOR WHATEVER IT'S WORTH, Scaramucci told Stephen Colbert last night "if it were up to me" Bannon would be gone. http://bit.ly/2wLDqAC ... **Colbert:** "What was it like for the 10 days you were in there? Did you get a sense of chaos?" **Scaramucci:** "Listen, I mean, it's a tough place. There was a lot of infighting. ... What people do is they go behind each other's backs and they leak things to the press and they say nasty things about each other to try to destabilize them or to influence the president's judgment of them. ... You have to have some level of esprit de corps and it didn't start that way." ... **Colbert:** "Were you brought in just to get rid of him [Reince Priebus] and Sean Spicer?"

Scaramucci: "Mmm, I don't want to say that. Ahh, I don't want to say it that way." **Colbert:** "Was it part of your job? ... Say it like the Mooch. Give me some Mooch." ... **Scaramucci:** "The Mooch of Long Island would say there was no love lost there ... I didn't think I was going to last too long, but I thought I would last longer than a carton of milk. I just didn't last that long." He also got booed by some in the audience when he said that he knew the president was a "compassionate person." ***10-min. video*** http://bit.ly/2w9lWka ... ***3-min. video*** http://bit.ly/2i1xXmd

ABOUT THAT RESPONSE -- "Trump plays both sides with Charlottesville response," by Eliana Johnson: "President Donald Trump caved to pressure from his senior advisers on Monday when he rebuked neo-Nazis and white supremacists for their involvement in the rally that ended in the death of a 32-year-old Charlottesville woman -- but it may have been a Pyrrhic victory. His remarks on Monday, authored in part by chief speechwriter Stephen Miller, put some of his most ardent supporters in the crosshairs, and quelled the outrage sparked by his initial statement, which was widely considered weak and equivocal.

"But the White House's slow-footed response, which played out over three days, fit a broader pattern that has hobbled the president before. Pushed to condemn some of the ugly factions of the alt-right made prominent by his candidacy, Trump has fallen back on the same tactic: delay, delay, delay. Political analysts said Trump's drawn-out response was part of a double game -- an effort to avoid alienating part of his base followed quickly by a pivot to tamp down the outrage. 'He feels he can keep his base happy by being mute for 48 hours, and then he can come in and mute the so-called mainstream media world,' said presidential historian Douglas Brinkley." http://politi.co/2uXjMj3

SETH MEYERS on Donald Trump and Charlottesville on "Late Night": http://bit.ly/2wLC2OC

-- AP's Jonathan Drew in Durham, North Carolina: "Protesters in North Carolina toppled a nearly century-old statue of a Confederate soldier Monday at a rally against racism. Activists in Durham brought a ladder up to the statue and used a rope to pull down the Confederate Soldiers Monument that was dedicated in 1924. A diverse crowd of dozens cheered as the statue of a soldier holding a rifle fell to the ground in front of an old

courthouse building that now houses local government offices. Seconds after the monument fell, protesters began kicking the crumpled bronze monument. 'I was a little bit shocked people could come here and come together like that,' said Isaiah Wallace, who is black." http://bit.ly/2i2BJLQ

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: If you know only one fact about rising drug costs, know this one: drug makers set prices for prescription drugs. To help manage nearly double-digit price increases, employers, unions and government programs use PBMs to negotiate lower net prices to help curb costs for employers and patients. Learn more at affordableprescriptiondrugs.org ******

BEN SCHRECKINGER in Alexandria, Virginia, **"White Nationalists Try on an Unfamiliar Role: Police Victims":** "Organizers of Saturday's deadly white nationalist rally say they are planning to return to Charlottesville for a future rally and to file lawsuits against city and state authorities for allegedly failing to protect their gathering. But first, they must cope with a psychic shock: feeling betrayed by government authorities they believed would always protect them. Before this weekend's events, the alt-right had been a bastion of pro-police sentiment -- especially when it came to police shootings of unarmed black victims and clashes with the Black Lives Matter movement. Now, the alt-right's leaders are grappling with the realities of being identifiable members of an unpopular minority group in public. ...

"[W]hite nationalist leader Richard Spencer at a small news conference inside his home here on Monday afternoon ... repeatedly dodged questions about whether his weekend experience has made him more sympathetic to the Black Lives Matter movement and members of minority groups who have claimed unfair treatment at the hands of police. ... Spencer said he was unimpressed by President Donald Trump's Monday statement condemning Nazis and the KKK, calling it 'nonsense' and 'silliness.' He said he did not believe Trump - who explicitly condemned white supremacy only after days of criticism for his failure to do so - was making the statement sincerely and said he does not believe the president had condemned his movement, pointing out that he did not use the term 'white nationalists.'" http://politi.co/2uF00xE

-- WAPO: "Records show Va. suspect's mom twice called 911 on son, paint a portrait of a violent young teen": http://wapo.st/2wLp3wc

--"Uber Bans Racists, Too," by BuzzFeed's Caroline O'Donovan: "Uber permanently banned white supremacist James Allsup from its ride-hail platform on Saturday after an Uber driver in Washington, D.C. kicked him and alt-right leader Tim Gionet, better known as Baked Alaska on Twitter, out of their ride for allegedly making racist remarks. ... Before the rallies, Airbnb decided to ban known white supremacists from its site, prohibiting some - including the well-known neo-Nazi Richard Spencer - from booking a place to stay at Charlottesville via the platform." http://bzfd.it/2uY0xpB

NEXT UP -- "Deadly rally accelerates removal of Confederate statues," by AP's Jesse J. Holland: "In Gainesville, Florida, workers hired by the Daughters of the

Confederacy chipped away at a Confederate soldier's statue, loaded it quietly on a truck and drove away with little fanfare. In Baltimore, Mayor Catherine Pugh said she's ready to tear down all of her city's Confederate statues, and the city council voted to have them destroyed. San Antonio lawmakers are looking ahead to removing a statue that many people wrongly assumed represented a famed Texas leader who died at the Alamo.

"The deadly white nationalist rally in Charlottesville, Virginia, is fueling another re-evaluation of Confederate statues in cities across the nation, accelerating their removal in much the same way that a 2015 mass shooting by a white supremacist renewed pressure to take down the Confederate flag from public property." http://bit.ly/2uEmy1E

CRISIS AVERTED ... FOR NOW -- "North Korean ruler stands down on threat to Guam," by L.A. Times' W.J. Hennigan and Jonathan Kaiman: "North Korea's autocratic ruler has decided not to launch missiles toward Guam, Pyongyang's state media reported Tuesday, easing the immediate threat of an attack on the U.S. territory in the western Pacific.

"The North Korean statement said Kim Jong Un could change his mind 'if the Yankees persist in their extremely dangerous reckless actions,' in which case the country's artillerymen would 'wring the windpipes of the Yankees and point daggers at their necks.' The announcement appeared shortly after Defense Secretary James N. Mattis warned that an attack could quickly escalate to war, although it's unclear if the developments were linked. 'If they fire at the United States it could escalate into war very quickly,' Mattis told reporters at the Pentagon. 'That's called war, if they shoot at us ... You don't shoot at people in this world unless you want to bear the consequences.'" http://lat.ms/2i3lbnk

FOR YOUR RADAR -- "Iran could quit nuclear deal in 'hours' if new U.S. sanctions imposed: Rouhani," by Reuters: "Iran could abandon its nuclear agreement with world powers 'within hours' if the United States imposes any more new sanctions, Iranian President Hassan Rouhani said on Tuesday. 'If America wants to go back to the experience (of imposing sanctions), Iran would certainly return in a short time -- not a week or a month but within hours -- to conditions more advanced than before the start of negotiations,' Rouhani told a session of parliament broadcast live on state television. Iran says new sanctions that the United States has imposed on it breach the agreement it reached in 2015 with the United States, Russia, China and three European powers in which it agreed to curb its nuclear work in return for the lifting of most sanctions." http://reut.rs/2uX4Kdm

-- REUTERS//MANILA: "Philippines says China has agreed no new expansion in South China Sea": "China has assured the Philippines it will not occupy new features or territory in the South China Sea, under a new status quo brokered by Manila as both sides try to strengthen their relations, the Philippine defense minister said. The minister, Delfin Lorenzana, told a congressional hearing that the Philippines and China had reached a 'modus vivendi', or a way to get along, in the South China Sea that prohibits

new occupation of islands. 'There is status quo now that is happening in the South China Sea brokered by the secretary of Foreign Affairs,' he told lawmakers late on Monday." http://reut.rs/2wLxEis

SOME SERIOUS COIN -- "Gates Makes Largest Donation Since 2000 With $4.6 Billion Pledge," by Bloomberg's Tom Metcalf: "Bill Gates made his largest gift since the turn of the century, giving away Microsoft shares that accounted for 5 percent of his fortune, the world's biggest. The billionaire donated 64 million of the software maker's shares valued at $4.6 billion on June 6, according to a Securities & Exchange Commission filing released Monday. While the recipient of the gift wasn't specified, Gates has made the majority of his donations to the Bill & Melinda Gates Foundation, the charity he and his wife use to direct their philanthropic efforts." https://bloom.bg/2i0hUoy

TRUMP'S TUESDAY -- TRUMP is in New York. He will discuss infrastructure and sign an executive order "establishing discipline and accountability in the environmental review and permitting process for infrastructure projects." He'll also give a public statement. The infrastructure meeting will be in the Trump Tower residence and the statement will be made from the Trump Tower lobby.

A REMINDER -- TONIGHT is the Alabama Senate primary. ***Seung Min Kim and Daniel Strauss tell us five things to watch*** http://politi.co/2fGxntm

Playbook Reads

PHOTO DU JOUR: A protester kicks a toppled statue of a Confederate soldier after it was pulled down in Durham, North Carolina on Aug. 14. | Casey Toth/The Herald-Sun via AP

OFF MESSAGE: ISAAC DOVERE talks to **CECILE RICHARDS** -- "Cecile Richards, the president of the Planned Parenthood Federation of America and Planned Parenthood Action Fund, couldn't be clearer on how wrong she thinks DCCC chair Ben Ray Luján is to say he won't have a litmus test for candidates on abortion rights. 'It's a shocking sort of misunderstanding of actually where the country is ... which is overwhelmingly supportive of abortion rights and also, who are the ground troops that kind of fuel the election of candidates,' Richards told Isaac Dovere for the latest episode of POLITICO's Off Message podcast. ...

"'On getting back in touch with Ivanka Trump: 'I guess I could. I feel like talk is cheap, right? It's actually what are the actions we're seeing and what we've seen out of this administration from day one have had both barrels aimed at women.'" http://politi.co/2x07ec6 ... ***Listen to the full podcast*** http://apple.co/2e2dLvm

COMING ATTRACTIONS -- "Women's March to reconvene around 2018 after Charlottesville," by USA Today's Heidi M. Przybyla: "For the first time since an estimated 2.6 million citizens marched on Washington and in cities across the country and globe a day after President Trump's inauguration, organizers are asking their allies to regroup in order to focus on the congressional, gubernatorial and local elections taking place next year. The Women's Convention, to be held in Detroit from Oct. 27-29, will bring together thousands of the women who organized sister marches across the country on Jan. 21 and have formed 5,000 local groups, or huddles, in 50 states to organize resistance actions over the past several months." https://usat.ly/2i17OUz

-- "Alarmed by Trump, Obama alums launch campaigns of their own," by Elena Schneider: "Shaken by Trump's victory and motivated by the potential undoing of what they worked to help Obama accomplish, roughly a dozen former White House and agency staffers have moved home to run for Congress. They're leaning on advice and seeking endorsements and donations from a roster of ex-Obama White House and campaign hands.

"Some House races have even drawn multiple former Obama hands into the arena. In Texas, former Obama chief of staff Denis McDonough and ex-Treasury Secretary Jack Lew have lined up behind Ed Meier, a former State Department official, while ex-Housing and Urban Development Secretary Julián Castro is backing his former employee, Colin Allred, who was also an Obama White House intern and professional football player. Meier and Allred are competing in a crowded primary to take on Rep. Pete Sessions (R-Texas), who didn't attract a single Democratic opponent last year." http://politi.co/2uJCviN

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers and other health care purchasers; however, the list price - the important starting point for those negotiations -- continues to rise, at a rate of nearly ten percent in 2016 alone. Increased competition, faster reviews of generics and biosimilars and ending anti-competitive practices can also bring down the cost of medications for patients. Learn more at affordableprescriptiondrugs.org ******

2018 WATCH -- "The GOP's nastiest Senate primary : Todd Rokita and Luke Messer have been trying to outdo one another in Indiana politics since they graduated from the same small college decades ago," by Maggie Severns and Kevin Robillard: "Their campaign didn't officially get underway until last week, but Messer, 48, has already accused Rokita of attacking his wife and 'spreading lies' about his record. Rokita, 47, has questioned his rival's mental health, calling Messer 'unhinged' and a 'ticking time bomb.' ... [F]ew states are as ripe for a Republican challenge as Indiana - where Democratic Sen. Joe Donnelly is unusually vulnerable, running in a state Trump carried by 19 points - and no primary has gotten so nasty, so quickly.

"More than a dozen professional colleagues and personal acquaintances painted the hostility between Rokita and Messer as the product of three decades of pent-up rivalry.

The two men ... have climbed Indiana's political ladder alongside each other for years and even attended the same small, all-male Wabash College together in the early 1990s - a school whose unofficial motto, a former dean noted with a touch of irony, is 'competition without malice.'" http://politi.co/2fHi3N2 ... ***Rokita's new digital attack ad on Messer*** http://bit.ly/2vELXpf

BUSINESS BURST -- "Warren Buffett Cashes Out on GE, Cashing In on Crisis Loan," by WSJ's Thomas Gryta and Maria Armental: "Warren Buffett's Berkshire Hathaway Inc. is getting out of one of America's oldest companies: General Electric Co. The billionaire investor's firm sold 10.6 million GE shares in the second quarter, a stake that would have been worth an estimated $315 million as of June 30, according to a regulatory filing. Berkshire received most of the shares in 2013 after the investor lent roughly $3 billion to GE in October 2008 during the depths of the financial crisis.

"In addition to the shares, Berkshire received hundreds of millions in dividends from GE over several years. All told, Mr. Buffett's $3 billion crisis-era investment generated a profit of more than $1 billion. Berkshire's decision to cash out its GE stake came in the same quarter that the conglomerate announced it was changing leaders, with Jeff Immelt stepping aside as chief executive after 16 years and handing over the job to one of his lieutenants, John Flannery." http://on.wsj.com/2uJudl0

THE CAMPAIGN PROMISE -- "Trump may not get the 'win' he seeks in NAFTA talks," by Doug Palmer: "As a candidate, Donald Trump constantly called NAFTA the worst trade deal in history and promised 'to get a better deal for our workers.' Now that he is president, Trump is about to find out how hard it is to get an agreement that satisfies not only those workers who feel 'shafted by NAFTA' but also the powerful business interests currently benefiting from billions of dollars in cross-border sales. Top trade officials from the United States, Canada and Mexico sit down on Wednesday to begin thrashing over hundreds of issues as distinct as Canadian dairy barriers and digital trade issues affecting both countries." http://politi.co/2w9u4Ba

TOP-ED -- SEN. JAMES LANKFORD (R-Okla.) in WaPo, **"The U.S. trade deficit is a good thing. Really":** "When a Canadian company decides to invest in a U.S.-based company, it increases our trade deficit. Similarly, when the Mexican government buys U.S. Treasury bonds (as most of the world does), the likelihood of an American trade deficit increases. Investments such as these are indicative of a strong economy. It should be an encouraging sign that we are by far the world's largest receiver of foreign direct investment. Our trade deficit means, in part, that U.S. companies are considered to be a better investment than companies in other countries. More investment in American businesses means more jobs and higher wages for American workers." http://wapo.st/2uJtRkw

MEDIAWATCH -- "Opponents to Sinclair-Tribune merger rally in new 15-member coalition," by John Hendel: "The Coalition to Save Local Media includes right-leaning programmers, tech industry interests, telecom trade groups and public interest advocates. ... Such a concerted effort from a wide range of voices puts additional

pressure on the FCC and Justice Department as they weigh the merger's prospects. It also creates a tough spot for Republican lawmakers, who so far have preferred to quietly assess the merger without summoning witnesses for hearings despite calls from some Democrats to do so. Amid all this noise, no proponents for the Sinclair-Tribune deal have stepped up to provide any countervailing view."

-- THE NEW YORKER has announced the line-up to its Oct. 6 one-day conference called TechFest; its speakers include Michael Lynton, Gina McCarthy, Jaron Lanier, and Garry Kasparov. http://bit.ly/2uEiUVw

PLAYBOOK SCOOPLET -- MCCLATCHY has hired Emma Dumain to be Washington correspondent for its South Carolina papers. She most recently was D.C. correspondent for the Post and Courier of Charleston.

Playbookers

DANA BASH will get GW's 2017 Distinguished Alumni Achievement Award at an Oct. 19 ceremony.

TRANSITIONS -- NOBUKO SASAE will chair the Eleanor Roosevelt Dialogue, a forum to educate spouses of ambassadors, cabinet secretaries, Supreme Court justices, White House aides and others on issues of the day. Sasae, wife of Japanese Ambassador Kenichiro Sasae, takes over from Kathleen Biden, who led the group for the past two years.

BIRTHDAY OF THE DAY: Elise Labott, CNN global affairs correspondent. **How she's celebrating:** "I usually take a wild trip with my friend Linda Roth, whose birthday is the day before mine. A few years ago we parasailed off the mountains of Medellin, Colombia and another year we went to the Croatian coast. She's on a work trip this year so I'm having a low key happy hour with friends." Read her Playbook Plus Q&A: http://politi.co/2vzH5mV

BIRTHDAYS: Karen Finney ... Vernon Jordan is 82 ... Melinda Gates is 53 ... Justice Stephen Breyer is 79 ... Rep. Maxine Waters (D-Calif.) is 79 ... Rep. Robert Pittenger (R-N.C.) is 69 ... Linda Ellerbee is 72 ... Dave Price ... Devin O'Malley is 3-0 ... McClatchy's Kevin Hall, a Pulitzer Prize winner, is 55 (hat tip: Kristin Roberts) ... Matt Pinnell ... Miranda Barrett ... Britain's Princess Anne is 67 ... Ben Affleck is 45 ... Joe Jonas is 28 ... Jennifer Lawrence is 27 (h/ts AP)

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : The high prices that drug makers set for prescription drugs can put financial strain on patients, employers, unions and others who provide health care coverage to more than 50 percent of Americans. Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers, unions and government programs. But, as list prices - the starting point for those negotiations -- continue their nearly double-digit increases, the effects ripple throughout the system. The key to ensuring greater access and affordability lies in fostering greater competition. Facilitating faster reviews of generics and biosimilars, identifying off-patent drugs with little or no generic competition, and ending anti-competitive practices that keep safe, effective alternatives out of the market are also key to abating rising drug costs for patients. Learn more at affordableprescriptiondrugs.org ******

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

November 1, 2017

Latest News

Pruitt Prepares To Axe Current Science Advisers, Driving 'Purge' Charge

EPA Administrator Scott Pruitt is applying his new policy barring science advisors from receiving agency grants retroactively to current advisors, a move that will force some to either give up their grants or step down from the panels on which they serve, opening the door to Pruitt making additional appointments and intensifying criticisms that the he is seeking to "purge" independent advisors.

EPA May Float Data Notice To Aid Revisions To Oil & Gas Methane Rule

As the Trump administration prepares to unveil a long-expected measure to pause provisions in the Obama EPA's oil and gas methane rule for two years, sources say the agency may also release a notice of data availability (NODA) that will help to build a record to support any future substantive revisions to the standards.

EPA Sees GHG Cuts From Oil & Gas Settlements But Declines To Quantify

EPA officials say they expect that settlement agreements announced Oct. 31 with oil company Exxon Mobil and oil and gas producer PCD Energy requiring cuts in volatile organic compound (VOC) emissions will have a "co-benefit" of reducing sector greenhouse gases, though agency officials are declining to quantify the exact benefit.

Former EPA Staff Say Budget Cuts Will Hinder 'Meaningless' Strategic Plan

Former EPA officials are criticizing the Trump administration's draft plan outlining the agency's broad priorities for 2018 through 2022 as an "almost meaningless" document, and saying that proposed budget cuts will hinder EPA's ability to even achieve the plan's vague goals let alone adequately protect public health and the environment.

Environmentalists Say EPA Policies Boost Suit Seeking CWA Ash Controls

Environmentalists are invoking past EPA policies to boost their lawsuit claim that the Clean Water Act (CWA) limits coal ash pollution that travels through groundwater to protected surface waters, in order to win judicial deference for that position and

arguing that such a decision would be hard for the Trump administration to avoid.

Pruitt Order Bars EPA Grant Recipients From Advisory Roles

Pruitt's directive reverses years of agency practice and is prompting fears that EPA will lose access to some top scientists in their fields.

Sparking Fears, EPA Drops Use Of Orders To Control Some 'New' Chemicals

EPA has dropped its use of enforcement orders to limit some 'new' chemicals' uses that it had previously applied as a bridge before issuing a rule governing those uses, but the move is sparking concerns from environmentalists who fear it will speed chemical approvals and end a backlog of reviews but make short shrift of public health concerns.

Daily Feed

EPA denies petition seeking ozone transport zone expansion

The Trump EPA is finalizing an Obama-era proposal to reject a petition seeking to expand the number of states covered by the Ozone Transport Commission, which are subject to stricter ozone air pollution controls.

Rep. Smith slams GAO's warning on climate costs

The House science committee chairman says that GAO's recent warning that the government is not doing enough to address climate change relied on a study was not been peer reviewed and is politically motivated.

International shipping group inches toward GHG agreement

The International Maritime Organization continues to make progress toward a global deal on reducing greenhouse gases from shipping, amid uncertainty over the Trump administration's position.

Ewire: Will Pruitt keep oil and gas methane rule?

In today's Ewire: A senior EPA official notes the "very extensive record" supporting Obama-era methane limits on new oil and gas equipment, suggesting the agency might retain some level of regulation.

LCV targets 10th Circuit nominee over drilling decision

Environmentalists are urging the Senate to oppose confirming Allison Eid to be a federal circuit judge, but point to only one environmental ruling as a reason why.

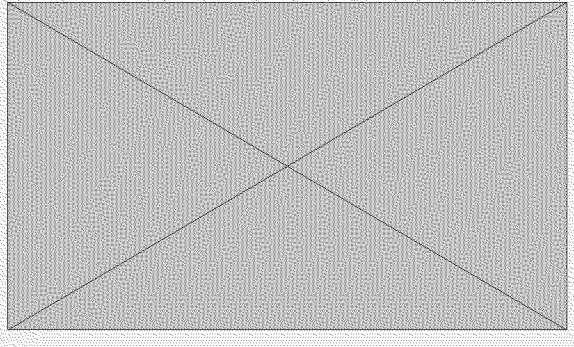
The president charts a positive if imperfect course in Afghanistan

Frederick W. Kagan | AEIdeas

President Trump's decision to recommit to Afghanistan was right and important. He explained the stakes of the fight accurately: to prevent al Qaeda and ISIS from regaining the base from which al Qaeda launched the 9/11 attacks. This outcome is both achievable and essential to American security. But a key piece of the puzzle is missing: The president offered no political

strategy for Afghanistan, nor did he describe how such a strategy would be developed.



Reuters

Congress' job is to serve the people — not embellish legacies

Joseph Antos | InsideSources

It's time to stop the grandstanding. The Affordable Care Act is seriously flawed, resulting in a less effective and more expensive approach to expanding health coverage than was promised eight years ago. But the solution is not one-off assaults on its weaknesses. When Congress returns in September, both parties should remember their constitutional duty has nothing to do with embellishing the legacy of presidents — past, present, or future.

The White House's China order: Historic or a nothing-burger?

Claude Barfield | AEIdeas

Given the president's vow to get tough on China, the question is why serious action on intellectual property was potentially put off for months. While US Trade Representative Robert Lighthizer was quick to make a preliminary determination, administration officials say the investigation could last for another year. This signals non-seriousness to Beijing. Meanwhile, grave challenges from China's high-tech mercantilism are already wreaking destruction.

High-tech weapons are our best shot to contain North Korea

John Yoo and Jeremy A. Rabkin | Los Angeles Times

With threats, bribes, diplomacy, and sanctions, American presidents of both parties have sought for 25 years to halt North Korea's quest for a nuclear arsenal. They have all fallen short. Although the brinkmanship of the past few weeks has subsided, President Trump still faces the

prospect of a madman in Pyongyang. What the US must now do is find options between conventional war and appeasement.

New York State Lawmaker to Lead EPA Regional Office

Posted September 28, 2017, 01:02 P.M. ET

By Abby Smith

Pete Lopez, the EPA's newly appointed Region 2 administrator, will have to hit the ground running.

A New York state assemblyman since 2007, Lopez will now be responsible for the Environmental Protection Agency's region that includes his home state, New Jersey, Puerto Rico, and the U.S. Virgin Islands—the latter two recently devastated by powerful hurricanes. Lopez has served in the New York state assembly for eight years, where he currently sits on the environment committee and the task force on food, farm, and nutrition policy. And he has experience with hurricane recovery: Lopez received an award in recognition of his efforts helping New York recover from Hurricane Irene and Tropical Storm Lee in 2011.

The EPA announced Lopez's appointment Sept. 28.

"His familiarity with the region and his experience working to solve environmental problems in New York will be invaluable in helping EPA serve Americans in the Northeast and the Caribbean," EPA Administrator Scott Pruitt said in a statement.

Lopez is the second regional administrator to be appointed by the Trump EPA. Last month, the EPA appointed Trey Glenn, former head of Alabama's environment department, to lead the agency's Region 4 that includes eight Southeast states.

U.S. Seen Having Long Way to Go to Market Energy Department Land

Posted September 28, 2017, 12:50 P.M. ET

By Emma Ockerman

The U.S. Department of Energy needs to develop a more accurate inventory of federal lands it

manages to promote energy projects by private companies.

While other government agencies such as the Department of the Interior have looked at opportunities to promote renewable energy on public lands, the Energy Department appears to have lagged behind, according to a report released Sept. 28 by the National Academies of Sciences, Engineering, and Medicine.

It recommended the department carry out an up-to-date assessment of properties that can be leased or sold among its 164 sites, with a view to eventually getting companies on board to start developing energy projects. The agency is responsible for 2.4 million acres of land, according to its website—about 735,000 acres fewer than the state of Connecticut.

The report authors reviewed two studies from the National Renewable Energy Laboratory and Colorado School of Mines, intended to examine the potential for energy resource development, which it said were hampered by limited data and budgets.

Given the limited funding, the Colorado analysis of available fossil fuels was "fairly rudimentary," said Paul DeCotis, chair of the committee behind the report and senior director of energy and utilities at West Monroe Partners.

The Colorado report found few opportunities for oil and natural gas development. Nevertheless, if the department were to open an office tasked with managing the leasing of its lands, it could engage developers on what would make them willing to snap up acreage.

"Really it's a question now of perhaps better characterizing the sites and partnering with the private sector to draw private capital to develop the sites," DeCotis said in an interview.

Perry to Talk Rare Earth Minerals at Pennsylvania Coal Mine

Posted September 28, 2017, 02:23 P.M. ET

By Stephen Lee

Energy Secretary Rick Perry is expected to make an announcement today about retrieving rare earth elements from coal during his visit to the Jeddo Coal Mine in Wilkes-Barre, Pa.

Rare earth elements can be found in coal and coal waste products. The minerals are used to make products such as cell phones, computers, wind turbines, and medical devices.

The Trump administration is getting behind research on extracting rare earth elements from coal to boost domestic demand for coal and reduce the need for foreign imports of the metals.

Interior Expects Hot Bidding for Offshore Wind Energy Leases

Posted September 28, 2017, 03:48 P.M. ET

By Adrianne Appel

The Bureau of Ocean Energy Management is betting on heightened interest in offshore wind to

drive up the price of the Atlantic ocean leases it will auction next year— parcels that just two years ago had no takers.

The Interior Department agency will auction two ocean parcels about 15 miles off the Massachusetts coast in late summer or fall of 2018, James Bennett, chief of renewable energy at BOEM, told Bloomberg BNA in a Sept. 28. The agency, which leases federal ocean areas for oil, gas and now, offshore wind, will announce details of the auction in the Federal Register by the end of the year, Bennett said.

"We've had two unsolicited bids" for the parcels already, Bennett said. That and the fact that a recent BOEM auction for an ocean parcel off Long Island, N.Y., netted a $42.5 million winning bid "indicates to us that interest in offshore wind has changed dramatically in just two years," Bennett said.

Battery Boom Spurs One Bank's Pivot from Iron Ore to Lithium

Posted September 28, 2017, 9:14 A.M. ET

By Jasmine Ng

Westpac Banking Corp., Australia's second-largest lender, is targeting deals linked to China that finance renewable energy minerals such as lithium and cobalt as a decade of unprecedented iron ore mining expansion in its home market has largely run its course.

"The next growth area is related to renewables," Paul Gardner, global head of structured commodity finance, said in an interview in Singapore. "If you look to the future, and you look to the electric cars etc., a lot of the lithium where there's accessible sourcing is actually in Australia."

Westpac's planned shift represents a pivot away from old economy iron ore, used to make steel, toward a focus on materials that are attracting increased investor attention as the building blocks for electric vehicles and renewable energy. Rising Chinese demand for the lithium-ion batteries that are needed for new vehicles and energy storage is driving price gains as well as an asset boom in Australia, already the world's largest lithium supplier.

"Right now, what I've seen pick up is interest from Australian miners in China and in pre-payment products," Gardner said. "For a company like ours to join the dots and to put pre-payment type financing structures in place—so the mine gets its capital, and in return for its capital it has a long-term offtake agreement with the Chinese buyer—that would be perfect scenario for us."

Earlier this month, China put the automotive industry on notice by becoming the largest country to seek a phase-out of fossil-fuel powered vehicles, a move sure to accelerate the shift toward electric-car development. That's helped to spur the race for raw materials used in the new technology, including cobalt.

Australia's government said in its latest resources quarterly that lithium, graphite and cobalt are being pulled "into a second commodity boom, with demand rising, prices spiking, and investment gathering steam." In lithium, "a host of companies in Western Australia are already targeting near-term concentrate production for sale to Chinese conversion facilities," it said.

Strategic Resource

Other countries are also seeking to beef up supplies. In Chile, a government commission is

expected to offer guidance by the year-end for private companies that want to start lithium operations, according to Mining Minister Aurora Williams. Lithium is considered a strategic resource in the South American country, and no company has obtained a license in over two decades.

For now, Australia is more associated with iron ore, and the country is the largest exporter, with shipments running at a record pace. Still, resources companies have scaled back investments in increased capacity after a period of breakneck growth, with BHP Billiton Ltd. calling the end of an era of massive expansions in the steel-making raw material in 2014.

Iron has been in retreat, while lithium is soaring. The steel-making raw material is 19 percent lower in 2017, set for the fourth drop in the past five years. Lithium carbonate, the primary base-chemical produced by the industry, more than doubled in the five years to 2016, according to UBS Group AG.

"We've seen a lot of business around iron ore historically because it's abundant: dig a spade in the ground almost anywhere in the Pilbara, you're going to get iron ore," said Westpac's Gardner. "But those large developments in that space have now matured and we're at oversupply."

Fighting the Toxic Nightmare Next Door

Posted September 28, 2017, 12:01 P.M. ET

By Susan Berfield

It was practical considerations that led Dawn and Brian Chapman to Maryland Heights, a modest suburb of St. Louis bound by two interstate highways, several strip malls, an international airport, and the Missouri River.

They found a three-bedroom, one-bathroom, 1,000-square-foot home near good public schools and parks, and a reasonable drive to her parents, for $146,000. By 2012, after seven years there, the Chapmans had three kids with special needs, and Dawn had given up teaching preschool to stay home with them.

That was when the stench overcame their neighborhood. It wasn't the usual methane smell from Bridgeton Landfill, about two miles away, that sometimes wafted through. "It was like rotten dead bodies, and there was a kerosene, chemical odor, too," says Dawn. "People were gagging."

That fall the St. Louis Post-Dispatch reported that the odors were coming from a fire that had been burning 80 feet to 120 feet below ground at the landfill for almost two years and was likely to smolder for many more. The heat from the fire was accelerating the decomposition of trash, and the pumps and gas flares that normally remove toxic leachate and limit odors from dumps couldn't keep up. Republic Services Inc., the company that owns the landfill, told the paper its staff was working to tame the "subsurface smoldering reaction"—an industry term of art for combustion that has no oxygen fueling it or flames rising from it.

When Chapman's family and neighbors began experiencing headaches, nosebleeds, and breathing problems that winter, she contacted the Missouri Department of Natural Resources, which regulates the state's landfills. She learned that Bridgeton Landfill was only one part of a 200-acre dumping

ground that had been classified as a Superfund site because another part of it, an old landfill known as West Lake, contained radioactive waste from the earliest days of the Atomic Age. One of the two radiation-riddled areas was contiguous with the Bridgeton section. No one knew how the fire had started in the Bridgeton Landfill or when it would end, but it was slowly moving north, toward the contaminated area.

The Environmental Protection Agency, which called the whole sprawling dump the West Lake Landfill complex, had placed it on the National Priorities List in 1990 and announced a remedy in 2008. The plan was to cover the "radiological-impacted material" with several feet of topsoil, clay, and crushed rock and concrete. But the Missouri Coalition for the Environment argued to the agency that it was reckless to leave this particular element—thorium, a byproduct of uranium's decay chain that becomes more radioactive over centuries—in an unlined landfill that sits in a developed area on a flood plain prone to tornadoes. An EPA review board also challenged the decision. Absent consensus, nothing was done. Officials were overseeing studies of other possible solutions when the landfill fire began.

Many people living near the site didn't even know it was there, and most who did gave it scant attention.

"We had no reason to look into the Superfund site before the smell, since it wasn't a nuisance," says Harvey Ferdman, a former volunteer policy adviser to Bridgeton's state representative who now serves as an official, unpaid liaison between the community and the EPA. When he and Chapman first spoke in early 2013, she'd been poring through records dating to the 1970s collected by a lifelong antinuclear activist named Kay Drey.

"Dawn told me about the illegally dumped nuclear waste, that there had been instances where it had gone off-site, which were documented, that when West Lake was unregulated it had received all kinds of toxic chemicals, including paint and jet fuel," says Ferdman. "I told her, 'No offense, but I'm going to be fact-based and objective. If 25 percent of what you've told me is true, we have a big problem.' And unfortunately it all turned out to be true."

In the spring of 2013, Chapman and a neighbor, Karen Nickel, formed Just Moms STL to advocate for the removal of the radioactive waste. Since then, the Moms, as they're known, have held monthly community meetings, appeared at all of the EPA's public sessions, kept watch on the Bridgeton Landfill fire, and become regulars at the state Capitol.

At the center of the swirling unease are the unknowable consequences of possible exposure to low-level radiation. With the initial recommendation to cap the waste, "the EPA has already established the fact that there's a risk to human health if they don't take action," says Ed Smith, policy director of the Missouri Coalition for the Environment. His group wants some, if not all, of the waste removed from West Lake. But the EPA says that since no one is being exposed to the dangerous particles, there's no current health risk. Republic argues that the agency's recommendation to cover the waste is still the safest, quickest, and easiest remedy. At an estimated cost of $67 million, it's also the least expensive; removing the contaminated soil could require nearly 10 times that amount.

Now, in a twist few would have anticipated, Scott Pruitt, the head of the EPA, wants West Lake to be a showcase of Trump-style environmentalism: dismissing climate change, deregulating industry, but taking action on toxic sites. Pruitt told a St. Louis radio host in April, "We're going to get things done at West Lake. The days of talking are over." A few months later, Pruitt said the agency was drawing up a list of the top 10 Superfund sites. West Lake is expected to be No. 1.

This would be great news in Bridgeton, but Trump's proposed federal budget includes cuts to the

Superfund program, and Pruitt has also promised to seek more cost-efficient remedies for the sites. “A million red lights went off when Pruitt talked about West Lake,” Chapman says. “There is no cost-effective solution for the site, only for Republic.”

As World War II raged, the U.S. sent spies on a top-secret mission to secure some of the world’s purest uranium from the Shinkolobwe mine in the Belgian Congo. It was shipped directly to Mallinckrodt Chemical Works in St. Louis, which developed techniques for purifying large quantities of the metal. Over the years the company chemically processed tens of thousands of tons of uranium, including the fissile material for the bomb the U.S. dropped on Hiroshima.

Mallinckrodt also produced about 2 million cubic yards of contaminated waste, some of which was transported hastily and carelessly in uncovered trucks to the St. Louis countryside in the late 1950s and ’60s, according to documents from the Atomic Energy Commission and its successor, the Nuclear Regulatory Commission. From there, selected residue that still had some value was sold by the AEC; Cotter Corp., another uranium processor, eventually acquired about 100,000 tons.

After it stripped out copper, nickel, and cobalt from the waste, Cotter was supposed to dispose of what was left and decontaminate its storage facility in Hazelwood, northwest of St. Louis, by October 1973. As the deadline approached, things went awry. Cotter couldn’t figure out how to get rid of 8,700 tons of leached barium sulfate, which contained 7 tons of unprocessed uranium, and the commission didn’t have any suggestions. A contractor mixed the powdery white substance with 39,000 tons of dirt from the site—later also found to be contaminated with radiation— and, over three months, dumped it at the West Lake Landfill.

In the late 1970s the government began an assessment of the damage caused by the nuclear program, which ultimately led the Department of Energy to put Cotter’s Hazelwood site and Mallinckrodt’s St. Louis processing facilities, as well as two other storage sites, on its list of the country’s most radioactive areas. By 1990 estimates for the cost of cleaning up around St. Louis—which included the removal of tons of soil by the Army Corps of Engineers—had reached $1.5 billion.

When it came to West Lake, the Nuclear Regulatory Commission argued that oversight should fall to the EPA and its Superfund program, since the radioactive material had been dumped without governmental approval and mixed with other industrial waste. The program, which today includes some 1,300 sites, operates on the principle that polluters, if the EPA can find them, should pay to assess contamination and clean it up. At West Lake, the EPA named three so-called potentially responsible parties: the landfills’ owners (now Republic Services’ subsidiaries in Bridgeton); Cotter (whose liability passed on to Exelon Corp.); and the DOE. Identifying who should pay, though, is more a signal to queue up lawyers and consultants than the start of remediation.

“Follow the garbage trucks,” says Russ Knocke, Republic’s vice president for communications and public affairs, by way of directions from my hotel to the Bridgeton Landfill. The facility no longer accepts trash but does have a revenue-generating transfer station, which accounts for the truck traffic. At the entrance there’s a small, faded Republic Services sign, but nothing about a Superfund site.

Knocke was press secretary for the U.S. Department of Homeland Security during Hurricane Katrina and joined Republic in mid-2013, as its handling of the fire was being questioned. He works from the company’s headquarters in Phoenix but has come to Bridgeton to meet me. He’s 43, wearing jeans and a button-down shirt; his hard hat is out, his presentation ready. With him are three of Republic’s experts on the landfill. “All the best in their fields, with years of experience,” he says.

When Republic took over the Bridgeton and West Lake landfills in mid-2008, following a $6 billion merger with Allied Waste, the transaction made Republic the second-biggest company in the industry by revenue. In the years since, Bill Gates's money management firm, Cascade Investment Group Inc., has increased its stake to 32 percent. The Superfund cleanup was considered a footnote to the merger: Under the assumption they'd only have to follow the EPA's requirement to cap the radioactive material, Republic expected to pay about $15 million, one-third of the estimated cost then. There had been at least one small fire at the landfill in 1992, but monitoring at Bridgeton was supposed to be routine. "Basically, we mow the grass," says Knocke of the company's other closed landfills. "A manager can oversee five of them at a time."

At Bridgeton, Republic instead employs a full-time staff of 15, and twice as many consultants. The company has spent more than $200 million to monitor and contain the fire and estimates the total could reach $400 million. In 2014, Republic agreed to pay almost $6.9 million to settle a class action brought by residents who lived within a mile of the landfill over the odors emanating from it. The former Missouri attorney general also brought a suit against the company for allegedly violating state environmental regulations at the trash dump; a trial date has been set for next March.

The Bridgeton Landfill takes up about a quarter of the 200-acre Superfund site. It was created out of an old limestone pit and consists of the North and South Quarries, connected by a narrow area called the Neck. Just beyond the North Quarry is West Lake Landfill, where radioactive particles lurk below the surface, sometimes near it. We drive past a 6-foot chain-link fence topped with three strands of barbed wire. A yellow sign stamped with the symbol for radiation warns not to enter. The soil is covered in vegetation: green grass, dandelions, a few early summer wildflowers.

Bridgeton, in contrast, looks like a botched science experiment. Republic first reported evidence of a problem in its South Quarry—elevated temperatures and carbon monoxide levels—in late 2010. But the state's Department of Natural Resources didn't make the information public, and no one told the fire department until 2012. By then it was hard to hide: A 40-foot section of ground had collapsed as the heat consumed buried trash.

"I wanted to give the company the benefit of the doubt," Matt LaVanchy, the assistant fire chief, told me of his first meeting with Republic to assess the situation. "I brought up the fact that there's a smoldering event in your landfill and a rad-waste dump that's also on your property." When he asked how they would keep the fire from the radioactive waste, "they said it was geologically impossible to reach the rad material because there is a natural barrier." LaVanchy, though, says the trash spills over the quarry wall.

The fire's origins are controversial. Republic's experts say it began spontaneously, while two consultants hired by the state say the company may have inadvertently allowed oxygen to enter the ground through its methane wells or improperly maintained soil cover. Everyone agrees that extinguishing it isn't possible.

Republic tried to cool the hottest spots in 2013, but the heat began moving toward the radioactive material at a faster pace; in June of that year a representative of the Department of Natural Resources said the heat might reach the waste in 400 days. One landfill consultant's worst-case scenario was a release of radioactive particles similar to a dirty bomb. In a report for the Missouri attorney general's office, another expert brought up the possibility of superheated steam carrying radionuclides, which happened at the nuclear plant disaster in Fukushima, Japan.

As fallout fears spread, the Moms put a countdown clock on their Facebook page and brought a child-size coffin and a petition calling for a state of emergency, signed by 13,000 people, to the governor's office in Jefferson City. The expert who'd invoked Fukushima later said in a deposition

that he hadn't meant to alarm residents.

"We've been the only adult in the room for a long time," Knocke says. "It's been this spin-up of noise and fear and anxiety, and we generally feel like we've been the only ones that have been trying to say, 'Guys, here's the science.' "

"You might see the ground dry up a little bit; you might see cracks; you might see radon emitted into the air," he says. "That's the what-happens-if. Not St. Louis goes boom." The Moms, he says, have shown "a complete disregard for science and distrust of institutions" and have scared the community.

Yet in the spring of 2014 the EPA's Office of Research and Development concluded that, although a fire in the radioactive zone wouldn't cause an explosion, it could present long-term risks, including the escape of radon gas into the air "at levels of concern." A few months later the St. Louis County Office of Emergency Management devised a "catastrophic event" plan that instructed those far enough from West Lake to evacuate and those closest to shelter in place. (Republic takes issue with the radon data the EPA used in its calculations.)

Concern intensified in October 2015 when residents noticed a plume of smoke rising from West Lake, prompting panicked calls to LaVanchy. The smoke came from a brushfire about 390 feet from the nearest known location of contaminated soil. The fire department extinguished it within 20 minutes. The EPA later ordered Republic and the other responsible parties to put a noncombustible cover over areas where the radioactivity is close to the surface as a temporary measure.

Below ground, the spread of the heat was slowing and shifting direction away from the Neck. The most intense heat is now deep in the South Quarry, and Republic expects the reaction to wear itself out in seven or so years. "The threat of immediate concern about the fire is lower now," LaVanchy says. "But I'll feel a lot better when the temperatures everywhere start dropping and stay there. It's not a stable situation. The fire is like a hostile animal."

Erin Fanning, the chipper, 35-year-old division manager at Bridgeton Landfill, says that since the reaction began, Republic has installed 57 probes capable of recording temperatures to a depth of 150 feet, more than 200 gas extraction points, 28 cooling wells, and 51,000 feet of piping. Everything has to be kept working amid shifting ground. The cover—made from thin layers of the polymer resin ethylene vinyl alcohol, designed to keep in noxious fumes—requires constant maintenance. "A single fracture or tear could cause an odor," Fanning says. A new waste treatment plant continuously processes the hundreds of thousands of gallons of hazardous leachate created every week by the trash as it decomposes rapidly from the heat.

Knocke casts Republic's investments as evidence that it's been a good neighbor. "We could have just walked away and said, 'Catch me if you can.' Now, without question, the state of the landfill today is as optimal as it's ever been," he says.

"When we hear this," Chapman says, "Karen and I look at each other and we're like, 'You spent $200 million because this is a pretty goddamn big deal,' " and not something Republic could have run from. "We always say they bought a lemon," Nickel says.

In the midst of Republic's firefighting, the EPA made a discovery that further eroded the community's trust in the company and the agency. Scientists found radioactive material 640 feet beyond where they thought it ended, in ground that had been considered part of the North Quarry of Bridgeton. Republic and the EPA said that even though they hadn't known it was there they weren't surprised to find it, and that since the waste wasn't close to the surface it wasn't a risk. "They're

confident they have found the extent of the contamination, and we don't have the same confidence," says Smith of the Missouri Coalition for the Environment, which wants the rest of the North Quarry tested. The EPA says that's not necessary. But the agency has opened an investigation of the groundwater below West Lake after earlier tests detected radium.

This spring, Republic opposed a state bill that would have created a $12 million relocation fund for residents of Spanish Village and Terrisan Reste, a mobile home park, both of which are closer to the Superfund site than Nickel's and Chapman's houses. The company contended that it was unnecessary and would hurt the local economy. "Actually, Republic was lobbying against the precedent. It would be the first time a legislative body acknowledged there is a problem," says Mark Matthiesen, the Republican state representative for the area, who shepherded the failed bill. "Every time we have some positive momentum, Republic starts working hard and putting more money to fight against it."

Matthiesen has watched in frustration as Republic's lobbyists have attempted to convince lawmakers that rural communities would be jeopardized if the EPA forced the company to remove the radioactive soil and an accident occurred during transportation. But the Army Corps of Engineers confirms that tons of such soil have already been moved through the state, accident-free, as the Corps and DOE clean up other contaminated sites in St. Louis County. Republic's argument, Matthiesen says, "just isn't right."

Republic funds its own citizens' group, the Coalition to Keep Us Safe, which seeks to assure Bridgeton residents that all is well and the real danger is in removal. The coalition has a Mom, too: Spokeswoman Molly Teichman, who lives several hours' drive from Bridgeton, calls herself the Mommentator, and once tweeted, "Dear mombots of #westlakelandfill, your reality TV show is over. Go home and hangout with your kids—they miss you."

The day after I tour the landfill, I visit Chapman and Nickel. They're sitting at Nickel's kitchen table in their usual chairs, wearing their usual summer clothes. Nickel is in a T-shirt and jeans; Chapman, a T-shirt and shorts. Nickel, who's 54 and has three adult children and a teenage daughter, is sick with lupus, psoriatic arthritis, and fibromyalgia. She grew up next to Cold Water Creek, an area about 12 miles from Bridgeton that's among those the Corps of Engineers is decontaminating. The U.S. Agency for Toxic Substances and Disease Registry is now assessing public-health risks from any possible exposure.

Nickel worked as an accounting associate at a pharmacy company until it left town; now she cares for a few neighborhood kids after school. "I'm physically strong, but she's the emotional anchor," says Chapman, who's 37. "I'm an analyzer and a processor," says Nickel. "Dawn's more of a jump off the bridge—"

"Jump off the bridge on fire," Chapman interjects, before Nickel continues: "I've got to catch her by her feet and pull her back up and say, 'Hold on. Let's think about this.' But it's worked."

They were in the midst of sorting through thousands of EPA documents that the Environmental Archives, a free digital library, had obtained through the Freedom of Information Act. In one email, an EPA representative remarked on a newspaper report that the activist Erin Brockovich was planning to meet with Chapman and Nickel: "SIX MORE MONTHS!!!!!.....AHHHHHHHHHH." (In a statement, the EPA said the representative had been looking forward to retirement after a long career.) In another, employees discussed not using email.

"The EPA has spent more time handling the people in this community than worrying about what's at that site and how it could harm the people of this community," Nickel says. As we talk, she and

Chapman receive a text from another activist, Robbin Dailey, who says she'd just missed the EPA officials walking around her Spanish Village neighborhood to placate residents, as they occasionally do. "I was going to lay into the EPA today," Dailey says when I visit her and her husband later that afternoon. "They're just mocking us."

She and her husband, Michael, are retirees in their 60s, and he's in poor health. They've lived up the hill from the Superfund site since 1999, in a home they bought for $110,000. For the past few years they've suspected it could be contaminated. About 18 months ago, attorneys at New York City based Hausfeld, known for their fen-phen litigation, got in touch with them, proposing to investigate possible contamination in their subdivision. "I said, 'Finally. We've got somebody that knows what the hell they're talking about and agrees with us that we're not crazy,' " Robbin says.

Scientists hired by the firm used a microanalytical method and said they discovered radioactive particles of Thorium-230 at concentrations 200 times higher than background levels. According to these experts, the thorium has the fingerprint of the uranium that was processed at Mallinckrodt. It was found in "archival dust" behind a loose floorboard in the kitchen where Robbin once hid the family's valuables, as well as along the ledges of their basement windows and in a few spots in their backyard.

Last November, the Daileys, who chose not to accept the early class-action suit most residents signed up for because it would have limited other legal action, filed their own lawsuit against Republic, Cotter, and Mallinckrodt seeking compensation for property damage and the provision of remediation and medical monitoring. They want the companies to admit that radioactive material has already spread beyond West Lake—which the companies deny—and to pay them for their home, which they say they can't, in good conscience, sell. (Knocke says that all neutral experts have deemed the community safe, and, in filings, all three companies deny the allegations.)

The family's lawyers say there is evidence of Thorium-230 and other particles from West Lake in multiple houses in Spanish Village. But when scientists for the EPA tested two other homes near the Daileys using a more standard method, they didn't find anything.

That didn't necessarily surprise Marco Kaltofen, a civil engineer who devised the microanalytical approach and is principal investigator at consulting firm Boston Chemical Data. He used the same method to conduct a study, funded by Drey, the activist who provided Chapman and Ferdman with archival documents, that was peer-reviewed and published last year. He found radioactive lead, another decay product of the Mallinckrodt waste, in a roughly 75-square-mile area around West Lake and Cold Water Creek. The lead was at levels that were within EPA guidelines but exceeded the more stringent Department of Energy standards.

Tom Mahler, the EPA's on-scene coordinator, emphasizes that the agency has been testing outside the Superfund site for the past five years and hasn't found anything of concern. "Is it there?" he asks. "I cannot speak to whether something occurred if I don't have data for it."

Living near West Lake means living with uncertainty. It's difficult to measure exposure to a chronic, low-level presence of unstable material, and it's hard, in an uncontrolled environment, to link it definitively with disease that can emerge years later. Lupus, for example, is an autoimmune disease that's been associated with uranium radiation. Is this what caused Nickel's illness? Right now, no one can say for sure. Science can help establish baselines for health risks, but those don't map to every human body, and it takes only one cell mutation to cause cancer.

A 2014 Missouri health survey found higher-than-expected incidences of leukemia, colon, prostate, bladder, kidney, and breast cancer in communities near contaminated areas in north St. Louis

County, especially Cold Water Creek, and a significantly higher-than-expected number of children with brain cancer in Maryland Heights. But the study didn't assess exposure to radiation, noting that obesity, smoking, and diabetes can contribute to some of these cancers. The Agency for Toxic Substances and Disease Registry concluded in 2015 that given the data from the EPA, other agencies, and the responsible parties, those living near the site aren't facing any health risks from it.

While Faisal Khan, director of the St. Louis County Department of Public Health, accepts that finding, he also says that "the preponderance of anecdotal evidence supports Dawn's conclusions of long-term, low-level exposure." There's no science to directly connect that to certain diseases, he adds, but no one should dismiss the community's fears. "Their health concerns are valid," he says, "and the level of anxiety related to the landfill and the entire toxic legacy is a huge disadvantage to their mental health." Khan would like West Lake to be fully excavated.

"We expect the EPA to acknowledge that there has been some exposure at the low level," says Chapman, "so that people can be proactive if they find a lump or feel sick." When I ask Mary Peterson, head of the Superfund division that oversees West Lake, about this persistent worry, she replies: "I want people to have faith in government. Yet I know sometimes the answers we find in science, no matter how concrete, do not overcome people's concerns."

A few days after I leave Bridgeton, Chapman and Nickel travel to Washington with Smith and Matthiesen for the premiere of Atomic Homefront, a documentary about West Lake and Cold Water Creek that HBO will air early next year. Then they meet with Patrick Davis, a former Trump fundraiser who's a political deputy at the EPA, and Albert Kelly, a former banker from Oklahoma who's now in charge of streamlining the Superfund program, to press their case for getting at least some of the radioactive waste removed and helping to relocate those in Spanish Village and the mobile home park who want to leave. "They gave us their personal cell phone numbers," Chapman says afterward. "That's when I thought: We're being played. When you're helpless, anything that gives you a little sense of power helps. But now we see that's BS. Every lobbyist has their numbers, too."

Chapman and Nickel worry that Pruitt will side with Republic. "I suppose that's a possibility," Kelly says. "The opposite is a possibility as well. I'm sure somebody is going to be unhappy."

Within months, they may know who. "After all these years, the decision will come down to one man," Chapman says, sighing. "There's no appeal." Republic, Exelon, and the DOE, though, will have options if they don't like the verdict. Superfund communities can't legally challenge an EPA decision, but companies can. And if the EPA selects a remedy other than the cap, Knocke says, there would very likely be litigation before anyone lifted a shovel.

Private Water Firms Tap Profit From Struggling Public Utilities

Posted September 28, 2017, 7:02 A.M. ET

By David Schultz

A cash crunch for public water utilities is creating an opportunity for the growing for-profit water companies—but it's one that might drain customers' wallets.

Companies like American Water Works Co. and Aqua America Inc. are finding the time is right to purchase small, troubled water utilities from local governments that are facing political pressure to

keep rates low—often by delaying infrastructure upgrades.

Acquisitions like these are helping private water companies grow even while per capita water consumption continues its long-term downward trend. And private companies say they can use their economies of scale to make the infrastructure investments that local politicians can't, or won't.

The CEOs of several of these companies told Bloomberg BNA that the leaders of municipal-run water systems are motivated sellers, particularly as many cities have been spooked by public health crises like the lead contamination in Flint, Mich. Such incidents have led some local leaders to question whether public control of drinking water still makes sense.

'Very Local, Very Political'

And laws recently passed in Pennsylvania, Illinois, and California removed some of the financial barriers that made these kinds of municipal-to-private utility transactions difficult in the past.

Still, a for-profit water company must walk a very fine line when it buys a public water system to avoid triggering an intense political backlash. The idea of a town ceding control of its drinking water to a company still makes some people squeamish.

"There's just something about water that gets everyone uneasy about selling their [utility]," said Ryan Wobbrock, a utilities industry analyst with Moody's Investors Service. "Water is very local, very political."

Prime Acquisition Targets

Unlike with gas or electric power, most Americans get their water from a utility that is owned and operated by their local government.

Private water companies serve less than one-fifth of the U.S. population, according to Chuck Firlotte, chief executive officer of Aquarion Water, which provides water to more than 600,000 people across New England. That's very different from how water delivery works in the U.K. and the rest of Europe, where it's operated by mostly private companies.

"One of the great mysteries to me is how, in the heart of global capitalism, we have a rather primitive view of how our infrastructure should be ... owned and operated," Firlotte told Bloomberg BNA.

The prime acquisition target for these companies is a small, troubled water utility that serves just a couple hundred homes and businesses, according to Firlotte. For-profit firms can use their resources and expertise to eliminate inefficiencies in these small systems while accomplishing the companies' ultimate goal of growing their customer base.

Companies like Firlotte's are thriving within this niche market, with typical annual revenue growth hovering around 5 percent for most for-profit water firms, according to Bloomberg Terminal data.

"We hope to make advances in that area," he said. These utilities "don't have the operational, financial or engineering expertise and they usually have a boatload of investment needs and probably shouldn't be in business."

State Laws Changing

Chris Franklin, CEO of Aqua America, said he's seeing more interest in doing a deal from these smaller utilities than at any time in his 24 years in the industry.

He attributes this uptick to four factors.

First, the Flint, Mich., lead contamination crisis spurred many local leaders to start asking more questions about how their water systems are run.

Second, many leaders realized that the cost of upgrading their water infrastructure has ballooned, Franklin said.

Third, they realized that the costs of complying with state and federal water quality regulations were becoming increasingly expensive and scientifically complex.

The fourth factor in this new wave of deals is the so-called fair value laws that have been enacted now in several states, Franklin said. These laws change the way for-profit water companies are allowed to raise their rates after making an acquisition.

'Fair Value'

In states without a fair value law, companies can raise their customers' rates only enough to recoup the value of the assets of the utility they're purchasing. But with a fair value law, a water company can recoup the full amount of the price they paid to buy the utility. Essentially, fair value laws take into account the fact that most companies sell for more than the sum total of their assets in an acquisition.

Versions of fair value laws have passed in Pennsylvania, Illinois, and California and have been brought up in several others states.

These laws have the effect of allowing small, fiscally distressed towns to sell their water systems at a much higher price than they would otherwise be able to get, according to Franklin. In essence, he said, fair value laws can provide the final push these towns need.

"What's happening now is that municipals are saying, 'Why are we in this business?'" Franklin told Bloomberg BNA.

'Financing Solution'

There are actually very good reasons for local governments to be in the water business, according to Mary Grant, a campaign director with environmental and consumer group Food & Water Watch.

For one, she told Bloomberg BNA, they have access to the tax-free municipal bond market and therefore can pass along those lower borrowing costs to their customers. This is crucial when considering the mammoth amounts many water utilities spend on capital expenses to maintain their infrastructure.

Also, Grant said, private companies are more likely to raise their customers' rates than municipal-run systems with leaders who are either directly or indirectly accountable to voters. Private companies could save money on the margins by using economies of scale to operate more efficiently, but ratepayers ultimately will be footing the massive bill for infrastructure upgrades.

More federal spending—not privatization—is needed, according to Grant. "Private companies are offering a financing solution, not a funding solution," she said.

'Already Under-Investing'

It's a familiar criticism for these companies, and one they're particularly sensitive to. Dennis Doll, the CEO of mid-Atlantic based Middlesex Water, said it's not totally inaccurate to say that for-profit companies often raise rates after taking over a municipal system. But, he said, that's only because these systems were likely under political pressure to keep their rates artificially low.

"So they're already under-investing," Doll told Bloomberg BNA. "Then the private company comes in and they, unfortunately, have to charge the rates to make that investment. Sometimes there are ways to reduce operating costs," but not always.

That's why Doll is actually leery of fair value laws, a minority among the water company CEOs who spoke to Bloomberg BNA. He said he worries they create a perverse incentive because the laws make it easier for local governments to sell a dilapidated system at a higher price.

"The troubled municipal entity is getting a bit of a windfall above value despite the fact that they haven't been keeping the system in good repair," Doll said. "It can be a reward for bad behavior."

Mandatory Consolidation

Ultimately, Doll said, for-profit companies should only step in when municipal water systems won't, or can't, raise rates high enough to keep their system in good shape—for example, in a town with a shrinking population where there aren't enough ratepayers to cover a system's costs.

A 2015 California law aimed at making this easier, SB 88, gives the state water board the authority to force a small, troubled utility to merge with a larger, healthier one nearby. The board hasn't had to use this authority yet, according to Jack Hawks, head of the California Water Association, which represents for-profit water companies in the Golden State.

But soon many other states could find that they now also have this authority.

Language similar to that in SB 88 was inserted into a federal drinking water bill that cleared a key congressional committee earlier this summer. The bill, H.R. 3387, was approved on a voice vote in the House Energy and Commerce Committee.

Like SB 88 in California, the House bill would give the company acquiring a troubled system some flexibility in paying out any environmental penalties the system may have racked up before being purchased.

That would be a welcome development for private water companies, according to Kathy Pape, a former senior executive at American Water Works who is now an attorney at the Pennsylvania firm McNees Wallace & Nurick.

She said it's often difficult for an acquiring company to grapple with decades of mismanagement immediately after getting handed the keys. That's especially the case with for-profit companies, which often enjoy no leniency from regulators, she said.

"When they get their hands on a private party, now they believe they can clamp down," Pape told

Bloomberg BNA.

New Head of State Air Pollution Group Seeks Common Ground

Posted September 28, 2017, 9:01 A.M. ET

By Jennifer Lu

The newest advocate for state air pollution officials wants to mend fences with a splinter group that objected to his association's often cozy relationship with the Obama-era EPA.

As the new executive director of the National Association of Clean Air Agencies, Miles Keogh said he is "not pushing for the reintegration" with the Association of Air Pollution Control Agencies, a group that formed in 2013 and now includes 20 states. There are issues, however, that the two groups can work on together when talking to the Environmental Protection Agency and providing clean air technology training to states, he told Bloomberg BNA.

"My highest and most urgent priority is to serve the members of NACAA, but also I support all clean air agencies," said Keogh, who started Aug. 7 at the association. "I think if there's leadership support for that collegiality, that gives the cover that states and locals need to be collegial. We both have to interface with EPA, so I don't want it to persist that there's competition between us, because there's not."

Keogh replaces NACAA's longtime executive director Bill Becker, who retired after 37 years at the association.

Clint Woods, executive director of AAPCA, told Bloomberg BNA that he is also open to working with his new counterpart.

Keogh 'The Right Person'

Virginia is a member of both organizations and Michael Dowd, director of air division in Virginia's Department of Environmental Quality and a member of the NACAA board, praised Keogh's "member-focused perspective."

"He's the right person to navigate some very difficult shoals with the Trump administration's EPA," Dowd said. "He knows a lot about how energy and environmental issues intersect."

While Keogh said he has not discussed specific issues with the EPA in his first six weeks as executive director, he said he has met with agency employees including Sarah Dunham, acting assistant administrator for the Office of Air and Radiation, and members of the Office of Transportation and Air Quality and the Office of Air Quality Planning and Standards.

"We're trying to suss each other out," Keogh said. "Everybody is still new on their side; we have new leadership on our side."

'Bread-and-Butter' Issues

Besides working with other state advocates, Keogh said he'll focus on "bread-and-butter" clean air issues such as dwindling funds from the EPA, possible revisions to the agency's greenhouse gas standards for passenger cars, and "stubborn and persistent" pollution from cars and other mobile

sources.

Keogh comes to NACAA from the National Association of Regulatory Utility Commissioners where he directed the research lab, which has studied electrical transmission, natural gas supply, energy efficiency, and cybersecurity. Though Keogh understands the electricity sector, which is a primary source of air pollution, he said his training is like "accelerated K-12 and bootcamp" as he gets up to speed.

"I thought there would be tons of overlap," Keogh said. "It's really unlike the work I was doing before."

Becker, who was not involved with the final hiring decision, said he had worked with Keogh when NACAA and NARUC partnered with the National Association of State Energy Officials in an effort to address the overlap between environmental protection and a reliable and efficient energy grid.

Becker remembered an emissions trading activity Keogh had prepared for the group.

"It showed me he had imagination" and "knows how to engage and bring together various stakeholders," Becker said. "It was a bit quirky, but it worked."

Merkel May Have Promised Too Much in Carbon Pollution Fight

Posted September 28, 2017, 9:21 A.M. ET

By Mathew Carr, Brian Parkin and Lars Paulsson

As German Chancellor Angela Merkel embarks on coalition talks to bed down her fourth term in office, a promise made shortly before her re-election may come back to haunt her.

At least that's the view of nine analysts and researchers from Berlin to London who all say her target of reducing carbon emissions in Europe's biggest economy by 40 percent in 2020 will probably fail. On Sept. 14, Merkel went as far as saying that she will find ways to meet the goal, no matter what. At the end of last year, those emissions were down 27 percent from 1990 levels.

"I think we all know that we're pretty far away from those, and I personally believe it will be extremely challenging to try to reach," said Klaus Schaefer, chief executive officer of Uniper SE, for which fossil fuels accounted for 57 percent of profit in the first half.

Merkel's stoic approach to meet the non-binding 2020 goal would most likely come down to how tough the governing coalition is prepared to be on the nation's biggest polluters. Plants burning coal still produced about 40 percent of the nation's power last year.

But she's got a problem. Ploughing up acre after acre, sometimes moving whole villages, to get to the lignite Germany still very much relies on will put her on collision course with voters expecting her to deliver on the promise to cut emissions. At the same time, closing down sites would irk unions representing thousands of workers in some of the most impoverished parts of the country.

"It's up to the next government to make an exerted effort in the short window available to land on target," said Michael Schroeren, a spokesman for the German environment ministry in Berlin. "This could be achieved in the energy sector in connection with other sectors."

Climate Talks

Germany's work toward meeting its target may face also international scrutiny in November as climate envoys from around the world will descend on its old capital of Bonn for United Nations talks that will be presided over by Fiji.

The talks are meant to beef up the rules of the Paris agreement. So far, climate talks have have failed to make much headway in cutting emissions in the two years since the Paris deal was struck, with global emissions steady at record levels.

Berlin-based environmental think tank Agora Energiewende reckons Germany will miss its target by about 10 percentage points. Emissions reductions "won't be a near miss but a booming failure," Agora researchers wrote in a report.

As many as 135,000 people work in the traditional power sector and associated coal mining industry.

Closing down much of the country's coal power output would result in the loss of thousands of jobs, according to Jahn Olsen, an analyst in London at Bloomberg New Energy Finance. But there's no way the goal can be met by improving energy efficiency or encouraging electric car use at the pace required within four years, he said.

The country could theoretically meet the reduction level through buying international emissions credits or allowances, Olsen said. But that option would counter earlier statements by the nation that it intends to meet its target domestically, making it "politically unpalatable," he said.

Merkel's Christian Democratic Union-led bloc won the weekend ballot with its worst performance since 1949. Her party needs a three-way alliance with the pro-business Free Democratic Party and the Greens, which could take months of negotiating, Barclays Plc said Sept. 25 in a note.

The coalition negotiations between parties with such different positions mean Germany probably won't be able to put together a plan to hit the target, said Deepa Venkateswaran, an analyst in London at Sanford C. Bernstein & Co.

"The Greens want it and the FDP are against," she said. "They might agree to a long-term exit from coal, but it won't be as aggressive as the Greens want."

China Gives Carmakers More Time in Biggest Electric-Vehicle Plan

Posted September 28, 2017, 8:36 A.M. ET

By Bloomberg News

China unveiled a comprehensive set of emission rules and delayed a credit-score program tied to the production of electric cars, giving automakers more time to prepare for the phasing out of fossil-fuel powered vehicles.

Under the so-called cap-and-trade policy, automakers must obtain a new-energy vehicle score—which is linked to the production of various types of zero- and low-emission vehicles—of at

least 10 percent starting in 2019, rising to 12 percent in 2020, the Ministry of Industry and Information Technology said on its website. The rule applies to carmakers that manufacture or import more than 30,000 traditional vehicles annually and those who fail to comply must buy credits or face fines.

"This is the single most important piece of EV legislation globally," said Colin McKerracher, a London-based analyst at Bloomberg New Energy Finance. "Overall, it provides further support for the EV industry in China. EV sales will continue growing quickly, despite the phase-down in direct subsidies."

China previously proposed to start implementing the policy next year, a target that was viewed by automakers as overly ambitious. China, which has vowed to cap its carbon emission by 2030 and curb worsening air pollution, joins the U.K. and France in seeking a timetable for the elimination of vehicles using gasoline and diesel. The country needs to use alternative energy to power some 200 million vehicles that ply its roads and reduce dependence on oil imports.

The targets look achievable for the industry as a whole, McKerracher said. Considering the credit structure, 12 percent in 2020 would translate to about 4 percent to 5 percent of actual vehicle sales, he said.

"Political considerations must have weighed in on the decision to delay the commencement date by a year," said Cao He, chairman of Quanlian Auto Investment Management Co. "Local automakers will likely benefit from this as they will have more buffer time to get ready on the technology front."

Honda, BYD

Honda Motor Co., which plans to sell an electric vehicle in China next year and plans to expand that business going forward, will work to achieve the credit-score target, a company spokeswoman said. Toyota Motor Corp. refrained from commenting on a specific government policy.

"China is sending a clear signal to domestic automakers that had been dragging their feet on EVs that it's time to get on board," McKerracher said.

Earlier this month, China's government said it's working on a timetable to phase out fossil-fuel powered vehicles, helping lift shares of local automakers such as BYD Co., a carmaker that's backed by Warren Buffett. Groups like BYD, Geely, Chery and others will have excess credits, McKerracher said.

While global manufacturers from billionaire Elon Musk's Tesla Inc. to Nissan Motor Co. and General Motors Co. are racing to grab a slice of the electric-vehicle market in China, local manufacturers such as Geely Automobile Holdings Ltd. have also found considerable success in the market, thanks to generous government subsidies.

BYD topped the new energy vehicle makers in sales in the first seven months of this year, delivering 46,855 electric and plug-in hybrid vehicles, resulting in about 30,000 credit points in the first half, according to the company's calculation.

Beijing Electric Vehicle, the EV division of state-owned BAIC Motor, followed with 36,084 units. By comparison, GM has sold 738 cars that run on electricity since it launched the Velite 5 plug-in hybrid model at the Shanghai auto show this April.

As part of efforts to boost sales of electric vehicles, foreign automakers are setting up new joint

ventures in China. Ford Motor Co. is exploring setting up a joint venture to produce electric vehicles in China with Anhui Zotye Automobile Co. while Volkswagen AG has partnered with Anhui Jianghuai Automobile Group Corp. to make electric cars.

Modi's $2.5 Billion Power Plan May Stumble on Ailing Buyers

Posted September 28, 2017, 8:49 A.M. ET

By Rajesh Kumar Singh and Anindya Upadhyay

The success of Prime Minister Narendra Modi's ambitious plan to electrify all households in India by December 2018 faces a familiar hurdle: the money-losing state power retailers.

Modi earlier this week announced the government will spend 163.2 billion rupees ($2.5 billion) to provide electricity connections to every home in India by the end of next year, ahead of an earlier deadline of March 2019. The bulk of the cost for providing equipment such as power cables and electricity meters to every poor household will be borne by the federal government and partly by the states and the power retailer.

"The key is not the scheme but the political will to allow for commercial operations of discoms," CLSA analyst Bharat Parekh said in a report on Tuesday, referring to electricity distribution companies. "The key issue is that after electrifying the households, how much power will discoms supply and how will they recover the money."

Several power retailers are losing money on selling electricity below cost, and turning them around is in the hands of the state governments, which have traditionally used cheap power to shore up popular support and advance their political goals. Convincing states to allow profitable power tariffs will be Modi's biggest challenge in fulfilling the pledge that helped him rise to power in New Delhi in 2014. Modi is up for re-election in 2019.

"The onus now lies with the states," according to Debasish Mishra, a partner at Deloitte Touche Tohmatsu LLP in Mumbai. "The federal government is paying for connections, but the purpose will be defeated if the states fail to supply reliable power to people. And for that to happen operational autonomy of the distribution companies and timely payment of subsidies is a must."

Discom Losses

The announcement follows a 2015 proposal to reform power distribution, which sought to transfer three-quarters of utilities' debt to their respective state governments. The utilities were set targets to bring down losses. As a result, total losses of utilities that signed up for the plan dropped 21.5 percent from a year earlier to 403 billion rupees in the year ended March 31.

There's pressure on state governments to bring losses down even further. Starting this financial year, states will begin sharing a part of the losses their retailers make, according to the plan to turn around power distributors. In the year ending March, provincial governments will take over 5 percent of their retailers' losses in the previous year. The state's share of losses will rise each year, reaching up to 50 percent in the year ending March 2021.

Years of selling electricity below cost has eroded discoms' ability to invest in infrastructure, buy enough power from generators and repay bank debts. Power generation plants operate at just about half their capacity, unable to sell all the power they can produce. The power-for-all plan could "act as a major stimulus for the ailing power sector in India, with demand revival," Deutsche Bank analyst Abhishek Puri said in a Sept. 26 report.

"Our analysis suggests that power demand could potentially grow by 20 percent to 35 percent from current levels in two years, if the government is able to meet its target, as against the tepid 15% cumulative growth in the past five years," Puri said.

'Actual Supply'

The Sept. 25 announcement supplements an earlier program to invest 760 billion rupees in rural electrification. Modi's administration embarked on the plan in 2015, beginning with electrifying more than 18,000 un-electrified villages. About 3,000 villages still remain to be electrified, which means creating the infrastructure to take electricity to villages, making sure at least 10 percent of the households and public buildings there have power connections. Taking electricity to every home is the next phase of the plan.

Retailers have coped with losses by limiting power supplies to consumers in rural areas, who are heavily subsidized, and selling more expensive electricity to industrial consumers to help fund a part of the losses. Even if all rural households get power, making adequate returns on their investment will be a challenge for retailers given the low-usage pattern.

"This ambitious scheme needs to be followed up with equal emphasis on actual hours of supply, otherwise there'll be a danger of people not getting the true benefits of electrification, which can reduce their willingness to pay," said Ashwini Chitnis, a researcher at Prayas, a non-profit advocacy group that focuses on energy, health and education. "Poor cost recovery can result in poor maintenance and thus huge investments in network infrastructure can go waste."

Chile Aims to Boost Lithium Output as Electric Cars Rise

Posted September 28, 2017, 12:15 P.M. ET

By Laura Millan Lombrana

The country holding the world's largest reserves of lithium is drafting regulations that would allow companies to set up new mines amid soaring demand for the mineral used in electric-car batteries.

A Chilean government commission is expected to offer guidance by the end of the year for private companies that want to start lithium operations in the country, Mining Minister Aurora Williams said in an interview.

Lithium is considered a strategic resource in Chile, and no company has obtained a license in more than two decades. While global demand for lithium is expected to surge this year as carmakers such as Tesla Inc., Mitsubishi Corp. and others push to bring electric vehicles to the mass market, only two companies mine lithium in Chile.

"What Chile wants is to maintain and increase production so we can capture this space in the market," Williams said. "We are working on a set of documents that effectively set up ways and procedures to mine lithium."

Chile holds more than half of the world's known reserves of the mineral, and CRU Group says the country has the lowest mining costs. Miners pump lithium-rich brine from beneath salt flats in the country's north and leave it to dry in evaporation pools. Sociedad Quimica y Minera de Chile SA and Albemarle Corp. remain the only companies producing lithium in the nation.

The Chilean government will also unify environmental monitoring in Atacama, where both SQM and Albemarle are operating, to ensure that mining operations have no irreversible impact on the salt-flat's delicate environment and on the communities living around it, Williams said.

Privately owned companies that want to start a lithium operation in Chile can either partner with a state-owned company or negotiate special contracts directly with the government. Chilean-owned Minera Salar Blanco spent months in talks with the government before withdrawing from the process.

'No Rules'

"There are no rules, no one knows what the requirements are," Minera Salar Chief Executive Officer Cristobal Garcia-Huidobro said in an interview in his office in Santiago. "When we realized the process wasn't advancing. we decided to withdraw and wait for the government to write down the rules."

The new framework won't change lithium's special status, and companies will still have to negotiate directly with the state, according to Sergio Hernandez, executive vice-president of the Chilean copper commission Cochilco, a member of the committee drafting the rules.

However, it will provide more clarity on financial guarantees for projects, investment requirements, compensation to communities or land owners, environmental rules, taxes, and royalties.

"The lithium royalty will probably be a bit higher than for copper," Hernandez said. "This makes sense because of the natural advantages of starting production of a resource that is fresh, low-cost and easy to extract."

New Players

The framework would be a sign that Chile is opening up to new players and that much more new, low-cost lithium production could enter the market over the medium term. Even a sign that the regulation is business-friendly would have an effect on prices, according to Marcelo Awad, a Wealth Minerals Ltd. manager in Chile.

The lithium market is in deficit, but it could go into a small surplus this year even as new projects experience delays during ramp up and as demand is expected to increase 14 percent, according to Bank of America Merrill Lynch. Established producers including China's Tianqi Lithium Corp. and Albemarle are expanding production in their current operations. But supply disruptions could easily put it back into deficit, according to CRU Group.

"Long-term lithium prices, used to evaluate projects globally, could drop 25 percent when the regulatory framework is out," said Awad, whose company has acquired mining concessions in salt flats across the country. "Chile has the world's largest reserves that can be mined at the lowest

price, so the mere announcement should lower the long-term price."

Companies are using long-term estimates of $11,000 to $12,000 per metric ton of lithium carbonate, which would fall to $8,000 to $9,000 per ton when the regulations are put in place, Awad said. Lithium prices have more than doubled in the five years to 2016, according to UBS Group AG. The mineral averaged $14,250 a ton in July, according to Benchmark Minerals.

"It is important that companies wait for the definitions, but whatever the demands are, they will not diminish in any significant way Chile's geological and institutional advantages as a lithium producer," Hernandez said. "We will remain attractive."
